Caller Remarks:

Above material discovered in pit in basement at above location. Sample has been taken and cleanup is pending results.

DEC Investigator Remarks:

e2mis no. 149-736:

10-Aug-2003 13:06 An unknown type of oil and quantity though undeterminable seems to be no more than 10 gallons, was discovered by Operator J. McGrath ID# 04509. The oil was found in a pit of area approx. 200 sq. ft. in the I.P. plant basement in an old storage room. The oil appears to be on the surface of water, again the exact quantities are undeterminable. Shift Supervisor A. Rodney ID# 00615 examined the pit and adjacent area and observed no trenches or any other means of release from the pit. A sample will be taken to determine hazardous properties, and cleanup will be conducted accordingly.

Sample results from oil in water came back negative for PCB's. All State PowerVac in station to clean up. Oily water cleaned up on 8/12/03. About 2 feet of sludge in bottom of pit. APV removed and placed in drums. Clean up complete 8/13/03 at 14:00. Samples of sludge taken and sent to ChemLab for PCB analysis. Sludge results are negative for PCBs.

LEAK FROM BEARING ON A FAN IN THE BOILER ROOM. SPILLED ONTO CONCRETE. TO BE CLEANED UP WITHIN 2 HOURS. CON EDISON REFERENCE NUMBER 142661.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
E2mis no. 142-661:

Mario de Corla-Souza (shift supervisor) at 0507 hours discovered approx. 1 gal of oil and grease between the boiler 115 FD fan air intake and the fan intake bearing pedestal. The oil has seeped to the basement but is contained in a trough without any outlet to the sewer or waterway. The trough is located on the East side of the FD fan. No cleanup is possible as the area is roped up due to yesterdays' PACM spill (E2MIS #142655). Housekeeping for the PACM spill will be done today and then the oil/grease cleanup could be accomplished. Possible cause could be leaky bearings. Work Order # 13581 entered.

Root Cause: Residual oil on pedestal from FD fan operations. Incorrect sight glass/fill port configuration installed on FD fan bearings.

Corrective Action: FD fans will return to service after outage with new oil sightglasses and a new operating procedure.

Con Ed e2mis #142491:

13:55 HRS WHILE MAKING LAP OF STATION SHIFT SUPERVISOR J.WALLER FOUND 2 GALLONS OF WHAT APPEARS TO BE LUBRICATING OIL IN SUMP PIT #3. THE SUMP PUMPS WHERE HELD OFF AND THE STATION OILY WATER SEPARATOR WAS CHECK FOR SIGNS OF OIL. NO SIGNS OF OIL SITED IN THE OILY WATER SEPARATOR. TRACED TRENCH DRAINS FROM SUMP TO POSSIBLE SOURCES OF OIL LEAKAGE NO SIGN OF ANY ACTIVE LEAK. SUSPECT SMALL LEAKAGE MAY HAVE BUILT UP OVER TIME AT BOTTOM OF PIT. 14:10 NOTIFIED PLANNING DEPT. TO HAVE VENDOR ARRIVE AT STATION TO CLEAN OUT PIT.

~~~~~~~~~~~~~~~~~~~~~

DEC Notes:
~~~~~~~~~~~~~~~~~~~~~

9/30/02

Walked through station with W. Fenner(Env Mgr), E. Dessen(law) and J. O'Connell. Oil in sump #3. Unknown source. Appears to be lube oil. Floor drain system is old and may have connections now covered over. Station to maintain absorbant pads in sump. Also will check oil/water separator when checking pads. (KMF)

~~~~~~~~~~~~~~~~~~~~

e2mis notes (cont'd)

All-State Power Vac responded to clean up sump pump pit. Cleaned out 850 gals of oily water waste. Removed from site by All State vac truck. Clean up completed 17:50-APR-2002.

ROOT CAUSE: Residual oil was apparently washed into the trenches during the boiler washes that occurred during the previous weeks.

CORRECTIVE ACTION: Sump and associated trenches were cleaned out. Future boiler washes will have to plan for blocking the floor trenches or similar efforts.

sample taken clean up pending results - spill confined to sump area

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
see #0200508

Con Ed e2mis #142285:

8: 16 AM Skip Emory was informed by Mario DeCorla- Souza that sump #1 contained oil. With the aid of the Safety Administrator and EI, an exaimination of the pit was conducted. A make-shift "Q- tip" was dipped into the pit and it came up positive for an oily substance similar to lube oil.

At 8: 45 AM All-State Power Vac was requested for and Emergency Land Spill clean-up. Attempts were made to determine if sump# 1 was a stand alone structure and at 8: 55 AM it was coonfimed that sump #1 was a stand alone structure. The sump pump was held off (hold off #111131) and the site isolated. 9: 04 AM CIG was notified and ther ERT responded at 9: 13 AM. Clean up attempts were halted for safety reasons. The Safety Administrator wanted confined space issues addressed before clean up can begin.

Update on 17-APR-2002

Clean-up of Sump #1, Sump #2 and tranches from 115 ID Fan O/B bearing completed by All-State power Vac at 16:15 16-APR-2002.

Environmental Detailed Incident Report

Updated six fields correctly; removed entry for resolved time and date; updated clean-up %, incident type and opn status.

ROOT CAUSE: Leak from 115 ID fan O/B bearing. WO# 59T-01-14550 entered previously to repair leak.

CORRECTIVE ACTION: Trenches and sump were vacummed out and powered washed by vendor. Bearing to be repaired during outage; new oil fill procedure and gauges installed.

a release to a trench drain - clean up pending analysis - ref #142263

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"
e2mis notes 142263:

AT 0950HR OIL WAS FOUND IN SUMP PIT #2. THE AMOUNT OF OIL IS APPROXIMATELY 2 GALLONS FROM AN UNKNOWN SOURCE. THE SUMP

PUMPS WERE SHUTDOWN AND THE STATION OILY WATER SEPERATOR WAS INSPECTED FOR OIL AND NONE WAS FOUND. A SAMPLE FROM

THE PIT WILL BE TAKEN AND SENT FOR ANALYSIS. CLEANUP WILL BE CONDUCTED AFTER RESULTS ARE RECEIVED AT THE STATION.

NO OUTSIDE STATION SEWER OR WATERWAY AFFECTED, OIL IN STATION SUMP PUMP PIT

NO FIRE OR SMOKE

SUBSTANCE: OIL OF UNKNOWN TYPE

SOURCE OF SPILL: UNKNOWN

CAUSE OF SPILL: UNKNOWN

NO PRIVATE PROPERTY AFFECTED

NOTIFIED CIG A.NATALE AT 1042 HRS.

11:00 SPT Valenti took oil/water sample for analysis. Set to Lab with ChemLab technician @13:00

13:00 OMA's Grice and Simon started preliminary clean up using pads to remove oil from surface of water. All-State PowerVac called in to complete cleaning.

13:50 NYSDEC Engr Abraham Rodriguez arrived at station to review spill, workplan and inspect area.

Reviewed work plan with A. Rodriguez. Clean gross oil with pads; pump remaining oily water into drums and hold pending analysis results; powerwash suspected trench from under 115 Boiler back to sump. If analysis comes back with results equal to or greater than 50 ppm PCB. Rodriguez wants wipe samples taken from sump walls and from sump pump.

15:10 All-State PowerVac arrives at station. Rodriguez and EHS reps review workscope with All-State reps.

15:30 A. Rodriguez leaves station.

19:30 Clean up of sump pump #2 complete. 3 drums of oily water waste and 2 drums of solid oily waste generated during all phases of clean up. Mike Bernardo returns work permit to watch.

Lab sample results show that oil was less than 1 ppm PCB.

16-APR-2002

(refer to Incident #142285)

Oil found in sump pit #1 which initially did not appear to communicate with Sump pit # 2. Upon further investigation it appears that Sump #2 will communicate to sump #1 at high levels in sump #2. The oil appears to have come from the outboard bearing on Boiler 115 ID Fan. There was some residual oil in the trench east of the platform for the ID fan. All-State PowerVac is in the station again to clean up the Sump #1 and will also reclean sump # 2 and the trench that showed residual oil.

16:15 16-APR-2002 Clean up by All-State Power Vac complete.

Boiler 115 ID Fan O/B Bearing drained of oil. Updated opn status; removed resolved date/time entry; updated persons involved

Updated by J. Burke 17-APR-2002

ROOT CAUSE: Leak from 115 ID Fan O/B Bearing. Overfilling of bearing by operations.

CORRECTIVE ACTION: Leak was reported under WO# 59T-01-14550. Leak repaired during outage. New oil fill procedure developed. New oil sight glasses

installed.

Inspector notes:

Oil was found on a sump in the basement on high pressure boiler side of plant. The oil is supposed to come from the boiler feed pumps areas. Preventive measures taken, replace all oil pads on pump's base. Clean the drains starting at the pumps and going towards the sump, clean the sump. All State was on site to do the cleanup. Con Edison cleaned part of the oil with oil pads.

4/23/02

Lubricating oil found in sumps 1&2. Pending repairs to equipment. Sump pumps remain off until repairs are made and sumps cleaned. (KMF)

9/30/02

Walked station with Wendell Fenner, Eric Dessen (Law Dept) and Jane O'Connell. Oil suspected to be from overfilling lube oil reservoir. Con Ed plans to install some sort of glass viewer for oil measurement. (KMF)

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

3/21/02
Met with Wendell Fenner, Env Mgr. Black substance coming through floor of station. Seeping up through concrete making bubbles under paint. Took ID sampls but "did not dissolve in solvent". Mr. Fenner stated he would speak to Chem Lab to find out exactly what that means. PCB <1ppm.

Will try to accumulate on floor to collect another sample. Will possibly remove paint and bore through concrete to locate source. Mr. Fenner to inveistigate history of site. Conrete laid about 20yrs ago. Substance appears thicker than #6 fuel oil. Possibly tar, resin or MGP waste. (KMF)

4/23/02
Substance continues to seep out from under paint on floor. There is one section which appears that there is space under floor and therefore no product pushing up through soil. Appears that substance may be related to the application of paint. Other sections of station which are not painted do not have this problem. Oil ID does not register as petroleum. Possibly some sort of resin. Con Ed is looking for MSDS on paint so Chem Lab can pinpoint what they’re looking for. Sections are taped off. (KMF)

9/30/02
Walked through station with W. Fenner, E. Dessen (law), and J. O’Connell. (KMF)

9/6/06 - See e-docs for Con Ed report detailing cleanup and closure. (JHO)

50 gallons unk oil in a pit - sample has been taken - clean up pending results

con ed #140505

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"

2-14-05. George Breen inspected the pit in the company of Con Ed employees John Burke and Daniel Barry. There was no sheen on the water in the pit. The water was clear. Evidently the cleanup was thorough and the repairs appropriate and satisfactory. This spill can be closed upon submission of a closure request with supporting documentation forward via e2mis system. (GDB)

~~~~~~~~~~~~~~~~~~~~~~~~~~
e2mis no. 140505:

09:13 John McGrath and Skip Emory - EH&S, discovered a metal plate on the floor of the IP basement by column V47 on the North
~~~~~~~~~~~~~~~~~~~~~~~~~~

side of the U -wall. Upon lifting the plate lead to the discovery of a pit containing what appears to be dirt, gravel and solidified #6 fuel oil residue. The amount can not be accurately determained based upon the fact that the pit contents have become so co-mingled. The pit is a three-sided structure with the open end facing South towards the 58th Street discharge tunnel. The area was isolated and a work order -#13810- to sample, clean and repair.

10:48 - Station results group could not obtain enough material to get sample. Requested Astoria Labs to come to the site and evaluate situation.

At 16:40 Astoria Labs arrived to obtain samples for PCBs, TCLP and Composite analysis.
The results were received via email 12/08 and 12/09. Results:
Grab sample of soil for PCB using EPA 608/8082 Lab sequence 01-11631-001
Total PCB < 1.0 ppm
Grab sample for oil Identification by NYSDOH 310-13 (hydrocarbon scan) Lab sequence# 01-11632-001 "The sample is too degraded to determine the source."

A land spill clean-up contractor will be brought in to determine the proper method of clean-up of the pit.

Update: 01-MAR-2005 by J. Burke
Area was inspected by J. Burke, EHS Engr., D. Barry, EHS Mgr and George Breen, NYSDEC Env Engr., on 14-FEB-2005 and the pit was found to be clean with only water in it and no sheen visible on top of water. Clean up was done by vendor and the date was not recorded on the associated work order.

ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION IN THE SALT WATER

INTAKE SYSTEM TO RETIRED HP PLANT. OIL CANNOT ENTER HUDSON RIVER

CLEANUP VENDOR HAS BEEN CONTACTED AND SAMPLE HAS BEEN TAKEN.

CON ED # 131729. NO CALL BACK REQUESTED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
Assigned to Rodriguez for follow-up.

e2MIS Notes:

While inspecting trench system and sumps in HP basement, discovered oily substance atop surface water in retired CWS Saltwater pump vertical intake pipes. Retired SW circulating intake pumps, that take river water suction from these pits, had recently been removed by vendor. Inspection by EI and station EHS revealed about a 2" thick floating coating in each of two vertical pipe inlets. These circulators have not been used in many years but do lead to teh 58th St intake tunnel. Estimate two gallons each pipe for a total of 4 gal.

Samples taken for PCB analysis.

Existing design drawings show that this pit is rectangular and drops vertically to take suction from the 58th St intake canal. This vertical section is separate from the large circulator pit, where the retired condenser sits. Feed to this pit from the intake is more than 20ft below basement level. Tidal action will raise and lower level in this pit no more than 6ft, effectively isolating the top layer from the river.

Results received 6/6/00 <1ppm and characterized as similar to lube oil. Clean Harbors conducted cleanup from surface on 6/6 and 6/7. Cleaning of walls and slabs completed. Opening of intake permanently closed and sealed.

Caller Remarks:

DURING TEST PITS FOUND, CONTAMINATED GROUNDWATER: JEFFRERY VOGHT FROM DEC IS WORKING ON THE EXISTING SPUILL NUMBER FROM THIS SITE

DEC Investigator Remarks:

2/11/05-Vought-Received message from Manfred Bohms (Gannett Fleming 516-671-8440x1308) that sheen was detected on groundwater during excavation for new foundation. See also open spill #0212404 at same location. Vought called Bohms and seven test pits were dug for geotechnical investigation. Spill at 12 and 16 west end Avenue. Petroleum contaminated soil at interface and sheen on groundwater (at 16' below grade). Area going to be excavated and dewatered via remedial plan on 0212404. Soil samples and groundwater samples were collected. Report shall be received to DEC by 3/1/05.

6/7/05-Vought-Spoke to Manfred Bohms and one (550-gallon) UST was discovered. Two drums of impacted soil was removed from underneath UST and endpoint samples were collected. No PBS registration required as site is under 1100 gallons for PBS requirements. All soil will be excavated down to groundwater.

9/12/05-Obligado- Spill transferred from Vought to Obligado.

5/11/06 - Obligado - Called Manfred Bohms, he said closure report is under review by client. Expects to receive it back within several days.

5/25/06 - Obligado - Spoke to Manfred Bohms, he said closure report is complete and will be sent in next few days.

5/31/06 - Obligado - Sent NFA letter

5/26/06 - Obligado - Received Closure Report. Requests closure based on 1000 gallon UST and contents removed, posed ex samples exhibit SVOC concentrations similar to "urban fill" material. 20 cubic yards of visually contaminated soil removed. 8,500 tons of soil removed as part of construction activities. All soil and bedrock removed down to 31 ft below original grade. Extensive dewatering as well to lower water table down to 31 ft bgs from original level of 15 ft bgs. See also spill number 0212404 for dewatering ground water anayltical results. NFA granted.

caller told by local region to call spill in of found chemicals in soil under bld from 20 years ago.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
12/23/2003 Sangesland sent a "Do Work" letter to: Compliance Officer, Hasco Utilities Co, Inc. 110 Swalm Street, Westbury, NY 11590.000

DEC has given a deadline of Feb 25, 2004 to submit a delineation, remediation plan for the soil contamination found at this building.

1/5/2004 First letter came back with a "non deliverable" note

Called the contact number and found a new address in Suffolk County. New letter sent to:

David Kohart, Hasko Utilities Co, Inc. 14 Industrial Blvd, Medford, NY 11763. New Deadline of March 15, 2004

1/12/2004 Sangesland spoke with David Kohart regarding this property. He explained the following history on the building.

1977 Hasko buys the building from a Taxi Garage company

1982 Closes tanks by NYCFD Standards - Slag fill tanks.

1998 Hasko Mortagages building, Bank requires Phase I & II report to be done. "Trace" contamination found, spill report filed.

To comply with Bank, Tanks were opened, refilled with cement and a Tank Closure Report submitted (to who?).

Sangesland requested copy of Phase I & II and Tank Closure Report. Hopefully this is enough info to show the contamination levels are low and the spill can be closed out.

1/20/2004 Sangesland received a report from David Kohart, VP

Hasko Utilities Co Inc. 14 Industrial Blvd, Medford NY 11763

(631-924-6900 / 631-765-6924)

6/1/2004 Based on submitted report, site is primarily a gasoline site (12 - 550 gal tanks) abandoned in 1996. Contaminated soil found on site. Project transferred from Sangesland to Rommel.

6/4/04

Stip mailed to David Kohart with deadline of 6/25/04. Rommel

7/11/05 Case has been transferred to Albany Remediation Group - Attn: Mike Komoroske

8/2/05- temperary transferred lead to Woodward -review of file revealed that a Christopher DiCarlo (212-675-3225)from Fleming Shea called 7/20/05 requesting to combine investigation of this spill with Spill #0503781. A second call from him said he wished to combine this site with spill #0503229 not the one previously mentioned. Returned call and left message to call me back to discuss issue.

11/21/05 Never recieved a return call to my messages. Still need to contact Mr. Dicarlo.

3/29/06-Vought-Called Valerie Woodward and spill transferred to Vought. Valerie will scan file and email to Vought ASAP. For further information on spill see spill #512733 at same location.

05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin.

12/7/06- DEC Piper received addendum report. The well has been resampled and results show slight exceedances of Benzene 16ppb, Isopropyl benzene 16.5ppb and n-propylbenzene 8.3 ppb. This is a significant decrease. Source area has been remediated through excavation, vapor barrier installed and active SSDS is ongoing. This case is closed as well as 0514548, 9803858, 0503781, 0503229. See E-docs if warranted. For further information on spill see spill #512733 at same location.

Map Identification Number 336 **VACANT LOT** **Spill Number: 0512733** **Close Date: 12/07/2006**
555 W. 59TH ST. MANHATTAN, NY TT-Id: 520A-0096-219

Caller Remarks:

This is a historical spill. No tanks were found in the ground but soil samples show contamination. Excavation has already begun to clean up the contaminated soil.

DEC Investigator Remarks:

02/03/06. Feroze, PBS of this site is # 2-603010. Talked to Mr. Prrek 212-479-5450. He informed that they will remove all contaminated soil. Previously it was a gas station. They already applied for registration renewal. Contamination soil letter is sent to:

Parek khouri
Lincoln Engineering
360 West 31st Street
8th Floor
New york, NY 10001

03/15/06. Spill is transferred from Feroze to Kumar Patel.

03/21/06-Vought-See closed spill #0514548 which is odor complaint from nearby school (The Beacon School) due to odors from excavation at the above site. Vought performed site visit and site currently being excavated for a 34 story residential building. Depth of excavation is approximately 30’ with no groundwater visible. Vought noted gasoline contaminated soil under southwestern

portion of site. Vought met with site construction manager(Kenneth Faulds-Plaza Construction 917-578-6620), environmental consultant(Ilkay Cam-Langan Engineering 212-479-5410, Eric Muller-Langan Engineering-646-285-4853), owner representative(Ramona Allegrini-Element West LLC 646-529-7982). As per Muller, site is an E-designated site and DEP approved workplan which include Community Air Monitoring Program (CAMP). At time of odor complaint, contaminated soil was being excavated and stockpiled onsite. Tarps were ordered to cover soil stockpile.

Vought, Faulds, Muller and Allegrini visited the Heschel School located at 20 West End Avenue(Principal-Ahuva Halberstam 212-246-7717, super Gino Bebinsta 917-843-3504) which was across street from site. Periodic odors were noted but no reports made due to low concern. Halberstam also noted that students were not allowed to leave the school during the day and windows were going to be kept closed as per DEC. Vought inspected basement of school and no visible leaks or source of odors noted. The Heschel school keeps all windows closed and is running on HVAC system (hence no odors in school). Vought provided contact information to school including contact information for site management so that if odors were noticed then managment could be contacted directly.

Vought, Faulds, Muller and Allegrini visited the Beacon School located at 227 West 61st Street (Principal-Ruth Lacey 212-245-2807, super-Dimitri-347-865-0760) which was source of odor complaint. Odors were noted for past two weeks but were very strong yesterday afternoon (coinciding with excavation of contaminated soil). Lacey contacted Schools Chancellor who contacted Bd. of Ed, NYCDEP. NYCDEP (John Wilson 646-879-7329) performed site visit on 3/20/06. Partial evacuation of school occurred on 3/20/06 as per Board of Education ATC was hired by Board of Education and performed air monitoring at school on 3/21/06.

Patel to require via phone: 1)submission of reports that were sent to DEP and all previous reports onsite(Patel to contact DEP, Langan(Ilkay Cam)and owner for reports 2)Contact address for site owner(Patel to contact Allegrini for information) 3)contact information for ATC(Patel to contact Dimitri for ATC contact)

DEC to send Stipulation Agreement (as per DEC Austin) requiring: 1)collection of endpoint samples 2)delineation of soil and possible groundwater contamination 3)installation of vapor barrier and possibly passive ventilation system 4)submission of CAMP and addition of hourly monitoring of both schools to CAMP 5)submission of all previous reports onsite 6)covering of all contaminated soil stockpiles 7)excavation of contaminated soil to be performed during non-school hours.

03/21/06-Hiralkumar Patel. Spoke with Ramona Allergrini. she told me that there are four partners and somebody will call back with name and number whom going to get letter from the Department. she also told me that she received call from school principal complaining odor again in building. Spoke with Muller at Langan. he is at school right now. he hasn't found any odor in school building. little odor out side of building. all soil work is stopped at location.
Spoke with Dimitri and he told me that he will call back, with ATC person's name and number, after some time.
received call from Kenneth Faulds. he gave me following information about owner:

Lee Samiul
Brach Realty
Element West
11th Floor
400 Broome Street
New York, NY 10013

and as this is an organization there are so many people involved. Kenneth will call back with owner's number.

03/22/06-Hiralkumar Patel. REceived message from Kenneth. he gave me number for owner is (212) 775-1111, FAX: (212) 925-4412. Left message on this number.

03/22/06-Vought-Received call and spoke to Michael Kumrev (212-775-1111) who is partial owner of site. Vought explained requirements to Kumrev including requirements of Stipulation Agreement.

ATC person who was on site for air monitoring:
Michael Donovan
Ph. (212) 353-8280

Tarek Khoury from Langan
(212) 479-5450

03/22/06-Hiralkumar Patel. Spoke with Collista Nazire (ph. 718-595-4401) at DEP. she gave me name and number of project manager at DEP who is handling this site. project manager is Amy Ma (amyma@dep.nyc.gov ph. 718-595-6658, FAX: 718-595-4479).

Spoke with Eric Muller (Fax: 212-479-5444) and asked him to send all the previous reports to DEC that he send to DEP and owner. Spoke with Mike (Ph. 212-353-8280, FAx: 212-353-8306) at ATC. they took air readings with instrument and found maximum of 1 ppm inside the school building. they measure for CO also but haven't found anything. Mike has submitted report to board of Education and denied my request to send copy of result report he has. but he gave me person's name and number in Board of Education who has this report and we can ask him. person's name is Mohamad Hemida (Office: 718-361-3807, Cell: 347-386-4417). Spoke with Mr. Hemida and as he was out of office, he asked me to call back tomorrow. ATC went on site again and Mr. Hemida will get result from second visit tomorrow. once he review that he will fax me the reports.

03/23/06-Hiralkumar Patel. Soil contamination letter with STIP sent out to Michael Kumrev at
Brach Realty requesting delineation of soil and groundwater contamination, endpoint samples, installation of vapor barrier, Adherence to the New York State Department of Health Generic Community Air Monitoring Program and submission of all previous reports. also sent copy of CAMP. letter faxed to Amy Ma in DEP, Eric Muller at Langan, Ruth Lacey at Beacon School and Mr. Kumrev at Brach REalty.
Received call from Mr. Muller. He told me that some other company did initial investigation and they had submitted report to DEP. Langan hasn't submit any report. they only submitted some letters. i have asked Mr. Muller to send copy of all the reports/letters they have sent to owner/DEP. he told me that he need permission from owner and will call me if he can send those documents to me or not. the previous consultant was RA Consultant. Muller doesn't have their phone number.

Received copy of air monitoring results from Mr. Dimitris. reports shows 0-1 ppm PID readings inside and outside of building.

03/27/06-Vought-Received two messages from Principal Lacy that odors were persisting at school. DEC Rahman visited site and spoke to Lacy. No odors in school at time of Lacey visit. As per Rahman work was being performed onsite and as soon as PID indicating hits work stopped. Vought called Kumrev and left message to return call to DEC immediately. Vought called NYCDEP Ma and left message to return call regarding assistance with site and enforcement of Health and Safety Plan. Vought called Cabbagestalk and left message to return call to DEC. Vought called Parek Khoury and left message inform them of additional odor complaint and request copy of Health and Safety Plan. Vought called Ramona Allegrini and left message to return call. Vought called Kenneth Faulds and excavating and contaminated soil was excavated from and area that was not known to him as Langan did not tell him what

areas will contaminated. Vought received call from Khoury and left message to return call.

03/27/06 Sharif Rahman- Performed a site visit after receiving odor complain from the school principla Ruth Lacey. I met Ruth Lacey at the school but could not detect smellable petroleum odor inside the school building.In front of the school entrance PID reading was 2.5- 2.7 ppm.The principal told me the odor comes on and off, and the time we were in the building the odor disappeared.I inspected the construction site at 599 W59th street and met site safety manager Timothy Searvant(347-723-6387) along with Supervisor Mr. Kenneth. I smelt strong petroleum odor inside the lot, and PID reading was fluctuating between 5.00 - 7.70 ppm. Timothy Searvant indicated that they were removing contaminated soil from north western side and as they noticed elevated PID readings, the excavation work was stopped. I suggested them to contact DEC case manager Jeff Vought before proceeding with further excavation work.

03/27/06-Vought-Teleconference with DEC Urda, DEC Patel, DEC Vought, Steve Russo (212-421-2150 fax: 212-421-2035). Agreed on minor change to CAP and discussed possible stop work order. Russo requested that he and Langan (Khoury) be sole contacts for further requirements.

03/28/06-Vought-Received message from NYCDEP Ma that she can call Langan for NYSDEC to get report. Vought called Ma and she will be sending DEC copies of all DEP letters and she will contact DEC Cabbagestalk regarding teleconference today regarding site. Vought called Principal Lacy and left message with Lacy to return call to DEC. Vought called Parek Khoury and per Khoury: previous Phase I was performed by Fleming Lee Shue. Site had 15-20 USTs on western portion and north of site. Soil and groundwater sampling with VOC exceedences around tank area. Groundwater data showed no impact but groundwater hard to reach. Soil will be removed to bedrock with installation of vapor barrier. Approximately 1.5 months ago Langan was hired as new consultant. Bedrock has serpentine with possible asbestos (being handled as haz waste) and hence dust suppression. Soil will be excavated to bedrock. No bedrock remediation is required due to potential ACM. During excavation additional tanks were found and PBS forms were updated. Khoury will be willing to staff someone full time at school. Vought received via FedEx: Remedial Investigation Report(Langan), Remdial Action Plan (Langan). Vought had teleconference with DEC Austin, DEC Urda, DEC Nagi, DEP Cabbagestalk and DEP Ma. DEP will seek stop work order and will contact DEP Licata to stop work and return call to DEC. DEC Rahman performed site visit to Beacon School and no odors were detected and no work was going on eastern portion of site. As per DEC Rahman, he was told by Ilkay Langan they also detected 5-7ppm at side of excavation. Vought called Lacy and left message of progress and to inform DEC if any odors are detected.

DEC requires: 1)submission of figures 1-3 of Remedial Investigation 2)full time staffing of someone at school 3)collection of endpoint samples 4)delineation of soil and possible groundwater contamination especially at former soil contamination locations 5)possibly passive ventilation system and submission of a letter certifying that the vapor barrier will be sufficient to withstand the concentrations of contamination present on the site after the installation is complete 6)addition of monitoring of both schools to CAMP 7)submission of all previous reports onsite 8)covering of all contaminated soil stockpiles 9)excavation of contaminated soil to be performed during non-school hours 10)notification to NYCDOH and NYSDOH 11)addition of residential construction letter to STIP cover letter 12)Updating of PBS registration to reflect removed status and not closed-in-place status 13)copies of previous reports)555 West 59th Street Phase II ESA, Impact Environmental(3/23/94), 555 West 59th Street Soil Screening and Tank Investigation Work, Tanks Closure Report, Don Carlo(11/4/03) for other spill numbers for site 14)Groundwater samples or vertical delineation in areas of highest soil contamination

---

3/29/06-Vought-File Review by Vought:

See also closed spill #0514548 for odor complaint at adjacent Beacon School, open spill #9803858(soil contamination, STIP sent on 6/4/04), open spill #0503781(discovery of old tanks), open spill #0503229(soil contamination found during borings).

PBS Registration #02603010. PBS registration up to date as per DEC Krimgold.

Letter from Hasko Utilities (Kohart) to NYFD-4/10/89. "This is to inform you that we abandoned our gasoline storage tanks in our building at 555 West 59th Street in Manhattan. The tanks were in good order and without leaks but we no longer had use for them so they've been filled with concrete".

Invoice from Alvin Petroleum-4/13/89. Invoice for tank abandonment.

Letter from DEC Sangesland to Hasco Utilities-12/23/03. Letter sent for spill #9803858. Letter sent requiring delineation and submission of a remedial action plan. "This report is required to be submitted to DEC by February 25, 2004".

Stipulation Agreement from DEC Rommel to Hasko (Kohart)-6/4/04. Stipulation Agreement sent and mailed certifed mail on 6/4/04. "If the signed Stipulation has not been received by June 25, 2004 the Department will hire a contractor to perform the work. No signed Stipulation in file.

Letter from Casey & Hibner (John Hibner)-6/24/04. "Please be advised that I am the attorney for Hasko..." "Hasko Utilities Company transferred all its right title and interest to the subject premises on January 30, 2004 to 55559 West Realty, LLC. Their attorney is Arthur Israel, 800 Third Avenue, 30th Floor, New York, New York 10022 and his phone number is 212-355-5353. The property was taken subject to any and all existing environmental conditions. Please contact the new owners with respect to any of the requirements contained in your correspondence".

Letter from Hasko(Kohart) to DEC Sangesland-1/16/04. "I am writing pursuant to our phone conversation". Enclosed is MTS EnviroSurv report.

Soil Screening Study and Tank Investigation Work (MTS EnviroSurv)-5/6/98. Report for 555 West 59th Street. Former use of site was a taxi garage. NYCDOB records indicate gasoline tanks were installed onsite dating back to 1940's. Lab results showed elevated VOCs in the soil. Groundwater not encountered in any of the borings.

Remedial Investigation Report (Fleming Lee Shue) August 2005 submitted to NYCDEP and prepared for Sive, Paget and Riesel. Soil and groundwater sampling activities were approved by NYCDEP. Site will be redeveloped for 35-story residential tower with cellar and sub-cellar extending to a total depth of 28" below grade. Sub cellar will be used for parking and cellar will be used for athletic facilities, theatres and a social space etc. Previous reports include 555 West 59th Street Phase II ESA, Impact Environmental(3/23/94), 555 West 59th Street Soil Screening and Tank Investigation Work, MTS EnviroSurv(5/6/98), Tanks Closure Report, Don Carlo(11/4/03). For investigation, site was divided into three sections. SECTION 1 included addresses of 543, 545, 547 West 59th St and was formerly utilized as a junkyard until 1976. SECTION 2 included addresses of 549, 551, 553 and 555 West 59th St and 248, 250, 252, 254 West 60th Street and was formerly utilized as a automobile repair shop and historic maps indicate three (550-gallon) gasoline USTs in the north central portion of the structures. Previous Phase II performed on section 2 by Impact Environmental. Soil analyticals from Phase II show TAGm 4046 VOC exceedences to a depth of 11'-14'bg. MTS EnviroSurv found 12 USTs in section 2 and performed seven borings inside building in 5/96. SECTION 3 included 238, 240, 242, 244 West 60th Street and was formerly utilized as tenemant housing and a wharehouse. Wharehouse had two USTs and one AST which were closed by Don Carlo (two 550-gallon) gasoline USTs and one 1080 fuel oil AST in basement. Five soil samples collected by Don Carlo during

gasoline UST excavation and during fuel oil AST with no VOC detections. "there is a ridge of shallow bedrock running through the central portion of the section one from the northwest corner extending southwest into section two". Groundwater flow to the west generally. Remedial Investigation included installation of 32 soil borings. Two monitoring wells were installed and rest of borings performed via Geoprobe. Two other monitoring wells were discovered (on the eastern portion of section 2 and in the sidewalk at the southwest corner of section 3. Soil analyticals from deep samples show: 5600ppb toluene(SB17 11-12'.bg), 22000ppb ethylbenzene(SB17 11-12'bg), 110000ppb xylene(SB17 11-12'bg), 21000ppb napthalene(SB17 11-12'bg), 7700ppb ethylbenzene(SB18 9-10'bg), 14000ppb xylene(SB18 9-10'bg), 23000ppb napthalene(SB18 9-10'bg), 60000ppb ethylbenzene(SB21 17-18'bg), 250000ppb xylene(SB21 17-18'bg), 31000ppb napthalene(SB21 17-18'bg), 22000ppb toluene(SB24 11-12'bg), 31000ppb ethylbenzene(SB24 11-12'bg), 158000ppb xylene(SB24 11-12'bg), 23000ppb napthalene(SB24 11-12'bg). Groundwater samples show no detections of VOCs (note that wells are not located in areas of soil contamination). Boring logs indicate: for SB17 at depth of 16'bg indicate "product in soil" and groundwater, for SB18 PID of 250ppm w/ gw at 14'bg and EOB at 14'bg, for SB22 PID of 1550ppm at 12'bg with EOB at 15' on bedrock, for SB21 1200ppb at 18'bg w/ gw at 17'bg and bedrock at 19'bg, for SB22 PID of 1550ppm at 12'bg and bedrock at 15'bg.

Letter from NYCDEP Cabbagestalk to Steve Russo (Sive, Paget & Riesel)-6/2/05. DEP reviewqed the Remedial Investigation Workplan for construction of residential apartment building. Phase II acceptable to DEP pending inclusion of: 1)detailed survey of asbestos containing materials 2)dust control measures due to Pb based paint 3)survey for fluorescent ballasts and any other PCB lighting fixtures 4)soil disturbance not take place until aforementioned conditions/recommendations are incoporated into a final workplan 5)submission of how applicant plans to satisfy the noise E requirement.

Remedial Action Workplan (Fleming Lee Shue)-September 2005 "The proposed building plan calls for the construction of a basement that will cover the entire property footprint. Soil in the area of the proposed basement will be excavated to the depth of 28 feet." Plan also includes UST removaland collection of endpoint samples. "During the soil excavation and removal, a Construction Health and Safety Plan (Construction HASP) will be implemented to protect workers from exposure to SVOCs, pesticides, and heavy metals. Dust suppression will be maintained by the contractor during excavation and grading activities as described in the construction HASP. A copy of the construction HASP is included in Appendix B". HASP section 23.3.2 calls for monitoring with a PID and "measurements will be taken prior to commencement of work and for at least 1 minute every 60 mintues during the work". Community Air Monitoring provides that "air quality will be continuously monitored at the downwind perimeter of the contaminated work area while soil disturbing activities are occurring." Action levels are as follows: <5ppm above background:continue work, 5<x<10ppm above background: implement vapor emission response plan, x>10ppm above background:stop work and perform downwind monitoring in accordance with vapor emission response plan. Vapor Emission Response Plan includes contact of local police authorities if levels measured within 20 feet of the nearest downwind residential or commercial structure exceed 10ppm above background or exceed 5ppm over background for a period greater than 30 minutes. "...pre-applied waterproofing membranes that bond integrally to poured concrete will be installed under the basement slab and along the foundation wall. Dewatering activities will occur as basement will be below groundwater level and DEP discharge permit will be obtained.

Remediation Action Workplan Addendum (Fleming Lee Shue) to DEP Ma-10/17/05. "Due to the exclusion of Lot 12 and the inclusion of Lot 51, the Development plans have been altered (see attachment A). The developement will still consist of a residential tower that will occupy the entire site; however, the basement plan has been altered. The basement will be located underneath the entire development, while the sub-basement will be located on the western portion of the site, only. The basement will be used for parking, mechanical space, staff areas, common space and retail space. The sub-basement will be used for common space, retail storage and mechanical areas." "The manufacturer will supply a letter certifying that the vapor barrier will be sufficient to withstand the concentrations of contamination present on the site after the installation is complete".

Letter from NYCDEP Cabbagestalk to Russo-9/22/05. Review of Remedial Investigation and requirement of: 1)submission of a RAP to DEP for approval and "RAP shall delineate that all excavated soils an fill materials will be removed from the site 2)site should have a site specific health and safety plan 3)installation of a vapor barrier 4)coverage of all stockpiles with polyethylene sheeting 4)maintenance of dust suppression 5)coverage of all non concrete areas with 2' of clean fill 6)removal of ASTs in accordance with DEC regulations. "Note that the New York State Department of Environmental Conservation has regulatory authority for protection of groundwater, and may have further requirements".

Letter from NYCDEP Cabbagestalk to Russo-11/29/05. NYCDEP reviewed Workplan Addendum. "We find the RAP, HASP and vapor barrier acceptable". NYCDEP has one requirement with respect to noise designation.

Letter from NYCDEP Cabbagestalk to NYCDOB Osorio-12/7/05. "DEP has concluded that the applicant may proceed with the construction...".

03/31/06-Vought-File review continued by Vought:

Mail to DEC Rahman from Fleming Lee Shue (DeCarlo) for spill #0503229-2/24/06. "Please find enclosed a CD with A PDF copy of the Remedial Investigation Report and Remedial Action Workplan approved by the New York City Department of Environmental Protection for the 60th Street Site. This includes data for the 244 West 60th Street Spill."

Contaminated Soil Letter from DEC Feroz to Lincoln Engineering-3/9/06. "...a letter report asserting a cause of release and sumamrizing cleanup activities.....must be submitted to this office no later than one month from the date of this letter..."

Fax from Dimitrios Stefanopoulos(Beacon) to DEC Patel-3/23/06. Report from ATC Associates-3/22/06. Report of "limited indoor air quality assessment conducted on March 31, 2006 in the morning" at the Beacon School. "Later that same day in the late afternoon ATC was requested again to return and check for the diesel fuel odor". Survey performed using PID. "TVOCs were detected in the school and ranged from 0.0 to 0.6ppm inside and were 0.0 ppm outside the building. The highest readings were on the 2nd floor in the vicinity of the science rooms". Classrooms and corriders were again tested in the afternoon and "TVOCs were detected in the school and ranged from <.01 to 2.0ppm inside and were 0.0ppm outside. The highest readings were from the chemicals in the chemistry room and the storage room of chemicals. All other representative readings taken were <0.1ppm." "No odors were detected in the assessed locations at the time of ATC's visits". Report concludes that "Based on our observations and measurements of (TVOCs) and CO, ATC concludes that the assessed locations were suitable for occupancy at the time of ATC's assessment".

Construction Safety and Health Guidelines (Plaza Construction), Site Specific Health And Safety Plan(HASP) and Mayrich Construction Project Safety Program including MSDS Information-
3/23/06. No mention of vapor monitoring or soil contamination.

Stipulation Agreement from DEC Patel-3/23/06. Stipulation Agreement sent to Micheal Kumrev requiring delineation of soil contamination collection of endpoint samples, installation of vapor barrier, adherence to DER-10 CAMP, submission of all previous reports. CC to NYCDEP Ma, Langan Muller and Lacy(Beacon). CAMP attached to Stipulation.

Phone call with DEC Urda, DEC Vought, DEC Patel, Tarek Khoury and Steve Russo-3/24/06. Russo requested following change to Stipulation CAP that "Respondent shall immediately submit and Investigation Summary Report that was previously submitted to NYCDEP" be included in CAP language.

Letter from Langan (Ilkay Cam-Spanos)-3/27/06. Attached are Remedial Action Workplan, Remedial Action Workplan Addendum and Remedial Investigation Report from Fleming Lee Shue.

Email fron Langan (Khoury)-3/28/05. "Atttached are PID readings from last week and today as well. As you can tell the readings are within acceptable levels. The highest PID reading today was at 1:22 PM and was 4ppm. This reading is still minimal reading and does not trigger safety or health risk issues".

Email from Langan Khoury-3/28/06. "In response to the odor complaint from the Beacon School and to efficiently and promptly respond to your concerns the following is being implemented immediately": 1)work at the impacted contaminated soil along 60th Street side of the project was halted for the day 2)"all commitment made to DEP in the RAP and CHSP are being followed to the letter" 3)PID readings will be taken all day along west 60th street and west 61st street by Beacon School. All PID readings were O on 3/28/06 4)The area with impacted material "is clearly defined and is covered with plastic sheeting" 5)Site visit to school was conducted with DEC and no complaints were noted 6)ASR will deploy foam suppressant at the site as of 7:30am tommorrow using L-10 bioenzyme product.

Letter from NYCDEP Cabbagestalk to NYCDOB Osorio-3/28/06. "The New York City Department of Environmental Prorection, Bureau of Environmental Planning and Assessment(DEP) is rescinding its December 7, 2005 Notice to Proceed and requests that New York City Department of Buildings issue a notice of intent to revoke permits for work currently proceeding at 555 West 59th Street...". "Currrent work at the site must stop immediately until we are assured that remedial/construction activity will proceed in a manner protective to public health and the environment".

Email from Steve Russo to NYCDEP and NYCDOB-3/28/06. "I am a little surprised that this action is being taken untilaterally without giving us an opportunity to address any concerns". "...we respectfully request that that DEP rescind its recission..." Request to meet onsite on 3/29/06. "There will be no disturbance in the affected area." Email also mentioned mitigation techniques. Later email from Russo that he was "advised that contaminated area was sprayed with foam.." and no work was going to occur in affected areas during the day. Russo and Khouri will be onsite at 1pm to observe conditions and requested for meeting with DEC and DEP.

Meeting at Site with DEC Vought, DEC Urda, Ramonal Allegrini(Element West 646-529-7982), Eric Johnson(Plaza Construction 212-849-4800), Rich Connor(Plaza Construction 212-849-4800), James Furey(Mayrich 718-378-2600), Steven Muller(ASR 212-809-1110), John Rhodes(Naley & Aldrich 212-785-8200), Steven Russo (Sive Paget and Riesel 212-421-2150), Jane Gol(Element West 646-202-9674), Lee Samuels(Element West 973-477-6448), Mohammed Khaja-Moinuddin(NYCDEP 718-595-4445), Joel Laudes(Langan 212-479-5404), Erick Muller(Langan 646-285-4853), Richard Levato(ASR 212-809-1110)-3/30/06. DEC required and Element West agreed to staffing one Langan employee at school at all times. Mitigation measures include VOC and dust monitoring, placement of foam on excavation, immediate removal from site of contaminated soil, loading of trucks at bottom of excavation, application of L-10 enzyme, use of vapor barrier. As per Plaza concrete scheduled to be poured in 5 days. DEC noted that vapor barrier had not been demonstrated as of yet to be compatible with petroleum contamination. NYCDEP discharge pertmit was applied for despite no groundwater in excavation. DEC requires: 1)collection of endpoint samples 2)soil investigation of contaminated area including collection of groundwater samples at highest areas of contamination. Vought received call from Khoury(Langan) later on 3/30/06 that three bedrock wells were going to be installed and proposal will be submitted to DEC.

Letter from Langan(Khoury) to NYCDEP Cabbagestalk-3/30/06. Langan commits to the following: 1)community dust, odor and Vapor Monitoring. Real time continuous monitoring being implemented. Additional commitments include excavation during non work hours,

deploying of foam suppressant, application of L-10 bacteria, full time monitoring at Beacon School, "all petroleum impacted material will be excavated for offsite disposal", collection of endpoint samples, "the foundation slabs will not be poured until the remaining soil under the proposed slab is tested, the results transmitted to the NYCDEP and NYSDEC and approval by either or both agencies is granted", installation of three groundwater rock wells, designing a sub-slab depressurization system if soil and groundwater data show subsurface contamination, prepare a remedial workplan for NYSDEC and NYCDEP for review.

Phone Conference with DEC Urda, DEC Austin, DEC Vought and DEP Cabbagestalk-3/31/06. NYCDEP Cabbagestalk will contact DOB for stop work order as RAP submitted to DEP was not accurate. NYCDEP also required submission of a workplan.

Email from Ilkay Cam-Spanos to DEC, DEP and Khoury-3/31/06. "The following items have been implemented and on-going": 1)excavation being performed from 4:30-7:30am 2)continuous PID monitoring at the Beacon School and onsite 3)collection of two endpoint soil samples on 3/13/06 and 15 endpoint soil samples on 3/31/06 4)installation of three bedrock wells.

4/1/06-Vought-Called Khoury for submission of boring location plan and left message to return call to DEC. Vought spoke to Khoury and endpoint samples will be collected and three were collected one month ago and ten samples were collected from site. Samples were collected from hand augres one foot below surface. Plan will show bedrock depth and contaminated soil. Six or seven samples will be collected from further excavation of contaminated soil. Driller will install rock wells along 60th street level inside excavation and will be installed as temporary wells and will be closed once concrete is poured. Khoury will submit site plan and soil and groundwater data, designing vapor intursion system (which will not be used if soil results are clean). DEC required collection of endpoint samples at areas of highest historical contamination with no vertical delineation(SB17, SB18, SB21, SB22 and SB24) and collection of groundwater sample in center of all five borings. Khoury stated that temporary wells were also going to be installed at northwest corner of excavation and at former boring location SB8. No odors detected today at school. As per Khoury no workplan was going to be submitted as samples were already collected and submitted for analysis.

4/1/06-Vought-DEC requires: 1)immediate recovery of free phase product if present. 2)submission of all previous reports including reports for Spill Numbers #9803858, #0503781 and #0503229 3)Immediate implementation and submittal of a (CAMP) including continuous indoor and outdoor monitoring at the Beacon School while school is in session and contaminated soil and/or groundwater is exposed, vapor mitigation efforts used during construction including, but not limited to, covering all contaminated soil stockpiles, use of vapor supressant foam, immediate removal of contaminated soil from site and restriction of contaminated soil operations during non-school hours 4)Prior to pouring of concrete for the foundation, immediate submission of an (ISR)that completely delineates soil and groundwater contamination on-site.5)Within 60 days submission of an ISR Addendum that includes off-site delineation of soil and/or groundwater contamination 5) Prior to pouring of concrete for the foundation, submission of a RAP detailing the work proposed to remediate all contaminated media on-site. The RAP shall include endpoint sample analyticals from the final depth of excavation to characterize soils directly underlying the building foundation. The RAP shall also detail vapor mitigation efforts used in the construction of the building including at a minimum, installation of a vapor barrier. The vapor barrier must also be demonstrated to be compatible with petroleum contamination. If contamination remains on-site in soil and/or groundwater, a sub-slab depressurization system will be installed. 6)Within 90 days submission of a RAP Addendum that includes off-site remediation of soil and/or groundwater contamination, if applicable. Vought drafted Stipulation and CAP with above requirements and submitted to DEC Urda and DEC Austin for review.

04/06/06-Vought-Recieved call from Langan (Khoury) and Steve Russo that they received stop work order from DOB and asking why order was given. Russo requested that DEC Vought contact NYCDEP Cabbagestalk to inform him that DEC was content with progress. Vought informed him that DEC had received no legally binding committment that development would not proceed, no data had been submitted to date to DEC and hence Vought could not make the requested call to NYCDEP. Vought informed him that Stipulation was

being reviewed by DEC Austin and since DEC Vought will be out on training from 4/10-4/14, DEC Austin should be contacted during that period.

04/07/06-Vought-Spoke to Rich Lavado and he had copy of file. Work at site included application of L-10 on contamination of sidewall and floor and hot zone by MW4. Area has strong odor possibly of petroleum. PID read up to 70ppm before application and 0 after. ASR not involved in soil sampling. Vought called Langan(Khoury) regarding hotzone excavation and delineation and left message that hotzone must be excavated and endpoint samples collected. Vought received second call from Lavado and they were also hired for soil and groundwater remediation. ASR will install bio-irrigation system of 4" manifolded PVC covered with bluestone topped by a vapor barrier. Lavado will submit RAP to DEC and NYCDEP.

04/07/06-Vought-Stipulation Agreement with above requirements from 4/1/06 sent after approval by DEC Austin and DEC Urda. Stipulation Deadline of May 7, 2006.

04/17/06-Vought-Received call and spoke to Khoury. Endpoint samples were collected from site (approximately 27 samples) and data showed slight methyls and PAH exceedences. One VOC exceedence in sample. Data was submitted to DEC. Three groundwater samples were collected and groundwater was 7-11' into bedrock. Some VOC exceedences in groundwater.

04/18/06-Vought-New file review by Vought:

Letter from NYCDOB to Moshe Azougi (owner) of 555 West 59th Stree Holdings LLC-4/3/06. "The Department of Buildings (the Department) intends to revoke the approval(s) and permit(s) used in connection with the application referenced above". "The Department hereby intends to revoke the permit based upon DEP's recission of it's approval.." "In addition the conditions described above present and imminent peril to life or property at the premises. Thereby you are required to STOP ALL WORK IMMEDIATELY".

Clean Backfill Material Report to DEP Cabbagestalk (Langan)-4/5/06. Documentation related to source of backfill material. "The material tested presented no TAGM 4046 exceedences and we request and approval for the use of 5,000-yard of this material as backfill at the 555 West 59th Street..." Enclosed is NYSS Beneficial Use Determination from NYSDEC dated 6/6/05, NYSS fill material laboratory test results for TAGM criteria and NYSS laboratory test results for chloride dated 11/4/05. Laboratory analyticals included show no TAGM exceedences in backfill material. Also included is letter from DEC Lynch to Nicolas Mann (Quay Consulting) dated 6/6/05 "The New York State Department of Environmental Conservation (NYSDEC) had reviewed your petition dated May5, 2005 for a benefical use determination (BUD) for sand dredged by Amboy Aggregates, Inc., of South Amboy, New Jersey from the Ambrose Channel as unrestricted-use aggregate in New York State". "The BUD No. 846-2-24 is granted to New York Sand and Stone LLC...". Vought called and spoke to Kathleen Prather (DEC) as she was listed as contact on letter and she stated that material could be used as backfill (after Vought explained current issues on site).

Remediation Work Progress Report-March 22 through April 5, 2006 (Langan)-4/6/06. COMMUNITY DUST AND VAPOR MONITORING: Monitoring in accordance with NYCDEP approved Remedial Action Workplan dated September 2005 including fixed monitoring points on the northeast and southeast corners of the site, applying water on haul road, wetting excavation faces and streets, tarping trucks, limiting of excavation during non-school hours, application of L-10 bioenzyme, ambient air monitoring including full time Langan staff at Beacon School. ENDPOINT SOIL SAMPLING: Collection of nineteen soil samples show exceedences for TAGM VOCs only is sample obtained from northwest corner of excavation below the West 60th Street sidewalk and slight exceedences of SVOCs. Additional endpoint sampling will be performed in areas once proposed excavation depth is reached. GROUNDWATER SAMPLING: Installation of four rock wells and collection of groundwater samples. Due to potential ACM in bedrock, a dust suppresion pla

nwill be implimented. SOIL GAS MITIGATION: "A sub-slab depressurization system is being designed as a parallel effort...." "Based on the soil data and the field observations it appears that the exceedences in remaining soil at the site are minimal and are characteristics of historical fill and are not related to the petroleum or gasoline spill. Langan recommends no further action with respect to the subsurface conditions at the grids:A1, B1, A2, A3, B3, B4, A5, B5, C1, D2, E3, E4, E5, F5, G5 and G6. We respectfully request your approval and clearance so that the construction and foundation work can continue in these grids."

Letter from Sive Paget and Riesel(Russo) to NYCDOB Osorio-4/11/06. "...we believe that there is no reason to revoke the work permits. Furthermore we request that following approval by the New York City Department of Environmental Protection of an amended Remedial Action Plan that will be submitted no later than April 19, 2006, that the Department revoke its stop work order." Letter summarizes remedial and vapor mitigation techniques. Letter also states that "owner committed in writing that the concrete slab for the building would not be constructed until DEP and DEC had reviewed all end point sampling and well sampling results and the parties had agreed that all required remedial meaures were implemented.

04/21/06-Vought-Continued file review by Vought:

Remedial Work Progress Report Addendum -Bedrock Well Installation Sampling and Laboratory Results (Langan)-4/11/06. Installation of four rock wells (RW01 thru RW04).

04/25/06-Vought-Continued file review by Vought:

Remedial Work Progress Report Addendum -Bedrock Well Installation Sampling and Laboratory Results (Langan)-4/11/06. Installation of four rock wells (RW01 thru RW04). Wells installed to a depth of approximately 16’ below bottom of excavation. "Groundwater was encountered at dpeths 3-ft bgs, 14.5-ft bgs, and 0.5-ft bgs in wells RW01, RW02 and RW04 respectively." No groundwater encountered in RW03. "It is our opinion that the groundwater encountered at the Site is perched (unconfined) water. The exceedences in the groundwater samples are most likely characteristics of the groundwater encountered in this general area of Manhattan and are not specifically related to site conditions." "However, and in abundance of caution, mitigation measures will be implemented to address potential vapor generation from the groundwater." Mitigation measure to include installation of vapor barrier. Groundwater analyticals show: 33ppb benzene(RW01), 26ppb xylene(RW01), 20ppb 1,2,4-trimethylbenzene(RW01), 22ppb 1,3,5-trimethylbenzene(RW01), 28ppb benzene(RW02), 51ppb toluene(RW02), 29ppb ethylbenzene(RW02), 166ppb xylene(RW02), 30ppb napthalene(RW02).

Endpoint Sample Results (Lagan)-4/13/06. Collection of endpoint samples (approximately 28 soil samples) from site. SVOC exceedences in PAHs (attributable to fill material) were found. "Based on the soil data and field observations it appears that the exceedences in remaining soil at the Site are minimal and are characteristic of historic fill, and are not related to petroleum or gasoline spill. Langan recommends no further action with respect to the subsurface conditions at the entire Site". Soil analyticals show: 71ppb benzene(C5), 67pp benzene(B5), 64ppb benzene(A6), 66ppb benzene(D5), 134ppb benzene(B6), 1347ppb xylene(B6), 92ppb benzene(Off site Pre-01), 1586ppb xylene(Off site Pre-01), 4170ppb n-propylbenzene(Off-site Pre-01).

Community Air Monitoring Plan for Remedial Action (Langan)-4/13/06. "The proposed Remdial Action (RA) consists of mass excavation and off-site disposal of impacted soil within the boundary of the Site". CAMP developed in conformance with NYSDOH Generic Community Air Monitoring Plan. CAMP includes: monitoring at site since 2/6/02 and at Beacon School since since 3/31/06, monitoring via PID and dust monitor, continuous VOC monitoring during all remdial activities including excavation and soil and groundwater handling, continuous monitoring at Beacon School "while school is in session and while contamianted soil and/or groundwater are exposed.", ambient air monitoring, limiting of excavation to non-school hours, covering of stockpiles, use of

foam suppressant, response actions for associated PID readings.

Faxed Letter from Sive, Paget and Riesel (Russo) to DEC Urda-4/17/06. "As discussed I attach and execution stipulation and corrective action plan regarding the above referenced project...". Fax included copy of Stipulation signed by Steven Russo.

Email from Langan (Khouri) to DEC Vought-4/18/06. "Attached is the NY Sand and Stone BUD and lab results for the material we intend to import to the site". Request to review and approve use of fill material. See notes above regarding Clean Backfill Material Report.

Investigation Summary Report (Langan)-4/18/06. "Impacted soil was encountered in the vicinity of closed-in-place underground storage tanks (USTs)". Adjacent property use includes vacant land to the north, construction site to the west, and commercial properties to the south and east. Former uses of the property include residential, comissary, junkyard, automobile repair shops, warehouse, stables. Report includes information submitted previously including: waste characterization, soil management, UST removals, post excavation endpoint sampling, rockwell installation, groundwater sampling, air monitoring, dust supression, odor supression, clean fill material, vapor memebrane, sub-slab depressurization system. "A SSDS has been designed and will be implemented as part of remedial actions at the Site. The SSDS system will create a low vacuum zone beneath the building slab by extracting the sub-slab air using a vacuum blower mounted onto the building roof." Draft SSDS design included in Appendix E of report.

Remedial Action Work Plan Addendum II (Langan)-4/18/06. Proposed construction includes parking garages on eastern portion of site and apartments in western portion of the site. Soil will be excavated to bedrock in areas of shallow bedrock. "Remaining areas of the Site will be excavated to the depth of the building basement and/or until all imapcted soil is removed". "Final excavations will be based on laboratory analysis of endpoint samples in the areas where bedrock is not encountered". RAP also included air monitoring, load out/tramsport and off-site disposal, importation of clean fill, installation of a vapor membrane, installation of SSDS. Addendum also included new Health and Safety Plan, CAMP and OM&M Plan. "Intermittent progress reports will be provide to the NYSDEC and NYDEP utnil the onsite remediation is completed". A final engineering report will also be submitted to the DEC and DEP.

DEC Vought to: 1)approve use of backfill material as per DEC Prather 2)investigation of soil and groundwater under sidewalk of West 60th Street due to TAGM VOC exceedences (4/6/06 report) 3)Additional excavation of B6 (also agreed to by DEC Austin)"Final excavations will be based on laboratory analysis of endpoint samples in the areas where bedrock is not encountered".

04/27/06-Vought-Spoke to Langan (Khouri) and informed him of above requirements and drafted letter with above requirements. Vought received email from Langan(Cam-Spanos) that B6 grid area was excavated to bedrock and after endpoint samples were collected. Letter was sent summarizing excavation.

Further Excavation and Additional Endpoint Sampling Request at B6 (Langan Cam-Spanos)-4/26/06. "As discussed during the phone conversation you had requested further excavation and additional end-point sampling at Grid B-6. Langan's and the contractors records indicate that due to a change in the construction plans, this area was excavated to bedrock after the initial end-point sampling and the entire grid was backfilled with clean gravel". "We respectfully request your approval on this matter and contact with the NYCDEP so that the construction and foundation work may continue...". Vought sent letter approving of ISR and RAP Addendum II, approve use of backfill material as per DEC Prather and requiring: 1)investigation of soil and groundwater under sidewalk of West 60th Street due to TAGM VOC exceedences (4/6/06 report). Vought called DEP Cabbagestalk to discuss letter and left message to check fax machine.

New file review by Vought:

Notice to Proceed (NYCDEP Cabbagestalk)-4/27/06. "Based on our review of the aforementioned documentation, DEP had concluded that the applicant may proceed with construction, provided that a closure report concerning the hazardous materials "E" related activities....ares submitted by the applicant to DEP for review and approval at the conclusion of the construction related activities".

05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin.

05/30/06-Vought-Received message from Ilkay Cam (Langan 917-822-3637) that sidewalk well will be installed tomorrow and confirming that well will be bedrock well. Vought returned call and informed her of new project manager and left message confirming DEC requirements of installation of rock well.

06/01/06-Vought-Received message from Ilkay and returned call and spoke to Cam. Extension requested for another 30 days. Extension granted by Vought for another 30 days till report is due for sidewalk well installation as per CAP. July 17th.

8/29/06- DEC Piper reviewed ISR Addendum dated 6/14/06- AS per report, during installation of gw well on W. 60th St., contaminated soil w. bewnzene exceedances was discovered 71 ppb at 10-12' in RW-05. and n-Propylbenzene 6420 ppb in same location. GW exceedances are as follows, 27.2 ppb 1,2,4 Trimethylbenzene, 7.4 ppb- 1,3,5 Trimethylbenzene, 114 ppb- benzene, 16.2 Ethyl benzene, 28 ppb Isopropylbenzene, 31.4 MtBE, 20.1 n-Propylbenzene. DEC Piper spoke w/ DEC Vought and DEC austin regarding exceedances. Though source area was removed, DEC instructed Langan to purge well of approx 200 gallons and resample.

12/6/06- DEC Piper received addendum report. The well has been resampled and results show slight exceedances of Benzene 16ppb, Isopropyl benzene 16.5ppb and n-propylbenzene 8.3 ppb. This is a significant decrease. Source area has been remediated through excavation, vapor barrier installed and active SSDS is ongoing. This case is closed as well as 0514548, 9803858, 0503781, 0503229. See E-docs if warranted.

Caller Remarks:

Material is on water on concrete. No to five questions. Transformer is in vault and unsure if it is teh cause. Con ed#156821

DEC Investigator Remarks:

10-1-05 @ 14:55. P Diaz # 09784 reports that while doing an inspection in v9879 f/o 704 9 av (48 st), he discovered 5 gallons of unknown oil and 30 gallons of water on the concrete floor of the structure. There was or is no smoke or fire involved. No sewer or waterway affected (the trap was checked and it was dry). No injuries and weather had no affect. No measuring device was used to determine the amount of the spill. Source and cause of spill are unknown. No private property affected. There is oil filled equipment in the structure (a transformer). Environmental yellow tag 38844 was applied. Water is standing, no visual water movement. Sump is concrete and the pump was unplugged. No dielectric filled feeders in the structure.
No dielectric filled feeders in the structure. 2 liquid samples were taken by P Diaz # 09784 from the spill, 1 for id and 1 for pcb. Sample priority "e". Chain of custody # cc17993. Cleanup is pending availability of crews and lab results.....J Moran #01182

Lab Results 01/11/05 20:43 hrs
Lab Sequence Number: 05-00244-001 Analysis indicates the presence of a transformer oil.

1/12/05 11:00

K. Wilkinson # 24331 I&A supervisor reported that on 1/10/05 the unit was pressure tested & was holding pressere. He says it held 7lbs. for 20 minutes.
A cleanup is being set up for 1/13/05 at 07:00 & the unit will be re-evaluated.

Update 1-13-05 @ 15:50
M Ryder #27277 reports that the cleanup is complete as of 15:45. Double washed with slix and flushed. 1100 gallons of oil and water mixed removed by tanker. 1
bag of ppe and debris removed. Tag # 38844 removed. Cleanup supervisor and crew are listed in the event involved person screen.
No visible sign of the spill
was observed during the cleanup

Caller Remarks:

STEVE SACCOCIO IS AWARE

DEC Investigator Remarks:

Spoke to Dr. Sandoval who represents Whitehouse - the tenant/builder/runner of future club. Swingtime is the owner of the property. According to a report written by Swingtime's consultant, American Envmtl Assessment(AEA), there was no contamination.

DEC Saccacio required more work.

PDM performed own investigation for Whitehouse and found contamination.

Whitehouse's attorney(Michael Perle) will send DEC letter.

Reassigned from Saccacio.

5/9/03 Reassigned from Rommel to Harrington.

1/5/05 Reassigned from Harrington to Foley. Changed address back to 609-611 11th Avenue. Address was 561 11th Ave and listed ExxonMobil as RP. Two PBS registrations, one at each location. Appeared to have been consolidated under spill #8806783 in error. Cross-reference open #9501693 for 609-611 11th Ave. (KMF)

From closed spill file: (KMF, 3/24/05)
10/24/00 Letter from PDM Environmental Services addressed to Mr. Oscar Sandoval of The White House. PDM reviewed the American Environmental Assessment Corp Summary Report for Soil Removal. They noted that in some samples the reported values were greater than the guidance values. Also noted that some samples were contaminated and above STARS guidance values. Sample results indicate that soils beneath the 11th Avenue property line show the greatest levels in exceedance of criteria and will probably require further remediation. PDM noted complications with obtaining a certificate of occupancy until contaminants have been removed to below acceptable levels.

A letter was issued by S. Saccacio on 11/22/00 which states that the spill number will not be considered for closure until additional investigation is conducted and the Dept reviews the results.

See spill #s 0001837, 0001719, 9501693.

WAIT FOR RECOMMENDATIONS BY DEC.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "VOUGHT"
Site Investigation Work Plan submitted 7/27/01 by Jacques Whitford Company, Inc. - Leigh Mulroy 914-686-1100.

09/27/2001-Leigh Mulroy looking for approvel for the work plan she submitted. wtc

9/27/01

The fieldwork commenced on the rescheduled date of September 26, 2001 at 7:00am.

Jacques Whitford Company (JWC) advanced three borings along the sidewalk on the north side of W54th St, and completed the borings as monitoring wells to 20 ft bg as per the Site Investigation Workplan (July 2001). Split spoon samples were screened continuously to depth and samples were collected for analysis (VOCs, BNs specified in the SI Workplan) at the the interval with the highest PID readings.

Soils consisted of fine brown gray sand and silt, and perched water was observed at approximately 14 ft bg. Soils in boring B-3 were clean, and soils from borings B-1 and B-2 had intermittent staining from 12 ft bg to 20 ft bg. The highest PID reading was 1128 ppm in B-2 (11-12'), and affected soils had a petroleum odor. JWC plans to gauge and sample the monitoring wells (MW-1, MW-2, MW-3) on October 3, and then gauge the wells again on October 10 and 17.

JWC will apprise the NYSDEC of the soil analytical results and subsequent groundwater analytical results when they are received. If acceptable to NYSDEC, the final Site Investigation Report will be submitted on November 19, 2001.

(914) 686-1100 JACQUES WHITFORD COMPANY, INC

10/01/01 - K.Goertz approved work plan,faxed approval to consultant on 10/1/01. MW's have already been installed and there was field evidence of contamination in wells MW-1,and MW-2. A vapor barrier and vapor extraction ines have been installed under newly constructed office building. (KG)

01/26/04

reassinged from rommel to vought

05/18/06 - Reviewed the May 29, 2003 GW Monitoring report. Highest TVOCs in GW has come down to 1.1 ppm with Benzene at 6.2 ppb. According to the report, the release was due to a 1000 gallon UST of gasoline leak. No free product ever found, and over 572 tons of petroleum impacted soil has been removed from the site. TVOCs in GW has been trending downward since 2001. There is currently a new building on the site and a vapor barrier and a passive sub-slab venting system are supposedly installed. Since the residual GW contamination is relatively low and there has been no vapor complaint, this spill is inactivated. - KST

Caller Remarks:

A SHEEN IS BEING SEEN ON THE HUDSON RIVER, COULD BE CREATSOL: UNSURE WHERE IT IS COMING FROM, WILL CALL KEN'S MARINA TO GET A VAC TRUCK AND SOME BOOMS: THE COAST GUARD IS ON SCENE. 157815.

DEC Investigator Remarks:

157815. AT APPROXIAMATELY 11:45 EHS ENGINEER J. BURKE ADVISED STATION THAT OIL SHEEN ON DOCK WAS OBSERVED AT PIER 98 ALSO A PINK UNIDENTIFIED SUBSTANCE OF APPROXIMATELY 6 OZ TRAPPED IN THE CONFINES OF THE BOOM. USCG ON SITE, CIG NOTIFIED, KEN BOOMING CONTACTED TO REPSPOND WITH A VACUUM TRUCK AND A SKIMMER. USCG WAS CONDUCTING ANNUAL INSPECTION. OIL SHEEN ON DOCK APPEARED TO BE APPROXIAMATELY 3 OZ AND WAS CLEANED UP BY OPERATOR (PIC) ON DUTY.
JEFFERSON (82797)/RODNEY (00615)

Update:
Ken's Marine responded with boom boat. Upon arrival it was determined that a vac truck and skimmer would not be able to remove any of the residual pink fluid
in the water. Sweep boom and pads placed on water to remove pink substance sheen. Clean up completed at 14:45. One bag of non-hazardous debris received
from Ken's Marine.

ROOT CAUSE: Oil sheen source was probably from residual chemicals that were used to treat deck timbers. There were very heavy rains at the time and there

were no vehicles that were on the dock. Unknown pink substance probably came from garbage that was already in the river. The pink substance had an
appearance similar to Pepto-Bismol. Pink substance had dissapated by time Ken's Marine arrived and we were unable to get a sample for analysis.
CORRECTIVE ACTION: The spills were contained and cleaned up by the PIC (Sheen on deck) and by OSRO (pink substance in water). No further corrective
action is anticipated.

Incident reviewed by EHS staff. Updated to submit to NYSDEC for close out.

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

On October 20, 1999, DEC Sigona met with Julio Godry, Superintendent for Hartley House. Set up follow-up meeting for 10/21/99 with superintendent for 416 West 47th Street and inspected the basement. There was a 3,000 gallon UST which is underground (covered with concrete), with weep holes. The tank was registered and last tested in March 1995. There was no sign of vapors or problems with the tank. Called tank owner who agreed to test the tank, and investigate any problems with vents.

Based upon investigation could not identify any source or confirm any vapor problem affected the school. Met with assistant director and explained the probelm, asked that the DEC be notified if the problem happens again.

DEC Sigona supervised tank test at 416 West 47th Street on November 11, 1999. The tank test resulted in a system failure reported under spill no. 9909811. Follow-up inspection by ABC Tank determined that vent pipe to rear of building was not

disconnected, allowing tank to fail test. The vent pipe was broken at top and vented vapors to base of Hartely house where vapors were entering the art studio. The evnt pipe was disconnected by ABC and inspected by DEC Sigona on November 16, 1999. See Spill No. 9908772 for further information. DEC Sigona informed the director of Hartely House of these findings. No further action necessary.

Caller Remarks:

Caller advised investigation in process on Block 1073 lot 1 near address given. Caller advised is unk type petroleum.

DEC Investigator Remarks:

3/8/11 - Raphael Ketani. I spoke to Stuart Knoop (k-noop)(212) 479-5461 of Langan Engineering. He said that Langan had been working on this vacant property as a due diligence effort for a developer, 85 Gotham Organization. He said that the City owns the property. The property is between 10th and 11th Avenues and between West 44th and West 45th Streets. Half of the property was a parking lot and the western side had a taxi service or a gas station.

Langan has already done many borings throughout the lot. They did one recent boring and hit 2 feet of oil about 7 to 9 feet below grade. He is sure that they hit the oil well above the groundwater. Mr. Knoop thinks that this is a tank or a vault. They will do test pitting to determine the source of the oil. I told Mr. Knoop to send the DEC the investigation report once they are finished boring and sampling the site. He said that he will.

4/8/11 - Raphael Ketani. I spoke to Mr. Knoop (k-noop)(212) 479-5461. He said that the oil that was found previously was from a buried drum that was leaking. This was cleaned up. The area where the drum was found contained lots of buried scrap metal. He went on to say that the significant petroleum impacts were discovered at the western part of site. There they found 11 tanks. All

of the contamination is being addressed. Mr. Knoop will send DEC a web address where the RAP and Health and Safety Plan, and other documents regarding the site, can be found and downloaded.

4/11/11 - Raphael Ketani. I found the website and downloaded the documents. Many of these documents turned out to be hundreds of pages long. They had been generated by different consulting companies.

4/15/11 - Raphael Ketani. I spoke to Mr. Knoop today. I asked him whether the gas tanks had ever been registered. He said that they had not. The gas station ceased operation in the 1960s. The previous owner never registered the tanks. I told Mr. Knoop to have someone start on the paperwork as there may be questions regarding how to list the tanks and the details for each listing. I told him that the paperwork should be ready to go and once his client finalizes the purchase, then the paperwork should be submitted to Albany. He said that this will be done. I asked him whether groundwater was found. He said that groundwater samples were taken, but there were no significant hits in the samples. Mr. Knoop commented that they were hoping to get a response letter from the DEC by the beginning of June. I told him that I will work on the reports over the course of several days and try to get a letter out as soon as possible.

4/21/11 - Raphael Ketani. I finished my review of the Langan Engineering 4/8/11 cover letter and the six attachments. My notes for each section are below:

Langan Engineering cover letter dated 4/8/11-
1)the 10 USTs will be removed from the western part of the site
2)there is no mention of the warehouse property (527 West 44 Street - aka 511-533 West 44 Street=playground and warehouse, respectively); it doesn't seem to be part of the site development
3)vapor barrier under buildings A and B; passive venting system under building B; overbuild AMTRAK railroad with building C

Attachment F - AKRF 11/7/08 Phase I Environmental Site Assessment-
1)5 gas USTs were found on site at the parking lot along 11th Avenue
2)fill cap seen in sidewalk at vacant warehouse at 527 West 44 Street (along with playground this part is 513-533 West 44th Street)
3)522 West 45 Street-stable to the west of P.S. 51M (520 West 45 Street); boiler present - there may be a tank
4)520 West 45 Street-P.S. 51M; two 2500 fuel oil ASTs; NY Power Authority generated lead and mercury waste as exempt low level hazardous waste generator
5)Sanborn maps indicate that the entire site once contained a foundry, metal works, manufacturing, a taxi terminal, National Gum and Mica, railroad right of way
6)suspect asbestos bearing materials throughout buildings that are still present
7)based on the age of the buildings, there is lead paint and PCB bearing ballasts and mercury switches
8)there was a gas station at the eastern end of the property
9)Consolidated Gas Co. facility was to the west of the property across 11th Avenue with large tanks and coal storage yards (former MGP site)
10)property is 25' to 30' above mean sea level, railroad is 20' below grade, Hudson River is about 1,000' due west
11)Figure 2 includes all property west of the gas station, including the AMTRAK right of way and the warehouse on West 44th Street

Attachment E - AKRF October 2009 Phase II -
1)investigation took place September 2009
2)2 soil samples from each soil boring, 1 temporary well, GPR survey

3)bedrock 6.5’ to 13’ below grade, staining in soil at SB-1 to SB-3
4)soil VOCs below TAGM, SVOCs only benzo series exceedences and their associated combustion products, groundwater didn’t have gas or oil VOCs or SVOCs
5)Table #1 (VOC) and Table #2 (SVOC) almost entirely non-detect for soil analytes, except benzo series, Table #6 (VOC) and Table #7 (SVOC) all non-detect for groundwater
6)6 borings done in taxi area in west third of property and public parking area; 3 borings in private parking area in middle of property
7)metal, PCB and pesticide analysis performed for soil and groundwater samples
8)Fleming-Lee Shue Phase II included in AKRF Phase II report, done in August 2009
8a)9 soil borings and 4 groundwater wells installed in area of playground and warehouse (513-533 West 44th Street), groundwater 10’ to 19’ below grade, bedrock 2’ to 16’ below grade
8b)soil vapor samples above limits for TCE and PCE - exceeds NYSDOH air guidance, TCE in 3 of 4 groundwater samples, 2 wells had TCE exceedences, TCE higher in upgradient well

Attachment D - Langan Engineering revised 1/6/11 Waste Characterization Report -
1)investigation of site took place 10/6/2010 to 10/15/2010
2)27 soil borings (EB-1 to EB-9, GEB-1 to GEB-18), performed by Laurel Environmental for Langan
3)chlorinated solvents as soil vapors and groundwater contamination
4)investigation identified tanks and SVOCs of urban fill
5)collected 11 grab samples and 11 composite soil samples from 0’ to 14’ below grade
6)1 grab sample and 1 composite sample collected from each of 9 waste characterization grids
7)fill to 5’ to 11’ overlying bedrock and native sand
8)petroleum odor and elevated PID readings at EB-2, EB-3 11’to 15’, EB-6 13’ to 15’, GEB-2 9’ to 11’, GEB-16 14’ to 16’, faint odor at EB-5 3’ to 13’, EB-6 3’ to 8’
9)petroleum impacts in west central area and oriented north-south, petroleum grab samples with 2 VOC exceedences, benzo series exceedences of historical fill

Attachment C - Langan Engineering 4/7/11 Supplemental Waste Characterization Report -
1)objectives: delineate extent of petroleum contamination in soil in the western part of site; evaluate potential presence of tanks; collect groundwater samples; delineate extent of lead contamination in soils in southeast part of site
2)did 104 borings, 20 test pits, 2 groundwater wells, collect 42 soil samples and 2 groundwater samples
3)SWCI done between 2/16/11 and 3/14/11; 66 borings DB-25 to DB-80; 3 additional borings DB-34S, DB-34N, DB-34W near apparent UST in stable
4)gray and black stains, petroleum odor, PID readings in borings in west part of site; DB-60 had 1440 ppm vapors at 15’; 2 borings at DB-17-2 at 6’ to 8’ in southeast area didn’t have product (spill case #1012171)
5)TP-9, TP-14, TP-17 to 19 revealed 9 USTs in western part of site along 11th Avenue - estimated to be 550 gal. tanks, base of tanks at 7’ below grade; gray to black staining under each tank at 9’ to 11’
6)TP-18 had 1,224 ppm vapors, TP-2, TP-5 and TP-13 had gray to black soil in west part of site with PID hits up to 355 ppm
7)TP-10 conducted at boring DB-17-2 in grid #8; found metal scraps and crushed, leaking drum of oil (spill case #1012171) 6’ below grade; test pits nearby had no contamination - bricks, tar, scrap metal, concrete, timber, plastic
8)no gas or oil analytes in groundwater

Attachment B - NYC DEP 3/8/11 RAP and CHASP Approval Letter to NYC HPD -
1)to Patrick Blanchfield of HPD, approving the RAP and CHASP

2)referenced October 2009 Phase II, March 2011 RAP and Construction HASP by AKRF, and February-June 2009 Phase II by Fleming-Lee Shue
3)March 2011 RAP proposes 20 MIL high density barrier and passive sub-slab ventilation system beneath building B
4)RAP approved by Maurice Winter, DEP Director in Site Assessment

Attachment A - AKRF March 2011 RAP and CHASP -
1)elevation about 25' above mean sea level
2)railroad right of way about 20' below grade
3)fill 2' to 10' below grade, bedrock 2' to 16' below grade
4)groundwater 10' to 19' below grade and flow believed to be to the west (Hudson River)
5)development site is taxi company and parking lots in west, stable on north along 45th Street, P.S. 51M on north along 45th Street (east of stable), active AMTRAK railway in east central area (NOTE! not included are the gas station at the east end of the block and the warehouse and playground along West 44th Street)
6)all of the reports are referenced

I spoke briefly to Mr. Knoop (212) 479-5461 about my review. He said that he couldn't talk at length right now. However, we agreed to talk on wednesday, April 27, about the project and the reports. I asked him about the warehouse with the chlorinated solvent hits. He said that he thought the project was being handled by the School Construction Authority since it was supposed to be the new site for P.S. 51M.

I searched the remediation and spills databases for a case that might involve the warehouse with the PCE and TCE vapors and the TCE in the groundwater. I used the addresses for West 44th Street of 511, 513, 527, and 533. I did not find an active case, nor a closed case.

4/28/11 - Raphael Ketani. Lee Gutterman (718) 472-8000, ext 8502 of the SCA returned my call today. We spoke about the site for the new P.S. 51M school. Ms. Gutterman said that the SCA is currently involved with the site. Due diligence was done. Presently, the demolition of the warehouse is taking place. Ms. Gutterman stated that the site is not the source of the PCE and TCE vapors, nor the TCE in the groundwater. She added that there was no indication of a source on-site, but there were potential sources off-site (i.e. gas station, commercial businesses). The site will be excavated to bedrock. An SSDS vapor management system and a vapor barrier will be installed. Lastly, she said that the vapor and groundwater contamination levels were low enough that she didn't see a reason why the DEC would get involved. I asked her whether someone from the DEC had ever been involved. She said "No."

Later, I called Ms. Gutterman again. I asked her for a copy of the SSDS and vapor barrier plans. She asked why. I told her that since there is chlorinated solvent contamination and vapors, I needed to send these plans and a copy of the Fleming Lee Shue report to the NYS DOH. After this, we had a discussion about why the DOH was going to receive the documents and their possible involvement and the DEC's possible involvement in the P.S. 51M school construction project. She asked what the chlorinated solvent threshold was for the DEC to get involved in a site as she did not know that there was one. I told her that I didn't know of one either and to discuss this with Jane O'Connell, head of the Region 2 Super Fund/Brownfield Unit. Ms. Gutterman said that she will send the documents, but that she has to go through channels first.

5/2/11 - Raphael Ketani. I drafted a letter to Mr. Knoop indicating that any contamination that is found on site and off site must be remediated, whether this is in the soil, bedrock or groundwater. The letter also stated that the USTs must be registered. The letter was approved by Randall Austin, Chief of the Spills Unit, and sent out today.

5/3/11 - Raphael Ketani. Jason Hayes (212) 479-5427 and Mr. Knoop left a message yesterday regarding Gotham West. I tried to return their call today, but could only leave a message.

Mr. Hayes and Mr. Knoop returned my call. We talked about the details regarding what should happen if contamination is found and how to manage it. We also discussed looking for and managing contamination that had left the site. Lastly, I reminded them that any USTs which are discovered must be registered with the PBS database. Both Mr. Hayes and Mr. Knoop said they agreed with the DEC regarding how the work should proceed. They added that a round of groundwater samples were taken 2 weeks ago. They said that they had looked at the raw data and said that there were no significant hits. I asked them for the data. They said that the DEC will receive a remediation report in the future.

5/10/11 - Raphael Ketani. Mr. Knoop sent me the Langan 5/9/11 Supplemental Groundwater Investigation report by e-mail. I reviewed the report. Seven wells (MW-3 to MW-9) were installed in April 2011. Contaminated soil samples with stains and odors were found at MW-3 (7'-8'), MW-6 (12'-14') and MW-8 (5'-8'). The PID readings were up to 631 ppm. The well screens were installed at 15' to 20' below grade. Groundwater was found at 4.55' to 7.35' elevation. It flows east and then turns due south, exiting the property at MW-6.

The wells were developed and then sampled 5 days after development. The samples had 14 to 54 NTUs. All samples were collected on 4/18/11:
MW-3: 35 ppb naphthalene, 6 low exceedences of benzo series and related analytes,+ chloroform
MW-4: 6 low exceedences - 4 of the benzo series and related analytes
MW-7: 48 ppb naphthalene and 2 low exceedences
MW-8: 3 low benzo series exceedences
MW-9: 14 ppb 1,2,4,5 tetramethylbenzene, and 1 low exceedence

MW-6: 12 exceedences; 3 exceedences of the methylbenzene series (150 ppb to 180 ppb), 250 ppb total xylenes, 62 ppb acetone, 45 ppb naphthalene, 20 ppb methylene chloride (no other samples with this analyte), 8 ppb chloroform, few other low level exceedence gasoline analytes, 2 ppb tetrachloroethene, 4.2 ppb trichloroethene.

Tetrachloroethene and trichloroethene are present in all of the groundwater samples at very low concentrations (i.e. 0.25 ppb). These are believed to be background concentration levels for the area.

I sent Mr. Knoop the following response e-mail:

I reviewed the Langan 5/9/11 Supplemental Groundwater Investigation report. Staff at the Department have generated the below listed comments:

1) We believe that the time between the date of development and the date of sampling (5 days) was too short to produce representative groundwater samples. Typically, we recommend a minimum waiting period of one month. In the past, we have found that this amount of time allows for movement of disturbed groundwater from the sampling location.

2) Langan did not extend its investigation far enough. MW-6 had the most contaminated groundwater and was situated at the southern boundary of the property. Wells must be installed across the street from the southern boundary in order to determine whether properties are being impacted off site. Again, we must state that groundwater contamination does not stop at property

boundaries.

3) After the contaminated soil and groundwater are removed, groundwater monitoring must continue in order to determine whether the contamination persists off site. If it does persist, then a remediation plan must be submitted to the Department describing how this contamination will be addressed.

4) Chlorinated solvent contamination appears to be ubiquitous in the groundwater, but at a very low level. Therefore, the Spills Unit will simply consider the concentrations of tetrachloroethene and trichloroethene to be background contamination and not an indication of a source in the area in question.

Should you have any questions or comments, please feel free to contact me.

Sincerely,
Raphael Ketani, CPG

5/24/11 - Raphael Ketani. I made an unannounced site visit. Excavation work was already taking place for the new P.S. 51M. An excavator was digging from on top of a large pile of soil. No odors were apparent from the soil. I could see that a number of concrete footings had been installed. The Gotham West property was just a large, empty parking lot with a fence around it. There were some drums on site within the fenced in area. There was noting else to note about Gotham West as nothing was taking place. However, muddy water was draining from the school construction site.

I met Sal Abbracciamento, Superintendent from Turner Construction Company (212) 229-6000, and his boss. I talked to them about the muddy water that was running down the street to the city sewer at 11th Avenue and West 44th Street. Mr. Abbracciamento explained that they were aware of the problem and that the hay near us was catching the sediment. However, this was not possible as the hay was too little and it was loose. Muddy water was still getting past the hay. I told him that he had to find a better way to collect the muddy water and dispose of it. I added that the sediment content was not in keeping with the NYCDEP standards for discharging water to a city sewer. He said that he needed to spray the tires of the trucks picking up the soil in order to prevent dust and mud from being spread onto the streets. I told Mr. Abbriacciamento that I understood this, but that the present method of dealing with the muddy water was inadequate - he didn't have a SPDES discharge permit, anyway. I left the site and called the NYCDEP Hotline to report the discharge.

6/7/11 - Raphael Ketani. I tried to contact Mr. Knoop (212) 479-5461 regarding the submission of a work plan for conducting further soil and groundwater investigating, but I could only leave a message.

Stewart of Langan called me back. He said that four wells will be put in the sidewalks along West 43rd Street. This is in response to the finding of groundwater contamination at MW-6 and will be to check whether contamination is flowing due south and off site. One well will be in the north sidewalk and three in the south sidewalk. Excavation of the site is scheduled for either late summer or early fall 2011.

6/15/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called. He said that they tried to install wells on the south side of West 43rd Street, but found out that there was a basement under the sidewalk at one location and were restrained by utilities at the other locations. So, 2 wells will be installed on the south side. Their locations will be pushed to the west and the east by the underground issues. I told Mr. Knoop that this was alright.

8/4/11 - Raphael Ketani. I spoke to Mr. Knoop (212) 479-5461. He said that there is still only one well across the street to the south. This is partly because there is a basement under the sidewalk in one location, partly because one land owner refuses to allow Langan to install a well and partly because there are utilities. However, Gotham West is negotiating with one landowner to the south and Mr. Knoop thinks that they will get a chance to install a second well across the street. I asked him about the street to the north. Mr. Knoop said that this well was successfully installed. He will call Gotham West soon and see whether they obtained permission to install the well.

8/16/11 - Raphael Ketani. I received a message yesterday from John of NYC DEP Hazmat (917) 576-8040. He stated that Langan was supervising the excavation and removal of 8 or 9 550 gal. USTs from Gotham West. He said that the tanks contained liquids and that some had spilled onto the ground and had created vapors and odors.

Today, I called Mr. Knoop (212) 479-5461 and asked him about the tank removal work that was taking place. Mr. Knoop sounded a little annoyed and stated that I should have remembered that this tank removal work was going to take place as it was in the work plan, and because the tanks were known. I responded that it was stated in Attachment C of the 4/7/11 Supplemental Waste Characterization Report that Langan would evaluate the potential presence of tanks, but not that it was definitely known they were there. I added that the submission of a work plan or a report never constitutes complete notification to the DEC regarding what will happen. I also said that the DEC always needs to be updated, either through phone messages or through e-mails, when significant work is taking place or when a significant issue arises. I said that the generation of vapors or odors that travel off site is a very significant issue. I added that the public could be affected by these vapors. Mr. Knoop stated they are already taking steps to abate the vapors and odors and to remove the contaminated soil. He added that they will take additional steps to make sure that no vapors or odors leave the site.

Mr. Knoop then gave me an update regarding what was taking place. He said that the excavation contractor was draining the tanks before they were removed. They were working westward. Right now, they were in grids #1 and #6. Next, they will move to grid #7. They are still in petroleum impacted soil. The soil and cut up tanks are all going for disposal to Carteret, New Jersey. The tank pulling will take another week or so.

8/18/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called today. He said that 8 tanks are out of the ground and have been removed. Excavation of the tank areas is now taking place. Biosolve is being sprayed on the ground where odors are present.

8/26/11 - Raphael Ketani. Mr. Knoop sent me the following e-mail:

Excavation continued throughout the West 44th Street site this week. Petroleum-impacted soil was removed from the western portion of the site near the former tank locations. It appears that the excavation in that area will extend into bedrock. Soil exposed along the western (Eleventh Avenue) sidewall of the excavation did not appear to be impacted. Four sidewall end-point soil samples were collected from the sidewall above the bedrock prior to the installation of lagging. Non-impacted urban fill was removed from the site east of the former tank areas, and hazardous lead-contaminated soil was removed from the delineated area on the south-central portion of the site. Bedrock removal continues on the northeastern portion of the site. The petroleum-contaminated soil is being disposed at the Clean Earth of Carteret and Bayshore recycling facilities in New Jersey. The hazardous soil is being disposed at the Clean Earth of North Jersey facility.

Dust and organic vapor concentrations were within action levels. Periodic on-site dust conditions were addressed with water application. Petroleum odors were not observed. The contractor (Laquila Group) maintains BioSolve on site as an odor suppressant ready to be applied when needed.

8/30/11 - Raphael Ketani. I sent Mr. Knoop an e-mail regarding whether Langan had found PCE and TCE in the soil and groundwater under the Gotham West site where it meets the new P.S. 51M site. I wrote that the Fleming Lee Shue report had indicated the presence of these two contaminants in the soil and in the soil vapor. He responded with the following e-mail:

Things are progressing thankfully smoothly. We were indeed provided with the report. It was included with the documentation I provided to you and discussed in AKRF's Phase II of the property. You and I also spoke briefly about it. Langan and AKRF alone collected and analyzed 28 soil samples from the site for VOCs, and Impact Environmental continues to oversee soil analysis for waste characterization purposes. We've also collected 7 groundwater samples. There is no evidence of PCE or TCE soil or groundwater impacts to our site. As such, cVOCs are not considered contaminants of concern on our property. That said, we're installing vapor proofing in Buildings A and B, and a passive SSDS in Building B as precautionary mitigation measures.

I looked back in the case notes and in the AKRF October 2009 Phase II and found that the groundwater sample from MW-6 did indeed have PCE (2 ppb) and TCE (4.2 ppb) hits, and so did the groundwater sample from upgradient MW-9 (1.2 ppb of PCE and 1.6 ppb of TCE). However, there were no such hits in the soil samples taken from borings SB-1 to SB-9. Later, I spoke to Mr. Knoop and we discussed the issue.

He said that they are screening the soil that's being excavated for waste characterization. Mr. Knoop said that PCE and TCE have not been a problem. I reminded him about the PCE and TCE in the sample from MW-6. He said that one downgradient well is in and that another property owner is willing to let Langan install a second well, but the other property owner with a garage is not willing. This property owner wants a bond from Langan assuring him that the well will be removed within a year and that the sidewalk flag will be replaced. Mr. Knoop said that they are still negotiating with this property owner. Mr. Knoop also said that the soil excavation in the western part of the property has gone down to bedrock already. The eastern part of the property will also be excavated to bedrock. After this, the conversation ended.

8/31/11 - Raphael Ketani. I made an unannounced site visit. I met Albert Tashji, environmental engineer and Langan site representative. He showed me the site. I could see that the bedrock and excavation work was proceeding quickly. There was bedrock in the western third and eastern third of the site with a reddish brown soil filled valley in the middle. The first place he pointed out was the area where the 8 or 9 old USTs had been. This was an area that paralleled 11th Avenue and contained soil, not rock. However, there were cut out portions of the bedrock at the very edge of the location where it met the sidewalk along 11th Avenue. I could see that the soil was dark, but there were no odors. Also at this location were large broken up blocks of bedrock. It appeared to be metaquartzite. Next, we walked over to a pile of dark soil. Mr. Tashji said that this soil had come from the area where the USTs used to be. Though we were right next to the pile, I didn't sense any odors. Mr. Tashji said that odor suppressant liquid had been sprayed on the pile. Next, we went over to the northeast corner of the property where two large chiseling machines were working. I commented that the rock was very hard. Mr. Tashji stated that they have been having a hard time with breaking up the rock and have broken pieces of many machines. At this northeast location, they had chiseled out a large flat platform of white rock. I could see pipes sticking up from the below the bedrock surface. Mr. Tashji said that they are at the design depth for the buildings and are already installing the conduit pipes. The chiseling machines still had a long way to go in order to finish breaking up the rock in this area.

After this, we passed by a gasoline fueling area with drums and containers for filling small motorized construction equipment. The area had a protective plywood roof and was about 10 long by 5 feet deep. The sheltered area didn't have walls to prevent rain from entering. The smell of gasoline was strong and I saw a little gasoline contaminated soil outside the shelter. I told Mr.

Tashji to find a better way to contain any gasoline spills before this area becomes a large mess. He said that he will do so. I added that with the chiseling machines working so hard, a hydraulic line is bound to break sooner or later. I told him that there should be absorbent pads, other equipment and a plan to manage hydraulic line spills. He said that he understood what I was saying. After this, I left the site.

I passed by the SCA site. Work had stopped for the day. It looked like things were progressing quickly.

9/1/11 - Raphael Ketani. I sent Mr. Knoop (212) 479-5461 an e-mail stating that the gasoline storage and transfer area has to be better managed and that the spills have to be managed. I also wrote that they should be prepared for hydraulic line failures with the necessary equipment and supplies. Lastly, I asked that the 9 tanks be registered.

Mr. Knoop sent me an e-mail in response. He wrote that 10 tanks have been registered. The one at the former stable was pulled by the NYC HPD and 9 were pulled by Laquila (the site construction company) in the western part of the site. Mr. Knoop added that he told the people at Laquila to make sure the gasoline storage area is kept clean and to have material on hand to manage any hydraulic lines that break and spill.

The PBS registration is #2-611602. Ten 550 gal. USTs are listed. The site is Gotham West Development at 592 West 44th Street, NY. The site block and lot are 1073 and 1.

9/2/11 - Raphael Ketani. Mr. Knoop sent me an e-mail stating that Laquila is ordering a spill kit for any hydraulic line leaks that may take place, the contaminated soil stockpile has been reduced, covered and bermed, and a containment system is being installed around the gasoline transfer area.

10/5/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called me today. He said that he has been having a lot of trouble siting the off site wells that would be downgradient from the site. He said that they hit a cellar in front of one property and two landowners don't want any wells in front of their property. Mr. Knoop said that one party wants to sell his property soon and so he doesn't want it to seem as if there are environmental issues with his property - he owns a garage. One landowner is cooperative and is willing to let Langan put a well in the sidewalk in front of his parking lot. Mr. Knoop said that this well would be across the street from the downgradient well to MW-6 that's already in and a little bit to the east. I told Mr. Knoop to install the one well and we will consider this well and the other sufficient. I told him to develope the wells, let them sit, and then sample them. He said that he will do this. I asked him to also sample MW-6 at the same time. He said that MW-6 was well within the footprint of the excavation and has been destroyed. He added that the construction company had put in well points for dewatering the site. They are about to install the casons. I told Mr. Knoop that the well point pumping will draw in contaminated water from the surrounding subsurface. So the water in the wells may not be representative of subsurface site conditions. Mr. Knoop said that he understood this. I told him to take samples from the two off site wells anyway just so that we can be sure that the PCE and TCE contamination is not originating from the site. He said that the samples will be taken.

11/8/11 - Raphael Ketani. Mr. Knoop (212) 479-5461 called me today. He said that the well across the street from site and a little to the east was sampled. It was clean. However, the well that was in the sidewalk, just downgradient from where MW-6 used to be, was destroyed. He wasn't sure where to go from here. I told him to send me the data from the new well and I will look over the numbers in light of the information in the case file. Then I will know what the next step is. Mr. Knoop said that would be fine.

11/9/11 - Raphael Ketani. I found an article on the internet regarding Gotham West construction. I put the article in the e-docs.

11/14/11 - Raphael Ketani. Mr. Knoop sent me an e-mail with two attachments. One attachment showed the location of MW-11. The well location appeared to be downgradient from the site and MW-6, which had the highest groundwater contamination. The second attachment contained the analytical results for the water sample from MW-11. They were almost entirely non-detect with the exception of two very low hits for MTBE and chloroform. Mr. Knoop stated in this e-mail that Langan will take soil endpoint samples from the walls of the excavation. He added that the soil analyticals should first be looked at before anything more is done. I responded back
that this was fine.

1/13/12 - Raphael Ketani. Mr. Knoop (212) 479-5461 sent me an e-mail with 6 attachments. I began my review.

1/17/12 - Raphael Ketani. I finished my review of the Off Site Monitoring Well Location Map, Alpha Analytical 11/01/11 Report, Sidewall Endpoint Sampling Results Map dated 01/12/12, Bottom Endpoint Sampling Results Map dated 01/12/12, Table 1 Bottom Endpoints Sample Results, and Table 2 Sidewall Endpoints Sample Results.

Based upon the information in Mr. Knoop's 1/13/12 e-mail and the six attachments, I determined that the contamination had been cleaned up. I sent Mr. Knoop a Spill Closure Letter.

Based upon the information in the case file and the e-docs, I have determined that the residual contamination does not pose a threat to the public or the environment. Therefore, I am closing the case effective today.

1/19/12 - Raphael Ketani. Mr. Knoop sent me a CD with the disposal manifests. I downloaded the file to the e-docs.

ENVIRONMENTAL BORINGS PRODUCED POSITIVE RESULTS FOR CONTAMINATED SOIL.

DEC Investigator Remarks:

** cross reference to spill #1012171 **

Copy of Oct 2009 Phase 2 report which shows the initial contamination identification is attached in eDocs.

2/17/2011 As per AKRF case manager Keri Cibelli, a Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) were submitted to NYCDEP in February 2011 for review. During the proposed development, contaminated soil will be excavated and disposed in accordance with applicable requirements.
6/15/2011 Sangesland spoke to "concerned neighbor" Mr. Tosh Anderson 212-518-1274. He is a parent of 2 children at an adjacent public school PS-51 at 520 West 45th St. Mr. Anderson says no construction work has been started on this section of the property yet. However he says there is another section of the property (where exactly????) that is being managed by Fleming Lee Shue which is being excavated which has a problem with Mercury, Lead, TCE and students and teachers are getting sick. Is DEC watching work being done at this site?

06/15/11 Spill case reassigned from S. Sangesland to Sharif Rahman.(sr)

06/23/11 I performed site visit on 06/15/11.Soil excavation for construction of PS 51M replacement school going on at 525 W 44th Street. This is a SCA managed site.General Contractor: Turner Construction Company. Environmental Consultant: CNS(516-932-3228). CNS overseeing the lead contaminated fill material removal.I asked the onsite personnel from CNS(Mr. Konrad)to forward DEC a copy of the recent investigation data. Reviewing the report on Edocs-the Phase II investigation was performed at 515-533 W 44th Street by Fleming Lee Shue. NYCSCA proposes to construct a new school facility on site and PS 51 located to the north, would relocate from the existing building to the new facility.The site(515-533 W 44th St, block 1073, lot 1) is approx 225 ft by 100 ft.Phase I ESA report identified Recognized Environmental Conditions(RECs)associated with use of western portion of the site as metal works establishments during 1950's. A fill port was noted on the side walk along W 44th Street.One dry cleaner and two Manufactured Gas Plant sites were identified in close proximity to the site.Phase II ESI consisted of a geophysical survey, nine soil borings, installation of four ground water monitoring wells, collection of six soil vapor samples(to a depth of 4 ft bgs),nine soil samples to bed rock refusal(approx 8 ft bgs)and four ground water samples.Four monitoring wells were installed outside of the site building, advanced to approx 30 ft bgs.GW was encountered in the bedrock at depth between 16 to 20 ft. The geophysical survey did not confirm the presence of USTs. Results of the soil vapor analysis indicated that TCE(max 160 ug/cubic meter) and

PCE(350 ug/cubic meter) exceeded the NYSDOH's Air Guidance Values.TCE(31 ug/l) was detected in three out of four ground water samples.AKRF recommended that a soil vapor barier and active sub slab depressurization system should be integrated into the new school design to prevent chlorinated solvent related compounds from entering the new school building. No visual, olfactory or measured evidence of contamination was present in any of the soil sample locations.PID readings were non detect in all borings.No VOCs were detected above NYSDEC's guidance values.The site is underlain by two to four feet of historic fill consisting of sand with brick, gravel, timber and coal.Soil samples were also analyzed for Total Petroleum Hydrocarbons and RCRA hazardous waste characterization.Metals- Arsenic, lead(8,030 mg/kg), mercury, silver, cadmium were detected in soil samples.
I called AKRF and asked them to farward DEC RAP and CHASP which were submitted to NYCDEP before.

06/24/11 Sent an email to Anna Ciecierska at SCA requesting to send us CAMP, monitoring log along with any recent site characterization report.(sr)

07/21/11 Letter requiring RAP submittal is in edocs.(sr)

08/09/11 Rec'd CAMP data and SSDS drawings and specifications.(sr)

10/27/11 Rec'd Report prepared by TRC in response to our letter dated July 2011. Soil within the footprint of the planned building has been removed to bedrock. SSDS and water proofing(vapor barrier) have been incorporated into the building design.TRC requested closure of the spill case considering there is no known source of contamination on the school construction site.Waste characterization sample results provided.Samples were analyzed for VOCs, SVOCs,PCBs.Analytical results identified typical urban fill material with SVOC and Metal exceedances.As per the report, NYSDOH indicated only a vapor barrier is required in instances where shallow ground water is present at or above the elevation of the basement floor slab.NFA required. Case closed.(sr)

POSS HISTORICAL STAIN FONUD ON PROPERTY

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT/O'CONNELL"
8/13/02: Originally assigned to Engelhardt, who closed the spill on 4/27/98. New findings by AKRF and Con Edison indicate probablye historic MGP impacts. Spill number reopened by O'Connell.

09/27/11 - located documents which pertain to the originally called in finding by AKRF and put into eDocs; the spill was a finding of contamination at the property located between 11th and 12th Avenues, and W. 45th and W. 46th Streets, as part of the Route 9A reconstruction and more specifically associated with preparation for construction of a pedestrian bridge spanning 12th Avenue from the northwest corner of the propery located southeast of the intersection of 12th Avenue and W. 46th Street. The contamination that was identified and reported through this spill report is presently being addressed under VCP site V00532, and as such this spill number is administratively closed. Additional information on the matter is available under that project. (JOC)

Caller Remarks:

at the above date the site was owned by emsig mfg corp. they no longer own it - caller states they have evidence of low concentrations of petro.

DEC Investigator Remarks:

4/4/03-Sigona sent contaminated soil letter.

4/9/2003-Vought: Received message from Joel Landes (212-479-5404). Vought returned call and left message to return call to NYSDEC. Vought again received message and returned call and spoke with Joel. Groundwater not encountered in borings due to refusal on bedrock. Only soil samples were collected. NYSDEC will require groundwater samples if contaminated soil is in contact with bedrock. New school with basement will be built on top of location of former button factory. Two closed UST's on site (fuel oil). All excavation will be performed beyond present bedrock surface. All unconsolidated material will be removed. Geotechnical borings will be performed including water sampling. NYSDEC requires disposal manifest, site plan, work description and analyticals. Nine borings performed. Joel will register AST with PBS Unit.

4/21/2003-Vought: 4/28/2003-Received letter with copy of PBS registration sent to PBS Unit (Sigona).

5/5/2003-Vought: Received letter from Langan Engineering summarizing phone conversation on

4/7/2003. Touro College will be the new owner of property. Phase I performed by Langan consisted of coring through basement, first floor slabs and sidewalk for soil samples. Refusal on bedrock encountered within several feet of floor. Samples analyzed for STARS 8021/8270. Ethylbenzene, xylenes and napthalene found at concentrations exceeding TAGM 4046 RSCO's. Planned construction will include a basement to a depth of 25'. At completion of excavation Langan will screen rock surface with an organinc vapor monitor. Vought called Landes and reiterated requirement of a water sample if impacted soil is found to be in contact with bedrock surface in addition to disposal manifests, site plan, work description and soil analyticals.

1/7/04-Vought: Spill transferred from Vought to Austin.

01/27/04-Sawyer: Spill transferred from Austin to Sawyer.

November 15, 2005-Durnin: Based on the Remedial Action Report by Langan Engineering, dated February 2005, all contaminated soil was removed to bedrock. Groundwater quality meets standards. Sidewall samples acceptable. This spill is closed.

leaking through the tunnel wall onto track - unknown where it is coming from - cleanup ongoing (contractor putting new pads down weekly) -

DEC Investigator Remarks:

10/29/10-HRAHMED-Called Stephan Gilmore of AMTRAK (917 270 5452) and left a message requesting callback.
Stephan called back. As per him, on 10/11/10 the AMTRAC contractor discovered some oil in the track seeping thru the side wall of tunnel during cleanup of garbage from the trac. They put some absorbent pad. They came back on 10/20/10. They found oil still dipping from the sidewall. They put new pads. They will go back next week to check the spot. Stephan will email me to update the status. If Stephan don't followup next week, DEC Patel would followup in the following week.

11/10/10-Hiralkumar Patel. received email from DEC Hasan (at 11:56 AM on 11/05/10) with copy of email update from Stefan. Doug from Moran environmental sent updates to Stefan stating that they inspected site on 10/29/10 when minimal free product found.

2:01 PM:- spoke with Stefan Gilmore. he mentioned that oil was found inside the 60th Street tunnel of Amtrak-Empire line. this tunnel is running under the city and closest building address, where oil leak was found, is 15 West End Ave. Stefan asked to contact Doug at Moran environmental who is handling cleanup.

Stefan Gilmore
Environmental Coordinator NY Division Engineering

400 W 31st Street, 5th Floor
New York, NY 10001
Ph. (917) 270-5452 (C)
email: stefan.gilmore@amtrak.com

2:06 PM:- left message for Doug at Moran.

Douglas Brittingham
Moran Environmental
Ph. (800) 562-7611
(203) 948-8338 (C)
Fax (203) 270-0096
email: dbrittingham@moranenvironmental.com

11/19/10-Hiralkumar Patel.
1:49 PM:- left message for Doug at Moran.

12/01/10-Hiralkumar Patel.
12:56 PM:- spoke with Stefan. asked him about updates. Stefan will ask Doug to call back.
1:03 PM:- received call from Doug. he mentioned that they were in tunnel for months for other work and during that, they observed reddish oil from tunnel ceiling. oil flowed along wall and came down to track area. Doug doesn't know if any product sample was collected or not. but they were in tunnel multiple times for oil spill cleanup. Doug mentioned that right above this spill area is a parking lot with hydraulic lifts. asked Doug to send information about site address (where hydraulic lifts are) and result of any product sample collected. Doug mentioned that they are going back into tunnel on 12/02/10 or 12/03/10. asked Doug to collect product sample for fingerprint analysis, if no sample collected before. asked Doug to take color pics of impacted area and leak area.
1:16 PM:- received call from Stefan. asked him to confirm property address which is right above the spill area. Stefan will ask their crew to note mile marker in tunnel and coordinate that on street. also asked him to collect product sample for fingerprint analysis, if no product collected before.

12/07/10-Hiralkumar Patel.
9:15 AM:- received email from Stefan with result of fingerprint analysis. fingerprint analysis shows product as hydraulic oil. as per notes from Moran environmental, more oil found in area.

possible source site: 15 West End Ave
alternate addresses: 1-29 West End Ave
property owner:

Fax (212) 712-6100

10:41 AM:- left message for Asher at Extell Development Company.

3:10 PM:- visited area. a Central Parking Systems in on 15 West End Ave. met John Madrid, facility manager of the parking facility. John mentioned that they have three lots: Lot A has 7 hydraulic motors, Lot B has 2 hydraulic motors and Lot C has 6 hydraulic motors.

John Madrid **facility manager**
Central Parking Systems
PH. (212) 246-4256

Jose Alvarez **operation manager**
Central Parking Systems
PH. (917) 974-7602

3:20 PM:- left message for Jose Alvarez, operation manager of Central Parking.

12/08/10-Hiralkumar Patel.
10:51 AM:- received call from Aldo Berasain from Central Parking. Mr. Berasain requested information about proximate location of the spill area so then can investigate lifts in that area. he mentioned that they have contract with Park Plus Inc. for maintenance of all lifts on the property. Mr. Berasain mentioned that hydraulic lift tanks on the property are either 50 gal or 90 gal capacity tanks. he also mentioned that at a time, these tanks have 1/3 rd of oil and remaining oil is in the tubes of the lifts.

Aldo Berasain
Director of Construction and Maintenance
Central Parking Systems
430 West 37th Street, 2nd Floor
New York, NY 10018
Ph. (212) 321-7751
email: aberasain@parking.com

11:05 AM:- left message for Mr. Luna at Park Plus Inc.

Washington Luna **maintenance supervisor**
Park Plus Inc.
PH. (973) 574-8020

11:15 AM:- spoke with Stefan regarding leak location. he is still waiting for information from another division in Amtrak. informed Stefan that without confirming street location, the department can not require any investigation done by Central Parking and the Department requires Amtrak to do weekly cleaning of the spill area. asked Stefan to collect product sample during next visit so that sample can be analyzed to compare with sample from oil tanks on parking lot.

11:20 AM:- spoke with Doug and asked him to collect product sample from tunnel so that sample can be analyzed to compare with sample in oil tanks in parking lot.

12/14/10-Hiralkumar Patel.
11:18 AM:- spoke with Stefan. he has set up inspection on 12/20/10, but still working on timing. he also mentioned that as per one of their employee, about 4-5 years ago, they had oil seepage into one of sump pit which is about block and half away from the current spill area. sump pit was cleaned up and sealed. as per employee, oil release was related to a construction site at that time. asked Stefan to bring maps and more info about the construction site.
11:30 AM:- left message for Mr. Berasain.

12/15/10-Hiralkumar Patel.
9:44 AM:- received message from Mr. Berasain.
11:22 AM:- spoke with Mr. Berasain regarding possible site visit on 12/20/10.

12/17/10-Hiralkumar Patel.
9:25 AM:- received email from Stefan. he scheduled a site visit at 9:30 AM on 12/20/10.
3:05 PM:- left message for Mr. Berasain with meeting schedule.

12/20/10-Hiralkumar Patel.
9:30 AM:- visited site. met Stefan. inspected track #1 on Empire line. rusty water with some reddish oil found along the tunnel wall on both side of track. as per Stefan, product amount has decreased a lot. spill area is right underneath the eastern edge of property 15 West End Ave. asked Stefan to inspect area again after a month. if no more product in the tunnel after a month, case can be closed.
inspected parking lot at 15 West End Ave. met Mr. Berasain. parking lot has two hydraulic pumps in the area of impacted area on track: one pump #A and another pump at the entrance along West End ave. during site inspection, Mr. Berasain mentioned that they removed a sign in the northeastern corner along West End Ave and during that process, they had to move a 90 gal hydraulic tank for lifts along West End Ave. found some stained soil around the tank. asked Mr. Berasain to test two pumps: pump A and entrance pump. informed Mr. Berasain that if the tanks fail or more product found on track after a month, the Department will require soil testing in area where the entrace pump was located initially (now there is a concrete pad in area).

12/21/10-Hiralkumar Patel.
1:03 PM:- sent email to Mr. Berasain and asked him to submit hydraulic oil system test results by the end of 01/07/11.

12/30/10-Hiralkumar Patel.
9:06 AM:- received email from Mr. Berasain requesting time extension to submit test results, due to snow storm.

01/04/11-Hiralkumar Patel.
3:38 PM:- sent email to Mr. Berasain approving time extension and asked to submit report by 01/14/11.

01/14/11-Hiralkumar Patel.
2:05 PM:- received email from Mr. Berasain including letter from Park Plus. Park Plus inspected lines on two systems and found no leaks.

01/20/11-Hiralkumar Patel.

2:07 PM:- sent email to Stefan inquiring updates about any more oil on track since last site visit on 12/20/10.
2:10 PM:- spoke with Stefan. he will schedule inspection. informed him about hydraulic system inspection result from Park Plus.
informed him that if no more oil found on tracks then case will be closed.

02/08/11-Hiralkumar Patel.
9:25 AM:- spoke with Stefan. due to weather condition, they haven't inspected tracks again. will do soon.

02/17/11-Hiralkumar Patel.
11:15 AM:- sent email to Stefan inquiring updates about re-inspection of the tunnel. email copied to Doug at Moran.

02/18/11-Hiralkumar Patel.
8:57 AM:- received email from Stefan. they haven't inspected tunnel yet. will do soon.

03/11/11-Hiralkumar Patel.
11:54 AM:- received email from Claudia Taccetta from Amtrak. she mentioned that track was inspected last month and there were not any sign of oil leaking and the pads/socks placed were clean.

OILY SHEEN COMING OUT OF CON-ED OUTFALL AT STATION- BOOM APPLIED-CLEANUP TO COMMENCE SOON

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
12/22/92: Internal Con Ed memo: The dock PIC reported a discharge of a dark substance into the river in the vicinity of the 59th St. discharge tunnel and the adjacent Sanitation Pier @ 1120 hrs.

Three fifths of the oil was contained by booms previously deployed. Station forces deployed assitional booms and oil soaking pads. At 1525 the sixe of the oil discharge being contained by the booms continued to grow. CIG was notified and Miller Environmental Group (MEG) was dispatched to assist in the clean up. MEG arrived at 1635 and deployed and additional 500 feet of oil absorbent boom with three boats and nine personnel. At this time the oily discharge ceased.

An inspection was made with DEP (Tom Thomas) and USCG of all drain troughs and oil handling stations within the building. No source of oil could be found. A manhole to the 59th St discharge tunnel was opened and there was no visual indication of oil.

10/10/95: This is additional information about material spilled from the translation of the old spill file: SHEEN.

Caller Remarks:

SPILL IS BEING INVESTIGATED-CLEAN UP CREW HAS BEEN DISPATCHED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"
Sangesland spoke with hotel engineering staff - "Mohamad"

He said the hotel got an oil delivery today (#2 oil) and oil leaked out of the gauge on the tank in the hotel basement.

They do not believe any floor drains were impacted.

Hotel staff contained the spill with linen and a shop vac. They vacuumed up approx 80 gallons of oil and put it into plastic storage drums in the basement.

Stuyvesant Fuel was called, but as of 4PM they were not yet on site.

Sangesland spoke to Margaret Gentle at Stuyvesant Fuel to say all of the contaminated linen will need to be manifested along with the oil in the drums. Sangesland also asked that the shop vac used by the hotel be looked at to determine if it should be thrown out as contaminated.

10/1/2003 Sangesland spoke with "Mike" hotel engineer (212-554-6193). He said Stuyvesant made an initial visit and laid down some speedie dry. They determined that the leak was from the tank gauge and it was not their problem. Stuyvesant gave the hotel engineer the name of ABC Tanks.

ABC Tanks came to the site on 9/30 and looked at the job. They submitted a proposal on 10/1 for $16,000 to clean up and repair the tank. The hotel engineer is waiting for approval from the hotel manager to hire ABC Tank. Until that time, the engineer says that the building is being run on natural gas.

It sounds like a DEC site visit is needed.

10/2/03 1130 Hrs Sawyer visited the Hotel and went down into the tank and boiler rooms with Mohammed who is an operator there. The floor and every surface was covered with #6 oil and speedy dry. The engineer was advised to get an environmental consultant

and to register this tank with NYSDEC.

10/3/03 1030 Hrs Sawyer was contacted by Birger Elvanist of Riverpoint Inc.(914)632-1552 an environmental consultant. The consultant was informed that the hotel management had just received a contaminated soil letter copy by fax today. He will keep DEC abreast of the progress.

8/12/04 - Sawyer - Received documentation that the cleanup was done by Abatement International Advatex. No further action needed. Closed.

CALLER SAYS OIL IS GETTING INTOTHE ELEVATER SHAFT AT THE POLICE DEPT; UNKNOWN WHERE COMING FROM: THE HOLE IS PLUGGED BUT WANTED DEC NOTIFIED

DEC Investigator Remarks:

4/24/07 - Raphael Ketani. I made a site visit and met Officer Jeffrey Cordes, project manager (718) 476-6828), Vincent Jimenez, supervisor of mechanics, and two of his mechanics helpers (Nick Gisouda was one).

Mr. Jimenez showed me the elevator pit before Mr. Cordes could arrive. The elevator is in the front right corner of the building and there are no tanks nearby, according to the architectural/engineering plan of the building that he showed me. I took pictures of the pit (and later the site of the gas tank and the diesel tank, and the basement of the court house next door - total 7 pictures). Mr. Jimenez explained that they were drilling holes in the walls of the elevator pit in order to pump in bentonite for waterproofing the elevator shaft. When they pumped in the bentonite, oil came out the holes and the joints in the walls of the elevator shaft. I noted a moderate petroleum (raw oil) odor and the PID meter registered about 1700 ppb when the nose of the instrument was lowered into the pit. However, ambient vapors were about 51 ppb. I told Mr. Jimenez to open the top of the elevator shaft and ventilate the long column of air. Next, we met Mr. Cordes and walked to the back of the property where the courtyard was. He explained that the gasoline tank had just been replaced. I saw fresh concrete and the PBS record (#2-343056) indicated that the tank was installed on 3/21/07. Next, we looked at the location of the diesel tank. There was nothing to note on the pavement surface. The diesel tank had been replaced on 11/1/00, along with the 25 gal. day tank. Mr. Cordes explained that the fill box at the front of the building had been cemented in when the old diesel tank was removed and that a fill pipe had been connected that ran from the fill box to the old diesel tank (a distance of about 100 feet). He asked what would be necessary for the investigation. I told him that borings will have to be done around the elevator pit, inside and outside the building, across the street, and along the fill pipe. He agreed to have this done. After this, I left and went to the check out whether anyone else had seen any oil in their basements.

I went next door to the Midtown Community Court building, 314 W. 54 St., and was directed to and eventually met James Jennings, Artistic Director of the Sargent Theater. His theater is a tenant in the same building and he runs a very small off Broadway theater company and knows the construction history of the building and neighboring buildings. He took me down to the basement. He explained that we were well below ground level with about 12 feet of bedrock along the outside of the east wall. He said that

this location is at the end of the west leg of the building and is about 47 feet from the driveway separating the court house from the precinct building. Mr. Jennings showed me the weep holes and explained that black liquid had been coming out of them. I didn't see anything much sticking out of the weep holes, but some black algae (the place has a bad water seepage problem and is very wet). There was no evidence of oil or oil odors. I asked him whether he ever smelled oil here. He said "No," but he explained that he knew they had replaced the diesel tank several years ago in 1985. I thanked him and explored the neighborhood further.

Next, I went to 301 W. 53rd Street, the very tall, fairly new apartment building that was at the corner of W. 53rd St. and 8th Avenue. I talked to Hector, the super. He said that he has never seen any oil in his basement nor any odors. With that I left.

I noted the presence of several building addresses across from the Midtown North Precinct, 307, 309 to 315, and 317 - all on W. 54 St. There are no spills, past or present, associated with these address. The only PBS case I found was for 317 W. 54 St. The case is #2-275948 and has a 3500 gal. tank with #2 oil.

4/26/07 - Raphael Ketani. I spoke to Jane Staten (stay-ton) of URS (716) 923-1152 (the DDC consultants). She asked what DEC wanted in the way of an investigation. I told her that borings needed to be done around the bottom of the elevator shaft (i.e. inside the building, in the driveway, in front of the building) and one boring across the street, and several along the fill pipe line. She said she will send a work plan.

5/11/07 - Raphael Ketani. I received the 5/11/07 soil investigation plan for the site by e-mail from Mr. Cordes.

I reviewed the investigation plan and had several comments:

1)secondly, a boring needs to be drilled midway between SB-03 and MW-07
2)thirdly, there should be 6 " of double zero size Moree sand above the #2 sand that will surround the screen
3)well development should not take place until the grout has had time to completely cure
4)sampling should not take place until at least 2 weeks after development

I e-mailed these comments to Mr. Cordes.

7/2/07 - Raphael Ketani. I e-mailed Ms. Staten and asked her what progress was being made towards the investigation.

Ms. Staten e-mailed me back:

We attempted to drill on June 7 and 8 but were unable to complete the work due to the neighboring court house. Apparently, the noise was too disruptive and we were told that we would have to work during the one hour lunch break or on the weekends. One boring in the driveway was cleared to 4 feet below ground surface before refusal was encountered.

In order to work on the weekend, we need to issue a change order to our driller's contract to allow for the increased weekend rates. I recently received those rates from our driller.

In the meantime, URS will attempt to obtain Midtown North Precinct building design drawings from NYPD Building Maintenance Headquarters. Since there is a sump in the elevator pit, it may be possible to incorporate it into an interim or even permanent remedial strategy.

8/17/07 - Raphael Ketani. I reviewed the 4/25/07 Site Assessment Report for the Underground Storage Tank Removal. Four soil samples were taken in the tank grave for the 4000 gal. tank(PBS lists a 3500 gal. tank). All of the samples, except S-2 were virtually non-detect. S-2 had a PID reading of 14.6 ppm and many hits of SVOCs. However, none of the hits were above the TAGM RSCO limits. The DEC found the report to be acceptable. This report concerned the tank under the southeast part of the property, not the leaking of oil into the bottom of the elevator shaft.

I called up Ms. Staten of URS (716) 923-1152 regarding the oil in the elevator shaft. She said that they have halted drilling as the judge at the court house across the alley came down and told them to stop. He said they were making too much noise (is that possible in NYC?) and to work on the weekends. Ms. Staten said that they have to come up with a new contract because of the higher weekends drilling and consulting rates and they also have to come up with a strategy for managing the oil that is still leaking into the bottom of the elevator shaft. She said that getting the elevator back in service is urgent as it is the only elevator in the buidling. She said they are thinking of some type of oil drainage and collection system with pre-treatment because groundwater is also seeping into the shaft. Ms. Staten said that the separated water will then be pumped into the sanitary sewer system. She added that a venting system will also be installed because of the oil vapors.

Ms. Staten said that they hit refusal at one location at 4’ below grade. They aren’t sure whether this was bedrock or a footing. She said finding a drilling location was very tough due to all of the utilities under the alley and the subway vents nearby. I asked her whether URS tested the old fill port and fill pipe. She said that the fill port was cemented years ago and the fill pipe is no longer in use. She said that a direct fill was installed for the tanks and that the oil delivery truck is going back there successfully. I asked her what type of oil was leaking into the elevator shaft. She said #2. I told her that, at least, if no more than one well can be installed, then it can be used to pump treatment solutions into the subsurface.

I asked her how bad the vapors are. She said she spoke to Mr. Cordes from the NYPD and he told her there have been no complaints. I told her that URS had to set up some type of vapor monitoring system in the building until the oil release is resolved. She asked whether 8 hour suma canisters would be acceptable. I told her some type of system has to be set up and quickly. She said that URS will get on it. I told her DEC needed regular vapor concentration reports in writing. She said she understood. Lastly, she said the work wont start until sometime in September.

8/27/07 - Raphael Ketani. Today I received the Proposed Remedial Strategy from URS dated 8/21/07. I reviewed the plan for sealing the elevator walls and collecting the oil that seeps through the walls to the sump. I found the plan to be acceptable. I called her and left a message to that effect. She mentioned in the plan that investigative borings will resume when they get the DDC permits for evening and weekend drilling.

10/2/07 - Raphael Ketani. I spoke to Ms. Staten regarding progress at the site. She said that the change order to drill at night and on weekends went through and is on Afar Samani’s desk. She is the project manager from the DDC. Ms. Staten said that none of the work going on is funded. She said the contractors are continuing to work on small items, but no big ticket items are being repaired or taking place. She said that they were supposed to get funded by the new fiscal year, but the money hasn’t come through. I asked her to do a PID check of the vapors in the basement and the other floors in the precinct building. She said this will take place and she will e-mail me the results.

10/3/07 - Raphael Ketani. I called up Afsar Samani of DDC (718) 391-1064 and told her that the Midtown North Precinct project needs money so that they can do the work. She said that the money is not in the budget yet. I asked her how long it will take. She said probably 4 weeks. She said that URS and its contractors should keep doing the work they're supposed to. I told her that they had to stop because the judge in the court house next door told them tha the drilling noise was too loud. She said she wasn't aware of this. I told her that DEC was concerned that the investigation and remediation work would stop because oil is seeping into the bottom of the elevator shaft and making vapors. She said she wasn't aware of this either. I told her that URS needs the funding to do the necessary work and Ms. Staten had told me that the money isn't there for expensive or large money parts of the project. Ms. Samani said that URS is supposed to do all the work that is necessary.

I called Ms. Staten and explained to her that the funding was about 4 weeks away. I told her that Ms. Samani wasn't aware of the change in drilling. She said that Ms. Samani is not the project manager, but she is the boss of the project manager at DDC. She added that the change order is probably sitting on her desk, but she isn't aware of what it is for. I told her that URS needs to communicate better with DDC. I added that she should call Ms. Samani.

11/28/07 - Raphael Ketani. I spoke to Ms. Staten (716) 923-1152. She said that they attempted to install the wells as requested on 11/17/07. However, they ran into many difficulties and a dangerous situation. First, they tried to do a utility survey, but the survey instrument encountered too much interference. They tried drilling in the driveway between the precinct building and the courthouse, but they were too close to the wall of the precinct building and were vibrating it badly. On top of this, they hit a gas line and another pipe. Though they didn't go through them. They then considered drilling between 2 water pipes, but Ms. Staten told the drillers not to do it as she felt the vibration from the drill would be too much and break the pipes. She added that they couldn't drill in the sidewalk as the fiberoptics for the Transit Authority subways runs under West 54 Street. Also, there is a general moratorium on drilling in Manhattan until January 2008.

Ms. Staten continued and stated that work was put out to bid to establish a passive oil collection system and improve the sump in the floor of the elevator shaft. They will clean out the elevator pit, and seal the walls so that no water or oil can get through, except via the holes that were drilled before. The sump pump will be replaced with a new pump.

I asked Ms. Staten to submit a report detailing the difficulties that they had in trying to install the wells and explaining what their new passive collection system is all about. I also asked her to submit the air sampling data for within the precinct building, the soil analytical data and any other information that she had for the investigation. She said she will do this.

I brought the case to the attention of Randall Austin, Chief of the Spills Unit. We came up with the idea of having URS and its contractors break up the sidewalk at the fill port, along the bend in the fill pipe, and maybe a little beyond the bend. Then they should dig down by hand - maybe a foot or so - and try to remove as much contaminated soil as they can find. Then they should inject or pour in oil treatment solution and breakdown the oil.

I left a message for Ms. Staten describing this new plan of investigation.

Ms. Staten called me back and stated that she would like to submit the investigation progress report before considering other alternatives to the passive collection system. She said that the subway duct bank is 3 feet below the sidewalk and 3 feet in from the curb, and does not daylight at the surface. She said that the old fill port was taken out when the duct bank was installed back about the year 2000. She said that the concrete under the driveway is reinforced with rebar and it would be very difficult to cut through. She said that she is open to other ideas, but she thought that there was no point in breaking up the sidewalk,

even if her crew were to expose the bend in the old fill pipe where the release may have originated from. She insisted that the best way to handle the situation is to plug up the holes in the elevator shaft wall and let any oil that is behind the wall seep into the sump. Ms. Staten (716) 923-1152 said the idea is to seal the walls and keep the water out so that it doesn't rust the elevator.

1/9/08 - Raphael Ketani. I spoke to Ms. Staten. She said that the report on their investigation of the site is in the mail and DEC should get it by friday. She said there really wasn't much anyone could do about the oil behind the wall of the elevator shaft. She said that they will seal the wall and let the sump collect the oil. She said that they ran air vapor samplers for 8 hours each in the precinct building and didn't detect any odors.

1/10/08 - Raphael Ketani. I received the Field Investigation Results report dated 1/3/08 from URS.

1/17/08 - Raphael Ketani. I finished my review of the FIR report. I called up Ms. Staten and told her the DEC was concerned that the investigation was hampered by the utilties and re-bar reinforced driveway and couldn't really do much work. I stated that at least some of the oil should be collected that is still behind the wall of the elevator shaft as it is #2 oil and can generate vapors and seep through at other locations. She said that the police were upset that the elevator wasn't running, but they weren't going to fix it if groundwater seeps in again. Therefore, they want the elevator shaft sealed. She added that this meant that the oil behind the wall would be sealed, also. I told her that the DEC wanted at least some of this oil collected. I suggested doing a one shot collection scheme whereby they take out the plugs in the wall and allow as much oil as possible to seep out in a finite period of time. She said she will talk to the NYPD and her people at URS and see what she can come up.

2/8/08 - Raphael Ketani. I received a call from Ms. Staten (716) 923-1152. She told me that her client and URS have agreed to the remediation approach discussed earlier. This would be to remove the plugs in the walls of the elevator shaft and to let as much of the oil drain out as is possible. Once they have determined that they are getting just water, then the plugs will be installed permanently and the elevator shaft floor will be cleaned. I told Ms. Staten this would be fine.

3/31/08 - Raphael Ketani. I spoke to Ms. Staten today. She said that they will replace pump, replace the in-line filters and pull the plugs in walls to let all of the liquids flow out. She added that they may drill additional holes to let more oil out. I asked her to keep me posted. She said she will.

8/20/08 - Raphael Ketani. I spoke to Ms. Staten. She said that the new sump pump was installed. When they first removed the plugs in the walls, a lot of liquid came out, but it was mostly water. The liquid was sucked up with a vac truck. The remediation contractor goes out every week to check on the situation and collect liquid. Air samples were taken weekly, at first, and now they are monthly. There have been no vapors in the building, itself. The elevator shaft has a passive venting system at the top and so they believe that's where the vapors are going. In September, the contractor will clean the pit and then they will see how much oil they are recovering from the wall holes. If it is water, then they will seal the holes and the pit, and end the job.

9/15/08 - Raphael Ketani. I spoke to Ms. Staten today (716) 923-1152. Next teusday they are going to bring a vac. truck and clean the elevator pit. Then they will monitor the site for oil seepage. If they don't see anything, then they will use Zypex and seal the weep holes. She said that if there is no oil and everything is sealed, then they will send DEC a closure report. She said she will know in several weeks what the full situation is and she will keep DEC informed.

10/27/08 - Raphael Ketani. I contacted Ms. Staten today. She said that they filled in the weep holes several weeks ago. Nothing is coming through the filled holes. They have been changing filters in the sump for a while now, but there is nothing to speak

of. They will power wash the elevator shaft floor this wednesday (10/29/08) and then apply the Zypex. Sometime after this, DEC will get a closure report.

11/21/08 - Raphael Ketani. I spoke to Ms. Staten (stay-ten). She said that the Zypex was applied two weeks ago. She said that people are going out once a week to make sure that it is holding up and keeping the water from draining into the elevator shaft. She said she hasn't forgotten about the closure report for the DEC, but she just wants to give the report a little more time.

12/23/08 - Raphael Ketani. I tried to contact Ms. Staten (716) 923-1152, but could only leave a message requesting the closure report.

12/30/08 - Raphael Ketani. I spoke to Ms. Staten. She said that they applied the Zypex to the walls at the bottom of the elevator shaft several weeks ago. It worked 90%. Now they have to get a change order to the work approved to do a second application of the material. She said that it's essentially cement and crystallizes on the surface it's applied to. The change order wont be approved until after 1/5/2009. This is when the contractor will be back in the office and the change order price can be discussed. She hopes that the work will be completed no later than late February 2009. I told her to keep me informed regarding progress on the project.

1/27/09 - Raphael Ketani. I received the following e-mail today from Ms. Staten:

I thought I would save you the trouble of phoning me and update you on the status of the Midtown North Precinct (spill no. 0700820).

As you may remember, our contractor applied Xypex, the waterproofing material, to the inside of the elevator pit. A couple of weeks following application, there were a few spots that showed breakthrough. So the Xypex representative. URS, and our contractor met at the site to discuss the problem and to develop a solution. Since the "solution" that was developed is outside the original scope of work, a change order is required. URS will submit the change order request to the NYCDDC by the end of this week.

We anticipate that the change order will be approved and that the contractor will complete the additional work by the end of March 2009. I will keep you posted.

Thanks.
Jane Staten

4/22/09 - Raphael Ketani. I tried to contact Ms. Staten (stay-ton) (716) 923-1152, but could only leave a message. I also sent her an e-mail requesting information about progress at the site.

Ms. Staten e-mailed me that the contractor recently completed the extra sealant application work. They are now in the monitoring phase of the project to see whether the seals hold. If they do, then URS will send a closure report.

6/17/09 - Raphael Ketani. Ms. Staten sent me an e-mail. She wrote that the elevator repair work has been completed. DEC will

receive the report describing the investigation and remediation work in the next several weeks.

7/9/09 - Raphael Ketani. Today I received the Summary of Remediation Activities and Request for Spill Closure report dated 6/30/09. I reviewed the report and had several comments for Ms. Staten.

7/10/09 - Raphael Ketani. I tried calling Ms. Staten, but could only leave a message wherein I asked the following:

1) how come oleophilic filters were being kept in the sump even though the site was cleaned up?
2) the picture dated 9/22/08 has a caption stating that petroleum product was allowed to drain into the sump for discharge - was oil actually allowed to flow into the sewer system, or was the oil first caught on the oleophilic filters and removed before discharge of the total liquids entering the sump?
3) the pictures dated 11/5/08 and 11/20/08 shows oil stains - were the walls waterproofed too soon, thereby not allowing all of the oil to drain out that could have?

Ms. Staten called me back. She said the following in response to the above 3 questions:

1) there is no more oil, the filters were just left in the sump as a precaution should there ever be renewed seepage
2) the oil was draining into the sump, but it was then pumped to oleophilic filters, and then the separated water was discharged into the sewer through a pipe
3) there was no oil coming out from behind the wall - there was not enough oil to seep into the elevator pit - but what little oil that was trapped in the sediment behind the wall did manage to stain the new concrete. The stained concrete was later replaced.

I told Ms. Staten that her answers gave me the information that I needed to close the spill case.

Based upon the information in the Spill Closure report, there appear to be no more impacts to people using the building and the residual oil that is left appears to be contained and will not affect the environment. Therefore, I am closing the spill case.

25000 GALLON TANK FAILED TIGHTNESS TEST

DEC Investigator Remarks:

05/31/06-Hiralkumar Patel. Spoke to Amy. they found dry leak in 25000 gal AST system. haven't found any oil stains under the tank. tank contains oil/water mix. Spoke to Mr. Cobal. he gave me following address to send out letter:

Extell 53 LLC
800 3RD Ave Fl 4
New York NY 10022-7772
Ph. (212) 712-6014
FAX (212) 712-6100

PBS #: 2-310107

TTF letter sent out to Mr. Cobal. faxed to Mr. Cobal.

06/01/06-Hiralkumar Patel. Received call from Mr. Cobal. he is in process of hiring contractor for work. he will call back by Jun 8, 2006 with contractor's name and number. as per him, to do testing work, he needs to block some public area and to get permit from Dept. of building, it will takes about 3 weeks. told him that if the department gets updates on regular basis, the department can approve deadline extension.

06/07/06-Hiralkumar Patel. REceived message from Daniel (Ph.: 212-712-6014, FAX: 212-712-6100). Left messsage for Daniel.

06/09/06-Hiralkumar Patel. REceived message from Daniel (212-712-6014). Left messsage for Daniel. Received call from DAniel. he is in process of hiring contractor. he thinks that first company haven't done test correctly and haven't cover vent pipe and Daniel thinks that is the reason behind tank failure. and Daniel told that property has UST and testing company reported it as AST.

06/16/06-Hiralkumar Patel. Received call from Daniel and he is still in process of hiring someone.

06/22/06-Hiralkumar Patel. REceived call from Daniel. he has hired Island Tank (718-708-3425). spoke to Vinny and he is going onsite tomorrow to do test again.
07/10/06-Hiralkumar Patel. spoke to Vinny and he found dry leak in pipes and at manhole. he has submitted proposal for further work. haven't heard back. Left message for Daniel. received call from Daniel. Eastmond will start further work on July 13, 2006. Eastmond will cut open and clean tank and will do isolation test. asked Daniel to call once he gets test result.
08/14/06-Hiralkumar Patel. spoke with Rene. he will check records and will call back.
08/23/06-Hiralkumar Patel. left message for Daniel.
08/24/06-Hiralkumar Patel. REceived message from Daniel. he has final report from testing company and can send through email. left email address to Daniel. received passing tank test result through email from Daniel.
08/25/06-Hiralkumar Patel. left message for Rene and Daniel as email that i got from Daniel doesn't have information about repair

work that done to make test pass.

09/06/06-Hiralkumar Patel. received fax from Isaac from Eastmond. they did isolation test on system and found system tight.
problem was old line connected to tank top. they have plugged this line and reseal manhole cover.
based on available information, case closed.

CON ED WAS INSTALLING A NEW TRANSFORMER IN A VAULT WHEN A STRAP BROKE DAMAGING THE TRANSFORMER, RELEASING THE FLUID. SPILL IS CONTAINED IN THE VAULT. CLEAN UP PENDING TRANSFORMER REMOVAL. NO SMOKE, FIRE, INJURIES, ETC.

DEC Investigator Remarks:

e2mis 152917

E Hulser # 3972 of Cable reported that while installing a new Transformer Unit at 302 W.54 St., one of the supporting straps caught on a "porcelin stab" and broke it and approx 10 gallons of dielectric fluid leaked out of the Unit into the Vault. The

Unit has a capacity of 390 gallons and the serial # P 819646. No sewer/waterway affected. The spill was in the concrete structure. No substantial cracks observed. There was no standing water in the structure. Environmental tag # 18708 was hung. Two samples will be taken for PCB and ID. Partial cleanup will need to be scheduled for a drain of the Unit. Pending removal.

4/15 @ 05:23

EPA ID # NYP004119475 issued. Cleanup scheduled for 4/15 @ 07:00 HRS.

UPDATE: Lab Results 04/15/04 08:33 hrs

Lab Sequence Number: 04-02847-001

PCBs < 1 ppm

Update as of 15:00 hrs partial clean up has been complteted as reporteted by G.Anelli. He and his crew removed 1 barrell of PPE and spill kits. Also approx. 30 gallons of oil from floor and approx. 220 gallons from unit to tanker. Power washed twice with flush trk, and slix.

Update: Clean up complete as per O.S Cable Dept. G Byrne #81264

He reports that the only solids removed was oil absorbent, and water to flush truck. It was washed twice with slix, and power washed with flush truck. Old transformer was removed and new one installed.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"
Con Ed e2mis #138605:

At 14:30 on 7/31/2001 J. Washington # 20481 of Construction Management reported to me that while working with "Counties" Contractors excavating a trench 17' long by 2 ' deep to unobstruct "ducts" a "wetness" appeared in the soil and approx 15 gals of the substance was seen. There was a smell similiar to gasoline from the trench. At this point work was stopped. The location is W. 61 st & West End Ave. There was no initial cleanup action taken and the Chem Lab was called and Washington will wait for them to arrive.

UPDATE: 8/01/01

Lab Sequence #01-07830-001, Total PCB = < 1.0 ppm

analysis indicates the presence of a substance similar to a mixture of gasoline and a lubricating oil.

05/06/03 @ 7:30hrs - As per Mr. Washington the clean up was complete and one roll off of non haz contaminated soil was removed by Clean Harbors and disposed of at Clean Rocks.

Cleanup Plan: Treat as 50-499; sample and to be cleaned in >48hrs

-sps

E2MIS 120263

10/03/98 09:40 BILL POWERS(CONST MGMT) REPORTS HE FOUND SPILL OF APPROX 40 GALLONS OF UNKNOWN OIL MIXED WITH 700 GALLONS OF

WATER IN MH30458 LOCATED N/W/C W 59 ST & COLUMBUS AVE. SPILL WAS FOUND AT 08:55 HRS AND REPORTED TO MCHUGH IN THE

CONTROL CENTER AT 09:00. SPILL IS CONTAINED. THERE WAS NO ENTRY TO ANY SEWERS OR WATERWAYS. POWERS RE10-7-98 by

P.RubinoPORTS DOES NOT HAVE SAMPLE JAR OR SPILL TAG... HE REQUESTS CREW TO LOCATION TO ASSIST. HE WILL HAVE CONTRACTOR

STANDING BY ON LOCATION UNTIL MATERIAL ARRIVES.THERE WERE NO AGENCIES ON LOCATION...LOGGER PGM

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is

used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis.

If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

10/03/98 10:23 MCHUGH NOTIFIED BILL MURPHY(CIG) OF THE SPILL. LOGGER PGM

SPILL IN MANHOLE ON TOP OF 100 GALLONS OF WATER IN THE PROCESS OF BEING CLEANED UP ALMOST COMPLETE CON EDISON REF # 146832 DUE TO EQUIPT FREEZING UP JOB WILL NOT BE COMPLETED UNTIL WEDNESDAY JAN 22ND APPROX IN THE AFTERNOON

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
Con Ed e2mis #146832:

1/21 @ 09:40

Comerford # 08212 I & A OS, reported to me at 09:25 that while doing primary connections in M-62499, he discovered approx 5 gallons unknown oil and 100 gallons water in the structure. No sewer/waterway affected, no fire/smoke involved, no injuries, no private property affected and weather did not contribute to spill. The source and cause of the spill are unknown at this time. No visual movement on the standing water, no substantail cracks observed in the structure. Environmental tag # 16916 was hung. Two samples will be taken of PCB and ID and Courier will be called by Finder for Chem Lab analysis. The Chain of Custody # AA 21264 will be used. No Parking Amtime in Loading zone. No initial cleanup action is being taken at this time. Cleanup will be scheduled ASAP as availability of crews dictate.

1/21 @ 11:00 HRS

Cleanup set up for toady @ 15:00. Clean Harbors was notified and faxed documentation. UG forces notified that they are required to be on site for cleanup. Notified F Romano of Clean Harbors cleanup and Emailed info EPA # NYP 004 104 464

1/21/03 17:07 Received lab results

Lab Sequence Number: 03-00549-001

Chain of Custody ID: AA21264

Aroclor 1242 < 1.0 ppm EPA 608/8082

Aroclor 1254 < 1.0 ppm EPA 608/8082

Aroclor 1248 < 1.0 ppm EPA 608/8082

Aroclor 1260 < 1.0 ppm EPA 608/8082

1/21/03 Received lab results

Lab Sequence Number: 03-00550-001 Date Approved: 1/21/2003

E2 Incident Number: 146832 Date Received: 1/21/2003

Chain of Custody ID: AA21264 Date Sampled: 1/21/2003

Analysis indicates the presence of a substance similar to a dielectric fluid, and lubricating oil.

1/21/03 23:15 Al Guerrero of Clean Harbors called to report that the cleanup will not be completed at this time because his equiptment is freezing up. He will have have a crew come on 1/22/03 in the afternoon to complete it. He states that it is 75% complete as of now. He removed 6 drums of sludge & other debris. He removed 55 gallons of water/oil mixture. The structure was only washed 1x at this point. The crew was: R. Sanchez, b. Jamison, K. Moreno, all of clean harbors. Due to this it will be changed to a dielectric spill & not a 24 hr.

m

1/22/03 21:08 Al Guerero of Clean harbors called to report that the cleanup was completed at 21:00.

He states that there was 4 more drums of waste generated from this cleanup. The structure was double washed wth citrus cleaner & the spill tag # 16916 was removed.

The cleanup crew was: R. Sanchez, b. Jamison, K. Moreno all from clean Harbors.

PHASE 2 RESULTS SHOWING CONTAMINATED SOIL AND GROUND WATER CLEAN UP PENDING.

DEC Investigator Remarks:

09/28/10-Zhune. The phase I dated November 2,2007 and Limited Subsurface Investigation Report dated October 2009 were reviewed. A total of eight soil borings were located base and upland areas of the Amtrack right of way. Nine soil samples were collected from the borings.

The analytical soil samples results indicated that four VOCs(Ethylbenzene, Methylene Chloride, Toluene, Total Xylenes) were detected above the NYSDEC (RSCOs). The following SVOCs(Benzo(a)anthracene, Benzo(a) pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perelyne, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Indeno were detected above the NYSDEC (RSCOs) Five pecticides(4,4'-DDT, beta-BHC, Endosulfan sulfate, Heptachlor, Heptachlor epoxice)were detected above the NYSDEC(RSCOs). The following metals (Arsenic, Berylium, Cadmium, Chromium, Cooper, Iron, Nickel, Zinc, Mercury were detected above the NYSDEC (RSCOs)

The groundwater analytical report indicated two VOCS (I,I-Dichloroethane, Trichloroehtene) slightly exceeding the NYSDEC(RSCOs). The folloowing SVOC(Benzo(a)anthracene, Benzo(a) pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perelyne, Benzo(k)fluoranthene,Indeno).Eleven Pecticides(4,4'-DDD,4,4'-DDTE,4'-DDT, Aldrin, Alpha BHC, Beta-BHC,Delta-BHC, Diedrin, Endrin, Gama BHC(Lindane), Heptachlor epoxice. The following Metals(Aluminum, Cobalt, Iron, Manganese, Sodium, Nickel, Lead, Vanium, Zinc and Mercury were detected above the NYSDEC regulatory limits. PBCs were not detected in any of the groundwater samples collected.

9/30/10-Vought-Reviewed analytical reports with DEC Zhune at her request. Soil analyticals show PAH compounds as well as metals contamination including maximum concentrations of: 6750ppm Pb, 2.8ppm Hg, 19.60ppm As, 4.10ppm Cd. Groundwater shows maxium contaminant concentrations of: 10ppb DCE, 7ppb PCE, 6ppb TCE, 3210ppb Pb and 1.5ppb Hg. Vought reviewed analyticals with DEC O'Connell who noted that further report review to be performed and meeting set up with DEC Cozzy to discuss potential P-Site listing due to metal contamination in soil and groundwater. Note also that as per email dated 9/29/10 from environmental consultant (Sean Dunn - EBI Consulting - (Ph:617-715-1868 cell:781-552-9953) that he is seeking spill closure due to "relatively low levels of contamination detected, the absence of sensitive or environmental human receptors to the contamination, the nature of the proposed development and the likely source of contamination being railroad operations at the property and migration from off-Site properties". Vought reviewed file for metals and chlorinated solvent contamination sources and results:

Phase I ESA (EBI Consulting - Joanna Miller)-11/2/07. Phase I performed due to property transaction. Site is .46 acres in size. Lot was located below grade and had "abandoned portion of the Penn Central Railroad Tracks" with no structures onsite. Proposed development is for two hotel buildings including a "13-story, 198 room Holiday Inn Express" and the second hotel (unnamed as of time of report) will include a "12-story, 144 room hotel located at 506-512 West 44th Street". No current manufacturing or industrial operations on site at time of Phase I. Owner at time of Phase I is SCW West, LLC. "Natural vegetation and subsurface bedrock formations lie along the eastern and western perimeters from ground surface to street level. The eastern and western boundaries are further defined by the adjacent properties facades, consistiing of multi-story brick buildings". Northeast of site across 44th Street is a school playground, northwest across 44th Street is a Hess Station, a hotel to the south across 43rd St, an apartment building to the southeast and to the southwest, an Avis Car Rental to the west. From around 1890-1930 the property was occupied by mutli-level dwellings and small stores and after 1940 was occupied by the railroad tracks. Historical surrounding property use included a printer, piano factory, "chinese laundry" and paint store. Report recommends limited subsurface investigation due to industrial use of property.

Limited Subsurface Investigation Report (EBI Consulting)-10/23/09. Groundwater flow to the east-southeast. Eight soil borings installed via hand auger "at the base and upland areas of the Amtrak right of way" including collection of soil samples and the installation of four monitoring wells via HSA/Air Rotary and boring locations "were selected based on proposed foundation pillar

locations and Amtrak instructions". Bedrock encountered at 2-6'bg. Groundwater at 1-3'bg in four monitoring wells. Groundwater samples collected and stabilization of TDS parameters shows approximately 1230 umhos/cm for specific conductivity suggesting turbid samples. Soil analyticals show show no TAGM 4046 RSCO exceedenence for petroleum VOCs, show PAH exceedences in samples from B1 thru B4, maximum metal concentrations of: 6750ppm Pb(HA-3), 2.8ppm Hg(HA-2), 19.6pp As(HA-3), 4.1ppb Cd(HA-3). Report recommends management of contaminated soil removed during piling installation. No additional spills or adjacent spills in UIS, no potential metals source in EPA Envirofacts website or in RCRA E-Smart.

10/1/10-Vought-E-doc'd file and sent email with appointment to DEC O'Connell and DEC Cozzy with summary site plans. Vought received email from DEC Cozzy that Site does not classify as P-Site. Vought spoke with O'Connell and Section A has no further requirements with respect to metals contamination. Vought informed Zhune of same.

10/04/10 Zhune. Discussed with Vought and Based on the no known release of oil or hazardous material at the subject property. Spill Closed.

INVESTIGATING, MAY BE FROM LEAKING TANK: BUT FOUND CONTAMINATION:

DEC Investigator Remarks:

2/10/05 MT//Contaminated soil/water letter sent.

3/21/05 - Assigned to Imdadul Islam for followup. - KST
4/6/05- After reviewing the investigation plan (3/17/05), spoke to Hardik Parekh of Hydro Tech (Consultant) and advised him to do 2 additional probes for soil and groundwater in the western vicinity of SP-1 and SP-3 soil probe locations besides proposed 6 probe locations and submit the investigation results along with recommended remedial measures. - II

5/11/05- Received and reviewed the Phase II investigation report from Hydro Tech dated April 25/05. They conducted GPR survey,

installed 5 soil probes and 3 GW probes. The sampling results indicate that both soil and GW are impacted. Spoke to Mark of Hydro Tech and was told that they are going to send the ISRP asap for Dept. review. Mr. Joe Fabian of Certified Environments Inc. being engaged by the Bank who is financing for the dev. of this site also telephoned inquiring about the status of the phase I & II investigation report. He also mentioned that Hydro Tech is preparing ISRP for the site and will send to the Dept. soon. - II.

7/21/05- Detailed ISRP as mentioned above has not been received to date. Mailed a letter to the owner (Bristol Three, Inc., Attn: David Sokol, 4400 N Federal Highway, Suite 31, Boca Raton, FL -33431), cc'd to Howard Sommers - Attorney of the RP asking for submission of the required ISRP by September 10, 2005.- II

8/8/05- Received a letter from Attorney Howard Sommers, dt. August 2/05 saying that the property has been sold to John Goldberg & Tom Iovane,406-408 W. 45th St. Holdings LLC, c/o. Artery Capital, 55 Fifth Avenue, NY, NY 10003 (Ph: 212-647-8600, Fax: 212-675-7236). The Attorney for the new owner is Scott Newmark, Meister Seelig & Fein LLP, 2 Grand Central Tower, 140 E. 45th St., NY, NY 10017 (Ph:212-655-3509). He also mentioned in the letter that the new owner has assumed responsibility for the pending spill case.- II

8/11/05- Visited the site and met Mostafa and Rachel from Hydro Tech (consultants) and Ronen, a rep. from new property owner. Advised consultant to advance three more borings- one adjacent to SP-5, one about 15' west of SP-5 and the third close to SP-7, sample them both for soil and GW, analyze for STARS VOCs and SVOCs and delineate the contamination plume. All phase II investigations done including the above should be summarized into one report and submitted to the Dept. including a proposed remediation plan (i.e. ISRP) by October 10, 2005. - II

10/7/05- As per telephone request by Ronen Abergel of Gramercy Property Group, the deadline for submitting the detailed ISRP is extended to October 28, 2005.-II

10/27/05- Mr. Ronen Abergel again requested over telephone for another six weeks of extension of the required ISRP submission on the grounds that they are facing problem in selecting the consultant for doing the job. It was approved.- II

11/29/05- Received and reviewed the ISRP dt. Nov. 28/05 by consultant Leggette, Brashears & Graham (LBG), Inc. No Chain of custody, boring procedures/logs and sampling procedures are not included in the report. No exceedances of NYSDEC soil and GW quality criteria are observed in the report which are in the contrary to the previous findings by consultant Hydro-Tech. Spoke to Dan Buzea of LBG and Ronen Abergel of Gramercy Property Group about these shortcomings and to submit them asap including the excavation plan to remove contaminated soil. Also, told to submit always electronic version of all reports in addition to hard copy.- II

03/29/06: This spill case transferred from I. Islam to J. Kolleeny.

Excavation of contaminated soil was performed at the site in late January - early February 2006; received soil excavation summary report (prepared by RND Services, Sharima Ryan) on March 20, 2006 (electronic copy received by email on 3/29/06). Report indicates that 135.66 tons of petroleum-contaminated soil were removed and concludes that soil contamination has been effectively addressed, since end-point samples had no exceedances. Two 550-gallon USTs were found to be partially filled with sand and water; sand and water were pumped out and tanks will be abandoned in place with concrete (they cannot be removed due to proximity to building structural support columns). Report notes that DEC has requested a groundwater sample to investigate potential groundwater impact (July 21, 2005 correspondence), and recommends installing "perforated risers" when backfilling the excavation, as well as applying ORC to excavation, providing bottom is moist.

Sharima Ryan of RND Services stated in 3/29/06 email that he will send a work plan for well installation soon. I sent an email to Sharima on 3/29/06 commenting that wells installed in the manner described would have no sand pack, which could compromise the quality of groundwater data from them, asked him to clarify this. - J. Kolleeny

04/03/06: Received email from Sharima Ryan of RND Services explaining that because excavation was in building basement, they recommend installing a 6-8 inch riser in which they would place a 2-inch screen plus riser, with sandpack around it, to avoid having to install wells later using a portable rig, the only kind which they would be able to bring down to the basement in the elevator. - J. Kolleeny

06/06/06: Sent email on 6/5/06 to Sharima Ryan of RND saying I never received a work plan for monitoring well installation and asking for an update on this project. Received reply from Sharima on 6/6/06 saying he was preparing a proposal for the client and expected to send DEC a work plan within 2 weeks. - J. Kolleeny

07/05/06: Received Proposed Work Plan for well installation from Sharima Ryan of RND on June 30, 2006. Plan involves installing 3 wells on bedrock surface 4 feet below grade, within building basement. I wrote email to Sharima on 6/30/06 asking if there would be sufficient water in the wells to sample. Sharima responded on 7/5/06 that based on presence of water in excavation and the fact that previous consultants were able to sample groundwater without penetrating bedrock, it seems likely that there will be adequate water to sample. I sent an email on 7/5/06 approving the Proposed Work Plan, copying the responsible party:

Gramercy Property Group LLC
55 5th Avenue - 14th Floor
New York, NY 10003
Attention: Mr. Eli Liedman
eli@gramercypg.com

and asking for advance notification of scheduled date for fieldwork. - J. Kolleeny

9/27/06: Monitoring wells were installed in basement according to work plan in mid-August ’06. According to email from Sharima Ryan of RND received 8/22/06, groundwater sampling would be performed on 8/23/06, and Sharima expected that a report would submitted by 9/18/06. On 9/27/06, I sent email to Sharima inquiring about current status of site and investigation report. Received reply from Sharima same day saying report has been completed and will be sent on either Sept. 29th or Oct. 2nd. - J. Kolleeny

10/26/06: Reviewed Groundwater Monitoring Well Installation and Sampling report dated Oct. 3, 2006 (received Oct. 16th), prepared by RND Services, Inc. (see eDocs). Report summarizes installation and sampling of three wells in the basement of the on-site building, where 135 tons of petroleum-contaminated soil had been removed from around two closed-in-place 550-gallon motor fuel USTs. Of the three wells, MW-1 was dry and could not be sampled, MW-2 had a number of petroleum-related compounds detected above groundwater standards, with total VOCs of 165 ppb, and MW-3 had only toluene above its GW standard, at 7 ppb. Upon consultation with supervisor Koon Tang, determined that groundwater contamination is very minor and likely to attenuate on its own since source removal was performed, and poses no significant threat to environment and public health. Closed spill and issued NFA letter (see eDocs). - J. Kolleeny

S Hart #17223 reorts that while doing an inspection in m56671 located at s/s w 45 st 40’ e/o 9 ave, he discovered 10 gallons of an unknown oil mixed with dirt on the concrete floor of the structure. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. No private property affected. Acoount #13712 is being used for this incident . No measuring device was used to determine the amount of the spill. Source and cause of spill are unknown. No oil filled equiptment in the structure . Environmental yellow tag # 29105 was installed. No sewer connection as per conduit plate # 27-e-4.

Sump is concrete. No sump pump. No substantial crackes. Parking information is, no standing except commercial vehicles, metred parking 3 hour limit. No dielectric filled feeders in the structure. 2 soil samples were taken by S Hart # 17223 from the spill, 1 for id and 1 for pcb. Sample priority "E" . Chain of custody # aa23107. Oil absorbent pads were applied to the spill.

As per ERT Sean Mahoney # 86887 the amount of the spill is being changed from 10 gallons to 5 gallons which now would allow this incident to be classified as a 24 hour deminimis. Cleanup is pending the availability of resources. CIG T Marcinek

Subject: RE: 147856/0-M56671 - W 45 ST S40E 9 AV - SPILL UNKNOWN OIL

Per the discoverer, Steve Hart, made a conservative overestimate. I responded to the scene and downgraded based on visual determination. There appeared to be <5 gallons of oil visible in the structure. I called John Moran and informed him of our decision.

Manhattan Environmental Desk made arrangements for Underground North to clean this manhole starting at 07:00 hrs. on 4/11/03. An Over 50 Tanker from

Astoria was ordered.

EPA # = NYP 004 109 658 issued by the ERT.

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<End Insert - R. Pellegrino #38620

04/11/03 09 :00 HRS

As of 08:15 hrs the #9 Shift Mgr. Martin Barry #09170 spoke with CIG Paul Didonato #01669 and It was determined that the job would be canceled by the planner Steve Cioffi #52868 due to lack of manpower. also spoke with Bill Murphy #76378 who advised the #9 shift Mgr. to update the e2mis Report to show that this incident was being down graded from a deminimus 24hr spill to a regular

Spill therefore this incident is no longer classified as a 24hr deminimus spill. after updating this Incident re-notified CIG @ 09:48 hrs. Spoke with Sean McKeever #15523 W. Boomer #07525

7 gallons of unknown oil in manhole.

Ref. #155068

Cleanup is pending crews.

DEC Investigator Remarks:

e2mis no. 155068:

R Oravec # 15482 reports that while responding to a manhole fire he discovered 7 gallons of unknown oil on the concrete floor of the structure (possibly from a blown joint in the manhole). Conduit plate 32-d-4 shows no sewer connection. 2 sludge samples were taken from the spill.

Lab Sequence Number: 04-06809-001: TOTAL PCB 416 ppm

Lab Sequence Number: 04-06811-001: Analysis indicates the presence of a feeder cable oil

8/26/04 14:23 M. Melendez # 11285 Underground/c;eanup supervisor called to report that athe cleanup was completed at 14:15. There was 2 barrels of waste generated as a result of this cleanup. The tanker removed 150 gsllons of water/oil miture from the structure. The structure was triple washed with slix. The spill tag # 44065 was removed. The cleanup crew was: C. padua # 82284, J. Oconnell # 00993, T. Nunez # 88450. The blwn joint will be replaced.

Subject: Incident # 155068
Mike, you were the cleanup supervisor listed for the subject incident on 8/26/04. The incident involved a blown joint on feeder 11m55. The manhole number is M58594 and there was approximately 7 gallons of feeder cable oil spilled. You indicated to the environmental desk when you called in the cleanup completion on 8/26/04 that the blown joint will be replaced. The NYSDEC has returned the incident for information on whether the blown joint has been repaired? Do you have confirmation that the joint has been repaired?

Update: 8/29/05 @ 14:15 hrs

New York, NY 10038
Ph. (212) 863-7172 (O)
(917) 559-4337 (C)
Fax (212) 863-5064
email: parsonsd@hpd.nyc.gov

1:44 PM:- spoke with Mr. Parsons. he contacted PTC who doesn't have any documents available on this case. Mr. Parsons will look for documents. during conversation, he mentioned that site has #2 oil tank, instead of gasoline tank as mentioned in PBS record. asked Mr. Parsons to correct PBS record.
2:28 PM:- sent email to Mr. Parsons with copy of PBS correction form. asked him to either submit spill cleanup documents from 1999/2000 or contractor's info, who will do soil investigation, by the end of 06/18/10.

06/03/10-Hiralkumar Patel. received email from Mr. Parsons (at 9:25 AM on 05/25/10) including copy of field survey data sheets. according to the survey data sheet dated 11/03/99, 6 inches of product found in tank room. HPD inspector suspected leak from tank itself due to corrosion. according to field survey data sheet dated 11/12/1999, 6 inches of product was still there in tank room. according to field survey data sheet dated 01/31/2000, vendor pumped out oil, removed old tank and was in process of installing new tank. also inspector found that tank room was flooded with water, but no oil sheen found on top of water on 01/31/2000.

as per field survey notes, contractor installed new tank on-site. but PBS record shows only one tank on site which was installed on 01/01/1910. no information about closure of old tank and installation of new tank.

1:48 PM:- left message for Mr. Parsons. informed him that as per field survey sheet, about 6 inches of oil found on tank room floor, but no indication of tank room floor condition or subsurface investigation. asked Mr. Parsons to either submit detailed cleanup report or do soil investigation.

during search at ACRIS, found that the subject site owned by Clinton Parkview Apartments Housing Development Fund Corporation.

2:35 PM:- spoke with Mr. Parsons. he mentioned that NYC HPD owns the subject site. he mentioned that the lot has mutiple buildings and some of those buildings were sold to Clinton Parkview Apartments Housing Development Corp. and due to some confusion, ACRIS showing the subject site owned by Clinton Parkview. but the subject site is owned by NYC HPD and leased to Clinton Housing Development Company. Mr. Parsons also mentioned that existing tank system at the site is owned by HPD but operated by Clinton Housing.

06/04/10-Hiralkumar Patel.
10:30 AM:- visited site. site has 10 story building with basement. met Lenny Costillo, building super. inspected tank room. site has AST on saddles in tank vault, which is located under a sidewalk. found tank in bad condition (corrosion and wall chips falling off). found water in tank vault. no label/tank info/fill port color code found. found old abandoned fill port.

11:30 AM:- left message for Ms. Poblador.
11:42 AM:- received call from Ms. Poblador. she mentioned that Ms. Griffin manages this building. Ms. Poblador mentioned that Clinton Housing has long term lease for the building and they are managing it for City.

06/17/10-Hiralkumar Patel. after discussing with DEC Austin, case closed based on following:

- 6 inches of #2 product found in tank room on 11/03/99
- product thickness (of 6 inches) was the same on 11/12/99
- new tank installed at same location
- on 01/31/2000, tank room was flooded with water, but no oil/sheen observed on water
- no odor/sheen/oil observed inside tank room or sump in basement during a recent site visit

4:48 PM:- sent email to DEC Leszek and informed him about PBS violations at the site.

case closed.

Caller Remarks:

FOUND CONTAMINATED SOIL UNDER DISPENSERS

DEC Investigator Remarks:

Sangesland played "phone tag" with Jeff Bohlen of Envirotrac. He said they removed a buried tank from the basement of the building and found contaminated soil. He said the contamination was confined by a historical subfloor/foundation structure from an old previous building on the site. Unknown if end point samples were taken (Sangesland did tell Mr. Bohlen that end points would be required). Sangesland asked Jeff Bohlen to contact Jeff Vought at the DEC directly for specific instructions to close out the case.
A CSL Letter was NOT sent.

06/20/08-Hiralkumar Patel. duplicate spill. case closed. refer to spill #: 0706546.

Caller Remarks:

Caller states soil sample results showed impacted soils.

DEC Investigator Remarks:

3/13/09 - Raphael Ketani. The site is a 6 story apartment building that was turned into condominiums. The block and lot are 1080 and 25. The main address is listed in Property Shark as 753 10th Avenue. The alternate addresses are 755-765 10th Avenue, 507-515 West 51st Street, and 510-518 West 52nd Street. The owner, according to ACRIS, is Clinton Green South, LLC, c/o The Dermot Company, Inc., 320 West 57th Street, NY, 10019.

According to Donna Vieni of ABC Tank (718) 272-2800, they were contracted by Lemi Construction (Sal is the contact; (646) 721-0019) back on 8/1/08 to remove a 275 gal. tank and the associated contaminated soil. She said that the soil and tank were removed and end point samples were taken. She has the results and they were at or below TAGM. She said that she has the whole remediation report and she will send it to DEC. I asked her why the spill wasn't reported until now. She said that she had no answer.

3/17/09 - Raphael Ketani. Donna of ABC Tank sent me the FAXed soil analyticals for the site. I reviewed them and found the residual contamination to be non-detect for VOCs and generally well below the TAGM limits for SVOCs.

As the analytical results indicate that the residual contaminant concentrations are very low and Donna told me that the tank and the contaminated soil were removed, I am closing the spill case.

over fill at apt. complex/vac truck and crew en route/spill contained to tank room

DEC Investigator Remarks:

statewide oil customer. Unkown oil co pumped #2 oil into tank. Overfill out top of tank to tank room floor. A couple inches is present. Riteway responding with vac truck and 7 men to perform cleanup. Unsure if #2 oil in tank will be pumped or burned. DEC Patel to respond.

09/20/11-Hiralkumar Patel.
1:36 PM:- spoke with Pete at Riteway. he received call from Statewide oil as the subject site is Statewide Oil’s customer. Pete was informed that an unknown oil company delivered about 9,000 gal oil into a 20,000 gal tank. as per super, oil spilled from manway inside the tank room only. no spill at the vent pipe. Pete was informed that there is about 2 inches of product in tank room.

alternate addresses: 737-751 10th Ave, 501 W 50th Street, 517 W 50th Street, 525-545 W 50th Street, 500 W 51st Street, 518 W 51st Street, 534 W 51st Street

PBS #: 2-040541, 2-353612

as per PBS #: 2-040541, site has one 40,000 gal #6 oil UST. tank was installed in Jan. 1974. this tank system owned by Hudsonview Terrace Apartment.

as per PBS #: 2-353612, site (525 W 50th Street) has two 20,000 gal #6 oil ASTs on legs/saddles. these tank systems owned by NYC Dept. of Education.

other spills : 0914426, 1002582

spill #: 0914426 was reported on 12/31/2009 by ConEd as 5 gal unknown oil found. case closed.
spill #: 1002582 was reported on 06/07/2010 by ConEd as 10 gal unknown oil found in transformer vault. case closed.

2:20 PM:- spoke with Frank Arias, building super. he mentioned that two buildings: 547 10th Ave and 525 W 50th Street were built at the same time, but both buildings owned by separate owners. there are some plumbing lines on each building that run into other building, but no connection between tank systems on both properties. Frank mentioned that they have two (2) 20,000 gal #6 oil ASTs on legs/saddles (not one 40,000 gal #6 oil UST as mentioned in PBS). this morning, he found 11,000 gal oil in south tank and now the south tank is full which means 9,000 gal #2 oil was delivered to the south tank. Frank mentioned that the spilled oil is completely contained inside the tank room and no odors in building other than basement. he also confirmed that no odors in adjacent school building. Frank mentioned that they will do necessary adjustment on boiler and will use the #2 oil delivered to the tank. asked him to stop further oil deliveries until the manway is fixed.

2nd floor 10019
Flora Buckley **property manager**
Ph. (212) 265-5868 (O)
email: fbuckley@bushterminal.com

Frank Arias **building super**
Ph. (212) 265-5868 (O)
(917) 399-1286
email: allpr4u@aol.com

2:57 PM;- sent email to Ms. Buckley with copy of PBS form and asked her to correct PBS information. also informed her that PBS registration expires on 12/02/2011. email copied to Frank and DEC Brian.

3:30 PM:- visited site. met Frank. inspected tank and boiler rooms for both apartment building and school building.
two 20,000 #6 oil ASTs on saddles are located in enclosed tank room within the boiler room. its same design for both buildings. boiler rooms for both buildings have common wall with access into each others area. all four tanks are located along the northern foundation wall of the buildings, along W 51st street. fill ports and vent pipes for both buildings are located on southern sidewalk of W 51st Street. tanks and boilers for both buildings are located in sub-basement (lowest point in buildings).

on street level, there is a private parking garage (ICON Parking) between the apartment building and school building. the school's tank/boiler rooms are located right underneath the apartment building area, east of private parking garage. no odors noticed in apartment building or in parking garage. the main school building is more than 500 ft west of their tank/boiler room.

both tank sets are located next to each other with a block wall in between. Frank mentioned that they are only using south tank and the north tank is completely empty, but not abandoned. north tank is ready to be used at any time. mixture of #2 and #6 oil spilled from a manway on top of south tank. as there is block wall on west and south side of tank room, oil seeped through block wall into apartment building's boiler room and into school's tank room. there is a sump located in northwest corner of the apartment's boiler room and minor oil found into this sump. there is another sump right across the wall from apartment's boiler room sump, in the northeast corner of the school's boiler room. no oil found in shcool's boiler room sump.

90% of the shcool's tank room is within the apartment's boiler room footprint. and that could be the reason for not having any oil in school's boiler room sump. Frank mentioned that the floor underneath the both tank/boiler rooms is more than 1 ft thick (the main floor for 38 floor apartment building).

Riteway crew was on site pumping oil from tank rooms. inspected remote fill port/vent pipe for both apartment building and school. no sign of any release at any fill port or vent pipe. asked Frank either to fix manway immediately or seal the fill port for south tank. Frank mentioned that Riteway will replace manway cover before leaving the site today.

during inspection of the school's tanks, found leak from manway of the north tank.

all the lines to and from both tank sets runs aboveground except part of remote fill line runs under sidewalk.

Frank mentioned that due to sidewalk shed along W 51st Street, no one from aprtment building noticed truck delivering oil to the tank.

based on available ACRIS record, entire site (including apartment building, parking garage and school) owned by NYC Dept. of Education and then the apartment building portion was leased to Hudsonview Terrace Apartment.

09/21/11-Hiralkumar Patel.
9:13 AM:- spoke with Frank. he confirmed that oil in apartment's tank and boiler room was cleaned yesterday and Riteway tank is on-site now to cleanup oil in school's tank room.

09/23/11-Hiralkumar Patel.
3:58 PM:- spoke with Pete at Riteway. he mentioned that spill in school's tank room is cleaned. but they are still cleaning up contaminated material (mostly dirt) in the building's tank room.

09/26/11-Hiralkumar Patel.
3:00 PM:- visited site. met Frank. inspected both tank rooms and boiler rooms. found mostly water inside the school's tank room and some minor oil droplets. found some oil in apartment building's tank and boiler room. no odors noticed in any area. oil found in basement could be oil left in block walls. asked Frank to have all oil cleaned up. he will talk to Riteway.

09/27/11-Hiralkumar Patel.
1:35 PM:- spoke with Pete at Riteway. he mentioned that Riteway crew is on site cleaning up the remaining oil.

10/20/11-Hiralkumar Patel.
1:12 PM:- spoke with Pete at Riteway who confirmed that cleanup was completed.

based on available information and observations during site visits, case closed.

leak in feeder that runs between manhattan and westchester county, showing a loss of 205 gallons in tank at 637 w 49th st in manhattan exact location of leak is unkown at this time.

1210 pm - Neal called - UPDATE - 300 gallons of Dielectric Fluid in a Manhole #62565 - Intersection of 101st and Western Ave in Manhattan

DEC Investigator Remarks:

03/26/10-HRAHMED-Spoke to ConEd ERT. Leak was discovered in feeder line M52 at 07:15 AM on 03/26/10. An off line analysis indicates a loss of approx. 205 gal at a leak rate of 2.8 gal. per minute. PFT vans are searching for the leak from W49th St. Substation to Sprainbrook Substation. Kaynes Marine is hired for searching any release in Harlem River between Hamilton bridge and Broadway brige. The location of the leak is still unknown.

As per conEd, a leak in the return line of feeder was discovered in Manhole #62565 at the Intersection of 101st and Western Ave in Manhattan. 300 gallons of Dielectric Fluid is contained in the Manhole. The leak has been clamped. ConEd took samples to characterize the fluid and will eventually pumped out the manhole.

04/16/10-HRAHMED-case transfer under Feroze, Mohammad for routine closure.

4/22/10 - Austin - Actual amonut lost to manhole was 230 gals. - spill contained and cleaned up by Con Ed - see eDocs for more details - Spill closed - end

Caller Remarks:

unknown what is going on: gauges are being tested, not sure if it is a real spill: still investigating: feeder related:

209430

DEC Investigator Remarks:

There are currently two separate spills involving W49 Street S/S; 0710712 and 0710715.

Two separate feeders are involved: M54 and 38M72/44.

Based on modeling, ConEd has just started digging on 11 Avenue between W49 and W50 Streets. Leak rate estimated to be 13 gallons per hour for a release of 460 gallons from M54. This is spill report 0710712. It was called in at 2:49 AM. ConEd reported a visible release inside the W49 Street Substation and mentioned a possible feeder leak.

The second spill report, 0710715, was called in at 7:23 AM. ConEd considers this a pump house inventory discrepancy involving feeders 38M72 and 38M44.

1/11/08. Report from Mike Pillig by telephone. The breach was located in a three-inch fill line that serves the substation's five pump houses. The breach is below the substation floor, which is eight to ten inches thick. The initial estimate is that 2000 gallons has been released beneath the substation. Chad Pfeiffer and Chris Cotronei will direct the remediation effort as a substation project.

1/16/08. Chad reports by telephone that the fill line has been repaired. All three fill lines passed pressure testing. Chad excavated down to five feet and took samples. Chris has photographs.

Chad Pfeiffer: 646-235-0196.
Mike Pillig: 347-386-5506
Chris Cotronie: 347-203-4225

209430. see eDocs

1/16/08: e-mail from Con Ed (Cotronei):
"Here is a little update on the pump house 4, 5, 6 fill line spill. The engineers are still finalizing the numbers, but it looks like we lost 2,850 gallons of dielectric fluid. Once a discrepancy was observed, all the valves that fed the suspect pipe were closed to no longer contribute fluid to the leak.

"We declared a leak on the fill line at approximately 1710 on 1/10/08 (Th). This was after many test to ensure that our equipment was measuring properly. Once a leak was declared we devised a plan to break the concrete above the 4 way joint in tr 4 vault near the fill port to
split the fill line into 4 pieces for drop testing each segment to determine direction. Once the leaking section was determined, the next elbow / tee would be exposed on the leaking line to break the line to drop check.

"By chance the first place we broke the concrete we discovered oil at approximately 0330 on 1/11/08 (F). Despite their being no flow out of the pipe, it was exposed and clamped by approximately 0720 on 1/11/08 (F). Throughout Friday Safeway and ASPV worked to expose enough pipe for S&TO to make permanent repairs. Permanent repairs and a drop checked were completed at 2030 on 1/11/08 (F).

"Safeway and ASPV worked from 2030 on 1/11/08 (F) to 2100 on 1/12/08 (Sa) to enlarge the opening in the concrete to 9' by 15'. Approximately 4' of sand and soil were removed from the excavation.

"At approximately 2100 on 1/12/08 (Sa) I sampled 12 locations for TPH 8100 (modified) to determine the remaining level of contamination. We are supposed to have these results tonight. I will forward them when I have them. See the attached sampling grid for locations.
* All samples were from the top approximately 6" of material
* All samples were primarily soil
* Samples 1, 2, 3 and 11 collected approximately 4' below the top of the concrete
* Samples 4, 5, 6, 7, 8, 9 an 12 collected approximately 5' below the top of the concrete
* Sample 10 collected approximately 2' below the top of the concrete
* Sample 11 collected approximately 5' below the top of the concrete

"As of 1/12/08 (s) at 2200 we removed approximately:
* 5 yards of reinforced concrete (9' * 15' * 1')
* 20 yards of soil and sand (9' * 15' * 4')
* 6.5 yards of clean bluestone removed for access (18' * 20' * 0.5')
* 4 vac boxes were utilized"

See eDocs for attached pictures. (Breen)

1/24/08: e-mail from Con Ed (Cotronei):
"On Tuesday we had ASPV remobilize on the site to continue remediation of the impacted area based upon engineering's constraints. After three days of work this week we completed the following:
* All remaining areas of the open concrete were excavated to approximately 5' below the top of the concrete.
* An area of approximately 6 1/2' wide and 4' under the concrete was excavated to 5' below the top of the concrete. This concrete that was undermined was braced with 4" by 4" timbers.
* Within the open concrete area we excavated another 18" of material out of the center area coming approximately 2' away from all walls and support structures.
* Covered the excavation with plastic to prevent water from saturating it.

"Going forward we will be talking to engineering about installing sheeting and shoring to excavate deeper in the center area as it is still contaminated. By sloping the
material we are not removing nearly as much impacted material as is possible. We will let you know when we receive information back from engineering."

<<excavation looking north 012408.JPG>>
<<area under concrete 012408.JPG>>

See eDocs for attached photos. (Breen)

1/31/08: Site visit with Con Ed (Cotronei, Pfeiffer and Pillig) - excavation is at approx. 5 feet below grade. Con Ed engineering is designing a shoring plan to allow additional excavation. (JHO)

3/4/08: e-mail from Con Ed (Cotronei) transmitting results of post-excavation sampling. Requested site sketch, which was later e-mailed by Con Ed (Chad Pfeiffer). Results indicate there are still areas that exceed the cleanup criteria, however Con Ed Engineering states that no additional soil can be removed in those areas. See eDocs for results and sketch. (JHO)

3/4/08: E-mail from Cotronei:

"We completed additional work at W49th St. We had sheeting and shoring installed and were able to excavate deeper. In all we excavated approximately 4' of material below the 1' of concrete. This final depth was given to us by engineering with the primary concerns being the
building on the west side and the concrete buttress of the east side of the excavation. The buttress is part of the structural support for the weight of the transformer and switchgear.

"Once we hit the final depth we had Jacques Whitford sample the area. All except one of the floor results are below 10000 ppm. 7 of the 12 samples taken from the wall area were below 10000 ppm. The remaining five were all under 22000 ppm."

Later the same day, received clarification e-mail from Pfeiffer based on inquiry from DEC:
"Sample locations PE-1 through PE-6 were collected on the sidewalls of the excavation and then cored into the sidewall, usually around 1.5 feet laterally into the wall. They were all taken around 6-10" above the excavation floor.

"The east and west sidewalls of the excavation that were sampled are soil supporting concrete beams (for the vault wall on the west side and the transformer foundation/pothead stand on the east side). See the attached sketch of a sideview of the east wall with the vault floor on
top, the concrete supporting beam beneath that and the soil supporting the beam below that. There is a similar setup on the west wall.

"Engineernig has told us that we cannot remove soil beneath the beams without risk of undermining. We also cannot dig any deeper without providing structural support to the sidewalls, current timber sheeting/shoring will not be adequate to support the sidewalls any
deeper.

"We have not encountered groundwater in the excavation and we we get to final restoration of the area, the solid concrete floor will be poured and tied into the existing vault floor. All precipitation landing in the vault goes into the station drainage system which leads to the
oil/water separator. The area will essentially be capped with no water draining into the soil."

See eDocs for sampling map and lab results.

Based on engineering restrictions, no further excavation can be done. Area will be capped with concrete. Close. (JHO)

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

On June 23, 2000, DEC (Sigona) responded to a complaint of a 150 gallon spill of fuel oil into the Hudon River at the Passenger Ship Terminal between Piers 88 and 90, at 711 12th Avenue, Manhattan. Upon arrival it was determined that the Big Red Boat II had spilled oil into the river from one of the portals on the Starboard side of the vessel. USCG (Hudman) could not obtain a confession from the Captain over the cause of the release. The Captain of the Bid Red Boat authorized the cleanup and copperated with USCG requirements for boom deployment. Miller Environmental Group deployed 500 feet of hard boom along the warf, and 2,000 feet of sweep along the warf and adjoing Piers Nos. 88 and 90. The sides of the vessel were stained, and some pockets of free product collected along the south side of the warf, as the tide washed up from the Hudson.

USCG (Hudman) indicated that the vessel was required to post a $11,000 bond which would be held by the Federal Government until the violations for the allleged discharge were resolved. The USCG provided oversight for the cleanup which continued on Saturday June 24, 2000, when the vessel was scheduled for departure.

STORM WATER REGULATOR ON WEST SIDE HWY & 47 ST HAS FLOATING WASTE OIL. SLIGHT SHEEN ON RIVER, TRACED BACK TO ARIO'S AAA TAXI GARAGE.USCG & IWCS ON SCENE. DEC CALLED CONTACTOR - NO RESPONSIBLE PARTY

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"
09/12/95: W.O. TNK IN BASEMENT OVERFILLED, INTO DRAIN, SEWER, RIVER. KINT DId NOT TAKE RESPONSIBILITY, OWNER MYRNA 47 REALTY, SENT LOR, and offered 30 day grace period for payment prior to starting a PIN. Spoke with Slavik Gossman (212) 768 - 7540 who said he represented the owner and would provide payment, sixty days later, never paid. Opened PIN (# 94352) to pay MILRO.

12-07-95 Got call from Sam at the Sunoco (adjoining property). Sam says that he is getting sued by owner, and has already paid owner over $ 3,000 dollars for the cleanup, but owner never paid MIlro.

5/12/04 - AUSTIN - TRANSFERRED FROM MULQUEEN TO TIPPLE - END

8/23/05 - Raphael Ketani. Case transferred to Jeff Vought.

07/25/08-Vought-Spill reassigned from DEC Vought to DEC Ketani as per DEC Austin.

10/8/08 - S. Paige conducted Technical Review of spill file.

Source of release was an automotive repair shop in operation at 602 West 47 Street, Manhattan. Waste oil was being discharged into a defective aboveground storage tank (AST) system in the basement of the repair shop. Oil overflowed from the AST and discharged into drain in the basement which then discharged into the storm sewer leading to the Hudson River.

M. Mulqueen (DEC) called out Milro Associates to contain the spill. Contractor vacuumed out storm drains and waste oil tank, placed booms in drains, and placed pads and speedy dry down in basement around tank area. Milro then transported and properly disposed of emulsified product at a disposal facility.

A review of the spills database showed that no other spills are open in close proximity to this site as of 10/8/08.

Given the age of the spill, readily available documentation and completed cleanup activities, no further action is required at this time.

1,000 GALLONS ON 2,000 GALLONS OF WATER. VENDOR HAS BEEN NOTIFIED FOR CLEANUP. SAMPLES TAKEN FOR PCB AND FOR FURTHER INVESTIGATION.

CLEANUP TO BE DONE 50 TO 499 PPM PCB. MANHOLE CONTAINS DIELECTRIC FLUID FILLED FEEDER CABLES M54 AND M55. FEEDERS ARE NOT LEAKING.

CON ED #143435.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"

6/19/02, 1230 hrs: Met at site with Joe Browne (UT supervisor) and David Duke (ERT). Material visually appears to be cable oil - samples taken for PCB and oil ID. Manhole is in center lane of 12th Ave./West Side Hwy. Lane is closed by Con Ed truck with flashing arrow and cones. Con Ed tanker arrived soon after I did - 4,000 gallon capacity. Using graduated stick and water-finding paste, estimate approxiamtely 800 gallons oil and 4,000 gallons of water. Tanker began pumping at about 1:15 PM. Will take several hours and another tanker to remove liquids. Clean Harbors will then clean the manhole so that crew can assess equipment to see if there is a leak. According to Joe Browne, there is no pressure drop on either feeder. This is probably a long-term,

low-volume leak from a fitting. DEP IWCS (Andrew Kelly) and Haz Mat (Chris Haas) also stopped at location to get update. (JHO)

6/20/02, 1540 hrs: spoke with Joe Browne. They pumped out and cleaned manhole, but found no evidence of a leak. They have obtained an emergency DOT permit to begin excavating end walls to check for leaks. (JHO)

6/21/02: Met with John Tranchina and Joe Browne. North end of manhole has been dug out. Leak was found in manhole sleeve. Small leak, low volume (slow leak) over time. No visual contamination in excavated area, but Tranchina reported some odor in soils. Will collect soil samples from floor, walls for TCLP benzene and TPH modified 8100. (JHO)

7/9/02: lab results for soil samples submitted by John Tranchina. Two of 10 locations still had high TPH after 6/21/02 sampling event. Tranchina excavated more soil and re-sampled the two locations on 6/28/02 - still very high TPH. (JHO)

7/17/02: Spoke with Tranchina - Locations 5 and 6 will be excavated additional 6" to 1'. Will collect samples and backfill. 2nd set of samples had higher TPH results than first set.(JHO)

10/13/06: Con Ed submitted report (see eDocs) documenting additional cleanup and sampling. Close. (JHO)
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
e2MIS no. 143-435:

On June 19, 2002, J. Browne, CCI, 78774 of Transmission Operations reported that while preparing for installation of a cathodic testing station at manhole 61724, feeder M54/M55 he discovered approx. 1000 gallons of unknown oil and approx. 2000 water. All substance contained in manhole. Chem Lab is at the site and will be taking samples. Source of spill and cause of spill is unknown at present. No sewer, waterway or private property affected. No smoke, fire, injuries or outside impact. Clean Harbors has been notified to report to the site. Tag no. 4259 will be hung in manhole. Treating as 50-499ppm.

UPDATE Per B. Byrne, Supervisor, 54151, 06/19/02 a crew was on site to check manhole. 06/20/02 - NYSSEC & NYSDOT was to meet with Construction Management to discuss permits and how to proceed with the remediation.

15:00 - 06/20/02 excavation began

06/21/02 - at present no leaks has been found on the North end, going to break out the wall to check the pipe in the wall.

Update: 06/21/02 15:40 hrs. Project Mgr. Mr. J.Farina # 75798, of transmission Operations
Reports that in M-61724, tanker pumped approx 2,000 gallons of water and approx 1,000 Of oil.
Clean Venture has removed approx. 30 yards of soil from the excavation.

PCB Concentration 6PPM
NO LEAK FOUND IN MANHOLE, LEAK FOUND ON THE SLEEVE OUTSIDE OF MANHOLE. -

Chem lab reported 02-05803-001 for PCB at 10 sample locations
Chem lab reported 02-05804-001 for TCLP Benzene and TPH at 10 locations.

OIL CONTAINED IN CONTAINMENT ROOM. NO SMOKE, FIRE OR WATERWAYS AFFECTED. CALL UPDATED AT 20:53 8/2/03 - AMT SPILLED ESTIMATED

FROM 1000 TO 2000 GALLONS. CON ED #149620

DEC Investigator Remarks:

E2MIS 149620

08-02-2003
At 1728 hours K. Paul while making his rounds noticed fuel oil in the basement. He immediately informed Shift Supervisor J. Waller. He together with the relieving Supervisor rushed to the basement and ordered the Operators to shut down the Sump Pit pumps and the Fuel Oil Pump. On further investigation, there was approxiametely a total of 1000 gals. of #6 fuel oil in the tank room and in the area approx. 20 feet north of fuel oil room. The oil had gone into the drain gutters but had not as yet gone into the Oily Water Seperator. There was no oil in the river or the street. The suction fusable link valve failed on tank #4 and the oil overflowed from that tank. Arrangements were made by ERT to have vendor come in to start clening up. The station Environmental Mgr. and the station Ops. Mgr. is in the station managing the spill. Vendor ALL STATE in station at 1924 hours to start cleanup.

Report entered by Mario de Corla-Souza for Jerry Waller. 20:35 REVISED SPILLAGE AMOUNT TO 2000 GALLONS AFTER MEASUREMENTS OF OIL ROOM WHERE TAKEN.

08/03/03 Update:
All State Power Vac in station cleaning up area by # 6 FO Tank Room and FO tank Room. Working 12 hours shifts round the clock until further notice. Miller Environmetal Group in station clean up area by #7 Surge Tank and Self Service area. Working 12 hours shifts round the clock until further notice. Slight amount of #6 oil found in #1 compartment of East OWS. All sump pums are shut down and the OWS are held off. Jei Zhao of NYSDEC in station from 0930 to 1100 to tour site with ERT Dave Kindberg and Steve Martis. She left with no major issues.

Station maintaining modified ICS. IC - Shift Supervisor; Operations/Logistics - from Maintenance Staff; Planning/Safety - from EHS Staff. Watches are 12 hour shifts around the clock until further notice.

19:00 03-AUG-2003 further inspection proved that no o&g/sheen entered river tunnels. trench/sump/ows system re-established with pumps in auto. some sump flooding requires
additional pump pm. plan made to reroute fo htexchngr stm condensate with hose to east trench. discharge piping from sump south of fo tank room must be replaced. cleaning and waste storage/removal continuing with meg and allstate. all waste nonhaz. final root cause of tank valve failure/spill with corrective action still being investigated. ows tank will be continuously monitored.

8/5/03 @17:00-area 1 south of tank room 95% clean except for trench replacement gratings and sump. tank #4 90% clean but residual oil from soaked insulation will make another spray wash cleaning necessary tomorrow. pads placed around bottom base of all tanks will be changed out regularly. area 2 by twall completed by meg and barrier tape removed. new trench gratings were placed and oil contaminated pallets will be plastic wrapped and placed in vendor lined dumpster tomorrow. vac trucks will be removed from 58th street this evening and no night shift cleaning planned.

Update: 01-MAR-2005 by J. Burke
Area #2 (by 7 Surge Tank) cleaning was completed on 8/5/03. Area #1 (south of Fuel Oil Room) and Area #3 (FO Room) cleaning was completed by 17:00 on 8/12/03. All debris was removed and disposed as non-hazardous waste of by All-State PowerVac and Miller Envr. Group.
ROOT CAUSE: Initial leakage was caused by the combined failure of fusible link on #4 FO tank suction valve and failure of #4 FO Tank level indication. With the FO system recirculating oil to the burner fronts, oil was entering the #4 FO tank but not being removed, which resulted in the tank overflow.
Oil escaped from the FO room because of an unknown leak in the FO Tank Room south wall.
CORRECTIVE ACTION: After consulting the OEM, the fusbile links on all the #6 FO tanks were replaced with a higher rated link, and the links are replaced on
an annual basis.
The #4 FO tank level indicator was repaired.
The hole in the south wall of the #6 FO Room was repaired with an expoxy patch and tested for leaks.
All repairs were completed.
This incident is being resubmitted to the NYSDEC for review and closure.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~
DEC Inspector Notes:
~~~~~~~~~~~~~~~~~~~~~~~~~~~~

Arakhan 8/8/03 Based on site inspection and interview with Nelayne Rios, EHS Manager, it was determined that the spill was caused by operator error. The tank #4 fuseable link failure alarm was misinterpreted by the operator as instrument error; the operator failed to verify absence of spill condition. The resulting spill escaped the secondary containment through a separation between the shop floor and the secondary containment wall. At the time of inspection, only the east compartment of the oil/water separator was in service; wastewater was being pumped into the o/w separator by manual switching. Con Edison is investigating the circumstances of this spill and will submit a report to the Department. (SKA)

Arakhan 8/14/03 Site inspection at 1:45 PM today revealed an approximately 2-inch wide, 2-inch deep crack in the floor next to tank #4. The crack continues through the wall via a hole which is approximately 1 1/2 inch in diameter. The floor drains covers in the affected have been replaced and overhead piping from the nearest sump have been cut and capped; the piping will be replaced soon since it contains oil. The fusable link to tank #4 has been repaired and the tank has been returned to service; the insulation around the tank is oil-soaked and continues to drip onto pads on the floor. The facility's oil/water separator has been returned to service since approximately 8/5. (SKA)

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
3/7/94: made visit to site. USCG, MEG Con Ed and NYCDEP on scene. Miller Env was cleaning up the spill. About 150 gallons spilled in water and about 350 gallons on deck of barge. (AZ)

3/10/94, 2:56 PM: Spoke to Mr. Brennen of 59th St. GS by phone. 350 gal spilled on barge, 150 gal in water. Everything is cleaned up except the bottom of the pier which will be cleaned tomorrow at low tide. (CAE)

3/11/94, 11:11 AM: Spoke with USCG. They are going to inspect clean up today at 1:00 PM - will meet them at scene. NOTE: Coast Guard never showed (see below).

3/11/94, 1:15 PM: met at site with Gaylord Hansen of MEG - he estimated 2500 to 3000 gallons spilled. Taken out in bags (3 x 20 yard rolloffs). The high-high alarm probe was known to have been malfunctioning since October '93. Also, there is a block valve for the #2 starboard chamber that was known to be defective for about 2 years. This valve is what caused the spill.

Most of the oil has been cleaned up. Gaylord sent crew under dock to remove any oil they could from there. It was coming off in chunks. Gay;ord wants to clean in between the barge and the dock (north side) but they have not been able to get approval to put "camel" blocks between the dock and barge to keep the barge from cruching workers.

Spoke with Bill Burkett - plant manager. Told him we needed to get that area cleaned. He seemed cooperative. (CAE)

3/14/94: Retrievied message left on 3/13 - Gaylord Hansen says USCG has inspected area and given approval of cleaning but has not inspected north face of the dock. Gaylord will be demobilizing clean up team. (CAE)

3/24/94: visited site - saw small patches of #6 oil on north face of dock and on barge. When returning to office I made appointment with Petty Officer Lopez and Bill Burkett to inspection on April 4 @ 11 AM. Afterwards spoke with Gaylord Hansen - he told me that MEG did in fact clean the north face on Monday 3/14 aftre last minute change-of-heart by Con Ed. He said the Coast Guard came down that morning and re-opened the case. USCG inspected dock after MEG was done and approved clean up, saying it was as clean as they could expect. (CAE)

03/29/95: CON SUBMITTED REMEDIATION CERTIFICATION ON 2/2/95 AS PER CONSENT ORDER REQUIREMENTS. CLEANUP COMPLETED BY MEG ON 3/24/94. INSPECTED AND APPROVED BY USCG.

DEC Investigator Remarks:

10/23/06 - See e-docs for Con Ed report detailing cleanup and closure.

On 11/19/04 at 13:00 Results Supervr D. Macrae noticed oil floating on the standing water under 115 Boiler. The spill was reported to SS T. Benjamin at 13:02. Mr. Benjamin discovered that the oil came from a leaking union of the suction piping for 115 ID Fan Lube Oil system. The leak was stopped by tightening on the union. OMA M. Simon and PW R. Ramirez were assigned to clean up spill. Because the oil spilled to a pool of standing water under Boiler 115, the spill cannot be cleaned up within 2 hours. Envr. Engr. J. Burke was resquested to assist Mr. Benjamin. Fire/Smoke NO. Sewer/Waterway NO. Substance Lube Oil. Source 115 ID Fan Lube Oil System. Cause Leaking Union. Private Property NO. Clean up in progress.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

~~~~~~~~~~~~~~~~~~~~~

Con Ed e2mis #149200:

At 00:53 it was observed by operator L. Tucker that oil was pouring out of #1 and #2 fuel oil tanks which is located inside of a moat in the fuel oil tank room. At this time fuel was being transferred from a barge on pier 98. The fuel transfer was stopped immedietly. The approx. amount of the spill is estimated to be about 200 gallons. The spill is contained in the moat in the fuel oil room. Operations personnel placed spill pillows around the spill on the floor, and also covered it with spill pads. Notification was made to CIG,EHS Manager, and Operations Manager. It was noticed by Shift Supervisor A. Rodney that 3 of the 4 tank level indicators in the control room were defective with a zero tank level indication, while the fourth tank (tank #4) was indicating 99.4%. Ops. Manager locating cleanup vendor to report to site to assist ops. personnel.

Clean Harbors on site at 0530 to start setup for cleanup. All gross oil removed from top of tank; sides and floor of fuel oil room. Cleanup operations suspended for weekend. Cleanup of cosmetic residual oil to continue Monday, July 14th.

Clean up completed 15-JUL-2003. Repairs to Magnetrol for High-High Alarm and Trip completed on 23-JUL-2003. Operation personnel conduct Trip testing of #6 fuel oil tanks and 500 valve. #1 tank was filled to 90%, the pump suction supply valve was closed ... the recirc valve to #1 tank open ... the recirc. valves to the other tank were closed. At 90% the Hi-level alarm went off. This practice was conducted on the remaining tanks, #2, #3 and #4. Below is the sequence:-
~~~~~~~~~~~~~~~~~~~~~

#1 tank -- Trips 500 vlv. at 96.1%
#2 tank -- Trips 500 vlv. at 97.8%
#3 tank -- Trips 500 vlv. at 96.5%
#4 tank -- Trips 500 vlv. at 96.4%.
Note:- The actual Trip Value is 95%, but the tanks level indication is about 1.5% higher on average.

UPDATE: Lab Seq. # 01-03652

04/13/01 12:58 hrs

Aroclor # 1260 PCB count 11PPM

on the subsequent findings of 100 gallons and a possible release to a sewer, this Deminimis 24 spill has been reclassified as Spill - Dielectric Transformer

04/13/01 @ 15:55 hrs. OGS. V. Vavallo # 57666 reports:

11:10 hrs. Tanker commences to drain structure.

12:10 hrs. DEC. Kerry Foley and ERT Sean Mahoney arrived on location.

12:30 hrs. Flush Truck on location.

12:40 hrs. DEC. left location, satisfied with progress of job.

12:50 hrs. DEP. Ellis St Jean arrives on location.

13:05 hrs. DEP left location, satisfied with progress of job.

13:20 hrs. Began draining transformer with Astoria tanker.

13.30 hrs. Coast Guard on Location, Doherty and Pedersen.

13:35 hrs. Coast Guard left location.

15:05 hrs. Building representitive imformed crew that oil had seeped into building, crew investigated and found 3' X1' puddle and cleaned up immediately.

Note: Removed 335 gallons of oil and water from vault 4824 and 310 gallons from the transformer. Transformer capacity is 360 gallons. Original spill states 100

gallons lost from transformer and should be changed to 50 gallons, in addition, release to waterway indicates 20 - 30 gallons and should be changed to 5 gallons.

Partial cleanup in progress.

04/13/01 @ 15:15hrs. OS. R. Browne # 21646 reports,Flushed vault 4824,. re-applied oil absorb, partial cleanup completed. Time of cleanup 13:00 - 15:00hrs, crew on location T. Korpas 07378, S. Sperrazza # 53318

5/14/01 07:30 E.Higgins # 18537 Cleanup supervisor reports that at 04:30 the cleanup was complete 100%. @ bags of debris were removed & the hole was

double washed. The cleanup crew was:

J. Fillisetti # 07376 & W. Holder # 85940. J. Moran Took the call & R. Bruns # 21106 was the logger

UPDATE : 5/17/01 17:31 HRS

Opererating Supv. R.Brown reports as of 17:31 under 50 cleanup comp. on v-2212

V-2212 was washed twice with slix cleaning agent and power washed & flushed

Tag was removed clean up crew in event involved person window.

Logger F.Curtis

I&A supervisor Joseph Cumberbatch field verified that there is a new transformer in vault 4824. The oil that got into the customer's basement in 2001 had seeped

through the wall do to the failure of the previous transformer. Mr. Cuimberbatch stated that a request for waterproofing had also been done in 2001. The installation of the new transformer and waterproofing would eliminate any oil source that could migrate into the basement.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
E2MIS NO. 140-715:

VERIFIED ON 12/27/01 @ 13:30 THAT 300 GALLONS OF AER-O-LITE 3%COLD FOAM WAS MISSING FROM DOCK STORAGE TANK. DISCUSSION WITH

OPERATIONS LED TO ASSUMPTION THAT FOAM HAD LEAKED THROUGH ASSOCIATED PIPING AND CHECK VALVE INTO THE WATERWAY. SPILL HAD APPARENTLY OCCURRED DURING PAST TWO WEEKS. NO LOG RECORD OF ANY TESTING AND/OR USE OF FOAM DURING THAT PERIOD. INVESTIGATION UNDERWAY AS TO EXACT CAUSE OF LEAK. REFILL OF TANK BEING PLANNED ASAP. THIS FOAM CONTAINS 10% PROPYLENE GLYCOL WHICH LED TO ESTIMATE OF A 30 GALLON SPILL. NO EVIDENCE OF CONTINUED SPILLAGE

AND/OR DISCOLORATION OF WATERWAY.

The following chemical spill was determined by losses observed in the fire fighting foam storage tank on the dock. The tank has direct reading graduations to determine the quantity of foam in the tank. It normally is filled to 1,400 gallons. Today, it was at 1100 gallons. From discussion with several station personnel, it probably occurred over the last two weeks. Today, there were no visible signs of any leakage. There will be further investigations to determine the root cause and to interview station personnel who had early knowledge of this condition. A valve was apparently closed by the PIC on Friday, December 21st that stopped leakage from the tank, but no spill report was made. W. Fenner 12/27/2001.

1/22/02 Review of the MSDS for Aer-O-Lite 3% Cold Foam indicates NO glycol compounds present. The major components, Propanediol (CAS 57-55-6) and Propanol (CAS 34590-94-8), are not RQ chemicals, therefor this spill was not an RQ chemical spill, and the incident type and material history have been changed to

indicate this.

DEC Inspector Notes (JHO): Excerpt from REPORT TO THE UNITED STATES ATTORNEY AND CON EDISON, by Mitchell S. Bernard (MB 5823):

"On December 19, 2001, an employee noticed an unusual foam floating in the Hudson River, north of the plant's 59th Street dock. He discovered an abnormally low level of fire-fighting foam in a storage tank located on the dock. A tank valve that should have been closed was open. The employee noted in a log that he had observed foam in the River.

The spill was first reported to the station's environmental manager eight days later, on December 27. According to an investigation conducted by the environmental manager, six plant employees knew pertinent facts relating to the spill between December 19 and 27. None of them pursued or reported them. An additional five plant employees could have learned of the spill by reading the December 19 log entry. None of them did.

The environmental manager reported the spill to the Company's Central Information Group ("CIG") on December 27. A preliminary inquiry began on December 28. A more detailed investigation commenced on January 2. It turned out the foam tank had lost 300 gallons, all of which may have reached the River. Plant investigators suspect the foam tank valve was not opened accidentally. They were unable to determine who had opened the valve, or why.

The widespread failure to recognize the environmental relevance of the spill, including the requirement to report it within the

plant and to CIG, is difficult to fathom. This kind of inattention, or willful disregard, can land the Company back in the trouble from which it has worked hard to emerge."

Caller Remarks:

In process of cleaning up - almost done.
No further information available - caller disconnected after being placed on hold while 74 handled an emergency phone line.
Hess Oil Corp has contract to deliver fuel - they were contacted to do cleanup.
Eric from Hess 908-392-0136 he responded with a team to the building to do the cleanup.
Fuel tank is in the basement - the boiler is on the 11th floor which is the top floor.
There is a pump that sends the fuel to 11th floor from basement - a pipe attached to this pump broke causing fuel oil to spill all over the 11th floor.

DEC Investigator Remarks:

DEC Piper and Zhune responded to site. Spill occured on roof due to broken return line to day tank. Spill is approx 500 gal #4 oil. some oil approx 50 gal leaked through floor into hallway of 11th floor. Floor was evacuated and cleanup began. PTC on site.

10/23/06- DECP iper visited site for inspeciton. 99% oil had been cleaned. Piper stated additional minor requirements. CLosed.

Caller Remarks:

Tank overfill. Speedy Dri applied. Caller's crew enroute.

DEC Investigator Remarks:

12/31/07-Hiralkumar Patel. visited site. met crew from PTC. site has 5000 gal #4 oil tank enclosed in concrete. found two vent pipes connected to the tank, one in backyard and one in front of building close to fill pipe. pipe in front is open ended (tell tail). tell tail pipe is higher in elevation then old vent pipe. during oil delivery, as tank got full, oil start coming out from vent in backyard and had a oil pool, before oil start coming out from tell tail pipe in front. some oil spilled from front pipe on concrete surface. most of spill was in backyard from old vent pipe. found old unpluged fill port in front on sidewalk. PTC crew cemented old fill port. PTC cleaned oil spill in front and also removed oil from backyard using vacuum truck.

spoke with Raha Arnold, property manager. explained her that as olf vent is lower in elevation, oil came out from old vent pipe and caused a spill. asked her to stop any further oil delivery until fix tank system. asked her to properly remove old vent pipe, repair gauge (as found faulty) and remove/plug fill port in front. also asked her to hire environmental company to remeidate contaminated soil in backyard.

PBS #: 2-061484. as per PBS record, site uses #2 oil.

Thomas (212-581-4407), building super Apt. # 1FE

Raha Arnold
Keystone Management Inc.
15165 Ventura Blvd #140
Sherman Oaks, CA 91403
Ph. (212) 684-4141 Ext. 311
(818) 822-5132 (C)
email: raha@keystonemanage.com

spoke with Ray Lara at PTC. they been hired by management and they did cleanup on 12/29/07. found mostly concrete in backyard, except one 2 ft * 2 ft dirt area. Ray took sample from this dirt area and will send it to lab for analysis. found concrete in front where spill was.

sent CSL to Ms. Arnold requiring tank test, soil and/or groundwater delineation, endpoint samples and repair/replacement of faulty gauge. also required to close one vent and fill pipe. letter emailed to Ms. Arnold.

01/03/08-Hiralkumar Patel. received call from Beth Weinstein (917-744-4377, Apt. # 1RE). she was out on vacation and on return, she found her apartment filled with oil smell. she is not confortable and wants to check her apartment.

01/04/08-Hiralkumar Patel. visited site yesterday. went to Ms. Weinstein's apartment. no odors inside her apartment or in hallway. went to backyard. found concrete surface in area of oil spill except a small portion of dirt area. concrete in backyard found in good condition. no odors in backyard.

01/07/08-Hiralkumar Patel. received call from Ms. Arnold. she is working to correct the problem and will submit a report.

01/25/08-Hiralkumar Patel. received message from Ms. Arnold. left message for Ms. Arnold.

01/28/08-Hiralkumar Patel. spoke with Ms. Arnold. they did tightness test on tank system and it passed. as per PTC, no contamination found in sample from open dirt area in backyard. petrometer has been replaced. they haven't removed vent pipe in back. will finish work, but till then, they will not fill entire tank and order only half amount. super will be present during oil delivery. once they pay entire bill by end of March, PTC will release report.

01/29/08-Hiralkumar Patel. received call from Ray Lara from PTC. spoke with Ray. they will schedule vent pipe work soon.

02/19/08-Hiralkumar Patel. received message from Ms. Arnold. they corrected vent line problem. will send documents.

03/14/08-Hiralkumar Patel. received fax from Ms. Arnold. they removed both old vent pipes (in in back and one in front) and installed new 2 inch vent line with alarm in front of building. tank test showed tank tight. no contamination found in sample taken from hole in backyard, near vent pipe.

Ms. Arnold left company. Lidia Montoya (212-684-4141 Ext. 313) will be property manager.

based on submitted documents and observations during second site visit on 01/04/08, case closed.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

D011 Silver

D018 BENZENE

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 4/16/2012. Data obtained by Toxics Targeting: 4/16/2012.
New Facilities updated through: 4/16/2012. Data obtained by Toxics Targeting: 4/16/2012.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 3/27/2012. Data obtained by Toxics Targeting: 3/27/2012.
New Facilities updated to: 3/27/2012. Data obtained by Toxics Targeting: 3/27/2012.

3) **Corrective Action Activity (CORRACTS):** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
Data attributes updated through: 3/13/2012. Data obtained by Toxics Targeting: 3/16/2012.
New facilities updated through: 3/13/2012. Data obtained by Toxics Targeting: 3/16/2012.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated through: 1/9/2008. Data obtained by Toxics Targeting: 3/12/2008.
New Facilities updated through: 1/9/2008. Data obtained by Toxics Targeting: 3/12/2008.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.
ASTM required.* Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 3/27/2012. Data obtained by Toxics Targeting: 3/27/2012.
New Facilities updated to: 3/27/2012. Data obtained by Toxics Targeting: 3/27/2012.

(a) **Brownfield Cleanup Program (BCP)**
(b) **Voluntary Cleanup Program (VCP)**
(c) **Environmental Restoration Program (ERP)**

6) **Solid Waste Facilities:** a compilation of the following 2 databases:

(a) **NYS Solid Waste Registry:** which includes, but is not limited to, landfills, incinerators, transfer stations, recycling centers.
ASTM required.* Fannie Mae required.** Source: New York State Dept. of Environmental Conservation.[2]
Data updated to: 12/31/2001. Data obtained by Toxics Targeting: 3/16/2002.

(b) **1934 Solid Waste Disposal Site in New York City:** which includes sites operated by municipal authorities circa 1934. Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 2/18/2012. New facilities obtained by Toxics Targeting: 3/29/2012.
Manifest transactions data updated to: 2/18/2012. Manifest transactions data obtained by Toxics Targeting: 3/29/2012.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
New facilities updated through: 3/13/2012. Data obtained by Toxics Targeting: 3/16/2012.
Data attributes updated through: 3/13/2012. Data obtained by Toxics Targeting: 3/16/2012.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills.
ASTM required.* Fannie Mae.** Source: NYS Department of Environmental Conservation.[2]

New spills through: 4/01/2012 New spills data obtained by Toxics Targeting: 4/01/2012
Spill attribute data through: 4/01/2012 Spill attribute data obtained by Toxics Targeting: 4/01/2012

Active spills: paperwork not completed. Closed spills: paperwork completed.
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

Data updated through: 3/9/2012. Data obtained by Toxics Targeting: 3/9/2012.

10) **Petroleum Bulk Storage Facilities:** a compilation of local and state databases of aboveground and underground petroleum storage tank facilities.

(a) **NYS Petroleum Bulk Storage Database:** This includes all New York State counties except Cortland, Nassau, Rockland, Suffolk, and Westchester. ASTM required.* Fannie Mae required.**
Source: NYS Department of Environmental Conservation.[2]
New facilities updated through: 3/9/2012. Data obtained by Toxics Targeting: 3/9/2012.
Tank data updated through: 3/9/2012. Data obtained by Toxics Targeting: 3/9/2012.

(b) **New York City Fire Department Tank Data:** **Data has been withheld by the NYC Fire Dept.**
Source: New York City Fire Department. Data obtained by Toxics Targeting: 2/18/1997

11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 2/18/2012 . New facilities obtained by Toxics Targeting: 3/29/2012.
Manifest transactions data updated to: 2/18/2012. Manifest transactions data obtained by Toxics Targeting: 3/29/2012.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]

New facilities updated through: 3/13/2012. Data obtained by Toxics Targeting: 3/16/2012.
Data attributes updated through: 3/13/2012. Data obtained by Toxics Targeting: 3/16/2012.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data updated through: 3/9/2012. Data obtained by Toxics Targeting: 3/9/2012.

13) **Historic New York City Utility Facilities (1898 to 1950):** An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study:** NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.
Source: New York State Department of Environmental Conservation.[2]
Data updated to: 5/16/2000. Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI):** Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency.[1] / NYS Department of Environmental Conservation[2]
Data updated through: 3/8/2004. Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System):** Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 6/17/2004. Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities:** EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.
See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency[1]
Data updated through: 11/24/1999. Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket:** This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
New Sites through: 10/14/1999.
Data updated through: 10/14/1999. Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites:** These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed. Source: New York City Department of Planning[3]
Data updated through: 3/28/2012. Data obtained by Toxics Targeting: 4/4/2012

20) **Emergency Response Notification System (ERNS):** Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.
ASTM required.* See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 1/31/2000. Data obtained by Toxics Targeting: 2/15/2000

21) **Remediation Site Borders:** Remediation site borders reported by NYSDEC.
Source: New York State Department of Environmental Conservation.[2]
Updated through: 4/8/2009. Data obtained by Toxics Targeting: 7/21/2009.

* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

APPENDIX D
LOCAL RECORDS

Form—244-1927 Certificate of Occupancy. BA-2087-27-I.

BUREAU OF BUILDINGS

BOROUGH OF MANHATTAN, CITY OF NEW YORK

HVC **CERTIFICATE OF OCCUPANCY No. 15561** 192 9

Supersedes Certificate of Occupancy No.

To the owner or owners of the building: New York Sept. 3, 1929

THIS CERTIFIES that the building located on Block 1081, Lot 16-19

known as 525-31 West 52nd Street
100' front

under a permit, Application No. 505 N.B. of 1928, conforms to the approved plans and specifications accompanying said permit and any approved amendments thereto, and to the requirements of the building code and all other laws and ordinances and to the rules and regulations of the board of standards and appeals, applicable to a building of its class and kind, except that in the case of a building heretofore existing and for which no previous certificate of occupancy has been issued and which has not been altered or converted since March 14, 1916, to a use that changed its classification as defined in the building code, this certificate confirms and continues the existing uses to which the building has been put; and

CERTIFIES FURTHER that the building is of fireproof construction within the meaning of the building code and may be used and occupied as a business building as hereinafter qualified, in a n unrestricted district under the building zone resolution, subject to all the privileges, requirements, limitations, and conditions prescribed by law or as hereinafter specified.

Re: Limited Due Diligence Investigation Report
525 West 52nd Street, New York, New York
Block 1080, Lot 7501

Dear John:

This letter describes the findings of the limited due diligence activities conducted by Fleming Lee Shue, Inc. (FLS) at the above-referenced site.

The objective of this effort was to provide a preliminary indication of potential impacts associated with underground storage tanks and historic operations upon soil and groundwater at the property. The limited investigation included the following tasks:

Task 1 – Site Visit/Review of Historic Sanborn Fire Insurance Maps. FLS staff conducted a site visit to observe evidence of potential contamination associated with historic use of the site. FLS also reviewed the historic Sanborn Maps for the Site and the adjacent properties to determine the types and dates of historic activities that may have impacted the property.

Task 2 – Geophysical Survey. Prior to installing the soil borings, a geophysical survey was conducted, using ground penetrating radar (GPR) and a metal detector to determine the potential presence of underground storage tanks (USTs) shown on the 1951 Sanborn map.

Task 3 – Limited Subsurface Investigation. Based on the information obtained in Tasks 1 and 2, soil borings were installed at the site and soil and groundwater sampling was conducted.

The findings of the above tasks are discussed below.

Task 1 – Site Visit and Review of Historic Information

The Site is bounded by West 53rd Street to the north; West 52nd Street to the south; a parking lot to the west; and a high rise building to the east. According to the Sanborn Fire Insurance Maps, the south part of the project building was constructed in 1925, and the north portion of the building was built in 1937. During the 11/2/10 site visit, two vent pipes were observed on the southern portion of the building rooftop. Vent pipes were traced from the roof to the building's sub-cellar. The pipes were cut at the sub-cellar slab at the southern boundary of the property. . One 10,000 gallon gravity tank was identified on the rooftop at the southeast side of the building. A concrete ramp in the northwest corner of the building leads

to the building sub-cellar from the 53rd Street. Based on the map review and site visit, the following potential environmental concerns were identified

- **Underground Storage Tanks (USTs)** – two cut-off pipes at the southern end of the sub-cellar, associated with two vent pipes observed on the roof top of the building and a suspected fill port at the west side of a boiler room, were observed during the site visit.

- **Building Floor Drains** - Several floor drains were observed in the sub-cellar area. One drain had signs of damage and discharge of unknown liquids to the subsurface.

- **Boiler Room** – An active oil tank is located at the boiler room, located at the eastern portion of the sub-cellar. A suspected fill port was observed at the south side of the boiler room and fuel oil stains were observed. Remnant pipes were observed at the west side of the boiler room.

- **Sub-cellar Floor Staining** – A 3-foot by 5-foot oil stained area was observed at the southeast corner of the sub-cellar where the fill line enters the building from the 52nd Street side.

Task 2 – Geophysical Survey

On 11/18/10, Naeva Geophysics Inc. (NAEVA) performed a geophysical investigation in the building sub-cellar to clear the proposed boring locations and to locate potential USTs and associated piping. The survey utilized an electromagnetic metal (EM) detector using a Fisher TW-6 Pipe and cable locator, a Subsite 950 utility locator, a Dynatel 2250 cable locator, and a Mala RAMAC/Ground Penetrating Radar (GPR) system with a 250 MHz antenna.

Geophysical data collected in the southern portion of the sub-cellar detected magnetic anomalies indicative of buried USTs. Other anomalies related to the presence of reinforced concrete floor slab and drain pipes were detected in the vicinity of the suspected UST area.

NAEVA also found a remote fill port and a vent pipe in the sidewalk along West 52nd Street, which is likely associated with the in-use aboveground storage tank (AST) in the boiler room.

The complete geophysical survey report is included in **Appendix A.**

Task 3 – Limited Subsurface Investigation

Sampling Methodology. The limited subsurface investigation included the installation of nine (9) soil borings and two (2) temporary groundwater wells and collection of soil and groundwater samples.

Hydro Tech Environmental Corp (Hydro Tech) of Commack, New York, a New York State licensed driller, installed the soil borings and temporary groundwater sampling point using truck-mounted and hand-held geoprobe units. All borings required core drilling to advance the borings through the concrete floor. All equipment was decontaminated between boreholes using an Alconox detergent rinse. After sampling was completed, soil cuttings were returned to each borehole and each borehole was grouted and patched.

Soils were removed from each borehole via macro-core acetate liners, screened using a photoionization detector (PID), and logged according to a modified Burmeister soil classification system. Visual and olfactory observations were noted on the boring log. Soil boring logs are provided in **Appendix B**.

Soil sample collection depths were biased toward the areas of highest contamination based on field screening of soils and/or information regarding the potential area of concern. FLS extracted samples for analysis using a decontaminated plastic spoon to place soil into clean, laboratory-prepared sample containers. Samples were shipped to Accutest Laboratories, Dayton, New Jersey, a New York State ELAP-certified laboratory, using proper chain-of-custody procedures.

FLS installed a total of nine soil borings in the area of the suspected USTs (FLS-UST 1 through FLS-UST-4), the floor drains (FLS-FD-1 through FLS-FD-3), the boiler room (FLS-Boiler Room) and the stained soil (FLS-Stained Soil). Soil boring locations are shown on **Figure 3.**

Soil borings FLS-FD-1 through FD-3 were advanced to the bedrock at 2 to 3.5 feet below the sub-cellar floor. No groundwater was encountered; however, perched groundwater was observed in the borings installed in the boiler room and near the oil staining area. Fill material was observed on top of the bedrock. No elevated PID readings were recorded during the field screening. There was no evidence of potential contamination observed in these soil borings except at FLS-FD-1, where petroleum odor was identified at 2 feet below ground surface (bgs). No PID reading was recorded at this location and soil samples were collected from 2 feet bgs. At FLS-FD-2 and FLS-FD-3, soil samples were collected from 6 inches above the bedrock.

Soil borings FLS-UST-1 to FLS-UST-4 were advanced to bedrock (1.5-3.5 feet below the sub-cellar floor slab) in the vicinity of suspected USTs. There was no evidence of petroleum impacts observed in these soil borings and these four soil samples were collected from 6 inches above the bedrock.

Soil boring FLS-Boiler Room was installed to a depth of 3.5 feet bgs down to the bedrock in the boiler room adjacent to the former furnace and in the vicinity of the fuel oil tank. Perched groundwater was encountered at 8 inches below the sub-cellar floor at this location. No evidence of petroleum impacts was observed in this soil boring and the soil sample was collected from 6 inches above the bedrock.

Soil boring FLS-Stained Soil was installed in the southeast corner of the building to a depth of 4 feet below the sub-cellar floor (top of bedrock). Perched groundwater was encountered at 11.5 inches below the sub-cellar floor. There were no PID readings at this location and soil samples were collected from 6 inches above the bedrock.

All nine (9) soil samples were analyzed for volatile organic contaminants (VOCs) by USEPA Method 8260; Floor drain samples (FLS-FD-1 to 3) were also analyzed for metals by USEPA Method 6010; the four (4) samples collected near the USTs (FLS-UST-1 through FLS-UST-4) were also analyzed for lead by USEPA 6010; FLS-Boiler Room and FLS-Stained Soil were also analyzed for semi-volatile organic contaminants (SVOCs) by USEPA Method 8270.

Groundwater samples were collected from temporary wells installed at borings FLS-Boiler Room and FLS-Stained Soil, where perched groundwater was encountered at 8 feet and 10.5 feet, respectively, below the sub-cellar floor. Groundwater samples were collected using a geopump and analyzed for VOCs by USEPA Method 8260 and SVOCs by USEPA Method 8270.

Analytical Results - Soil

Soil analytical results were compared to the New York State Department of Environmental Conservation Technical and Administrative Guidance Memorandum (TAGM) 4060 Recommended Soil Cleanup Objectives (RSCOs).

VOCs. No VOCs were detected at concentrations above their respective RSCOs.

SVOCs. SVOC concentrations detected in samples FLS-Boiler room and FLS-Stained Soil were all below NYSDEC TAGM RSCOs with the exception of benzo(a)anthracene, benzo(a)pyrene, dibenzo(a,h)anthracene benzo(b)fluoranthene, and chrysene. These compounds are polycyclic aromatic hydrocarbons (PAHs), a class of compounds found in some petroleum products, asphalt, and as byproducts of combustion. The type and levels of SVOCs are typical of urban fill material (such as that found on the Site). SVOC concentrations at the remaining locations were all below the TAGM RSCOs.

Lead. Lead concentrations in the samples in the UST area (FLS-UST-1 through FLS-UST-4) were below the TAGM RSCO.

Metals. Slightly elevated levels (relative to Eastern USA background) of mercury and zinc were detected in the two soil samples collected from the floor drain areas. Zinc was detected at 74.1 parts per million (ppm) at FLS-FD-2 (2.5 feet bgs) and at 77.2 ppm at FLS-FD-3 (2.0 feet bgs), above the RSCO of 50 ppm. Mercury was detected at FLS-FD-3 (2.0 feet bgs) at .42 ppm, above the RSCO of 0.2 ppm. .

Analytical Results - Groundwater

Groundwater sampling results were compared to the NYSDEC TOGS 1.1.1 Class GA Ambient Water Quality Standards and Guidance Values (Class GA Standards).

VOCs. No VOCs were detected in either groundwater sample at concentrations above the Class GA Standards.

SVOCs. Several SVOCs, including phenol, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene were detected in the perched groundwater sample FLS-Boiler Room. Based on the presence of naphthalene at 95 parts per billion (ppb), above the Class GA standard of 10 parts per billion (ppb), the elevated SVOCs are likely petroleum- related. SVOCs such as benzo(a)anthracene, benzo(b)fluoranthene, chrysene, and Indeno(1,2,3-cd)pyrene were detected in the perched groundwater sample FLS-Stained Soil. These constituents are not petroleum-related and are likely due to sediment in the groundwater sample.

The analytical results for soil and groundwater samples are provided in Tables 1 through 5. The laboratory analytical data packages are provided in **Appendix C.**

CONCLUSIONS

FLS performed a limited due diligence investigation at the property located at 525 West 52nd Street in New York, New York (Site). The conclusions of the investigation are as follows:

- No impacts pertaining to the abandoned UST system were detected in soil or groundwater samples.

- No impacts related to discharges to the floor drains were detected in soil or groundwater; the two metal exceedances in soils from this area appear to be related to the presence of historic fill on the site.
- No impacts associated with the floor staining in the southeastern corner of the sub-cellar were detected. The PAHs detected at this location are likely attributable to the historic fill throughout the site.
- Slightly elevated concentrations of phenol, PAHs and naphthalene found in the groundwater sample collected from the boiler room are most likely related to the presence of the nearby aboveground fuel oil tank.

Please contact us with any comments or questions.

Sincerely,
Fleming Lee Shue, Inc.

Mohamed Ahmed PhD. CPG.
Senior Geologist

New York, NY 10001

Dear Mr. Ahmed:

This letter summarizes the results of the geophysical investigation conducted by NAEVA Geophysics, Inc. on November 18, 2010 at a commercial parking garage located at 525 West 52nd Street in Manhattan, New York. The purpose of the investigation was to search for abandoned underground storage tanks (USTs) that historic records suggest may exist at the site. The area of investigation was the approximately 19,500 square-foot basement of the building. The Fleming-Lee Shue site representative informed us that two cut-off pipes at the southern end of the basement were associated with two vent pipes observed on the roof top of the building and that a suspected fill port had been noted at the west side of a boiler room. At the request by the client, NAEVA also conducted a subsurface utility mark-out to allow for the safer placement of five boring locations.

The equipment used for the geophysical investigation included a Fisher TW-6 Pipe and Cable Locator (a type of hand-held electromagnetic metal-detector), a Subsite 950 utility locator, a Dynatel 2250 Cable Locator, and a Malå RAMAC/Ground Penetrating Radar (GPR) system with a 250 MHz antenna.

The two suspected vent pipes were traced for approximately 30 feet to the north where two immobilized vehicles were parked (see attached map). The TW-6 hand-held metal-detector indicated an anomalous area between the vent pipes and the two vehicles. Bi-directional GPR data profiles were collected over the accessible portions of this anomaly, but the GPR's signal penetration was insufficient through the reinforced concrete to confirm the presence of USTs. While NAEVA found no conclusive evidence of USTs at the aforementioned area between the suspected vent pipes and the two parked vehicles, we suggest it may be prudent to carefully excavate the anomalies to determine their sources.

The TW-6 metal-detector was carried in a series of parallel traverses throughout the area of investigation to search for other potential undocumented USTs. However, the instrument indicated that the majority of the basement was constructed with reinforced concrete, the presence of which prevented the use of the metal-detector. As an alternative approach, GPR data profiles were collected throughout the reinforced sections of the basement, but the data was inconclusive and could not be used to determine the presence of USTs. It should be noted that visible metal-frames on the surface within the western half of the basement also hindered the ability of our instruments to detect subsurface features.

The Subsite line locator was utilized to delineate a large number of cut-off pipes including the client-noted suspected fill port at the west side of the boiler room, but the traced locations of these unknown lines gave no additional information to determine the presence of USTs.

NAEVA found a remote fill port and a vent pipe in the sidewalk along 52nd Street, but these were associated with an in-use aboveground storage tank in the boiler room.

Thank you for the opportunity to work with you on this project. We look forward to providing subsurface locating service for you in the future. Please call me if I may answer any questions.

Sincerely,

Hiromi Hamajima

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: Fleming-Lee Shue, Inc. **Job No:** JA62028

Site: 525 West 52nd Street, New York, NY **Report Date** 12/7/2010 4:54:28 PM

On 11/18/2010, 11 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories at a temperature of 2.6 C. Samples were intact and properly preserved, unless noted below. An Accutest Job Number of JA62028 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** V3A3693

- All samples were analyzed within the recommended method holding time.
- Sample(s) JA62116-1MS, JA62116-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Recovery(s) for cis-1,2-Dichloroethene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike Duplicate Recovery(s) for cis-1,2-Dichloroethene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- Matrix Spike / Matrix Spike Duplicate Recovery(s) for Methylene chloride are outside control limits. Outside control limits due to high level in sample relative to spike amount.

Matrix: SO **Batch ID:** VY4515

- All samples were analyzed within the recommended method holding time.
- Sample(s) JA62168-4MS, JA62168-4MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- JA62028-1 for Dibromofluoromethane: Outside control limits due to matrix interference, confirmed by reanalysis.

Matrix: SO **Batch ID:** VY4517

- All samples were analyzed within the recommended method holding time.
- Sample(s) JA62028-4MS, JA62028-4MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Blank Spike Recovery(s) for cis-1,2-Dichloroethene are outside control limits. High percent recoveries and no associated positive found in the QC batch.
- JA62028-1: Confirmation run for surrogate recoveries.

Matrix: SO **Batch ID:** VY4523

- The data for SW846 8260B meets quality control requirements.
- JA62028-3: Confirmation run for surrogate recoveries.

Extractables by GCMS By Method SW846 8270C

Matrix: AQ **Batch ID:** OP46866

- All samples were extracted within the recommended method holding time.
- Sample(s) JA62003-2MS, JA62003-2MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.
- Matrix Spike Recovery(s) for bis(2-Ethylhexyl)phthalate are outside control limits. Outside control limits due to matrix interference.
- Matrix Spike Duplicate Recovery(s) for bis(2-Ethylhexyl)phthalate are outside control limits. Outside control limits due to matrix interference.
- RPD(s) for MSD for 4-Nitrophenol are outside control limits for sample OP46866-MSD. Outside control limits due to matrix interference.
- OP46866-MSD for 2-Fluorophenol: Outside of in house control limits, but within reasonable method recovery limits.
- OP46866-MS for 2-Fluorophenol: Outside of in house control limits, but within reasonable method recovery limits.
- OP46866-MS for Phenol-d5: Outside of in house control limits, but within reasonable method recovery limits.
- OP46866-MSD for Phenol-d5: Outside of in house control limits, but within reasonable method recovery limits.

Matrix: SO **Batch ID:** OP46863

- All samples were extracted within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA62002-1MS, JA62002-1MSD were used as the QC samples indicated.
- JA62028-1: Confirmation run for internal standard areas.
- JA62028-2: Confirmation run for internal standard areas.
- JA62028-2 for 2-Fluorophenol: Outside control limits due to matrix interference.
- JA62028-2 for 2-Fluorobiphenyl: Outside control limits due to matrix interference.

Metals By Method SW846 6010B

Matrix: SO **Batch ID:** MP55928

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA61985-2MS, JA61985-2MSD, JA61985-2SDL were used as the QC samples for metals.
- Matrix Spike Recovery(s) for Aluminum, Antimony, Iron, Lead, Magnesium, Manganese, Zinc are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike Duplicate Recovery(s) for Aluminum, Antimony, Calcium, Magnesium, Zinc, Lead are outside control limits. Spike recovery indicates possible matrix interference and/or sample nonhomogeneity.
- Matrix Spike / Matrix Spike Duplicate Recovery(s) for Calcium are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.
- RPD(s) for MSD for Lead are outside control limits for sample MP55928-S2. High rpd due to possible sample nonhomogeneity.
- RPD(s) for Serial Dilution for Antimony, Cadmium, Selenium, Thallium are outside control limits for sample MP55928-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).
- RPD(s) for Serial Dilution for Nickel, Zinc are outside control limits for sample MP55928-SD1. Serial dilution indicates possible matrix interference.

Metals By Method SW846 7471A

Matrix: SO **Batch ID:** MP55941

- All samples were digested within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JA61946-1MS, JA61946-1MSD were used as the QC samples for metals.

Wet Chemistry By Method SM18 2540G

Matrix:	SO	Batch ID:	GN45285

- The data for SM18 2540G meets quality control requirements.

Matrix:	SO	Batch ID:	GN45286

- The data for SM18 2540G meets quality control requirements.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Surrogate Compounds	Recovery Limits
S1 = Dibromofluoromethane	67-127%
S2 = 1,2-Dichloroethane-D4	65-132%
S3 = Toluene-D8	74-129%
S4 = 4-Bromofluorobenzene	62-138%

(a) Outside control limits due to matrix interference.
(b) Outside control limits due to matrix interference, confirmed by reanalysis.

Initial Calibration Summary

Job Number: JA62028
Account: FLSNYNY Fleming-Lee Shue, Inc.
Project: 525 West 52nd Street, New York, NY

Sample: V3A3607-ICC3607
Lab FileID: 3A83950.D

Response Factor Report MS3A

Method : C:\MSDCHEM\1\METHODS\M3A3607.M (RTE Integrator)
Title : Method SW846 8260B, ZB624 60mx0.25mmx1.4um
Last Update : Fri Oct 08 10:58:06 2010
Response via : Initial Calibration

Manual Integration Approval Summary

Sample Number: VY4490-IC4490 **Method:** SW846 8260B
Lab FileID: Y105435.D **Analyst approved:** 11/15/10 13:50 Ho Joong Kim
Injection Time: 11/08/10 11:15 **Supervisor approved:** 11/15/10 15:35 Kanya Veerawat

Parameter	CAS	Sig#	R.T. (min.)	Reason
Acetaldehyde	75-07-0		3.13	Poorly defined baseline
Methyl Acetate	79-20-9		5.42	Poorly defined baseline
Isopropyl Acetate	108-21-4		8.70	Poor instrument integration
Methyl methacrylate	80-62-6		9.92	Poor instrument integration
4-Methyl-2-pentanone(MIBK)	108-10-1		10.77	Baseline ripple
Butyl Acetate	123-86-4		11.83	Split peak

Sample : ic4329-2 Inst : MSF
Misc : op46122,ef4329 Multiplr: 1.00
MS Integration Params: RTEINT.P
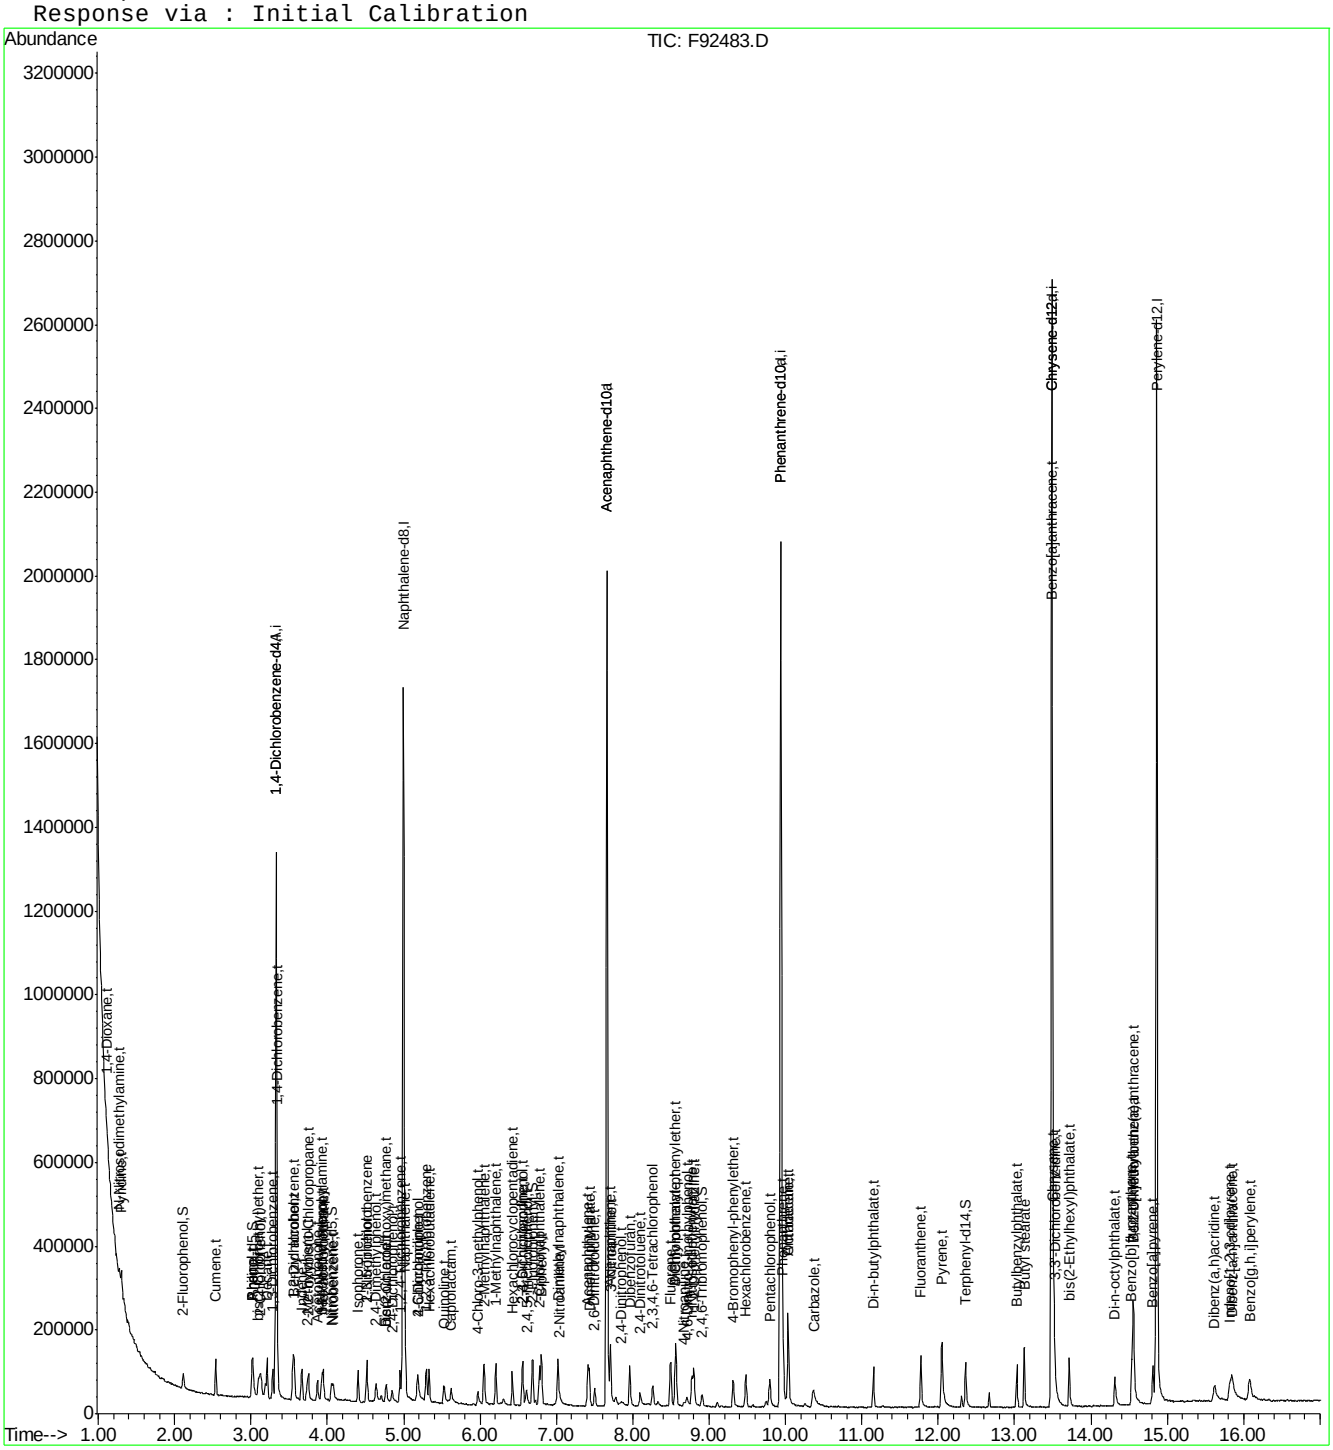
Quant Time: Oct 20 11:06 2010 Quant Results File: MF4329.RES

Method : C:\MSDCHEM\1\METHODS\MF4329.M (RTE Integrator)
Title : Semi Volatile GC/MS, ZB-5MSi 15m x .25mm x .25um
Last Update : Wed Oct 20 12:50:15 2010
Response via : Initial Calibration



Manual Integration Approval Summary

Sample Number:	EF4329-IC4329	**Method:**	SW846 8270C
Lab FileID:	F92483.D	**Analyst approved:**	10/20/10 13:04 Nina Pandya
Injection Time:	10/20/10 10:41	**Supervisor approved:**	10/22/10 16:12 Kristi Schollenberger

Parameter	CAS	Sig#	R.T. (min.)	Reason
Benzo(b)fluoranthene	205-99-2		14.53	Overlapping peak
Benzo(k)fluoranthene	207-08-9		14.55	Overlapping peak
