Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Tank Info:

Tank Number:	041
Tank Id:	19045
Material Code:	0003
Common Name of Substance:	#6 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	G03 - Tank Secondary Containment - Vault (w/o access)
	H00 - Tank Leak Detection - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	B00 - Tank External Protection - None
	C00 - Pipe Location - No Piping
	F00 - Pipe External Protection - None
	J02 - Dispenser - Suction Dispenser
	I04 - Overfill - Product Level Gauge (A/G)
Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	In Service
Pipe Model:	Not reported
Install Date:	08/19/1953
Capacity Gallons:	5000
Tightness Test Method:	NN
Date Test:	Not reported

RESIDENTIAL BUILDING (Continued) **U003390444**

Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True
Modified By:	NTFREEMA

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

COMPLIANCE AND EMISSIONS REPORTING
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number:	006
Tank Id:	6492
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None
J01 - Dispenser - Pressurized Dispenser
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
H00 - Tank Leak Detection - None
I00 - Overfill - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
G00 - Tank Secondary Containment - None

Tank Location:	Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported
Install Date:	Not reported
Capacity Gallons:	275
Tightness Test Method:	NN
Date Test:	Not reported
Next Test Date:	Not reported
Date Tank Closed:	Not reported
Register:	True

Material Name:	#2 fuel oil (on-site consumption)

Tank Number:	207-3
Tank Id:	63896
Material Code:	0001
Common Name of Substance:	#2 Fuel Oil (On-Site Consumption)

Equipment Records:

	A00 - Tank Internal Protection - None
	B01 - Tank External Protection - Painted/Asphalt Coating
	D01 - Pipe Type - Steel/Carbon Steel/Iron
	K00 - Spill Prevention - None
	F00 - Pipe External Protection - None
	H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
	J04 - Dispenser - On Site Heating System (Suction)
	C01 - Pipe Location - Aboveground
	I04 - Overfill - Product Level Gauge (A/G)
	E00 - Piping Secondary Containment - None
	L09 - Piping Leak Detection - Exempt Suction Piping
	G12 - Tank Secondary Containment - Double-Walled (AG only)
Tank Location:	Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type:	Steel/Carbon Steel/Iron
Tank Status:	Closed - Removed
Pipe Model:	Not reported

DEC Region:	2
DER Facility ID:	280160
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE See also 02-04997 & 02-02959. This spill will now refer to both #6 heating oil tanks. 06-23-05: Initial site investigation identified soil contamination and free product. It also identified another tank. A supplemental investigation work plan has been submitted and approved to define the extent of contamination and to provide monitroing and bailing points to monitor the plume while the yard is being reconstructed. The tanks and associated contamination will be removed during the reconstruction phase pertaining to the boiler plant. 09/28/06: Tenative schedule for tank and soil removal - December 2008, if NTP is issued in December 2006. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 5/19/2011 The spill was

207 TH STREET YARD-NYCT (Continued) **S105135505**

reassigned from Joe O'Connell to Linda Ross 12/18/12 - Raphael Ketani. The spill was assigned to me during February 2012 as part of a caseload realignment. There have been monthly to bimonthly (once every two months) update meetings with the NYCT regarding this and 17 other sites. The information for the sites is in the UIS under e-docs, multiple sites, DER, Region 2, Petroleum Spills, NYCT. May 1, 2018 - V. Brevdo Due to Project Manager Raphael Ketani's retirement on April 27, 2018, Vadim Brevdo became new project manager for this spill case effective April 30, 2018. VB April 8, 2019 - V. Brevdo NYCT 207th Street Yard, 3961 10th Ave., Manhattan (Spill No. 0106375) The site is utilized as a NYCT rail yard and rail car maintenance facility. Petrolem contamination at the site has been identified as No.6 heating oil. In 2001, the heating oil UST system consisting of two 35,000-gallon No. 6 fuel oil USTs failed tightness testing and spill case was assigned to the site. Several investigations were conducted to delineate the limits of petroleum impacts. As part of these investigations, nine groundwater monitoring wells were installed on-site, and a third, 20,000-gallon No. 6 fuel oil UST was identified that required closure. Petroleum monitoring/manual recovery efforts are completed on a monthly basis at the site. The Department approved Remedial Action Work Plan on June 28, 2011. The approved remedy includes excavation and/or closure in place of the on-site USTs and soil remediation. Remedial work is planned to be implemented in two phases. Phase I remediation will include establishing soil stockpile areas, excavating 3 test pits to expose tops of USTs, closure in place of the first (out of two) 35,000-gallon UST and 20,000-gallon UST (including cleaning the tanks, removal of oil supply lines, filling tanks with slurry mix), excavation and disposal off site of contaminated soil, backfilling of excavation with clean materials. Phase II remediation will include the excavation of the second (out of two) 35,000-gallon UST along with free product and petroleum contaminated soil. A shoring plan is required for Phase II remediation and is being developed by the remedial contractor. Once the shoring plan is approved by NYCT, the implementation schedule for Phase II remediation will be prepared and provided to the Department. NYCT informed the Department that Phase I remediation is scheduled to commence on April 8, 2019 (site and equipment mobilization) with the Phase I remediation completion date of May 24, 2019. VB July 12, 2019 - V. Brevdo NYCT 207th Street Yard, 3961 10th Ave., Manhattan (Spill No. 0106375) The site is utilized as a NYCT rail yard and rail car maintenance facility. Petroleum contamination at the site has been identified as No.6 heating oil. In 2001, the heating oil UST system consisting of two 35,000-gallon No. 6 fuel oil USTs failed tightness testing and spill case was assigned to the site. Several investigations were conducted to delineate the limits of petroleum impacts. As part of these investigations, nine groundwater monitoring wells were installed on-site, and a third, 20,000-gallon No. 6 fuel oil UST was identified that required closure. Petroleum monitoring/manual recovery efforts are completed on a monthly basis at the site. The Department approved Remedial Action Work Plan on June 28, 2011. The approved remedy includes excavation and/or closure in place of the on-site USTs and soil remediation. Remedial work is planned to be implemented in two phases. Phase I remediation will include establishing soil stockpile areas, excavating 3 test pits to expose tops of USTs, closure in place of the first (out of two) 35,000-gallon UST and 20,000-gallon UST (including cleaning the tanks, removal of oil supply lines,

207 TH STREET YARD-NYCT (Continued) **S105135505**

filling tanks with slurry mix), excavation and disposal off site of contaminated soil, backfilling of excavation with clean materials. Phase II remediation was initially planned to include the excavation of the second (out of two) 35,000-gallon UST along with free product and petroleum contaminated soil. NYCT subsequently requested NYSDEC to approve modification/amendment to the scope of Phase II remediation, which (modification) is closing second 35,000-gallon UST in place in lieu of removing it. Phase I remediation commenced on April 8, 2019 and is expected to be completed by July 24, 2019. On July 11, 2019, NYCT requested NYSDEC to approve modification/amendment to the RAWP for Phase II site remediation. The nature of the requested RAWP modification/amendment is as follows: Based on the field conditions observed following recent activities to expose the 35,000-gallon UST 207-4, NYCT requested reduction of the excavation depth (in the excavation area northeast of UST 207-4) from 18 feet to 13 feet below grade and closure in place of the aforementioned UST in lieu of removing it. NYCT and NYCT s environmental engineering consultant, AECOM, provided the following grounds for RAWP modification/amendment request: 1) Groundwater is approximately 10 ft bgs and the No. 6 fuel oil smear zone exists at depths between 7 to 11 feet. The majority of contamination was found at or above smear zone. Therefore, limiting the excavation depth to 13 feet is expected to include removal of a substantial majority of petroleum Impacts; 2) NYCT and AECOM concluded that removal of the UST is not feasible, as such removal may damage or impair structures and utilities in the immediate vicinity/area (i.e. boiler house, electrical duct bank, steam trench, and sewer system). There is a limited space to guarantee the safe removal of the approximately 50 ft long UST without encountering nearby structures. NYSDEC evaluated the July 11, 2019 RAWP modification/amendment request and approved it on July 12, 2019. DER project manager directed NYCT to coordinate UST closure in place with NYSDEC Region 2 PBS Unit to ensure compliance with PBS regulations. VB October 29, 2019 NYCT 207th Street Yard, 3961 10th Ave., Manhattan (Spill No. 0106375) The site is utilized as a NYCT rail yard and rail car maintenance facility. Petroleum contamination at the site has been identified as No.6 heating oil. In 2001, the heating oil UST system consisting of two 35,000-gallon No. 6 fuel oil USTs failed tightness testing and spill case was assigned to the site. Several investigations were conducted to delineate the limits of petroleum impacts. As part of these investigations, nine groundwater monitoring wells were installed on-site, and a third, 20,000-gallon No. 6 fuel oil UST was identified that required closure. Petroleum monitoring/manual recovery efforts are completed on a monthly basis at the site. The Department approved Remedial Action Work Plan on June 28, 2011. Subsequently, NYSDEC evaluated the July 11, 2019 RAWP modification/amendment request from NYCT and approved it on July 12, 2019. Approved remediation includes excavation of contaminated soil to the depth of 13 feet and closure of USTs in place. Removal of the UST is not feasible, as such removal may damage or impair structures and utilities in the immediate vicinity/area (i.e. boiler house, electrical duct bank, steam trench, and sewer system). DER project manager directed NYCT to coordinate UST closure in place with NYSDEC Region 2 PBS Unit to ensure compliance with PBS regulations. On October 29, 2019, NYCT provided NYSDEC with tentative remediation schedule, including anticipated dates for commencement and completion of the remediation field activities which are October 29, 2019 and November 28, 2019,

207 TH STREET YARD-NYCT (Continued) **S105135505**

	respectively. VB November 7, 2019 - V. Brevdo NYCT 207th Street Yard, 3961 10th Ave., Manhattan (Spill No. 0106375) On November 7, 2019, NYSDEC remediation project manager inspected the site and conducted oversight of the remediation field work jointly with MTA NYCT engineering professionals. VB "
Remarks:	"u/g tank failed test property manager will be advised asap retest may be tried later "

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY Also, refer to spill # 9604408. -II (12/14/04). Site was first investigated by Lehrer McGovern Bovis and Raritan Enviro Sciences; they installed a limited product recovery system, with recovered & treated groundwater (from depression pump) going to percolation trench. Site was transferred to LiRo, and they removed the old system and installed a more extensive multi-phase extraction system, which is currently operating to address soil and groundwater contamination and recover small amounts of free product. This site transferred from Kolleeny to A. Zhitomirsky on 4/15/05. - JK 6-20-2005 Reviewed a Monitoring Report for January-March 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. In the report LiRo proposed to shut down Header No.2 and only operating the

MANHATTAN WEST 12 DOS -DDC (Continued) **S103478327**

system on Header No.1. This will allow the system to operate on the remaining area of contamination. The Department concured with this proposal. AZ 7-18-2005 Reviewed a Monitoring Report for April-June 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. In the report LiRo recommends installing ORC socks in wells MW-8 and MW-10 to treat MTBE in groundwater. The Department concured with this proposal. AZ 12-27-2005. Reviewed a Monitoring Report for July - September 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. In the report LiRo recommended installing ORC socks in wells MW-9 and MW-13 to treat groundwater contamination. The Department concurred with this proposal. Also, the Department concurred with LiRo proposals to shut down extraction wells EW-5, EW-6, EW-9 and EW-10. Remaining extraction wells should continue to remediate remaining groundwater contamination. Proposed confirmation soil borings were approved. AZ 4-5-2006 Reviewed a Monitoring Report for October - December 2005. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. Gw and soil contamination exists in the area of MW-8, MW-10, and MW-13. LiRo recommended turning on wells EW-11,EW-12, EW-18 and EW-19. AZ 5-11-2006 Reviewed a Monitoring Report for January - March 2006 received on April 13, 2006. The report presented remedial system performance and groundwater monitoring data. The system was shut down for 14 days in March 2006 due to sensor replacement. As of March 2006 LiRo is no longer the consultant fr the site. Gw and soil contamination exists in the area of MW-8, MW-10, and MW-13. AZ 11-13-2006 Reviewed a Monitoring Report for April - July 2006 received on August 23, 2006. The report presented remedial system performance and groundwater monitoring data. MW-03 is apparently short circuited by EW-08. Wells MW-05, MW-10 and MW-14 were not accessible for sampling. A confirmation soil plan will be prepared by URS. AZ 1-2-2006 Reviewed a Confirmation Soil Plan dated September 26, 2006, and a Monitoring report for August through October 2006 dated November 14, 2006. Low vacuum in MW- 3, MW-7, MW-14. URS recommended advancement of three new borings in contaminated areas. AZ 1-3-2006 Could not locate borings which encountered contaminated soil in previous investigations on the site plan. GW Samples were not collected from MW-10, MW-12, MW-09 since they were unaccessible due to the parked vehicles. I informed Jane Staten that all wells should be sampled in order to apply for NFA. Contacted Jane Staten (URS) via e-mail and phone and requested clarification of the boring locations. AZ 3-20-2007 Contacted Jane Staten (URS). URS provided clarifications following DEC request for existing borings locations. 3 confirmation borings will be advanced. The dual phase system is down due to the liquid ring pump failure since February 17, 2007. System repairs will be postponed until the full round of gw and soil sampling is performed. AZ 3-21-2007 Reviewed monitoring report for November 2006 - January 2007. On December 6, 2006 the MPE system was off due to the blockage in the seal water piping. The system was repaired.M W-02 was destroyed. No gw compounds exceeded DEC Quality Criteria. Soil sampling will be performed. I requested that downgradient wells are sampled. AZ 11-20-2007 Reviewed report dated Aug.7, 2007. A spike in MTBE level

MANHATTAN WEST 12 DOS -DDC (Continued) **S103478327**

in MW-12 (2,100 ppb). The soil analytical results showed sliight exceedances but PID readings were high and petro odor noticed. URS proposed additional soil borings UBR-04,UBR-05 and UBR-06 near UBR-01,UBR-02 and UBR-03. No groundwater map with the plume was submitted. Spoke with Jane Staten and sent the following e-mail: As per our discussion of the above site, proposed soil borings are approved. The report submitted on August 13, 2007, did not contain groundwater map with the contaminant plume. Whenever groundwater sampling is performed, groundwater plume map with the latest sampling results should be compiled. I concur with your proposals to sample all existing groundwater wells. Special attention should be given to sampling the downgradient wells. AZ 4-29-2008 Reviewed Contamination Soil Sampling Results/Recommended strategy report dated February 5, 2008. MTBE contamination ranged from 24 ppb to 1,100 ppb in two wells. There is a slight rise in MTBE concentrations in MW-12 over the last three sampling events. Recent soil sampling showed a significantly elevated concentration of total xylenes in UBR-04 (8' TO 10' bgs) - 44, 000. MPE system is off-line. The Harlem River is situated approximately 200' from the site. Discussed the site with Jane Staten (URS). I proposed to install ORC socks in MW-12 and leave MPE system in-place. Jane Staten proposed quarterly monitoring of the select wells. An e-mail with these conclusions was sent to URS/DDC/VB. AZ 12-24-2008 Reviewed Groundwater monitoring data through 2nd quarter 2008 dated August 8, 2008.ORC sock was installed in MW-12 in June 2008. Monitoring was performed on July 14, 2008. Well MW-12 exhibited MTBE at a concentration of 340 ppb. No other VOCs were detected in MW-12. The improved groundwater quality in MW-12 may be attributed to the ORC socks. AZ 1-8-2009 Reviewed Groundwater monitoring data through 3rd quarter 2008 dated November 14, 2008. It appears that the ORC sock placed in MW-12 should be replaced, however MW-12 box needs repair, the sock will be installed after the repairs are made. The work was planned for December 2008. In October 2008 all wells were sampled.. MTBE was the only contaminant detected. Concentrations ranged from 23 ppb to 720 ppb. Concentration of MTBE has increased from 340 ppb to 720 ppb in MW-12. AZ 5-14-2009 Reviewed groundwater monitoring data through 1st quarter 2009 dated February 16, 2008. In January 2009 all wells were sampled. MW-08 and MW-12 exhibited MTBE at concentrations of 260 ppb and 42 ppb respectively. MW-12 also exhibited benzene slightly above criteria. Well MW-08 exhibited an unexpected increase in MTBE concentrations. AZ 9-21-09 Reviewed groundwater monitoring data through 2nd quarter 2009 dated May 27, 2009. In April 2009 all wells were sampled. MW-08, MW-10 and MW-13 exhibited MTBE at concentrations ranging from 25 ppb to 260 ppb. DEC requested installation of ORC socks which were consequently installed. The ORC socks in MW-12 are improving groundwater quality MTBE concentrations in this well continues to decrease. Well MW-9 was destroyed. AZ 1-26-10 Reviewed groundwater monitoring data through 3rd quarter 2009 dated August 25, 2009. In July 2009 all wells were sampled. MW-08, MW-10,MW-'12 and MW-13 exhibited MTBE at concentrations ranging from 12 ppb to 310 ppb. DEC requested installation of ORC socks which were consequently installed. URS will replace ORC sock in well MW-12 to reduce MTBE concentrations. Well MW-9 was destroyed. AZ 2-16-2010 Reviewed groundwater monitoring data through 4th quarter 2009 dated October 28, 2009. Wells exhibited MTBE at concentrations ranging from 11 ppb to 85 ppb. Well MW-9 was destroyed. AZ 4-21-2010 Reviewed groundwater monitoring data through 1ST quarter 20010 dated February 17, 2010.

MANHATTAN WEST 12 DOS -DDC (Continued) **S103478327**

Well MW-08 exhibited MTBE at concentrations of 100 ppb and MW-12 exhibited MTBE at concentrations of 260 ppb. ORC sock was placed in well MW-12 and may have contributed to the decrease of MTBE concentrations. Analytical data for well MW-08 sine October 2007 shows fluctuating MTBE concentrations and there is no decreasing contamination trend in this well. AZ 4-23-2010 An e-mail was sent to J. Staten (URS): I have reviewed groundwater monitoring data through 1st quarter 2010 for the above site. Well MW-08 exhibited MTBE at concentrations of 100 ppb and well MW-12 exhibited MTBE at concentrations of 260 ppb. ORC sock was placed in well MW-12 and may have contributed to the decrease of MTBE concentrations. Analytical data for well MW-08 sine October 2007 shows fluctuating MTBE concentrations and there is no decreasing contamination trend in this well. URS proposed spill closure for this site. Spill closure can not be granted at this time. However, monitoring reports could be submitted semi-annually. ORC sock should be placed in MW-8, if this has not been done before. AZ 2-17-2011 An e-mail was sent to K.Shenahan/Asbagh/V. brevdo: I have reviewed semi-annual monitoring report for the above site dated October 13, 2010. Monitoring well MW-06 can be removed from the scheduled sampling. AZ 2-18-2011 Discussed this site with URS at the quarterly meeting. URS informed DEC that MW-06 had a reading of about 300 pbb in January. DEC requested continuing monitoring of MW-06. An e-mail was sent to URS on 2-18-2011. AZ 7-8-2011 Reviewed gw monitoring report through February 2011 and dated May 19, 2011. An email was sent to URS/DDC/V. Brevdo: Dear Kevin, I have reviewed a quarterly monitoring report through February 2011 and dated May 19, 2011, for the above site. The report states that there are some discrepancies in the tank inventory between URS's records and PBS records. This discrepancy should be clarified. A site visit should be conducted to confirm the tanks status. If necessary, GPR studies should be performed to verify if the tanks in question are removed or closed in place. After discrepancies are clarified, a corrected PBS form should be submitted to NYSDEC PBS Section. Contamination was unexpectedly found in a monitoring well MW-6. As per URS recommendation, if re-sampling confirms contamination, an investigation should be performed to determine the extent of the problem. AZ 8-6-2012 The spill was discussed at the DEC/DDC/URS meeting on August 2, 2012. Groundwater monitoring report for the fourth quarter 2011 and first quarter 2012, dated May 17,2012 was discussed. The report stated that all available wells were sampled. However, wells EW-08 AND EW-20 were blocked, EW-09 was destroyed, EW-02 and EW-11 had obstructions in the well. It was decided that URS will attempt to sample blocked wells. Regarding the wells which were destroyed and/or had obstructions, historical data will be submitted to DEC. Groundwater results in nine wells exceeded VOC criteria. Also, after removal of ORC socks, concentrations in three wells rebounded: MW-12 (from 30 ppb to 300 ppb),EW-11 (from 0 ppb to 171 ppb) and EW-13 (from 0 ppb to 200 ppb). URS will continue monitoring this site. I have discussed the site with K. Shenahan over the phone. AZ 8-7-2012 E-mail received from K. Shenahan: Alex, We are sampling the extraction wells they are designated as EW wells. Only two EW wells are not functioning. EW-02 could not be sampled due to an obstruction. It is relatively close to the boundary of dissolved-phase contamination, located between wells MW-13 and MW-14, and about 15 feet or so from each. Analytical data from MW-13 and MW-14 over the past 5 years shows low contamination. EW-09 is reported as being destroyed. It is upgradient from the

MANHATTAN WEST 12 DOS -DDC (Continued) **S103478327**

plume, and total VOCs in nearby wells have been 2 ppb or Not Detected over the past 5 years. I recommend that we sample the wells listed and if the levels are such that we could petition for closure we could see if it is necessary to acquire data from these locations. AZ 6-7-2012 An e-mail received from URS: From: McDaid, Daniel Sent: Tuesday, August 07, 2012 4:19 PM To: Shanahan, Kevin Subject: RE: Man W12 sampling Wells within the boundary of dissolved-phase contamination: MW-06 MW-08 MW-10 MW-12 EW-01 EW-11 EW-12 EW-15 EW-18 The following wells were not sampled (green font indicates that the sample collection could be re-attempted): EW-02 Obstruction EW-08 Vehicle parked over well EW-09 Destroyed EW-16 Not enough water EW-20 Vehicle parked over well In summary, here is a full list of wells to be sampled during the upcoming site visit: MW-06 MW-08 MW-10 MW-12 EW-01 EW-08 Vehicle parked over well EW-11 EW-12 EW-15 EW-16 Not enough water EW-18 EW-20 Vehicle parked over well Notes EW-02 could not be sampled due to obstruction. It is relatively close to the boundary of dissolved-phase contamination, located between wells MW-13 and MW-14, and about 15 feet or so from each. Analytical data from MW-13 and MW-14 over the past 5 years shows minimal contamination (See attached). EW-09 is reported as being destroyed. It is upgradient from the plume, and total VOCs in nearby wells (See attached) have been 2ppb or ND over the past 5 years. URS has never sampled any of the extraction wells before, and there is no historical data for these wells in the ISRP. AZ 11-19-2012 Discussed the site with K. Shenahan. There is persistant MTBE contamination probably related to soil MTBE contamination. A soil map attached to the report is not legible. URS will submit another map. AZ 11-20-2012 Email from K.Shanahan: Alex, Yesterday you called me to discuss the above referenced site and specifically URS' report dated September 21, 2012 . You indicated that Figure 3 in Attachment B was not legible enough to discern the boring locations. I have sent you a hard copy in a separate letter. In the meantime, the pdf version is attached. AZ 11-21-2012 An e-mail was sent to K. SHenahan and V. Brevdo Dear Kevin, We have discussed this site yesterday and today. The groundwater at the site still has MTBE contamination which exceeds the standards by an order of magnitude. A reason for this contamination could be that soil at the site was grossly contaminated with MTBE. In order to trace groundwater contamination we need to prepare detailed soil maps showing original soil contaminant levels and the latest confirmation soil borings results. It was agreed that URS will submit these maps to DEC. Sincerely, Alexander Zhitomirsky 5-13-2013 On April 3 and 4, 2012, URS sampled monitoring wells. The data showed that the groundwater in the northeastern corner of the sanitation garage continued to be impacted with low concentrations of volatile organic compounds (VOCs) including MTBE. The highest total VOC concentration detected was in MW-12 with 300 ppb (MTBE was the only compound detected). I have reviewed a Historical Soil Sampling Analytical Results report dated February 1, 2012. The report stated that free phase at the site was treated by a passive product recovery system which was converted to operate as an active groundwater and product recovery system. Also, product recovery was performed using a vac truck. A multi-phase extraction system was constructed at the site in 2003 and was shut down due to equipment failure in 2007. The site still has lingering groundwater impacts detected in the northeastern corner near the dispensers. Given the most current soil and groundwater data for the site, URS recommended natural attenuation of remaining soil and groundwater contamination. URS

MANHATTAN WEST 12 DOS -DDC (Continued) **S103478327**

recommended no further action for this site. The report stated that soil sampling completed after MPE system was terminated. In 2007 soil samples were collected. PID screening had elevated measurements indicating petroleum constituents. Moderately elevated VOC exceedances were present in the sample collected from UBR-04. AZ 8-5-2013 Reviewed Groundwater Monitoring Report and Request for Spill Closure dated May 10, 2013. A total of 1,018 gallons of product were reported as being collected by RES through 1999. LiRo reported collecting an additional 88 gallons of free product.. No free product has been observed at the site since September 2003. The most recent soil sampling was conducted in 2007/2008. The soil data indicated that a limited area of contamination remained in the area of MW-08, MW-12, and MW-13 near the former dispenser area. The highest total VOC concentration was about 46,000 ppb. groundwater sampling from from January 2013 ranged from 52 PPB TO 224 PPB in those wells with exceedances of the the NYSDEC criteria. In the latest sampling event in April 2013, the highest total VOC concentration observed was 175 ppb. Based on the above information,URS requested that DEC close spill number 9604262. This request is approved and the spill number is closed. However, there are some discrepancies between the PBS registration and URS' current understanding of the tanks status. A number of tanks are listed in the PBS database as aboveground tanks (ASTs) tanks were closed in place. It is assumed that most if not all of these ASTs were removed from the site.Additionally, PBS lists tanks Nos. 008 and 009 as closed in place, although URS believes that these tanks have been removed. URS should perform a site inspection and very the tanks status. An updated PBS information should filed. URS inform NYSDEC when the above information is filed. AZ 8-6-2013 The following e-mail was sent to Kevin Shenahan, M. Asbagh and Vadim Brevdo: Dear Kevin, I have reviewed Groundwater Monitoring Report and Request for Spill Closure dated May 10, 2013. A total of 1,018 gallons of product were reported as being collected by RES through 1999. LiRo reported collecting an additional 88 gallons of free product. No free product has been observed at the site since September 2003. The most recent soil sampling was conducted in 2007/2008. The soil data indicated that a limited area of contamination remained in the area of MW-08, MW-12, and MW-13 near the former dispenser area. The highest total VOC concentration was about 46,000 ppb. Groundwater sampling results from January 2013 sampling event, ranged from 52 ppb to 224 ppb, in those wells with exceedances of the NYSDEC criteria. In the latest sampling event in April 2013, the highest total VOC concentration observed was 175 ppb. Based on the above information,URS requested that DEC close spill number 9604262. This request is approved and the spill number is closed. However, there are some discrepancies between the PBS registration and URS' current understanding of the tanks status. A number of tanks are listed in the PBS database as aboveground tanks (ASTs) tanks closed in place. It is assumed by URS that most, if not all of these ASTs, were removed from the site.Additionally, PBS lists tanks Nos. 008 and 009 as closed in place, although URS believes that these tanks have been removed. URS should perform a site inspection and verify the status of the tanks. An updated PBS information should filed with the PBS Section of NYSDEC. URS should inform NYSDEC when the above information is filed. Based on the documentation provided to date, the New York State Department of Environmental Conservation (the Department) has closed the spill case number 9604262. All wells associated with this project should be closed according to the

MANHATTAN WEST 12 DOS -DDC (Continued) **S103478327**

Department's Groundwater Monitoring Well Decommissioning Procedures. All wells should gaged for the presence of free product before closure. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: I. The off-site migration of petroleum contaminants that was unknown at the time of this closure. II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure. III. Information received, in whole or part, after the Department's spill case closure, which indicates the corrective action was not sufficiently protective of human health and/or the environment. IV. Fraud in obtaining this spill case closure determination. As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts must be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely. Sincerely, Alexander Zhitomirsky "

Remarks: "upon drilling for wells soil contamination was discovered still under investigation at this time"

DEC Memo:	"7-13-2005 This site is remediated under NYCDDC CO. Monitoring borings were completed in April 2005 and the results showed compliance with TAGM 4046. Contacted Steve Frank (LiRo). Requested to map exact location of the excavated tanks, excavate all contaminated soil, install new soil borings/wells if this area is not covered by the previous investigation. AZ 7-18-2005 Requested original laboratory data and tank closure report. AZ 3-23-2006 Contacted Steve Frank (LiRo) and requested an update for the site. AZ 3-21-2007 Reviewed monitoring report for November 2006 - January 2007. On December 6, 2006 the MPE system was off due to the blockage in the seal water piping. The system was repaired.M W-02 was destroyed. No gw compounds exceeded DEC Quality Criteria. Soil sampling will be performed. I requested that downgradient wells are sampled. AZ 4-30-2008 An e-mail requesting identification, investigation and remediation of the tanks associated with the spill was sent to Jane Staten (URS)/VB. Conversation w/Jane Staten. I confirmed that DEC requested information about this tank closure but never received it. URS has to map the tanks and sow locations of sampling points and their results in the USTs area. J. Staten will look into it. AZ 7-8-2008 I have reviewed a report for the above spill number dated June 2, 2008. URS stated in their report that in June 2005, The Franklin Company (Franklin) excavated three of five USTs contained in a vault located at the Manhattan 12 site. The USTs were identified as ##7, #10 and #11. The remaining two USTs located in the same tank vault, identified as #8, and #9, were previously closed in place (filled with concrete) in September 1996. Following removal of tanks #7, #10, and #11, Franklin collected five post-excavation samples. The analytical data showed that no compounds exceeded the NYSDEC TAGM #4046. Additional soil samples were collected in the vicinity of the tank vault. In July 2004 and April 2005, Liro collected confirmation soil samples to evaluate the effectiveness of the multiple-phase extraction system that began operating in March 2003. The analytical data showed that no compounds exceeded the NYSDEC TAGM #4046 recommended soil cleanup criteria. Collectively, the analytical data showed that soil in the vicinity of the tank vault had been remediated. Based on the submitted information, spill #0504296 is closed. An e-mail was sent to Jane Staten/DDC/V. Brevdo. AZ "

DEC Memo: "Double walled tank, line, sump and they found oil in the sump. When F&N opened up the boot they found the whole secondary containment was filled with oil. DOS foreman said that the tank & system was taken out of service for repairs. 8-6-2008 An e-mail was sent to DDC/URS/V. Brevdo: There is a new spill caused by a hydraulic oil tank. The spill records state that oil was found in the sump. F&N found that the whole secondary containment was filled with oil. DOS foreman said that the tank & system was taken out of service for repairs. The tank area should be investigated. Please submit an investigation plan to DEC. AZ 8/21/2008 There was a duplicate spill number for this tank test failure. Spill # 0802569 was closed out and referred to this case. 8-21-2008 Received a NYC DOS report stating that the motor oil tank #2 (2,000 gallon UST) failed an air tightness test. Follow up testing by Fenley & Nicol showed that there is a leak in the piping (suction line). NYC DOS suspended use of this tank. I sent an e-mail to DDC/URS/V. Brevdo requesting investigation of the spill. AZ 3-9-2010 Reviewed URS report dated August 20, 2009. The report stated that the cause of this spill was a failed tightness test of the suction line associated with 2,000-gallon motor oil UST. In May 2009 Franklin Company Contractors initiated work by tightness testing the suction line. The primary, inner line was tested at 30 psi and the secondary, outer pipe was tested at 5 psi for 30 minutes. During the test, Franklin observed that pressure in the primary pipe dropped while pressure in the secondary pipe increased. These results indicated that there was a break in the primary line but that the secondary pipe was tight. Any release from the primary pipe was contained by the secondary pipe and returned to the tank sump. Franklin excavated and removed the entire length of the old suction line. Franklin found no break in the secondary line and no evidence of soil contamination. Franklin installed and tightness tested a new double-walled suction line. Based on the above information, URS requested closure of this spill number. The request is granted. The e-mail confirming spill closure was sent to J. Staten, Ms. Asbagh (NYC DDDC) and V. Brevdo. AZ"
Remarks: "Motor oil line failed. Material is leaking into the piping sump. No impact to the environment. The line will be taken out of service and repaired. Unknown who is doing the repair work."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo:	"8/05/2015: Rashad Spill transferred from Sangesland to Rashad as per RSE. 8/18/2015: Rashad Caller remarks dry leak/5000 gallon UST. As per NYC building records 101 Cooper Street has an alternate address of 97-105 Cooper Street. According to PBS#2-255610, there is a 5,000 gallon #6 fuel oil tank aboveground on saddles, legs, stilts, rack or cradle. PBS indicated no last test date or next test date, reg. expires 11/16/2017. No other spill cases found for this site. No documents found in D2. Site owner information per PBS: 101 Cooper St. LLC 570 Seventh Ave New York, NY 10019 Mail Correspondent Information from PBS and NYC building records: Rosedale Management 21 West 38th, 8th Floor New York NY 10018 8/21/2015: Rashad Emailed Rene Lewis: After reviewing the spill report for 101 Cooper Street, New York, NY spill#1003365 dated 6/25/2010. I would like to request the following information: Failed system test report. Test results for supply/return and vent/fill lines. Property owner information. 9/14/2015: Rashad According to building records on 10/7/2010 a work order for PERMANENT CLOSURE OF 5000 GALLON UST, INSTALLATION OF 4000 GALLON AST, AND TWO (2) TEMPORARY 275 GALLON TANKS TO BE REMOVED PRIOR TO SIGNOFF. Email sent to ecrane@rosedalemanagement.com: I am currently reviewing an old spill case for 101 Cooper Street, Manhattan New York dated 6/25/2010 spill# 1003365. A tank test failure was reported in a 5,000 gallon tank, I would appreciate any information or reports you have on this tank. 9/16/2015: Rashad Elizabeth responded: I am attaching a copy of the pressure tank test for the oil tank conducted on June 25, 2010. The tank passed the test. Although there was some concern about the possibility of a spill, no spill actually occurred. Subsequently, the tank was

PVT DWELLING TTF (Continued) **S110490795**

replaced with an above-ground tank. Let me know if there are any other questions. She has attached passing tank test dated 6/25/10, it has been uploaded to D2. Tank test indicates tight tank in the 5000 gallon #6 fuel AST at 101 Cooper Street conducted on 6/25/10. Sent email to Elizabeth: Thank you for the report, would you happen to have the initial tank test report which failed, if not do you know why the tank failed? Elizabeth wrote back Sorry but I've never seen a failed tank test report. Here are the prior test results from 2005. 10/19/2015: Rashad Due to aboveground passing tank test and confirmation from Elizabeth that no spill actually occurred spill will be closed. "

Remarks: "dry leak/5000gal ust"

DEC Memo:	"PBS 2-289647 Need to send a TTF letter Nov. 25, 2005 A Tank Test Failure Letter was sent to: Mr. Walter Delgado Audubon Partnershipp for Economic Devel 513 West 207th Street New York, NY 10034 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/22/06 - Raphael Ketani. I called up Joe at PTC

COMMERCIAL BLDG (Continued) **S107489073**

(718) 624-4842. He said that this is an old case (spill happened 11/8/05) and that he will have Diana call me back. The tank is 2000 gal., contained #2 fuel oil, and is listed as in service. 7/5/06 - Raphael Ketani. I reached Diana. She gave me the phone number to Audubon (212) 544-2400. She said that they had a failed tank only test, abandoned the tank in place with slurry, had 2 275 gal. tanks installed in place, and other work. I called Audubon and was told to call Carmen Diaz after 12 noon. Ms. Diaz called me back to say that her contractor had sent her documents for the abandonmnent of the tank and other items. She asked which documents I needed. I told her I needed a revised PBS application for the 2000 gal. tank and any documents regarding cleanup and soil removal. She said she will call her vendor and get back to me. 7/11/06 - Raphael Ketani. I received a call from Nora Hines of the Audubon Partnership. She said that she was the assistant for Ms. Diaz. She said she had a bunch of papers that she could send me copies of regarding the work that was done at the site. Ms. Hines went through the list of documents, but none were the ones I needed. I checked the PBS record and the tank is still listed as in service. I told Ms. Hines that I needed a revised PBS application to show that the tank is abandoned and a report from PTC describing the abandonment work and the removal of any contamination. She said she will talk to Ms. Diaz on monday when she comes back and get the proper paperwork. 7/13/06 - Raphael Ketani. Ms. Hines FAXed me a copy of the current PBS record, and the failing tank test results (in the dry portion). I still need an official document regarding abandonment of the tank (and any cleanup that was needed) and a revised PBS application. 7/20/06 - Raphael Ketani. I spoke to Ms. Diaz regarding the revised PBS application and the official letter regarding the abandonment of the tank and the replacement. She said that the person who normally handles these documents is on vacation and will be back on monday. She said she will get me these documents. 7/25/06 - Raphael Ketani. Ms. Albertina Cabrera, assistant to Ms. Diaz, called up to ask what documents I needed from the Audubon Partnership. I told her that I needed a revised PBS and a letter describing the cleanup and the tank abandonment. She said she will send it. 8/15/06 - Raphael Ketani. Mark Salamack of PTC (718) 624-4842 called regarding the site. He said that he will submit to me a cover letter explaining what went on at the site, with soil test results, tanks test results, and a revised PBS application. 8/16/06 - Raphael Ketani. I received a FAX late yesterday from Mr. Salamack regarding the site. The FAX consisted of a letter to Sharif Rahman dated March 9, 2006 from PTC, soil analytical data, a site map, a copy of Mr. Rahman's tank test failure letter, and a copy of the closed record from the publicly accessible spill database. Mr. Rahman's spill case record number was 0507807 and was initiated due to a failed tank test for a 2000 gal. #2 fuel oil tank. His case was initiated on 9/29/05 and closed on 3/15/06. The case that I have, #0509515, also lists a 2000 gal. #2 fuel oil tank for the same site. This case was opened on 11/8/05 due to a tank test failure. The two cases appear to be exactly the same and are for the same site. I called up Mr. Salamack and he said that what they normally do is test the tank system first and then isolate the tank and test it alone. This would explain the two test dates. Based upon the documentation mentioned above that I received from Mr. Salamack, I am closing the spill case. "

Remarks: "System test was done in October 2005 and failed. Tank was then evacuated and the holes in the line were plugged. A tank test was

COMMERCIAL BLDG (Continued) **S107489073**

done today and it failed again. Now they are looking for a new tank and abandon the old one. (No release)"

Spiller Company:	001
Contact Name:	STEVE FRANK
DEC Memo:	"Liro Construction is installing a sewer line for NYC-DDC project - While digging a trench in front of an existing gas station (401 West 207th st) they found weathered petroleum contaminated soil. Sangesland asked Mr. Frank to confirm that the contaminated soil was NOT dumped back into the trench after the new line was installed. Mr. Frank will confirm and call back. Apparently there is already an open spill for the gas station at this location. 4/23/07 - Carlson - Received email from Steve Frank at Liro Engineering : The trench was excavated to install a new water line. Trench length is more than 100 ’ but the affected area is only about 10’ wide. The trench is about 10’ deep there. The contractor reported that nothing unusual was noticed in the soil when the trench was dug and that no liquid was in the trench when excavated. The substance in the trench was not noticed until after the big rainstorm. We inspected the fluid Weds. AM, collected a sample and called the hotline as it smelled and looked like a petroleum product to us. The trench is still open and the Contractor does not intend to backfill with the soil that was removed from the trench. Received laboratory results of sample. DEC Carlson performed site inspection. The sewer line is being installed at approximately 8 ft below grade. One portion about 10ft long is contains water and floating product. This portion is directly downgradient of the Hess station. The portion with water and product is greater than 8 ft deep, and will have a concrete box and manhole around it. The construction operator reported seeing soil staining when groundwater was encountered at approximately 8 ft below grade. Met with the engineer on site Attef Farag (phone 973-623-2999, email afarag@kseng.com). Met with Hess’s consultant, Jonathan Curran from Delta. Tim Fisher from Delta will be managing this incident. I indicated to Attef Farag that the water in the excavation will need to pumped out and properly disposed of. 05/14/07-Vought-Called Farag for update on trench installation and to notify him that spill will be closed and referred to Hess open spill at adjacent site. Vought

MERIT INWOOD GAS STATION (Continued) **S108636298**

left message for Farag to return call to DEC. 05/16/07-Vought-Called Farag for update as no call received and told to call 718-424-4157. Vought called Steve Frank (Liro) and left message to return call to DEC and will provide him with contact info for DEC Carlson and Hess (who will be managing remediation of source site).
06/21/07-Vought-Called Frank (718)321-3136x236 for update and left message that case will be closed and referred to open spill for source Hess Station located at 401W207th Street (spill #0201597). Spill closed by Vought."

Town:	New York City
Record Added Date:	06/30/2016
Record Updated Date:	05/22/2019
Update By:	JCGRATHW
Site Description:	Location: The Site is located at 3875 9th Avenue within the Inwood section of the Borough of Manhattan, New York City. The Site is 71,575 square feet (1.64 acres) and encompasses an entire city block (Block 2188, Lot 1). The property is bounded by 9th Avenue to the west, West 207th Street/University Heights Bridge approach to the south, West 208th Street to the north, and Exterior Street to the east. West 208th Street and Exterior Street are both mapped streets that were never constructed (i.e., paper streets). Beyond the Site boundary to the east and to the north, the land is a natural wooded riparian area bounded by the Harlem River and North Cove, respectively. Site Features: Currently, the entire Site is an asphalt-paved parking lot. There is a parking attendant trailer in the northwestern corner of the parking lot, and the parking lot is surrounded by a chain link fence. Current Zoning and Land Use: The Site was rezoned from M1-1 (light manufacturing) 2018 to R8/R9 (residential) which designates high-density residential districts. The nearest residential properties are located approximately 500 feet northwest of the Site. Surrounding land uses located immediately adjacent to the property include a New York City Transit rail yard and office building, a gas station, a parking facility and a food and beverage commercial store. Other land uses within the Site vicinity include: light commercial facilities, places of worship, multi-family housing, and a school. Past Use of the Site: The Site was historically used for auto repair and sales shop, auto wrecking, houseboat mooring, trailer parking, dumping and vacant land. Undocumented underground storage tanks may be present in the

207TH STREET/9TH AVENUE (Continued) **S118950501**

southwest section of the Site associated with the auto repair and auto wrecking shops that were present from 1930s to at least the 1950s. The eastern portion of the property was part of the Harlem River until filling activities occurred between 1951 and 1968. The fill material was of unknown origin. Site Geology and Hydrogeology: The Site is generally characterized by historic fill from ground surface to a depth of approximately 12 feet below ground surface (bgs) consisting of anthropogenic materials such as brick, concrete, ash, plastic and wood with intermittent sandy and/or gravely silt and silty sand layers. Silty clay, clay and vegetative matter (peat) was observed in several borings at depths ranging between 10.5 to 12.5 feet bgs, consistent with the historical river and associated wetlands. The geology in the area of the Site consists primarily of metamorphic rock and bedrock consists of Cambrian-Ordovician Inwood Marble (USGS). Groundwater in the vicinity of the Site flows in a northeasterly direction toward the Harlem River. However, based on gauging on-Site monitoring wells during the investigation, local groundwater flow at the site is towards the west. Groundwater elevation measured in the wells varied between approximately 5 to 11 feet bgs and is tidally influenced.

Env Problem:

This section summarizes the assessment of existing and potential future environmental impacts presented by the site. Environmental impacts may include existing and potential future exposure pathways to fish and wildlife receptors, wetlands, groundwater resources, and surface water. The RI report presents a detailed discussion of any existing and potential impacts from the site to fish and wildlife receptors. Soil and groundwater have been analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, poly-chlorinated biphenyls (PCBs), and metals. Groundwater has additionally been analyzed for per- and polyfluoroalkyl substances (PFAS). Soil vapor has been analyzed for VOCs. Soil: Twenty-seven soil samples were collected from thirteen soil boring locations at depths ranging from 0 to 12 feet below ground surface (ft-bgs). Petroleum related VOCs were detected in one soil sample at levels above Protection of Groundwater Soil Cleanup Objectives (SCOs) but below Restricted Residential SCOs. The primary contaminants found in site soils are SVOCs and metals typically found in historic fill, which is generally present in the top 10-12 feet bgs of the site. The SVOCs and metals were found at levels above the both the Restricted Residential SCOs and Protection of Groundwater SCOs. SVOCs were detected in soils down to 12 ft-bgs and include, but are not limited to, benzo(a)anthracene (max. 7.6 parts per million (ppm)), benzo(a)pyrene (max. 6.6 ppm), benzo(b)fluoranthene (max. 9.0 ppm), benzo(k)fluoranthene (max. 2.7 ppm), chrysene (max. 6.7 ppm), dibenzo(a,h)anthracene (max. 1.1 ppm), and indeno(1,2,3-cd)pyrene (max. 4.8 ppm). Metals were detected in soils down to 12 ft-bgs and include, but are not limited to, arsenic (max. 22.9 ppm), barium (max. 693 ppm), cadmium (max. 28.1 ppm), copper (max. 568 ppm), lead (max. 3,430 ppm), mercury (max. 2.72 ppm) and zinc (24,500 ppm). Chlorinated solvents were not detected in soil. Data does not indicate any off-site impacts in soil related to this site.
Groundwater: Five groundwater samples were collected and analyzed. VOCs were detected in groundwater above Ambient Water Quality Standards or Guidance Values, and include benzene up to 1.5 parts per billion (ppb) (standard 1 ppb), 1,2,4,5-tetramethylbenzene up to 22 ppb (standard 5 ppb), isopropylbenzene up to 9.5 ppb (standard 5 ppb), n-propylbenzene up to 20 ppb (standard 5 ppb), vinyl-chloride

207TH STREET/9TH AVENUE (Continued) **S118950501**

	up to 42 ppb (standard 2 ppb), and cis-1,2-dichloroethene up to 67 ppb (standard 5 ppb). SVOCs were also detected above standards and include benzo(a)anthracene up to 0.13 ppb (standard 0.002 ppb), benzo(a)pyrene up to 0.05 ppb, benzo(b)fluoranthene up to 0.07 ppb (standard 0.002 ppb), and chrysene up to 0.11 ppb (standard 0.002 ppb). Barium was detected up to 2,288 ppb (dissolved) (standard 1,000 ppb). Data does not indicate any off-site groundwater impacts related to this site. Soil Vapor: Nine soil vapor samples were initially collected and analyzed. Several VOCs were detected in soil vapor samples throughout of the site. Chlorinated VOCs detected at elevated levels were tetrachloroethene (PCE) (max. 2,220 micrograms per cubic meter (g/m3)), trichloroethene (TCE) (max. 5,970 g/m3), and cis-1,2-Dichloroethene (max. 245 g/m3). Based on these results, three additional soil vapor samples were collected off-site in the sidewalk area adjacent to the existing soil vapor point with the highest concentration of chlorinated VOCs. All three of the additional points detected chlorinated VOCs, primarily PCE (max. 1,500(g/m3)) and TCE (max. 408(g/m3)), but levels were below those of the highest on-site point.
Health Problem:	Since the site is fenced and gated, and covered with asphalt, people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on?site development. Additional Investigation is needed to fully evaluate the potential for soil vapor intrusion off-site.

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 3/5/2004 Spill switched from Mulqueen to Sangesland Sangesland spoke to Mark at PTC about closing out the spill. The building now has a new owner and there are no records of the cleanup from 1996. At that time there was a 7,500 gal tank which leaked. This tank was removed and a new 9,000 gal AST tank was built in this room. To close out this spill number, PTC was directed to drill several soil borings in the floor to look for contamination. If these borings are clean, then PTC will put together a report with results along with photos and a request for closure. 3/16/2004 Ray (PTC) asked if contamination was found in the borings would a new spill number be required? Sangesland said no just an update to this old spill number would be required. 4/26/2004 Sangesland reviewed a soil sampling report submitted by Action Remediation (Kevin O'Connor) 516-781-3000. Report shows photos of the new tank, 8 soil boring locations around the tank and VOC/SVOC results from 2 soil samples. All results came back below TAGM. Spill Closed"
Remarks:	"tank had a leak in it over the weekend and spill went into the

DER Facility ID:	259550
DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KRIMGOLD 2-275 GALLONS ASTs show missing fuel oil during building renovation. Bayside is not servicing this builing at this time. Unknown if oil was drained to sewer or stolen. AJS. 11/27/02. J.Krimgold spoke to Mary Langevin (718) 562-9427, the homeowner. The 4 story brownstone building has 2x275 gal tanks located in the basement. On November 25, 2002 oil was delivered to the building by Bayside Fuel, however, on November 27 she have found that the tanks are empty. She will contact her insurance co. and Milro (recommended by Bayside Fuel) to perform a cleanup. 11/29/02. J. Krimgold spoke to Mary Langevin. She informed that her insurance co. is not covering the cost of environmental cleanup. She will use her own funds to hire a contractor. She is currently negotiating with Miro as a potential contractor. 12/03/02. J. Krimgold spoke to Paul Basso (Milro). Milro went to the side and confirmed that tanks are empty, the buttom of one tank is porous and might developed a leak. There is a hall in the concrete floor in the vicinity of tanks, with evidence of oil in it. Paul B. also informed that a bedrock was found about one foot bellow the floor. Milro is planning to begin excavation on 12/5/02. 12/9/02. J. Krimgold @ site. Spoke to Steve Gordon (Trade Winds Env.) which was hired by the homeowner to do the job. 2x275 gal tanks, contaminated concrete and soil was removed from the tank room. However, oil probably escaped through a fractured bedrock, which was found under the thank room floor. Based on the amount of oil left in the tanks, it was assumed that about 200 gal was lost, and not recoverable at this time. It was agreed that Trade Winds will apply bio-solution into bedrock fractures in hope to contain and biodegrade the oil. Trade Winds should follow with a report upon completion of bio-injection. 04/07/03. Spoke to Steve Gordon he should submit a report in two- three days. 05/05/03. Krimgold. Mary Langevin - homeowner called DEC and requested a spill closure letter. I explained that the case will be closed only after DEC receipt of the remedial report and a Non-Haz. Manifest. 08/18/03. Trade-Winds

DEC Memo:	"5/2/08 Sent ttf letter to: Carmen Santiago The Dermot Company 1775 Broadway, Suite 510 New York, NY 10019 1/15/09. J.Krimgold reviewed the letter-report submitted by Approved Oil Company of Brooklyn and dated 12/13/08. According to this letter, the tank is aboveground and was tested to to satisfy private requirements. The cause of the failure was a suction line which was at some time back temporarily replaced by cooper tubing leaving a gap in the tank topping. After replacing cooper tubing with permanent pipe the tank system was retested and passed. NFA. J.K."

DEC Memo:	"7/13/15 TJD File review. Spill reassigned from AH Primary (Ahmed) to AH Secondary (Patel). 09/02/15-Hiralkumar Patel. alternate address: 176-182 Sherman Ave, 600-606 W 204th Street no other spills found. PBS #: 2-279234. as per PBS record, the site has one (1) 3,000 gal #2 oil AST in contact with soil, in-service, installed in Sep. 1994. Sherman Holding Corp. **property owner** c/o Eldorado Holding Corp. 227 East 56th Street, Suite 401 New York, NY 10022 Attn.: Martin Levine Ph. (212) 838-1255 (917) 533-1800 (C) email: msl@elhcorp.com Martin@redwoodreg.com 11:25 AM:- spoke with Rob at Riteway. they welded a precut on top of the tank and installed a new set of fill and vent lines. the tank system passed the test after that. the fill port is installed at different location and old fill line is still

APARTMENT BLDG (Continued) **S117853825**

in-place. Riteway did removed some contaminated materials from tank room floor. asked Rob to submit report including work details, test results, disposal manifest, site map and photographs. 11:36 AM:- left message for Janet Gerena, Mr. Levine's assistant. 10/29/15-Hiralkumar Patel. 9:40 AM:- received call from Rob. asked him to submit report. 12/04/15-Hiralkumar Patel. 2:57 PM:- sent email to Rob and asked him to submit report. email copied to Mr. Levine. 3:00 PM:- received email from Rob. he mentioned that due to some payment dispute with the owner, report was not sent. 3:13 PM:- spoke with Janet Gerena at Mr. Levine's office. informed her about open spill case and asked her to submit report. she asked to send correspondence to her attention. Janet Gerena Sherman Holding Corp. **property owner** Ph. (212) 838-1255 email: janet@redwoodreg.com 3:34 PM:- sent letter to Ms. Gerena requiring submission of tank test failure investigation report by the end of 01/22/2016. letter emailed to Ms. Gerena and Rob. 01/15/16-Hiralkumar Patel. 3:49 PM:- sent email to Ms. Gerena reminding that report is due on 01/22/16. 04/05/16-Hiralkumar Patel. DEC Mahat forwarded email from Dave from Riteway. Dave submitted a spill closure request report. as per the report, the tank system failed a tightness test due to faulty fill and vent lines. these faulty lines were replaced and total of 10 drums of debris removed from tank room. as per discussion with Rob on 09/02/15, a new fill and vent lines were installed at different location and the old fill line was still in-place. spoke with Dave at Riteway. informed him that the department requires investigation along the former faulty lines. 1:12 PM:- left message for Ms. Gerena. 1:32 PM:- received call from Pete from Riteway. he mentioned that besides faulty fill and vent lines, they had found old cut on tank top which had also contributed in initial system failure. informed Pete that this information is not included in the report. also informed him that the department requires investigation along the former faulty lines. he will talk to property manager. 3:08 PM:- received call from Pete. he spoke with Martin Levine, property owner and will send him proposal for investigation along former leaking lines. Pete provided Mr. Levine's cell number. 3:10 PM:- spoke with Mr. Levine. he confirmed discussion with Pete. based on available information, asked Mr. Levine to submit report for investigation along the former leaking lines by the end of 05/06/16. 05/06/16-Hiralkumar Patel. 11:18 AM:- left message for Mr. Levine and reminded him that the report for investigation along the former leaking lines is due today. 11:20 AM:- sent email to Mr. Levine reminding to submit report today. email copied to Rob Hill. 11:35 AM:- received email from Dave from Riteway including copy of work proposal dated 04/06/16. Dave mentioned that they have not received response from property owner yet. 1:10 PM:- received call from Mr. Levine. he mentioned that he signed the work proposal from Riteway immediately after receiving it. he will check with his assistant to confirm that signed proposal was sent back to Riteway. asked Mr. Levine to provide work plan and schedule by the end of today. 1:20 PM:- sent email to Mr. Levine and asked to submit a work plan with schedule (for field work and submission of report) by the end of today for review and approval. email copied to Dave. 1:41 PM:- sent email to Charisma and Mr. Levine stating that the department requires investigation along all failed portions of the tank system and not only the fill line. 2:07 PM:- received email from Charisma stating that the vent line was removed and replaced. she mentioned that the vent line was corroded in tank room by the foundation wall. 2:08 PM:- sent email to Charisma inquiring about any

APARTMENT BLDG (Continued) **S117853825**

release from faulty vent line. 2:31 PM:- received email from Charisma stating no release. 3:41 PM:- received email from Charisma including a site map with proposed boring locations along fill line. she mentioned that samples will be collected on 05/09/16. 05/10/16-Hiralkumar Patel. 1:38 PM:- spoke with Pete. he went to site yesterday to collect soil samples. out of six samples collected, petroleum odors were noted in five samples. he will discuss with Mr. Levine on next step (lab analysis of samples from fill line or initiating soil remediation) and will call back by tomorrow. 05/11/16-Hiralkumar Patel. 10:15 AM:- received email from Charisma including PID log for six soil samples. PID readings noted between 181.4 ppm and 581.9 ppm. 11:16 AM:- received call from Pete. he mentioned that soil samples were collected about 2-3 ft below surface. he will talk to Mr. Levine to discuss further work. 12:56 PM:- spoke with Mr. Levine and informed him about field data from Riteway. he will discuss with Riteway about next step. asked him to provide update (either complete delineation by borings or beginning of soil remediation via excavation) by tomorrow. 09/20/16-Hrialkumar Patel. 9:53 AM:- left message for Mr. Levine. 9:54 AM:- spoke with Pete. he mentioned that they just finished soil remediation and collecting endpoint samples today. he stated that the report will be submitted by 09/30/16. 10:06 AM:- received call from Mr. Levine. informed him about discussion with Pete. 11/01/16-Hiralkumar Patel. 10:15 AM:- received email from David including report. total of 22 drums of soil removed. three (3) endpoint soil samples were collected along the path of the buried portion of the old fill line at one (1) ft below the fill line. no contamination found in endpoint samples. case closed based on available information. 10:47 AM:- sent spill closure letter to Mr. Levine. letter emailed to Mr. Levine, Ms. Gerena and David."

Updated By:	SRHEIGEL
Site Description:	Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.
Env Problem:	Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and

2614 KINGSBRIDGE CORP (Continued) **U001836650**

removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.

Health Problem:	Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Control Type:	ENG
Date Record Added:	08/05/2008
Date Rec Updated:	10/31/2014
Updated By:	SRHEIGEL
Site Description:	Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered

2614 KINGSBRIDGE CORP (Continued) **U001836650**

bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.

Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.

Health Problem: Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Region: 2
Town: New York City
Acres: 0.5
Date Record Added: 11/30/2000
Date Record Updated: 07/09/2018
Updated By: JHOCONNE
Site Description: Location: The site is located in an urban area in Bronx County. The site encompasses about 0.5 acres and is located at 2614 and 2620 University Avenue, Bronx County, Block 3215, Lot 11 and Lot 14. Site Features: The new building (a home and hospital for the aged) has been constructed and consists of seven floors with 50 residential units of affordable housing for seniors. Current Zoning/Use: The current use is a home and hospital of senior citizens. Surrounding uses also include residential and commercial. Historical Use: The 2614 Kingsbridge Corporation had operated a parking garage at the site since it purchased the property in 1973. Historical information indicated that there were three 550-gallon gasoline underground storage tanks USTs located beneath the garage. Phase II investigation identified petroleum impacts to the soil and groundwater. Additional sampling identified a release of tetrachloroethene (PCE) believed to be from a former dry cleaner offsite at 2628 University Ave. and a gasoline release from the former underground storage tanks at 2614 University Avenue. Site Geology and Hydrogeology: The site is underlain by a thin veneer (less than 6-inches to 8-feet) of low permeability, unconsolidated overburden on top of dense crystalline bedrock. The overburden is primarily silt and clay (weathered bedrock) with pockets of fill and thin lenses of native fine sand and rock fragments. Groundwater is not present at all locations in the overburden. Groundwater has been measured to flow from University Avenue southeasterly toward Aqueduct Avenue at a gradient of approximately 0.03 ft/ft.
Env Problem: Nature and Extent of Contamination: Prior to Remediation - Contaminants of concern at the site included chlorinated volatile organic compounds (cVOCs) consisting of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene, as well as non-chlorinated petroleum VOCs such as benzene, ethyl-benzene, toluene, and xylene (BTEX). Impacted media included soil, soil gas, and groundwater. As a result of the remediation implemented at the site, concentrations of the contaminants of concern declined substantially. Post Remediation - The remedial measures commenced in 2000 and involved excavation and removal of the USTs and contaminated soils; installation and operation of a Soil Vapor Extraction (SVE) system to address any residual contamination; a Sub-slab Depressurization System (SSDS) beneath the new building; and groundwater monitoring to assess the effectiveness of these remedial actions. A total of 3,070 tons of contaminated soil was removed and disposed off-site. The SVE system operated continuously for two years. The semi-annual groundwater monitoring program was implemented in June 2001, following completion of the remedy. Engineering and Institutional Controls (ECs/ICs), including a Site Management Plan and deed restrictions, are in-place. Engineering controls consist of a composite cover system, vapor barrier and active sub-slab depressurization system. The remediation was completed in April 2007 with the approval of the Site Management Plan and issuance of the VCA Release letter.
Health Problem: Volatile organic compounds are present in the groundwater at this site, however, exposure via ingestion is not expected as the area is served by public water. The potential for soil vapor intrusion in the

2614 KINGSBRIDGE CORP (Continued) **U001836650**

on-site building has been mitigated by the installation and operation of a sub-slab depressurization system under the building.

Site Description: The site is located in a commercial/residential area of the Kingsbridge Heights section of the Bronx. The property is currently occupied by a two-story brick building which contains a laundromat. The site is bordered by a convenience store and apartment building on the north, by a formerly vacant lot (now under construction for Home/Hospital for the Aged), by a parking garage to the east, and by Universtity Avenue (a.k.a Martin Luther King, Jr. Boulevard) to the west. Before its use as a laundromat the property was previously utilized by a dry cleaner for an unknown length of time. Investigations conducted immediately south of the site (at 2614-2620 University Avenue) in 1997 identified tetracholoethylene (PCE) at high levels in the soil (200 ppm) and groundwater (110,000 ppb). Based on subsequent investigations, a PCE hot spot was identified. In 2000, excavation of the hot spot area was completed. Confirmatory samples collected from the excavation showed non-detectable levels of PCE and associated breakdown products. Levels of contamination in the groundwater dropped by several orders of magnitude since 1997. The remaining groundwater contamination will be addressed under the Operations, Maintenance and Monitoring Plan. See also site no. 203008, which determined there was no source of contamination on 2628 University Ave. The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites.
Env Problem: The operations contaminated the soil and groundwater on the adjacent property with tetracholoroethylene (PCE) and its associated breakdown products. Excavations addressed soil contamination, and most of the groundwater contamiation. The remaining groundwater contamination is being addressed under the Operations, Maintenance and Monitoring Plan. GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations
Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/12/2020

Version Date:	2013

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

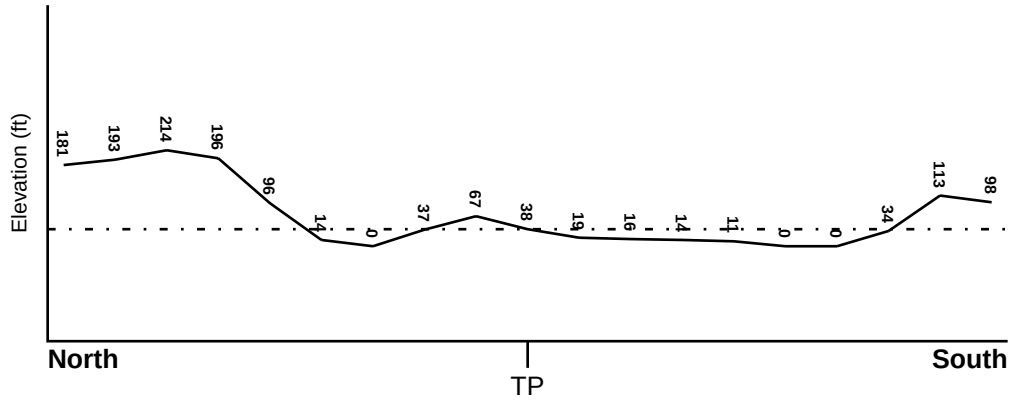
TOPOGRAPHIC INFORMATION

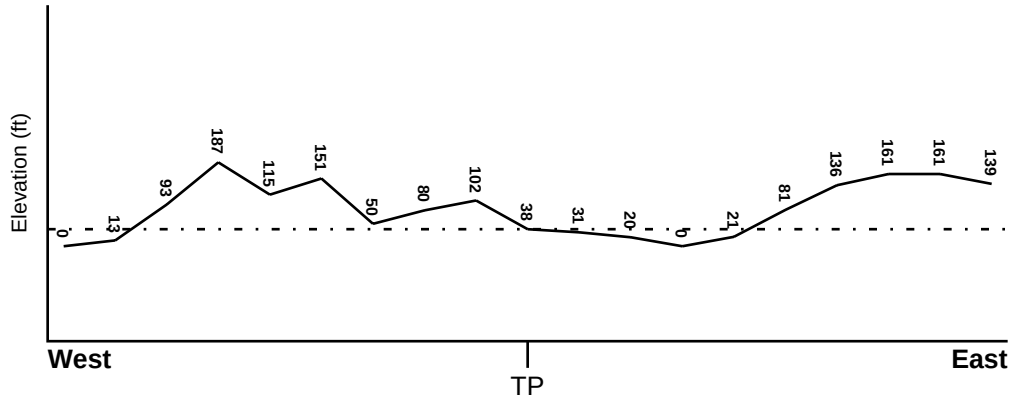
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 38 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
3604970081F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
3604970018F	FEMA FIRM Flood data
34003C0220G	FEMA FIRM Flood data

3604970082F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT		**GEOLOGIC AGE IDENTIFICATION**	
Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: unweathered bedrock

Surficial Soil Types: unweathered bedrock

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: gravelly - sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

CEQR Number	Project Name	Project Description
17DME007M	Inwood Rezoning Proposal	The City of New York, acting through the New York City (NYC) Economic Development Corporation, in collaboration with the NYC Department of Housing Preservation and Development, the NYC Department of Citywide Administrative Services, and the

		Department of Small Business Services (SBS), and the Department of Parks and Recreation (NYC Parks) is proposing a series of land use and other discretionary actions (the Proposed Actions) to implement recommendations of a comprehensive plan, the Inwood NYC 2017 Action Plan, to redevelop and revitalize an approximately 62-block area (240 acres) of the Inwood neighborhood of Manhattan, Community District 12. The Proposed Actions are intended to facilitate a development pattern that meets the long-term community vision for the neighborhood by extending the mixed-use character of Inwood east to the Harlem River and preserving the strong existing fabric in areas west of 10th Avenue. The area affected by this proposal is generally bounded by the Harlem River to the east, the Sherman Creek Inlet, Riverside Drive, Thayer and Dyckman streets to the south, Indian Road, Payson Avenue, Broadway and Staff Street to the west, and Broadway Bridge to the north. Within this area, over a 15-year period, the Proposed Actions are expected to result in an incremental increase over the future condition without the Proposed Project (the “No Action condition”) of approximately 4,348 dwelling units (DUs) (3,804,235 sf of residential floor area), including either 1,325 or 1,563 affordable units (depending on which Mandatory Inclusionary Housing (MIH) option is selected), 1,135,032 sf of commercial space, 472,685 sf of community facility space, and a net reduction of up to 216 accessory parking spaces (depending on which MIH option is selected), as well as a net reduction of 50,614 sf in industrial space (the “Proposed Project”). The total difference between the built square footage in the No-Action and With-Action conditions is approximately 5,361,338 sf on the projected development sites. The proposed actions would result in a net increment of 12,088 residents and 4,712 workers. The Proposed Project would require the following discretionary approvals: Zoning map amendments, Zoning text amendments, City Map Amendments, Disposition of Real Property, Acquisition of Real Property, Urban Development Action Area and Urban Development Action Area Project Designation, and a New York State Department of Environmental Conservation Tidal Wetlands Permit and a subdivision of City-owned waterfront lots.

Disclaimer and Notes:

The database contains records of CEQR projects, which were filed with the Mayor's Office of Environmental Coordination from January 1, 2005 to the present. While some older records are available in the database, records that cannot be found on CEQR Access should be requested from the agency that was responsible for preparing it (the “Lead Agency”). If any errors are found in the database, please notify the Mayor’s Office of Environmental Coordination (ceqraccess@cityhall.nyc.gov). The Mayor’s Office of Environmental Coordination makes no representation as to the accuracy of the information in the database or its suitability for any purpose, and disclaims any liability for errors that may be contained therein.

E and RD Property Search

Instructions: Please enter the Borough, Block, and Lot for the property you are interested in, and then hit search. If you do not know the Block and Lot of the property, please refer to NYC Department of City Planning's Geographic Online Address Translator (http://a030-goat.nyc.gov/goat/Default.aspx). Please also search the original lot configuration if the property has been merged, subdivided, or affected. To identify the original lots, please use the NYC Digital Tax Map (http://gis.nyc.gov/taxmap/) and the NYC Department of Buildings Building Information System (BIS) (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp).

Once you've identified the E-Designation and/or Restrictive Declaration information you are interested in, please consult the CEQR Documents section of OER's website (http://www.nyc.gov/html/oer/html/e-designation/ceqr-documents.shtml) and CEQR Access (https://a002-ceqraccess.nyc.gov/ceqr/) to identify Site-specific requirements. Please also visit the NYC Department of City Planning's (E) Designations - Frequently Asked Questions (http://www.nyc.gov/html/dcp/html/env_review/e_designation_faqs.shtml) page.

Disclaimer: The E and RD Property Search is a tool designed to assist with determining whether properties have Environmental Restrictions also known as E-Designations and Restrictive Declarations. The most updated list of properties with E-designations and Restrictive Declarations is maintained by the NYC Department of City Planning in Appendix C of the Zoning Resolution: E-Designations in Table 1 (http://www.nyc.gov/html/dcp/pdf/zone/appendixc_tab1.pdf) and Restrictive Declarations in Table 2 (http://www.nyc.gov/html/dcp/pdf/zone/appendixc_tab2.pdf).

Please note that Appendix C and the E/RD Search tool may not reflect all merged, subdivided or condo (e.g., 7501) lots. This may lead to temporarily incorrect entries regarding environmental restrictions in the NYC Department of Buildings Buildings Information System (http://a810-bisweb.nyc.gov/bisweb/bispi00.jsp). According to the Zoning Resolution (ZR 11-15), when lots with an environmental restriction

are merged, subdivided or affected, the resulting lots also carry the environmental restrictions. To confirm the results of this tool, we strongly recommend checking Appendix C Tables 1 and 2 (http://www.nyc.gov/html/dcp/pdf/zone/appendixc.pdf) to determine if the original lot configuration before the merging, subdivision, or condo conversion has an environmental restriction. Please see the instructions for additional information on identifying the original lot configuration. If you have questions about a property or you identify an error in either Appendix C of the Zoning Resolution or in the E and RD Property Search Tool, please contact OER.

New York City Office of Environmental Remediation 100 Gold Street, 2nd Floor New York, NY 10038. Our general phone number is: (212) 788-8841

FOIL Control #: 2020FR01698

The NYC Department of Health and Mental Hygiene (DOHMH) acknowledges receipt of your Freedom of Information Law request. It has been assigned the above-noted control number and has been forwarded to the following bureau/office for processing:

Environmental Health Services
Alfreda Torbert, e-mail: atorber1@health.nyc.gov
Sheba Taylor-Medina, e-mail: staylor2@health.nyc.gov

You should receive a response from the program/bureau within twenty(20) business days. Please note that as of January 1, 2019, the Department will be charging the statutorily allowable fee of 25¢ per page for FOIL responses. You will be advised by the program/bureau of the fee that is due and, upon receipt of your payment by check or money order, the copies will be forwarded to you.
All inquiries about the status of your request should be made with the program/bureau noted above.

Thank you,

Subject: FOIL Request Confirmation from Open FOIL NY

Thank you for submitting your FOIL request through Open FOIL NY.

Here is your Open FOIL NY confirmation information for future reference:

SANDVE_DEC_20200922133903285

SANDVE_DOH_20200922133903285

INFORMATION SUBMITTED:

Records Requested From	Department of Environmental Conservation Department of Health
Short Title	5055 Broadway, New York, NY
Description	Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 5055 Broadway, New York, NY (Block 2243, Lot 255).
Uploaded Files	1-Site Location.pdf
FOIL Response Format	Email
If fees apply, please contact me if costs will be greater than	$

Your FOIL request has been forwarded to the organization(s) you selected, and the respective Records Access Officer will contact you directly for further processing of your request. Please allow up to five business days for such communication(s). For your convenience, here is additional contact information:

In light of New York State's reduction in workforce as part of the ongoing response to the COVID-19 pandemic, there may be delays in response to FOIL requests. Thank you for your patience during this extraordinary time.

For your convenience, here is additional contact information:

Subject: FOIL Request :: W072918-092220

Dear Ashley:

Thank you for your Freedom of Information Law (FOIL) request. Your request has been received and is being processed. Your request was received in this office on 9/22/2020 and given the reference number FOIL #W072918-092220 for tracking purposes. You may expect the Department's response to your request no later than **10/21/2020**.

Record Requested: **5055 Broadway, New York, NY Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 5055 Broadway, New York, NY (Block 2243, Lot 255).**

You can monitor the progress of your request at the link below and you'll receive an email when your request has been completed. Again, thank you for using the FOIL Center.

Please note that due to the COVID-19 outbreak, DEC may be experiencing staffing shortages and some records custodians may be working remotely. This may result in a delayed response time to your FOIL request. We appreciate your understanding and cooperation.

RE: PUBLIC RECORDS REQUEST of 9/22/2020, Reference # W072918-092220

Date: 09/23/2020

Dear Ashley Sandve,

I write in response to your Freedom of Information Law (FOIL) request seeking:

> *5055 Broadway, New York, NY*
> *Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, groundwater sampling, asbestos abatement, radon, hazardous materials and any other documents that your department may have regarding the property at 5055 Broadway, New York, NY (Block 2243, Lot 255).*

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. If I can be of further assistance, please contact me at (718) 482-4912 and reference FOIL #W072918-092220, or simply reply to this email. Thank you.

Sincerely,

Region 2 FOIL Coordinator

FOIL #: 20-09-261
RE: 5055 Broadway, New York, NY

Dear Ms. Sandve:

This will acknowledge receipt of your request for records under the Freedom of Information Law (FOIL), received by this office on September 22, 2020.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

Rosemarie Hewig, Esq.
Records Access Officer

Consultation Code: 05E1LI00-2020-SLI-0755
Event Code: 05E1LI00-2020-E-01759
Project Name: 5055 Broadway

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Long Island Ecological Services Field Office
340 Smith Road
Shirley, NY 11967-2258
(631) 286-0485

Event Code: 05E1LI00-2020-E-01759

Project Name: 5055 Broadway

Project Type: ** OTHER **

Project Description: New York, NY

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/place/40.8702637509396N73.91584240278033W

Counties: New York, NY

Endangered Species Act Species

There is a total of 0 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

The New York Natural Heritage Program

Home

Project Screening Request Form

The New York Natural Heritage Program will review locations of proposed projects, activities, and SEQR-subject actions for any records of rare species or significant natural communities in our database. We will report records which are in the vicinity of the location and for which impacts from the project or action may need to be assessed.

To request a review of a specific project site, please complete and submit this form.
We recommend that you submit a map of your project site as a .pdf file as part of this form.
If you do not have a map in .pdf format, you must provide at least two of the following: tax parcel number, latitude/longitude (if available, coordinates are very helpful), and street address.

Do not use this form if your project
• is more than 1000 acres in size
• is a linear project such as a transmission line or pipeline more than 2 miles in length
• is a wind farm project of more than two turbines
• includes parts of three or more counties.
For these types of projects, please send a request and map or GIS file of your project site directly to the New York Natural Heritage Program.

If you have any questions or need further information, please contact the New York Natural Heritage Program at NaturalHeritage@dec.ny.gov.

Project Summary *

We are doing a Phase I for the site located at 5055 Broadway, New York, NY. In order to complete the Phase I, we will need to know whether the any rare animals or plants and significant natural communities are located in the vicinity of the above mentioned property, and any additional information pertaining to those rare animal and plants and significant natural communities.

Briefly describe the proposed project or activity, including why you need information (e.g., SEQR review, environmental assessment for permit, planning board approval, management plan). If the proposed action is undergoing SEQR review, also include the name of the lead agency. Example: "A 25 unit residential single-family housing development is proposed for an 150-acre parcel. The development will occupy 100 acres; the remaining 50 acres will be left undisturbed. We have been contracted to review the environmental impacts of the project and prepare the Environmental Assessment Form under SEQR, to be reviewed by the Town of Red Hook acting as Lead Agency. In order to complete the EAF, we will need to know whether the proposed project would likely impact any ecologically significant areas or rare species of plants or animals."

Current Land Use

Parking Lot

Briefly describe the current land use and habitats at the project site (e.g., wooded, agricultural, developed commercial). Example: "The site is currently undeveloped, and mostly wooded with some former agricultural fields."

PDF Map 1-Site Location.pdf Remove

Please attach one or two maps of your project site as .pdf files. The map should include names of nearby roads and other landmarks, and the boundary of the proposed project site should be clearly labeled, marked or highlighted. You may submit more than one map if they show the project site at different scales or with different backgrounds. Please do not send architectural or engineering drawings or photographs. If you are not submitting a map, you must complete at least two of the following: Tax parcel number, Latitude/Longitude, and Street Address of Project Site.

PDF Map 2 Choose File No file chosen Upload

Same directions as above.

Tax parcel number

Block 2243, Lot 255 If you are submitting a map, this field is optional.

If you are submitting a map, the following two fields are optional, but very helpful.

Latitude

Longitude

Street Address of Project

5505 Broadway, New York, NY

If you are submitting a map, this field is optional.

Project Notes

Any other information regarding this request not addressed in the previous fields.

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

New York County, New York

Map of project location

Local office

(631) 286-4003

340 Smith Road
Shirley, NY 11967-2258

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

THERE ARE NO ENDANGERED SPECIES EXPECTED TO OCCUR AT THIS LOCATION.

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS

NOT FOR CONSULTATION

ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)

Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Oct 15 to Aug 31
Black Skimmer Rynchops niger This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/5234	Breeds May 20 to Sep 15
Black-billed Cuckoo Coccyzus erythropthalmus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9399	Breeds May 15 to Oct 10
Bobolink Dolichonyx oryzivorus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 20 to Jul 31
Canada Warbler Cardellina canadensis This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 20 to Aug 10
Cerulean Warbler Dendroica cerulea This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/2974	Breeds Apr 29 to Jul 20
Golden Eagle Aquila chrysaetos This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds elsewhere
Lesser Yellowlegs Tringa flavipes This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere

NOT FOR CONSULTATION

Long-eared Owl asio otus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3631	Breeds elsewhere
Nelson's Sparrow Ammodramus nelsoni This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 15 to Sep 5
Prairie Warbler Dendroica discolor This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Prothonotary Warbler Protonotaria citrea This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 1 to Jul 31
Red-headed Woodpecker Melanerpes erythrocephalus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Red-throated Loon Gavia stellata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Rusty Blackbird Euphagus carolinus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Seaside Sparrow Ammodramus maritimus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Aug 20
Semipalmated Sandpiper Calidris pusilla This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Short-billed Dowitcher Limnodromus griseus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Willet Tringa semipalmata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 20 to Aug 5

NOT FOR CONSULTATION

Wood Thrush *Hylocichla mustelina* Breeds May 10 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

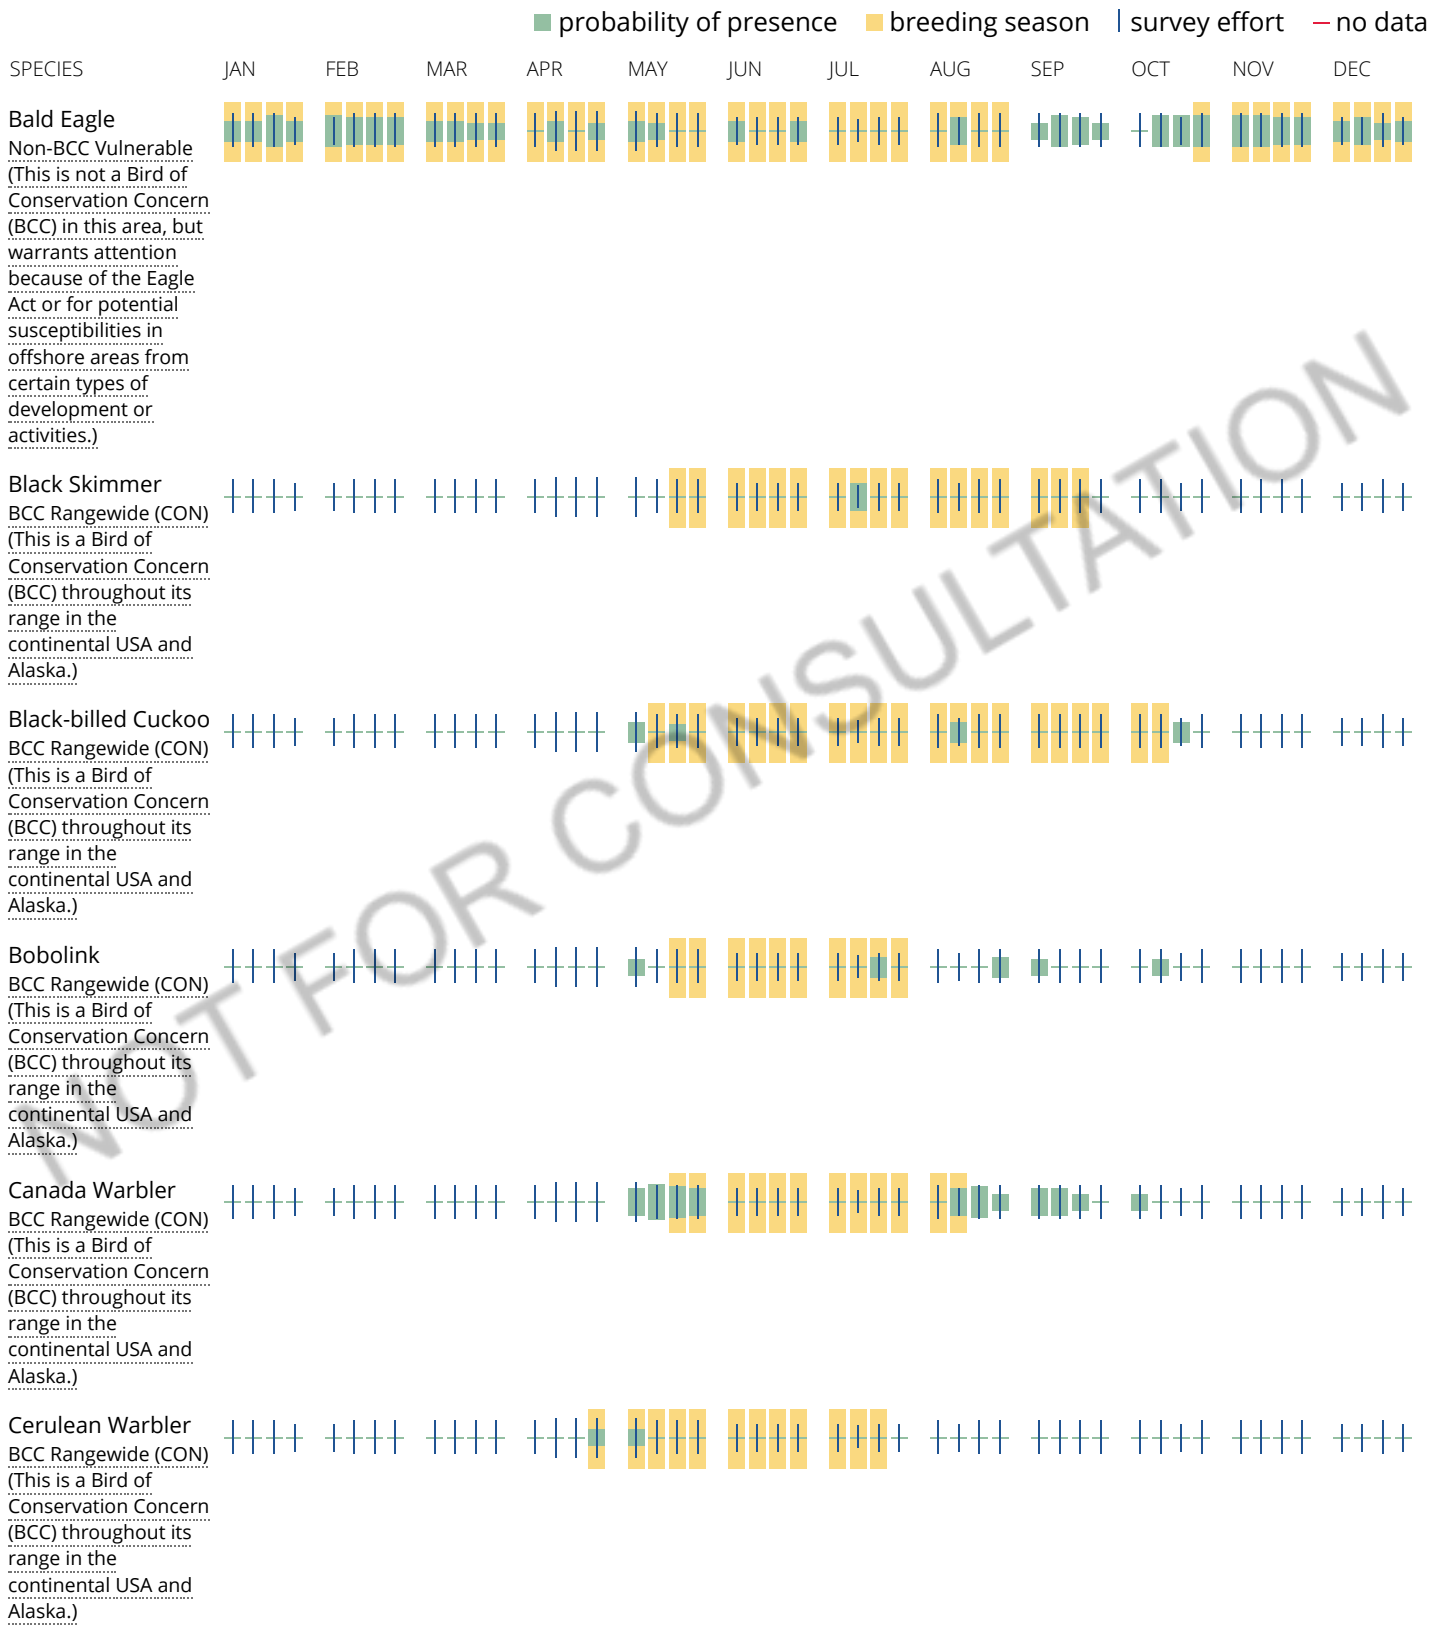
To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

NOT FOR CONSULTATION

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



NOT FOR CONSULTATION

Golden Eagle
Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)

Lesser Yellowlegs
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Long-eared Owl
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Nelson's Sparrow
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Prairie Warbler
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Prothonotary Warbler

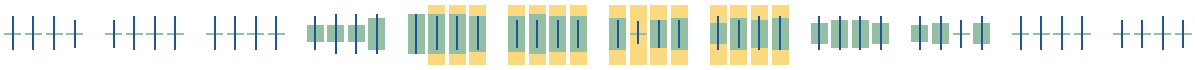
Wood Thrush
BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be

breeding in your project area, view the Probability of Presence Summary. Additional measures and/or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

NOT FOR CONSULTATION

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Re: Geotechnical Engineering Report
5055 Broadway
New York, NY 10034

Dear Mr. Torkin,

GZA GeoEnvironmental of New York (GZA) is pleased to submit this geotechnical engineering report to 5055 Broadway LLC (Client) for the proposed 5055 Broadway, New York, NY project. Our objectives were to evaluate the subsurface conditions at the site and provide geotechnical engineering design and construction recommendations for the proposed development.

SCOPE OF SERVICES

Our services were performed in accordance with our proposal 41.P000152.22 R1, dated May 04, 2021, fully executed on May 04, 2021, and are subject to the terms of our proposal and the limitations presented in Appendix A.

Our scope of services included:

- A subsurface exploration program consisting of three test borings
- Geotechnical laboratory testing
- Research of readily available subsurface data in the project vicinity
- Geotechnical engineering analyses of the subsurface conditions encountered at the site
- This geotechnical engineering report which summarizes our observations and engineering recommendations for the project

SITE AND PROJECT BACKGROUND

The site is located at 5055 Broadway, New York, NY, bordered by a 6-story residential building on rock slope crest to the northwest, a 6-story residential building to the northeast, sidewalk of Broadway to the southeast and a one-story commercial building to the southwest. A Site Location Plan is included as Figure 1. The rock outcrop in the northwest portion of the site encroaches about 12 to 28 feet into the site. The site measures about 100 feet by 75 feet in plan, occupying a footprint area of about 7,500 square feet (SF), and has a vacant asphalt paved surface. The elevation of Broadway sidewalk fronting the site is at approximately El. 33 feet. Elevations in this report are in feet and are referenced to the North American Vertical Datum of 1988 (NAVD 88), unless otherwise noted.

Our understanding of the project is based on the preliminary/conceptual Architectural plans prepared by Fischer + Makooi Architects, PLLC, dated November 2020 provided in your April 6, 2021 email. We understand the proposed construction consists of a 10-story mixed-use building with a partial cellar occupying a footprint of approximately 5,600 SF.

The geologic stratigraphy at the Site consists of miscellaneous urban fill overlying natural sands, followed by weathered rock overlying Inwood Marble of early Cambrian to early Ordovician age. The natural soils themselves have been used as Fill, likely placed during prior grading or development activities. The soils typically consist of a mixture of sand, little to trace silt, and trace gravel.

A review of the Rock Data Map of Manhattan indicates that top of bedrock varies generally in depth between about 15 to 20 feet below the sidewalk elevation. Our experience on other projects within this area is consistent with these findings.

SUBSURFACE EXPLORATION PROGRAM

We conducted a subsurface exploration and laboratory testing program to evaluate the subsurface materials underlying the project site. GZA's subsurface exploration program consisted of a geophysical survey of the exploration locations, test borings, and geotechnical laboratory testing of selected soil and rock samples. Figure 2 shows the approximate boring locations. The boring logs and log key are included in Appendix B and rock core photo logs are included in Appendix C. Geotechnical laboratory test results are included in Appendix D.

Geophysical Survey

Prior to drilling the borings at the Site, Ground Penetrating Radar System (GPRS) LLC, under subcontract to GZA, performed a geophysical survey of each proposed exploration location. The geophysical survey was performed on May 21, 2021. The geophysical survey utilized ground penetrating radar, electromagnetic surveys, and a magnetic survey to locate and identify detectable subsurface anomalies, buried structures, and utilities at the proposed exploration locations. Test boring locations were offset as needed to avoid observed below grade conflicts.

Test Borings

Three test borings (GZ-01 to GZ-03) were advanced by Craig Geotechnical Drilling, of Mays Landing, New Jersey, under the observation of our field representative on May 21, 2021. The borings were advanced in the asphalt paved parking lot using a truck-mounted drilling rig with mud rotary drilling techniques and metal casing as needed to stabilize the borehole. The borings extended to depths of approximately 14 to 35 feet below the ground surface.

Soil samples were visually classified in the field by our representative in accordance with the Modified Burmister Soil Classification System. Standard Penetration Tests (SPT) were performed continuously within the top 12 feet of the borings and at five-foot intervals thereafter in general accordance with ASTM D-1586. A 140-pound automatic hammer was used to drive the split-spoon sampler through a distance of 24-inches for each SPT sample. The number of blows required to drive the split-spoon sampler from 6 to 18-inches is known as the N-value, a commonly used indicator of soil density and consistency. The hammer blows and SPT N-values at various depths are recorded on the boring logs as well as a modified Burmister description and the Class of Materials from the New York City Building Code (NYCBC) for each stratum.

Rock coring was performed in each of the test borings using a double-tube rock core barrel. Recovered rock cores were described using a modified International Society for Rock Mechanics (ISRM) System. The rock description, the rock core sample recovery, and the Rock Quality Designations (RQD) for each core run are recorded on the test boring logs. The rock descriptions, recovery values, and RQD values provide a qualitative understanding of the physical and engineering properties of the rock. The RQD for each run is calculated as the summation of intact core pieces 4-inches or more in length divided by the total length of the core run. Material classes have been provided for the rock samples in accordance with the NYCBC. Upon completion, the borings were backfilled with soil cuttings and patched with concrete at surface.

Laboratory Testing Program

Selected soil and rock core samples were sent to Thielsch Engineering, LLC of Cranston, Rhode Island for geotechnical testing. The laboratory testing program included two Grain Size Analyses, Sieve (ASTM D6913) and two Unconfined Compressive Strength of

Rock tests (ASTM D7012). Laboratory test results are included in Appendix D and incorporated in the boring logs and subsurface stratigraphy where applicable.

SUBSURFACE CONDITIONS

Based on the results of our subsurface exploration program, the subsurface conditions at the site generally consist of the following, in order of increasing depth:

- SURFACE COVER MATERIALS – An approximately 4-inch thick asphalt pavement was encountered at each test boring location.

- FILL (NYCBC Class 7) – The Fill stratum was encountered in two borings (GZ-02 and GZ-03) below the asphalt pavement to a depth of approximately 2.5 feet below grade. This stratum generally consisted of brown to dark gray, fine to medium sand, little to trace silt, trace gravel, occasional brick and asphalt fragments. The Fill was medium dense with measured SPT N-values of 18 and 19 blows per foot (bpf).

- SAND (NYCBC Class 6/3b/3a) – A Sand stratum was encountered beneath the surface cover or fill stratum in each boring and extended to top of bedrock. The stratum generally consisted of loose to very dense, brown, fine to medium sand, little to trace amount of gravel, and little to trace amount of silt. Based on GZ-03, NYCBC 6 loose sand was encountered from about 6 to 17 feet below ground surface in the Upper Sand Stratum, and NYCBC 3a dense sand was encountered at about 20 feet below ground surface in the Lower Sand Stratum. Measured SPT N-values ranged between 6 bpf and spoon refusal in this stratum, with an average of about approximately 15 bpf, excluding the refusal measurements. Grain size distribution testing on two samples collected from this stratum indicated gravel content ranging from 0 to 5.7 percent, sand content ranging from 8.7 to 66.5 percent, and fines content ranging from 19.4 to 24.8 percent. Typical USCS symbols for this stratum is SM.

- BEDROCK (NYCBC Class 1c/1d) – Rock coring was performed for a length of approximately 10 feet when split-spoon sampler and roller bit refusal were encountered in each of the boring locations. The rock generally consisted of hard to moderately hard, fresh to slightly weathered, gray-white, fine to coarse grained, Inwood Marble, with horizontal to sub-horizontal, closely to moderately closely spaced fractures. Measured recovery values for the rock cores varied between 80 and 100 percent, and calculated RQD values varied between 68 and 83 percent. The approximate depth and elevation to the top of bedrock is displayed in Table A below.

Table A - Approximate Top of Bedrock Depth and Elevation (NAVD88)

Boring	Approximate Ground Surface Elevation (ft)	Approximate Depth of top of Rock (ft)	Approximate Elevation of top of Rock (ft)
GZ-01	40	4	36
GZ-02	36.3	25	11.3
GZ-03	39	6	33

- GROUNDWATER – Groundwater was not encountered in the borings; however, it is anticipated that perched or trapped water may be present along the top of rock. It should be noted that changes in groundwater depths will occur due to variations in seasonal influences, tidal fluctuations, precipitation amounts, local pumping, utility leakage, and other factors different from those existing at the time the observations were made.

GEOTECHNICAL RECOMMENDATIONS

Foundation Recommendations

Based on the subsurface conditions observed during the subsurface exploration program, spread, strip, or mat foundations bearing on bedrock or sand stratum are recommended to support the proposed mixed use 10-story building.

We recommend that the following properties of bedrock be used for design purposes for shallow foundation bearing on bedrock:

Rock Stratum	Total Unit Weight	Friction Angle	Allowable Bearing Capacity
Bedrock (NYCBC Class 1c/1d)	145 pcf	NA	8 tsf

Note: pcf = pounds per cubic foot; tsf = tons per square foot; NA = Not Applicable

Where shallow foundations will bear on the sand stratum, the following properties of sand are recommended for design purposes:

Stratum	Total Unit Weight	Friction Angle	Allowable Bearing Capacity
Dense Sand Stratum (NYCBC 3a)	125 pcf	34^0	3 tsf

Foundation should not bear on fill or loose sand stratum. Foundations should be designed in accordance with the latest NYCBC utilizing the design parameters provided above, assuming that the subgrade is prepared as described later in this report.

Where bearing elevations between adjacent footings vary, the edges of the footings should be installed at such depth so as to avoid the footing influence area of the adjacent footing. The footing influence area is defined as the area within the planes made by a 45-degree angle (1H:1V) extending outward and downward from each footing bottom edge. This may require footings to be installed at a lower elevation.

We have not received any information regarding the proposed building loads. If the building foundation is to take large lateral loads (due to seismic or wind forces), deep foundation options such as drilled shafts socketed into bedrock may need to be considered.

It is our understanding that cellar construction will require excavation of about 15 feet in depth below existing grade which will require rock removal. The cost and risk to the adjacent structures from rock removal should be carefully considered.

Foundation Settlement

For foundations designed and constructed in accordance with the recommendations presented in this report, the expected settlement of spread footings or structural mats is less than ¼ inch for new footings bearing on sand, and less than 1/8 inch for footings bearing on bedrock, most of which will occur immediately upon load application during construction. Differential settlement between the footings on sand stratum and bedrock is anticipated to be 1/8 to ¼ inch. We recommend that the anticipated differential settlement to be incorporated into the design by the project structural engineer.

Cellar Floor Slab

Concrete slabs-on-grade should be designed using a unit modulus of subgrade reaction as shown in table below.

Slab Bearing Material	Modulus of Subgrade Reaction (pci)
Fill	150
Sand or Compacted Sand-Gravel	200
Decomposed Rock or Compacted Sand-Gravel Over Rock	500
Bedrock (Class 1c and higher)	2,000

The unit modulus of subgrade reaction value provided herein must be adjusted from a 1-foot square area to the slab area by the project structural engineer.

Rock Slope Stabilization

The rock slope in the rear of the site to the northwest encroaches from about 12 to 28 feet into the site. We understand that no construction work is proposed for the rock slope. Additional exploration may be required to collect data to review the rock slope stability and rock slope stabilization approaches if construction work will be proposed for the rock slope. Proposal for additional geotechnical engineering services to evaluate rock slope stability can be provided upon request.

Seismic Design Parameters

Based on the subsurface conditions encountered in the subsurface exploration, we recommend Seismic Site Class D for calculation of seismic loading and the corresponding response spectrum as described in Section 1613.5.2 of the NYCBC.

Lateral Earth Pressures

New permanent cellar walls with unbalanced loading should be designed to resist lateral earth pressures due to soil weight, bedrock loading, neighboring foundation loads, and other surcharges. An equivalent fluid unit weight should be used for the design of all permanent (rigid, fixed) walls. An additional uniform horizontal pressure should be used for design of permanent walls where surcharges are anticipated due to pedestrian traffic, foundations, etc. This additional uniform horizontal pressure should be equal to half of the anticipated vertical surcharge load and as defined in the NYCBC.

The subject of lateral pressure from vertical rock excavation in fractured rock mass is difficult to quantify. In order to reduce possible bedrock loading on the new foundations the support of excavation design for rock excavation greater than 5 feet will require the use of angled rock bolts. Permanent anchors would need to consider corrosion protection and, if on neighbor property, permission. Above the 5 foot excavation level and at depths below where rock bolts are utilized, we recommended lateral earth design pressure of 500 pounds per square foot (psf).

Groundwater Control

Groundwater was not observed within the test boring, but it is likely that it is perched on top of bedrock. It is our recommendation that the cellar be waterproofed and include under slab drains if the cellar is to be utilized for any other purpose than mechanical equipment. The Contractor should be prepared to evacuate water that may enter excavations from the soil layers, fractures in the rock or due to general seepage or other causes such as rainwater runoff to allow construction to proceed.

The waterproofing manufacturer should perform laboratory testing to confirm the compatibility of the waterproofing material and submit a certificate of compliance to the Owner. The contractor installing the waterproofing shall be approved by the waterproofing manufacturer. Waterproofing will need to be carefully planned and installed in sections and in conjunction with the foundation operations.

CONSTRUCTION RECOMMENDATIONS

Subgrade Preparation

For new footings and strap beams, loose and weathered rock should be excavated to expose the bedrock surface across the location of the proposed new foundations. To expose NYCBC Class 1c or better rock, any disturbed or loose rock fragments must be removed from the final subgrade. Once the subgrade has been prepared and special inspection has been completed, a lean concrete ($f'c \leq 2000$ psi) leveling course shall be placed to protect from weathering and provide a support for formwork and reinforcing steel.

We recommend that any Fill be removed and that a slab-on-grade base course consisting of at least 6 inches of Sand-Gravel, be utilized. Sand-Gravel shall conform to the following gradation requirements as specified in Table 1. The slab base course subgrade should be adequately compacted using several passes of a vibratory smooth-drum roller and should be free of debris, standing water, and ice. The slab and foundation subgrades should be protected in their as-approved condition until concrete pour.

Re-use of Existing Material

If on-site excavated material meets the requirements of Table 1, it may be re-used as fill material. Based on the results of the laboratory testing, we anticipate that excavated on-site soils can be reused as granular/structural fill provided they are culled of organics, boulders, construction debris and other deleterious materials and can be adequately compacted. Fill should not contain particles greater than 3 inches.

General Excavation

The Owner and the Contractor should make themselves aware of and become familiar with applicable local, state, and federal safety regulations, including the current Occupational Safety and Health Administration (OSHA) Excavation and Trench Safety Standards. Construction site safety generally is the sole responsibility of the Contractor, who shall also be solely responsible for the means, methods, and sequencing of construction operations. We are providing this information solely as a service to our client. Under no circumstances should the information provided herein be interpreted to mean that GZA is assuming responsibility for construction site safety or the Contractor's activities, such responsibility is not being implied and shall not be inferred.

To construct the cellar, a simple slope excavation (1.0 horizontal to 1.0 vertical) is likely to be practical in the southwest and northwest sides of the Site, and a soldier pile and lagging system will needed for southeast side of site along sidewalk of Broadway. Underpinning may be needed on northeast side of the site if the excavation is lower than adjacent building foundations. The resulting area of the slope will need to be backfilled after completion of excavation and/or construction. It is recommended that all vehicles and soil piles be kept a minimum lateral distance from the crest of slopes equal to no less than the slope height. Exposed slope faces should also be protected against the elements.

Rock Excavation

Due to the shallow depth to bedrock, rock excavation consisting of removal of decomposed rock and bedrock will be required for lowering of the grade for construction of the proposed cellar, building into the rear yard, and elevator construction. The rock excavation may entail mechanical excavation by chipping with hydraulic hoe-ram/breakers, line drilling, splitting, and ripping; rock blasting is not anticipated to be required. The method of excavation is typically a function of the Contractor's ability, preference, and cost analysis.

For new footings, strap beams, and wall foundations, Fill, Sand and Decomposed Rock stratum should be excavated to expose the bedrock surface (Class 1c or better) across the location of the proposed new foundations. To expose 8 tsf bedrock, any disturbed or loose rock fragments must be removed from the final subgrade; any rock surface that does not "ring" when struck with a metal hammer or bar must be removed. Once the subgrade has been prepared and special inspection has been completed, a lean concrete ($f'c \leq 2000$ psi) leveling course may be placed to protect from weathering and provide a support for formwork and reinforcing steel.

Bedrock excavation will entail mechanical excavation by means of mechanical chipping and the use of chemical splitting, in which small diameter holes are drilled at fixed regular intervals in the rock mass and force, either through hydraulic or chemical expansion means, is applied in one direction in each hole to create a controlled break. The controlled break must be directed away from adjacent structures by using relief holes within the exposed bedrock within the footprint of the proposed building. Pneumatic breakage and explosive means would be effective in excavating the rock, but may not be feasible due to permitting, noise issues, and potential effects on adjacent buildings. Mechanical chipping will impart a significant amount of low frequency vibrations into the ground which will be transmitted to nearby. The imparted energy will be attenuated with increasing distance.

Line drilling and channel drilling should be used to reduce rock damage and overbreak outside of the planned excavation limits and would also reduce the propagation of vibrations to adjacent structures and utilities. Line drilling, which consists of drilled holes with a maximum center-to-center spacing of two times the hole diameter should be provided along all excavation perimeters. Channel drilling, which consists of drilled holes with a maximum center-to-center spacing equal to the hole diameter, which effectively creates a channel or slot in the bedrock, should be performed along the part of the site that's abutting the foundations of the adjacent buildings or if further vibration reduction is required. Line drilling and channel drilling should be performed in lifts no greater than 8 feet, thus two or more lifts of drilling.

Rock stabilization may be required as the excavation progresses in depth and unfavorable joints or blocks are identified to reduce the potential for rock outbreaks and loss of support to existing and adjacent foundations/structures. Local rock instability could result in loss of foundation support during excavation. The underpinning and foundation design should consider the cost premium associated with the rock removal in an urban and confined space. Rock bolts should be installed perpendicular to slip joints. Rock bolts will need to be tensioned and locked off before excavation to lower elevations.

Additional Exploration

Our exploration program was limited to test borings and we have not performed test pit to adequately observe the depth or configuration or elevations of the neighboring footings. Test pits to explore the foundations of neighboring footings are recommended to collect these measurements. We would need to understand the arrangement of the adjacent foundation for use in the design of support of excavation system. This information is important to the development of construction drawings and limiting possible changes in field conditions based on assumptions.

Documentation and Monitoring of Adjacent Structures

The NYCBC requires the documentation of the conditions of adjacent structures prior to excavation or construction and monitoring of structures during excavation and construction if excavation depths will exceed five feet or if excavation depths will exceed the depths of footings of adjacent buildings. A Professional Engineer licensed in the State of New York must develop a monitoring plan to comply with the requirements of NYCBC Section 3309.16.

The pre-construction condition of adjacent buildings should be documented. This includes photographing and measuring existing conditions and apparent defects to provide a quantifiable baseline record prior to construction. Crack gages, vibration monitors and/or survey points should be installed at applicable locations, and baseline values should be recorded. Crack readings, vibration measurements, and deflections should be measured throughout excavation and construction. This work must be performed on behalf of the owner, not the contractor.

Special Inspection Requirements

We recommend that you retain GZA to observe earthwork, SOE, line drilling, rock bolt installation, and subgrade preparation.

- Subgrade Inspection (BC 1704.7.1)
- Subsurface Conditions – Fill Placement & In-Place Density (BC 1704.7.2 and 1704.7.3)
- Excavation—Sheeting, Shoring and Bracing (BC 1704.20.2)
- Underpinning (1704.20.3, 1814)

This includes the review of plans prior to bidding and site visits at the time of construction. These services are intended to reduce unexpected circumstances throughout the bidding and construction process and to expedite resolution if unanticipated conditions are encountered or if questions arise.

RECOMMENDED ADDITIONAL SERVICES

Because of our familiarity with the proposed construction and the subsurface conditions at the project Site, we recommend that we should be retained to perform the following additional services:

- SOE/Underpinning design calculations and drawings
- Pre-construction condition surveys prior to the beginning of construction
- Instrumentation monitoring of nearby buildings
- Review of contractor foundation-related submittals
- Attendance of project meetings with the design team upon request
- Special inspection of foundation construction, excavation support, and underpinning

CLOSING

We appreciate the opportunity to provide our services to you on this project. Should you have any questions, please contact us.

Very truly yours,
GZA GEOENVIRONMENTAL OF NEW YORK

TABLES

Table 1: Recommended Use and Gradation Criteria For Fill Materials

USE OF FILL MATERIAL

Granular Fill: Below footings and slab base course, and 3 feet laterally behind walls provided that amount passing Sieve No. 200 is less than 8 percent.

Sand-Gravel: Slab base course and 3 feet laterally behind walls

Crushed Stone: Drain line backfill and foundation protective layer. Crushed stone should be wrapped in non-woven filter fabric.

GRADATION REQUIREMENTS

Sieve Size	Percent Finer by Weight
Granular Fill	Shall be free from ice and snow, roots, sod, rubbish and other deleterious or organic matter. Granular Fill shall conform to the following gradation requirements:
2/3 of the loose lift thickness	100
No. 10	30 – 95
No. 40	10 – 70
No. 200	*0 – 15 *0 – 8 where used behind walls
Sand-Gravel	Shall consist of durable sand and gravel and shall be free from ice and snow, roots, sod, rubbish and other deleterious or organic matter. Sand-Gravel shall conform to the following gradation requirements:
3 inch	100
½ inch	50 – 85
No. 4	40 – 75
No. 40	10 – 35
No. 200	0 – 8
Crushed Stone	Shall consist of durable crushed rock or durable crushed gravel stone and shall be free from ice and snow, roots, sod, rubbish and other deleterious or organic matter or material. Crushed Stone shall conform to the following gradation requirements:
1 inch	100
¾ inch	90 – 100
½ inch	10 – 50
3/8 inch	0 – 20
No. 4	0 – 5
No. 200	0 – 1

Table 2: Compaction Methods

Compaction Method	Max. Stone Size*	Maximum Loose Lift Thickness		Minimum Number of Passes	
		Below Structures and Pavement	Less Critical Area	Below Structures and Pavement	Less Critical Area
GRANULAR FILL, SAND-GRAVEL FILL, CRUSHED STONE					
Hand-operated vibratory plate or light roller in confined areas	4″	6″	8″	4	4
Hand-operated vibratory drum rollers weighing at least 1,000# in confined areas	6″	10″	12″	4	4
Light vibratory drum roller Min. weight at drum 3000# Min dynamic force 10,000#	8″	12″	18″	4	4
Medium vibratory drum roller Min. weight at drum 10,000# Min dynamic force 20,000#	8″	18″	24″	6	6

* Indicates not to exceed more than 2/3 the lift thickness

APPENDIX A

GEOTECHNICAL LIMITATIONS

USE OF REPORT

1. GZA GeoEnvironmental, Inc. (GZA) prepared this report on behalf of, and for the exclusive use of our Client for the stated purpose(s) and location(s) identified in the Proposal for Services and/or Report. Use of this report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions; and we do not accept any responsibility for the consequences of such use(s). Further, reliance by any party not expressly identified in the contract documents, for any use, without our prior written permission, shall be at that party's sole risk, and without any liability to GZA.

STANDARD OF CARE

2. GZA's findings and conclusions are based on the work conducted as part of the Scope of Services set forth in Proposal for Services and/or Report, and reflect our professional judgment. These findings and conclusions must be considered not as scientific or engineering certainties, but rather as our professional opinions concerning the limited data gathered during the course of our work. If conditions other than those described in this report are found at the subject location(s), or the design has been altered in any way, GZA shall be so notified and afforded the opportunity to revise the report,as appropriate, to reflect the unanticipated changed conditions .

3. GZA's services were performed using the degree of skill and care ordinarily exercised by qualified professionals performing the same type of services, at the same time, under similar conditions, at the same or a similar property. No warranty, expressed or implied, is made.

4. In conducting our work, GZA relied upon certain information made available by public agencies, Client and/or others. GZA did not attempt to independently verify the accuracy or completeness of that information. Inconsistencies in this information which we have noted, if any, are discussed in the Report.

SUBSURFACE CONDITIONS

5. The generalized soil profile(s) provided in our Report are based on widely-spaced subsurface explorations and are intended only to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and were based on our assessment of subsurface conditions. The composition of strata, and the transitions between strata, may be more variable and more complex than indicated. For more specific information on soil conditions at a specific location refer to the exploration logs. The nature and extent of variations between these explorations may not become evident until further exploration or construction. If variations or other latent conditions then become evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

6. In preparing this report, GZA relied on certain information provided by the Client, state and local officials, and other parties referenced therein which were made available to GZA at the time of our evaluation. GZA did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this evaluation.

7. Water level readings have been made in test holes (as described in this Report) and monitoring wells at the specified times and under the stated conditions. These data have been reviewed and interpretations have been made in this Report. Fluctuations in the level of the groundwater however occur due to temporal or spatial variations in areal recharge rates, soil heterogeneities, the presence of subsurface utilities, and/or natural or artificially induced perturbations. The water table encountered in the course of the work may differ from that indicated in the Report.

8. GZA's services did not include an assessment of the presence of oil or hazardous materials at the property. Consequently, we did not consider the potential impacts (if any) that contaminants in soil or groundwater may have on construction activities, or the use of structures on the property.

9. Recommendations for foundation drainage, waterproofing, and moisture control address the conventional geotechnical engineering aspects of seepage control. These recommendations may not preclude an environment that allows the infestation of mold or other biological pollutants.

COMPLIANCE WITH CODES AND REGULATIONS

10. We used reasonable care in identifying and interpreting applicable codes and regulations. These codes and regulations are subject to various, and possibly contradictory, interpretations. Compliance with codes and regulations by other parties is beyond our control.

COST ESTIMATES

11. Unless otherwise stated, our cost estimates are only for comparative and general planning purposes. These estimates may involve approximate quantity evaluations. Note that these quantity estimates are not intended to be sufficiently accurate to develop construction bids, or to predict the actual cost of work addressed in this Report. Further, since we have no control over either when the work will take place or the labor and material costs required to plan and execute the anticipated work, our cost estimates were made by relying on our experience, the experience of others, and other sources of readily available information. Actual costs may vary over time and could be significantly more, or less, than stated in the Report.

ADDITIONAL SERVICES

12. GZA recommends that we be retained to provide services during any future: site observations, design, implementation activities, construction and/or property development/redevelopment. This will allow us the opportunity to: i) observe conditions and compliance with our design concepts and opinions; ii) allow for changes in the event that conditions are other than anticipated; iii) provide modifications to our design; and iv) assess the consequences of changes in technologies and/or regulations.

APPENDIX B

BORING LOG

LOG KEY

GZA
Geo Environmental, Inc.
Engineers and Scientists

BURMISTER SOIL CLASSIFICATION

COMPONENT	NAME	PROPORTIONAL TERM	PERCENT BY WEIGHT
MAJOR	GRAVEL, SAND, FINES*		>50
Minor	Gravel, Sand, Fines*	and	35 - 50
		some	20-35
		little	10-20
		trace	0-10

*See identification of fines table.

IDENTIFICATION OF FINES

Material	PI	Atterberg Thread Dia.
SILT	0	Cannot Roll
Clayey SILT	1-5	1/4"
SILT & CLAY	5-10	1/8"
CLAY & SILT	10-20	1/16"
Silty CLAY	20-40	1/32"
CLAY	>40	1/64"

GRADATION DESIGNATION	PROPORTION OF COMPONENT
Fine to coarse	All fractions > 10%
Medium to coarse	<10% fine
Fine to medium	<10% coarse
Coarse	<10% fine and medium
Medium	<10% coarse and fine
Fine	<10% coarse and medium

PLASTIC SOILS

Consistency	Blows/Ft. SPT N-Value
Very Soft	< 2
Soft	2 - 4
Medium Stiff	4 - 8
Stiff	8 - 15
Very Stiff	15 - 30
Hard	>30

GRAVEL & SAND

Density	Blows/Ft. SPT N-Value
Very Loose	< 4
Loose	4 - 10
Medium Dense	10 - 30
Dense	30 - 50
Very Dense	> 50

UNIFIED SOIL CLASSIFICATION SYSTEM (USCS) (ASTM D 2487)

MAJOR DIVISIONS			Group Symbols
Coarse Grained Soils More than 50% of material larger than No. 200 sieve.	Gravel More than 50% larger than No. 4 sieve.	Clean Gravels (Little or no fines)	GW GP
		Gravels with Fines (Appreciable amount of fines)	GM GC
	Sand More than 50% smaller than No. 4 sieve.	Clean Sands (Little or no fines)	SW SP
		Sands with Fines (Appreciable amount of fines)	SM SC
Fine Grained Soils More than 50% of material smaller than No. 200 sieve.		Silts and Clays Liquid Limit <50	ML CL
		Silts and CLays Liquid Limit >50	OL MH CH OH
		Highly Organic Soils	Pt

ORGANIC SOIL CLASSIFICATION

Fibrous PEAT (Pt) - Lightweight, spongy, mostly visible organic matter, water squeezes readily from sample. Typically near top of deposit.
Fine Grained PEAT (Pt) - Lightweight, spongy, little visible organic matter, water squeezes readily from sample. Typically below fibrous peat.
Organic Silt (OL) - Typically gray to dark gray, often has strong H2S odor. Typically contains shells or shell fragments. Lightweight. Usually found near coastal regions. May contain wide range of sand fractions.
Organic Clay (OH) - Typically gray to dark gray, high plasticity. Usually found near coastal regions. May contain wide range of sand fractions. Need organic content test for final identification.

ABBREVIATIONS

MR = Mud Rotary
HSA = Hollow Stem Auger
SSA = Solid Stem Auger
SS = Split Spoon Sampler
U = Undisturbed Sample (Shelby Tube)
MC = Modified California Sampler
V = Vibracore
M = Macrocore

USCS = Unified Soil Classification System (ASTM D2487)
NYCBC = New York City Building Code
WOR = Weight of Rods
WOH= Weight of Hammer
SPT = Standard Penetration Test (ASTM D1586)

Tv = Field Vane Shear Test (Torvane) Shear Strength
PP = Pocket Penetrometer Shear Strength
PI = Plasticity Index
Wn = Moisture Content
CO = Consolidation
UC = Unconfined Compression Test
UU = Unconsolidated Undrained (Triaxial) Test
SI = Sieve Analysis
DS = Direct Shear
PID = Photoionization Detector
ppm = Parts Per Million
REC = Recovery
RQD = Rock Quality Designation
▼ = Measured Water Level

N-Value = Cumulative number of uncorrected blows for the middle two six-inch intervals (blows/foot).

25											
30											

REMARKS

1 - Drilled through asphalt pavement and base material to 0.5 feet using roller bit. Split spoon sampling started at 0.5 feet below ground surface (bgs).
2 - Spoon refusal encountered at 1.4 feet bgs. Spoon sampler was broken and recovery is unknown, sample description based on the sample from tip of spoon.
3 - Roller bit advanced to 4 feet bgs, rock coring started at 4 feet.
4 - Upon completion, borehole was backfilled with bentonite hole plug and concrete patch at ground surface.

See Log Key for exploration of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

Field Screening performed with PID equipped with a 10.6 eV lamp calibrated to a 100 ppm isobutylene standard.See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on June 18 and 21, 2021. The canister certification results are provided as an addendum.

L2133540-02D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2133540-03D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2133540-05D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1516640-3 LCS recoveries for propylene (134%), 3-chloropropene (143%), bromoform (135%) and benzyl chloride (151%) are above the upper 130% acceptance limit. All samples associated with this LCS do not have reportable amounts of these analytes.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J. Anderson

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Project Name:	5055 BRAODWAY ENV.	**Lab Number:**	L2133540
Project Number:	41.0162895.00	**Report Date:**	06/25/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the reporting limit (RL) for the sample.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Project Name:	5055 BRAODWAY ENV.	**Lab Number:**	L2133540
Project Number:	41.0162895.00	**Report Date:**	06/25/21

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Metals

L2133587-01 through -12: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	5055 BROADWAY ENVIRONMENTAL	**Lab Number:**	L2133587
Project Number:	41.0162895.00	**Report Date:**	07/21/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	5055 BROADWAY ENVIRONMENTAL	**Lab Number:**	L2133587
Project Number:	41.0162895.00	**Report Date:**	07/21/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

Project Name:	5055 BROADWAY ENVIRONMENTAL	**Lab Number:**	L2133587
Project Number:	41.0162895.00	**Report Date:**	07/21/21

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

July 02, 2021: This final report includes the results of all requested analyses.

June 29, 2021: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by Isotope Dilution

WG1515214-1: Extracted Internal Standard recoveries were outside the acceptance criteria for individual analytes. Please refer to the surrogate section of the report for details.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Project Number:	41.0162895.00	**Report Date:**	07/02/21

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name:	5055 BRAODWAY ENV.	**Lab Number:**	L2133588
Project Number:	41.0162895.00	**Report Date:**	07/02/21

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name:	5055 BRAODWAY ENV.	**Lab Number:**	L2133588
Project Number:	41.0162895.00	**Report Date:**	07/02/21

Data Qualifiers

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene
EPA 625/625.1: alpha-Terpineol
EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N, **SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**
EPA 624.1: Volatile Halocarbons & Aromatics,
EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625.1: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
