New York, New York 10013

Re: Phase I Environmental Site Assessment
102-110 North 1st Street – Brooklyn, New York
AKRF Project Number: 170003

Dear Mr. Kluczkowski:

AKRF, Inc. (AKRF) is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps".

We appreciate the opportunity to provide you with our services. If you should have any questions, please do not hesitate to contact us.

Sincerely,

A handwritten signature in dark ink, appearing to read 'MG' or similar initials, written over a horizontal line.

Marc S. Godick, LEP
Senior Vice President

A handwritten signature in dark ink, appearing to read 'Adrianna Bosco', written over a horizontal line.

Adrianna Bosco
Environmental Scientist

Enc.

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by DDG to perform a Phase I Environmental Site Assessment (ESA) of the property located at 102-110 North 1st Street in the Williamsburg section of Brooklyn, New York (the “Property”), also identified as Block 2379, Lots 16 and 19. At the time of the reconnaissance, the Property included a one-story clothing warehouse (Lot 16) and a one-story art gallery and artist’s studio (Lot 19). The surrounding area was predominantly commercial with few industrial uses consisting of warehouses. Additional mixed-use buildings were noted further east. A Property location map and site plan are provided as Figures 1 and 2, respectively.

Historical Sanborn maps indicated that as early as 1887, Lot 16 was developed with a carriage house and Lot 19 was developed with dwellings. The Property lots were later occupied by Paul Wiedmann Brewing Co. between approximately 1905 and 1916. By 1942, Lot 16 was developed with a one-story sawdust warehouse, similar to its current configuration, and was identified as a warehouse for barrel storage on the 1965 through 2007 Sanborn maps. Lot 19 was developed with a parking garage between approximately 1942 and 1965, and was vacant by 1978. In 1987 a one-story warehouse was developed on Lot 19 and appeared unchanged through the 2007 Sanborn maps.

The objective of this assessment was to identify any potential environmental concerns associated with the site resulting from past or current site usage or usage of neighboring properties.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice* which satisfies USEPA’s “all appropriate inquiries” (AAI) requirement for landowner liability defenses under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term “Recognized Environmental Condition” (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC, Controlled REC and *De Minimis* Condition.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions

- The Property was assigned an NYC (E) Designation for hazardous materials, of the Greenpoint-Williamsburg Rezoning in May 2005. The hazardous materials (E) Designation requires that a subsurface testing protocol be submitted to, approved by, and completed to the satisfaction of the NYC Mayor’s Office of Environmental Remediation (OER) before the issuance of any building permits associated with subsurface disturbance. OER will require appropriate remedial measures to be conducted prior to or as part of redevelopment (or renovation) involving subsurface disturbance or change to a more sensitive use.
- Historical Sanborn maps indicated that the Property located at 106-110 North 1st Street was developed with a parking garage between approximately 1942 and 1965. Although gasoline tanks were noted in the off-site portion of the parking garage on the Sanborn maps, potential abandoned or unregistered underground storage tanks (USTs) may be located beneath the Property. Potential buried debris from former on-site structures could contain historic fill of unknown origin.
- Historical Sanborn maps and the regulatory database information identified numerous industrial and automotive uses in the surrounding area between 1887 and 2007. Such uses with the potential to affect subsurface conditions beneath the Property included an auto parts rebuilding facility, Imperial

Plating Co., garages and gasoline tanks, Brooklyn Coal Co., auto repair shops, a filling station, and various furniture and accessory manufacturers and factories. One active-status spill and one closed-status spill, both with documented subsurface contamination, were identified within 250 feet of the Property. Additionally, the site reconnaissance identified a dry cleaner with potential on-site operations on the north-adjacent block, approximately 50 feet north of the Property.

Other On-site Environmental Concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)

- Based on the presumed age of the building on Lot 16 (constructed between approximately 1916 and 1942), electrical equipment, lighting fixtures, and caulk may include polychlorinated biphenyl (PCB)- or mercury-containing components. No obvious leaks or odors were observed in connection with observed equipment or the lighting fixtures.
- Suspect asbestos containing materials (ACM) are present in the buildings. Suspect ACM were noted to be in generally good to fair condition.
- Based on the age of the building on Lot 16, lead-based paint may be present on indoor and/or outdoor surfaces. Painted surfaces were observed to be in generally good to fair condition.

Recommendations

- A subsurface (Phase II) investigation is recommended to determine whether former on- or off-site uses (including those identified as RECs above) have affected soil, soil vapor, and/or groundwater conditions in accordance with the (E) Designation requirements managed by OER. The Phase II Investigation should also be conducted to ensure that soil excavation and groundwater dewatering activities (if required) are conducted in accordance with applicable regulations, to determine if vapor mitigation is warranted, and assess whether any other remedial or environmental provisions should be incorporated into the development plan.
- During any subsurface disturbance (if applicable), excavated soil and any debris should be handled and disposed of in accordance with applicable regulatory requirements. If any petroleum underground storage tanks are encountered, they should be closed and removed, along with any contaminated soil, in accordance with applicable requirements. Any evidence of a petroleum spill should be reported to the New York State Department of Environmental Conservation (NYSDEC) and OER and addressed in accordance with applicable requirements.
- If dewatering is required during potential future construction activities, water should be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) and/or NYSDEC requirements.
- Prior to any renovation or demolition activities with the potential to disturb suspect ACM, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all local, state, and federal regulations prior to any renovation or demolition that would disturb those materials.
- Unless there is labeling or test data that indicates that fluorescent lights, hydraulic equipment and other electrical equipment are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.
- Any renovation or demolition activities with the potential to disturb lead-based paint should be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by DDG to perform a Phase I Environmental Site Assessment (ESA) of the property located at 102-110 North 1st Street in the Williamsburg section of Brooklyn, New York (the “Property”), also identified as Block 2379, Lots 16 and 19. At the time of the reconnaissance, the Property included a one-story clothing warehouse (Lot 16) and a one-story art gallery and artist’s studio (Lot 19). The surrounding area was predominantly commercial with few industrial uses consisting of warehouses. Additional mixed-use buildings were noted further east. A Property location map and site plan are provided as Figures 1 and 2, respectively.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*). Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor, and/or groundwater) within, from, and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed, and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps for the Property and nearby properties were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Site and properties within the ASTM-specified radii: the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP); CORRACTS (Corrective Actions Report); RCRIS (Resource Conservation and Recovery Information System); and Emergency Response Notification System (ERNS). Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); CONSENT (Superfund Consent Decrees); ROD (Records of Decision); Delisted NPL (National priority List Deletions); United States Brownfields; and EDR US Historic Auto Station Listings
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil

Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); and New York Brownfield Cleanup Program (BCP).

- Local agency reviews including online Buildings and Finance Department records and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

On January 17, 2017, Ms. Adrianna Bosco of AKRF conducted a reconnaissance of the Property. Neighboring properties were also viewed from public rights-of-way. The weather was rainy and approximately 40 °F, the visibility was good, and the premises were adequately illuminated by natural and artificial light. The Property was inspected for the presence of stained surfaces and soil, stressed vegetation, storage tanks, drums, leaking pipes, transformers, and any other evidence of hazardous material usage and storage on-site. Photographs documenting the inspection are included in Appendix A.

2.1 General Site Conditions

102 North 1st Street – Lot 16

Lot 16 included an approximately 4,325-square foot (SF), one-story brick building on an approximately 4,285-SF tax lot. Interior building materials included painted brick and cinder block walls; unfinished concrete floors; and sheetrock ceilings. Interior building materials were noted to be in good to fair condition. The building was heated by a ceiling-mounted, gas-fired unit. There was no air conditioning in the building.

At the time of the reconnaissance, the building was utilized as a clothing warehouse. Clothing was contained on racks and shelving units located throughout the building. A roll-up door was located along the northern façade of the building, fronting North 1st Street. The current tenant indicated that the building had been used as a clothing warehouse for the previous 6 to 8 years and was utilized for art storage prior to that, but has always been a warehouse throughout its history. Some minor areas of peeling paint were noted on the walls, but did not appear to be due to apparent water damage. A temporary trailer was located in the western portion of the building and used for employee office space. Chemical storage was minimal and consisted of two small containers (approximately 17 ounces) of Febreze® odor eliminator spray and one 32-ounce container of lighter fluid. The chemicals were labeled and neatly stored, with no evidence of a leak or staining.

106-110 North 1st Street – Lot 19

Lot 19 was occupied by an approximately 6,800-SF, one-story brick building on an approximately 7,066-SF tax lot. Interior building materials included painted brick, cinder block, and sheetrock walls; bare concrete and painted wooden floors; and metal ceilings with exposed beams. Interior building materials were noted to be in good condition. The building was heated by a ceiling-mounted, gas-fired heating unit and cooled by an electrical air conditioning unit. Two roll-up doors were located along the northern façade of the building.

At the time of the reconnaissance, the building was occupied by an artist's studio in the eastern portion of the building (110 North 1st Street) and The Journal, an art gallery, in the western portion of the building (106 North 1st Street). The artist's studio contained artwork mounted on sheetrock walls and a small office area. Chemical storage consisted of small containers (generally 5 gallons or less) of acrylic paint, which were stored on shelving units and tables, off the floor. The Journal art gallery contained a receptionist area, employee offices and conference room, and sculptures mounted on sheetrock walls. A mezzanine level was located in the eastern

portion of the gallery and contained employee office and lounge space. Chemical storage was minimal (generally 5 gallons or less) of paint and cleaning fluids, with no evidence of a leak or spill.

2.2 Topography and Hydrogeology

Topography at the Property is relatively level. Based on the U.S. Geological Survey, Brooklyn, NY Quadrangle (2013) map, the Property is approximately 40 feet above the National Geodetic Vertical Datum of 1988 (an approximation of mean sea level).

Based upon USGS mapping, groundwater is likely to be encountered at approximately 35 feet below ground surface and is assumed to flow in a west to northwesterly direction toward the East River, approximately 0.2 mile west of the Property. However, actual groundwater flow may be affected by many factors including underground utilities, subsurface features, seasonal and tidal fluctuations in groundwater levels, precipitation, geology, and other factors beyond the scope of this study.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the site inspection, no evidence, such as manways, vent pipes, or dispenser equipment, was observed that would indicate past or present underground storage tanks (USTs) at the Property. Regulatory records did not indicate any USTs.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

During the site inspection, no evidence, such as manways, vents, or dispenser equipment, was observed that would indicate past or present aboveground storage tanks (ASTs) at the Property. Regulatory records did not indicate any ASTs.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs) and Mercury

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

The current Property owner believes that the buildings were constructed in the 1980s. Based on a review of historical Sanborn maps, the building on Lot 19 was constructed in 1987 and the building on Lot 16 appeared to be constructed between approximately 1916 and 1942. Based on the age of the building on Lot 16, electrical equipment (including switchgears), and lighting fixtures, switches, thermostats, and caulking may include PCB- and/or mercury-containing components. No obvious leaks or odors were observed in connection with observed equipment or the lighting fixtures.

2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1977 nationwide. After 1977, its use inside commercial structures was also restricted and its use elsewhere became less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Based on the presumed age of the building on Lot 16, lead-based paint may be present on interior and exterior surfaces. Painted surfaces were observed to be in good condition, with some minor damage observed on interior walls.

Any painting, renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with applicable lead paint regulations, including: Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction), EPA's Lead Renovation, Repair and Painting Rule (RRP Rule), and NYC Local Law No. 1. Additional lead-based paint requirements include occupant notification, disclosure, condition inspections, contractor licensing, and lead-safe work practices.

2.6 Utilities

Consolidated Edison (Con Ed) provided electricity, and National Grid provided natural gas to the Property. The Property was connected to New York City municipal water and sewer systems.

2.7 Waste Management and Chemical Handling

Private haulers are responsible for refuse collection and disposal of commercial waste from both Property buildings. No bulk chemical handling activities were observed at the Property and no evidence of current or former bulk chemical storage was noted. Small containers (generally 5 gallons or less) of paints, cleaning fluids, and air freshener were noted in storage areas within the Property buildings, with no evidence of associated leakage.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the radioactive decay of certain rocks. According to a New York State Department of Health database the average level of radon found in basements in Kings County in October 2016 is 2.29 picocuries/liter and 1.05 picocuries /liter in 1st floors, below the USEPA recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

Suspect ACM were observed during the reconnaissance and included: plaster, sheetrock, electrical panels, brick and block mortar, and roofing materials. Suspect ACMs were noted to be in good to damaged condition. ACM may also be present in other locations not readily accessible during the reconnaissance. This reconnaissance did not constitute and cannot substitute for an asbestos survey, which includes comprehensive inspection and material sampling with laboratory testing.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYS-certified asbestos inspector to determine if the project will disturb ACM. Any such ACM (and any other ACM subsequently identified) must be removed prior to the renovation or demolition.

4.0 ADJACENT LAND USE

The Property was abutted to the north by North 1st Street, followed by warehouses and residential buildings; to the east by a facility for A to Z Kosher Meat Products Co.; to the south by residential buildings with street-level commercial uses; and to the west by warehouses. The surrounding area was primarily commercial with few warehouses. Additional residential uses were noted further east. A dry cleaner was located on the north adjacent block, approximately 50 feet north of the Property. A tank fill port and vent pipe were observed outside a building on the north-adjacent block, approximately 80 feet northwest of the Property. Public School (P.S.) 84 was located on the south-adjacent block.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use Maps

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006, and 2007 were reviewed and are provided in Appendix B.

1887

The Property contained a two-story carriage house on Lot 16 and two, two-story dwellings on Lot 19.

The Property block was developed with a barrel storage facility west-adjacent to the Property, dwellings, and unspecified stores. The surrounding area was densely developed with residential and commercial structures, with few industrial uses. The north-adjacent block was developed with a chair factory, approximately 50 feet north of the Property, a brewery, approximately 100 feet north of the Property, and a coal shed, approximately 200 feet north of the Property. A manufacturer of steam fitters and coal yard were located within 220 feet southwest of the Property, on the south-adjacent block. In the greater surrounding area, a printing facility, a tin ware factory, and a sugar bag drying facility were noted over 450 feet north of the Property.

1905

The former dwellings previously identified on Lot 19 were replaced by a five-story structure. Property buildings on both lots were labeled as part of the Paul Wiedmann Brewing Co., and were improved with an ice house, fermenting room, and storage areas. The brewery facility extended further east to the end of the Property block.

The chair factory previously noted on the north-adjacent block was replaced by a dwelling. A pearl button factory replaced a vacant building on the east-adjacent block, approximately 120 feet east of the Property. Brooklyn Coal Co. was located approximately 150 feet south of the Property, on the south-adjacent block. The former steam fitter manufacturer and coal yard identified on the 1887 Sanborn map were no longer noted on the south-adjacent block. The National Enameling & Stamping Co. replaced the tin ware factory and sugar bag drying facility previously noted on the 1887 Sanborn map.

1916

The Property structures appeared similar to the 1905 Sanborn map, but were relabeled as “vacant.”

A feather pillow manufacturer and Harden Brothers Trucks auto storage facility were noted on the north-adjacent block, approximately 50 feet north of the Property. Several dwellings and stores on the south-adjacent block were demolished. In the greater surrounding area, a garage with a buried gasoline tank was noted two blocks away and J.H. White Manufacturing Co. of Brass Goods and U.S. Printing and Lithographic Co. were located over two blocks north of the Property.

1942

Lot 16 was developed with a one-story sawdust warehouse. Lot 19 was developed with a one-story parking garage, which extended further east on the adjacent, off-site lot.

The off-site portion of the parking garage included two 550-gallon underground gasoline tanks. The feather pillow manufacturer previously noted on the north-adjacent block was replaced by a carriage and wheel manufacturer. A newly depicted garage and gasoline tank was shown on the north-adjacent block, approximately 50 feet north of the Property, in place of Harden Brothers Trucks. A garage and multiple gasoline tanks were noted on the southeast-adjacent block, approximately 175 feet southeast of the Property. A playground and comfort station were noted on the south-adjacent block, in place of a vacant lot and iron yard. Additional garages, gasoline tanks, and a trucking facility were noted over 300 feet away from the Property.

1951

Lot 16 appeared similar to the 1942 Sanborn map. Lot 19 was identified as a private garage.

An auto parts rebuilding facility was located approximately 100 feet west of the Property. Imperial Plating Co., containing plating and polishing facilities, replaced several warehouses on the north-adjacent block, approximately 80 feet northwest of the Property. The garage previously noted approximately 175 feet southeast of the Property, on the 1942 Sanborn map, was replaced by an auto repair shop and filling station.

1965

The building on Lot 16 was identified as barrel storage. Lot 19 appeared similar to the 1951 Sanborn map.

The surrounding area appeared similar to the 1951 Sanborn map.

1978

Lot 16 appeared similar to the 1965 Sanborn map. Lot 19 was vacant and the previous property building was demolished.

A provisions manufacturer was noted southeast-adjacent to the Property on the Property block, in place of a store. P.S. 84 occupied the entirety of the south-adjacent block. No further significant changes were noted in the surrounding area from the 1965 Sanborn map.

1979-1986

The Property and surrounding area appeared similar to the 1978 Sanborn map.

1987

Lot 16 appeared similar to the 1986 Sanborn map. Lot 19 was developed with a one-story warehouse with a construction date of 1987.

The surrounding area appeared similar to the 1986 Sanborn map.

1988-2007

The Property and surrounding area appeared similar to the 1987 Sanborn map.

In summary, historical Sanborn maps indicated that as early as 1887 Lot 16 was occupied by a carriage house and Lot 19 was occupied by dwellings. The Property lots were later occupied by Paul Wiedmann Brewing Co. between approximately 1905 and 1916. By 1942, Lot 16 was developed with a one-story sawdust storage warehouse, similar to its current configuration and was identified as a warehouse for barrel storage on the 1965 through 2007 Sanborn maps. Lot 19 was developed with a parking garage between approximately 1942 and 1965, and was vacant by 1978. In 1987 a one-story warehouse was developed on Lot 19 and appeared unchanged through the 2007 Sanborn maps.

Sanborn maps indicated the surrounding area included primarily commercial and residential uses, with some automotive and industrial facilities including:

The Property block included:

- Two 550-gallon underground gasoline tanks (associated with the off-site portion of the former Property garage) located approximately 20 feet east of the Property (1942-1965 Sanborn maps).
- An auto parts rebuilding facility located approximately 100 feet west of the Property (1951-2007 Sanborn maps).

The north-adjacent block included:

- A chair factory located approximately 50 feet north of the Property (1887 Sanborn map).
- A feather pillow manufacturer located approximately 50 feet north of the Property (1916 Sanborn map).
- A carriage and wheel manufacturer located approximately 50 feet north of the Property (1942-1951 Sanborn maps).
- Harden Brothers Trucks facility and later a garage with a gasoline tank, located approximately 50 feet north of the Property (1916-1942 Sanborn maps).
- Imperial Plating Co. located approximately 80 feet north of the Property (1951-2007 Sanborn maps).

The east-adjacent block included:

- A pearl button factory located approximately 120 feet east of the Property (1905-1916 Sanborn maps).

The southeast-adjacent block included:

- A garage and gasoline tanks, and later an auto repair shop and filling station, located approximately 175 feet southeast of the Property (1942-2007 Sanborn maps).

The south-adjacent block included:

- Brooklyn Coal Co. located approximately 150 feet south of the Property (1905-1916 Sanborn maps).
- A steam fitter manufacturer located approximately 220 feet southwest of the Property (1887 Sanborn map).

Additional automotive and industrial uses were identified in the greater surrounding area, such as a printing facility, a tin ware factory, National Enameling & Stamping Co., J.H. White Manufacturing Co. of Brass Goods, U.S. Printing and Lithographic Co., and garages with gasoline tanks. However, based on their distance and/or inferred groundwater flow direction, these facilities are not likely to have affected the Property subsurface.

5.1.2 Historical Topographic Maps and Aerial Photographs

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

5.1.3 Property Tax Files and Zoning Records

Based on information provided by Environmental Data Resources, Inc. of Shelton, CT and New York City's Zoning and Land Use database, the Property is zoned as M1-2/R6A (light manufacturing and residential district) and located within special mixed-use district MX-8. Both Property buildings are classified as warehouses.

5.1.4 Recorded Land Title Records

Copies of title records were not provided to AKRF for review. A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified no environmental liens or use restrictions for the Property. Deed information obtained from the ACRIS files is summarized as follows:

Lot 16:

Year	Grantor/Grantee Listed on Deed
1973	Grantor is Charles Shapiro; Grantee is 230 Green St. Realty Corp.
1980	Grantor is 230 Green St. Realty Corp.; Grantee is Sam and Ethel Loeffler
1997	Grantor is Sam and Ethel Loeffler; Grantee is Sam Loeffler, as Trustee of the Samuel Loeffler Revocable Trust
2006	Grantor is Sam Loeffler, as Trustee of the Samuel Loeffler Revocable Trust; Grantee is Ethel Loeffler Revocable Trust
12/2006	Grantor is Samuel Loeffler and Loeffler Revocable Trust; Grantee is Loeffler Properties LLC

Lot 19:

Year	Grantor/Grantee Listed on Deed
1967	Grantor is Berry Street Garage Inc.; Grantee is Dolgin Eldert Corp.
1972	Grantor is Dolgin Eldert Corp.; Grantee is Ritchfield Properties LTD
1974	Grantor is Ritchfield Properties LTD; Grantee is A to Z Kosher Meat Products Co. Inc.
1983	Grantor is A to Z Kosher Meat Products Co. Inc.; Grantee is Sam and Ethel Loeffler
1997	Grantor is Sam and Ethel Loeffler; Grantee is Sam Loeffler, as Trustee of the Samuel Loeffler Revocable Trust
2006	Grantor is Sam Loeffler, as Trustee of the Samuel Loeffler Revocable Trust; Grantee is Ethel Loeffler Revocable Trust
12/2006	Grantor is Samuel Loeffler and Loeffler Revocable Trust; Grantee is Loeffler Properties LLC

5.1.5 Local Street Directories

A City Directory prepared by Environmental Data Resource, Inc. was reviewed as part of this Phase I ESA and is provided in Appendix E. The City Directory consisted of the names of businesses located on-site and in adjacent properties, compiled from city and reverse telephone directories, as listed in Table 1.

Table 1. Historical City Directories

Year	Comments
1928	Site: Not listed Surrounding Properties: Commercial
1934	Site: Not listed Surrounding Properties: Not listed
1940	Site: Not listed Surrounding Properties: Not listed
1945	Site: Not listed Surrounding Properties: Not listed
1949	Site: Not listed Surrounding Properties: Not listed
1960	Site: Monitor Cooperage (102 North 1 st Street) Surrounding Properties: Commercial
1980	Site: Not listed Surrounding Properties: Marrero Mechanical Corp. (103 North 1 st Street)
1992	Site: Elm Drugs & Cosmetics (102 North 1 st Street); Central Wholesale Distributors (106 North 1 st Street) Surrounding Properties: Residential; Commercial
1997	Site: Central Wholesale Distributors (106 North 1 st Street) Surrounding Properties: Residential; Commercial
2000	Site: Jeffrey Deitch Inc. (102 North 1 st Street); Central Wholesale Distributors (106 North 1 st Street) Surrounding Properties: Commercial
2005	Site: Jeffrey Deitch Inc. (102 North 1 st Street); Great LNA Trading (106 North 1 st Street) Surrounding Properties: Commercial; Andros Trucks Co. Inc. (101 North 1 st Street)
2008	Site: Great LNA Trading (106 North 1 st Street) Surrounding Properties: Andros Trucks Co. Inc. (101 North 1 st Street)
2013	Site: Central Wholesale Distributors, The Journal Incorporated (106 North 1 st Street) Surrounding Properties: Commercial

City directories identified a coopeage at the Property located at 102 North 1st Street in 1960. Between 1992 and 2013, the Property was identified with commercial uses including Elm Drugs & Cosmetics, Central Wholesale Distributors, Jeffrey Deitch Inc. (art gallery/studio), Great LNA Trading, and The Journal Incorporated (current art gallery on Lot 19).

A review of historic city directories identified the following automotive facility in close proximity to the Property:

- Andros Trucks Co. Inc., approximately 50 feet north of the Property on the north-adjacent block.

5.2 Regulatory Review

The regulatory database report, provided in Appendix C, was obtained from Environmental Data Resources, Inc. of Shelton, Connecticut. It includes summaries of the databases searched, their radii around the Property, and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

Federal ASTM standard records reviewed included: the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP); CORRACTS (Corrective Actions Report); RCRIS (Resource Conservation and Recovery Information System); and Emergency Response Notification System (ERNS).

Federal ASTM supplemental records reviewed included: Toxic Chemical Release Inventory System (TRIS); CONSENT (Superfund Consent Decrees); ROD (Records of Decision); Delisted NPL (National priority List Deletions); and United States Brownfields.

National Priority List (NPL)

The NPL is the USEPA's database of some of the most serious uncontrolled or abandoned hazardous waste sites identified for probable remedial action under the Superfund Program. These sites may constitute an immediate threat to human health and the environment. Due to the amount of public attention focused on NPL sites, they pose a significant risk of stigmatizing surrounding properties and potentially impacting property values.

No NPL sites were identified within a one-mile radius of the Property.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of known or suspected, uncontrolled or abandoned hazardous waste sites which the USEPA has investigated, or plans to investigate, for a release, or threatened release, of hazardous substances pursuant to the Superfund Act of 1980 (CERCLA). Some of these sites may constitute a potential threat to human health and the environment. While it has been determined by the USEPA that some CERCLIS sites require no action, others could pose a real or perceived environmental threat to neighboring properties, thus affecting property values.

One CERCLIS site, FYN Paint and Lacquer Co., Inc., was identified within a ½-mile radius of the Property. Based on its distance from the Property (approximately 800 feet to the west) and inferred groundwater flow direction, this site is not anticipated to have affected subsurface conditions at the Property.

Comprehensive Environmental Response, Compensation, and Liability Information System-No Further Remedial Action Planned (CERCLIS-NFRAP)

As of February 1995, CERCLIS sites designated “No Further Remedial Action Planned” have been removed from CERCLIS.

One CERCLIS NFRAP site, All Plating Corp., was identified within a ½-mile radius of the Property. Based its distance from the Property (over 1,500 feet away) and anticipated groundwater flow direction, this site is not anticipated to have affected subsurface conditions at the Property.

CORRACTS (Corrective Actions Report)

The CORRACTS database identifies hazardous waste handlers with RCRA corrective action activity.

One CORRACTS site was identified within a one-mile radius of the Property. Based on its distance from the Property (approximately 800 feet to the west) and anticipated groundwater flow direction, this site is not anticipated to have affected subsurface conditions at the Property.

RCRIS (Resource Conservation and Recovery Information System)

This database lists sites that have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA.

One TSD facility was identified within a ½-mile radius of the Property. Eight RCRA generators and 14 non-generators were identified within a ⅛-mile radius of the Property. Of these, the following listings have some limited potential to have affected the Property subsurface based on proximity and listing details:

- Garcia-Rivera Property located at 98 North 1st Street, west-adjacent to the Property, was listed as a non-generator and historical LQG of non-listed ignitable wastes and sodium cyanide in 1986. No violations were reported.
- NYC Department of Education – P.S. 84, located on the south-adjacent block approximately 160 feet south of the Property, was listed as a LQG and historical SQG, CESQG, and non-generator, of lead and PCB waste between 1995 and 2014. No violations were reported.
- Rohner Furniture Inc. located at 100 Metropolitan Avenue, approximately 200 feet northwest of the Property, was listed as a non-generator and historical SQG of ignitable waste in 1989. No violations were reported.
- Triboro Shelving & Partition located at 296 Wythe Avenue, approximately 300 feet west of the Property, was listed as non-generator and historical SQG of corrosive waste in 1993. No violations were reported.

Based on the listing details, distance from the Property, and/or inferred groundwater flow direction, the remaining listings would not be expected to have affected the Property subsurface. Details of all RCRA listings are included in Appendix C.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

No potentially on-site ERNS listings were identified.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a 1/8-mile radius of the Property.

CONSENT (Superfund Consent Decrees)

Superfund consent decrees are major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. These decrees are periodically released by the United States District Courts after settlement by parties to litigation matters.

No CONSENT sites were identified within a one-mile radius of the Property.

ROD (Records of Decision)

Record of Decision documents mandate permanent remedies at NPL sites, and contain technical and health information to aid in the cleanup.

No ROD sites were identified within a one-mile radius of the Property.

Delisted NPL (National Priority List Deletions)

This database described former NPL sites that are removed from the NPL list by the US EPA. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establish the criteria used by the EPA to delist sites where no further federal response is needed.

No delisted NPL sites were identified within a one-mile radius of the Property.

US Brownfields

The US Brownfields program is for properties that clean up and report to the EPA and are served by Brownfields grant programs.

No US Brownfields sites were identified within a 1/2-mile radius of the Property.

EDR US Historic Auto Station Listings

The EDR US Historic Auto Station database was researched to identify listings for the Property and within a 1/8-mile radius of the Property. This database lists properties that might include gas/filling station establishments based on EDR's search of select national business directories.

Seven historic auto station listings were identified within a 1/8-mile radius of the Property. The nearest off-site listings associated with some limited potential to have affected the Property, based on listing details, and location, are listed as follows:

- 93 North 1st Street, approximately 80 feet north-northwest of the Property, was listed as Unico Auto Truck Repair Inc. in 2003.
- 120 Metropolitan Avenue, approximately 160 feet north of the Property, was listed as Flash Fuel Oil Corp. in 2005.
- 255 Berry Street, approximately 175 feet southeast of the Property, was listed as General Auto Repair between 1999 and 2008.

Based on the listing details, distance from the Property, and/or inferred groundwater flow direction, the remaining listings would not be expected to have affected the Property subsurface. Details of all EDR Historic Auto Station listings are included in Appendix C.

5.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Leaking Underground Storage Tanks (LTANKs); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Waste Disposal Site Inventory (HSWDS); Major Oil Storage Facilities (MOSF); Environmental Restoration Program (ERP); Voluntary Cleanup Program (VCP); and New York Brownfield Cleanup Program (BCP).

New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKs)

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

The Property was not listed on the NY Spills database. A total of 342 spills were reported within a ½-mile radius. Of these, the following spills have some limited potential to have affected the Property subsurface based on proximity and listing details:

- Spill No. 0613966 was reported in March 2007 at a former gas station located at 128 Grand Street, approximately 175 feet southeast of the Property on the southeast-adjacent block. According to the spill listing, two 550-gallon tanks were removed from the site and free product was reportedly encountered beneath the tank vault floor. A Phase II (Subsurface) investigation was conducted as required by NYSDEC. The listing reported that significant volatile organic compound (VOC) contamination was detected in groundwater samples [up to 329 parts per billion (ppb) of total xylenes]. Since work on the site was delayed and there was uncovered excavation, NYSDEC requested that the basement vapors be screened for VOCs with a photoionization detector (PID) within the west-adjacent school (P.S. 84). No PID readings were reportedly detected in the school building. Remediation continued at the site and two additional tanks were encountered. Oil-contaminated soil was excavated and removed from the site. Adjacent neighbors complained about odors inside their buildings. At the request of NYSDEC, soil borings and groundwater monitoring wells were installed off-site within the sidewalk across Grand Street and Berry Street. Soil beneath the site was excavated and apparent clean confirmatory endpoint samples were collected from the site at depths up to approximately 32 feet below grade. The chlorinated solvents tetrachloroethene, trichloroethene, and cis-1,2-dichloroethene, which were detected in groundwater samples, were reported to be originating from off-site, up-gradient properties. Unspecified treatment solution was injected at the site to remediate soil contamination and a vapor barrier was planned to

be installed at the site prior to construction of the proposed building. NYSDEC closed the spill in June 2010 since soil and groundwater analytical results indicated that oil and gas contamination had reportedly been cleaned up.

- Spill No. 1604271 was reported in July 2016 at a 125 Metropolitan Avenue, approximately 250 feet north of the Property. According to the spill listing, soil contamination was encountered at an active construction site while excavating for a foundation development. Soil endpoint samples and a groundwater sample were collected; however, no evidence of petroleum contamination was reportedly detected in either sample media. A vapor barrier was installed at the site. The spill has not been closed.

Based on listing details, including nature of the spills, distance from the Property, and/or inferred groundwater flow direction, the remaining listed spills would not be expected to have significantly affected the Property. Details from all spills are included in Appendix C.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

Two CBS facilities were identified within a 1/8-mile radius of the Property. Based on listing details, distance from the Property (over 600 feet away), and/or inferred groundwater flow direction, these listings are not anticipated to have affected subsurface conditions at the Property.

Solid Waste Facilities/Landfill Sites (SWF/LF)

The SWF/LF database is a comprehensive listing of state permitted/recorded solid waste management facilities including certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

Eleven SWF/LF sites were identified within a 1/2-mile radius of the Property. Based on distance (over 700 feet away), database listings, and/or anticipated groundwater flow direction, these sites are not anticipated to have affected subsurface conditions at the Property.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Eighteen PBS facilities were identified within a 1/8-mile radius of the Property. Details of the nearest facilities most likely to have affected the Property (based on distance) are given in Table 2:

Table 2
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Install Date	Status	Approximate Distance/Direction from Site
Grand Suites, LLC 128-134 Grand Street	550 UST x 4 30 UST	Gasoline Waste Oil/Used Oil Hydraulic Oil (30 UST)	Not Reported	Closed-Removed	175 feet southeast (southeast-adjacent block)
Metro Realty 100 Metropolitan Avenue	6,000 UST	No. 2 Fuel Oil	Not Reported	In Service	80 feet north-northwest (north-adjacent block)
145 Grand Street	4,500 AST	No. 2 Fuel Oil	Not Reported	Closed-Removed	280 feet southeast (east-adjacent block)
136 North 1 st Street	1,500 AST	No. 2 Fuel Oil	6/1/1952	In Service	320 feet east (east-adjacent block)

Note: AST – aboveground storage tank

UST – underground storage tank

Grand Suites, LLC (128-134 Grand Street) was also listed in the NY Spills database with documented subsurface contamination (Spill No. 0613966).

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Eight SHWS sites were identified within a one-mile radius of the Property. Based on distance (approximately 800 feet away), these sites are not anticipated to have affected subsurface conditions at the Property.

Hazardous Substance Waste Disposal Site Inventory (HSWDS)

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites.

One HSWDS site was identified within a ½-mile radius of the Property. Based on its distance from the Property (approximately 0.5 mile away), this site is not anticipated to have affected subsurface conditions at the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a ¼-mile radius of the Property.

Environmental Restoration Program (ERP)

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program (VCP)

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Two Voluntary Cleanup Program sites were identified within a ½ -mile radius of the Property. Based on their distance from the Property (over 800 feet away) and inferred groundwater flow direction, these listings are not anticipated to have affected subsurface conditions at the Property.

Brownfield Cleanup Program (BCP)

This NYSDEC program is the successor to the Voluntary Cleanup Program. Some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Eleven BCP sites were identified within a ½-mile radius of the Property. The nearest facility, located at 230 Kent Avenue, approximately 770 feet west of the Property, is an off-site investigation area associated with the former Fyn Paint and Lacquer Co., Inc. The database listing cited elevated levels of acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from the Fyn Paint and Lacquer Co., Inc. property and extended beneath adjacent sidewalks, parking lots, and streets. Additional investigation was required to further delineate the extent of the plume emanating from the lacquer facility. Based on the database listing and inferred groundwater flow direction, this site is not anticipated to have affected subsurface conditions at the Property.

5.2.3 Local Agency File Review

Records available online from the New York City Buildings and Finance Departments were viewed for the Property. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendix D.

NYC Buildings Department (DOB)

DOB records were generally consistent with the historical information detailed in the Sanborn maps, reviewed in Section 5.1.1. Computerized records identified the following:

Lot 16

- A 1996 work permit to replace a hanging heating unit and connect a gas line to a new meter.
- A 2009 resolved complaint from Con Edison regarding an exposed wire for a gate motor.

Lot 19

- A 1992 resolved complaint citing no Certificate of Occupancy (C of O) for the building. Additionally, computerized DOB records did not include a C of O for the building.
- A 2012 job application for the conversion from warehouse to gallery, addition of mezzanine levels for office space, and mechanical work.

No pertinent environmental records were identified in the NYCDOB electronic files.

Department of City Planning

A search of NYC Environmental Quality Review Requirements (CEQR) data by EDR indicated that the Property, and 106 additional sites within a 1/8-mile radius of the Property, were assigned (E) designations.

The designation on the Property was specified as E-138 as part of the Greenpoint-Williamsburg Rezoning (04DCP003K), and indicated that the requirement for underground gasoline storage tanks testing protocol (hazardous materials).

New York City Department of Environmental Protection (NYCDEP)

AKRF sent a FOIL request to the NYCDEP on January 10, 2017 pertaining to environmental records. As of the date of this report, NYCDEP has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

New York City Department of Health and Mental Hygiene (NYCDOHMH)

AKRF sent a FOIL request to the NYCDOHMH on January 10, 2017 pertaining to environmental records. In a letter dated January 12, 2017, NYCDOHMH indicated that no environmental records were found for the Property address.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; and useful, accurate and complete in light of the objective of the records review. These records include:

- Local brownfields lists
- Local lists of landfill/solid waste disposal sites
- Local lists of hazardous waste/contaminated Sites
- Local lists of registered tanks
- Local land records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Local/Regional Water Quality Agency

- Local Electric Utility (for PCB records)

In addition to the Local Agency File Review, AKRF sent a FOIL request to NYSDEC Region 2 on January 12, 2017 for the Property to determine whether pertinent environmental records for the Property could be obtained for further review. As of the date of this report, NYSDEC has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

AKRF sent a FOIL request to the New York State Department of Health (NYSDOH) on January 10, 2017 for the Property to determine whether pertinent environmental records for the Property could be obtained for further review. As of the date of this report, NYSDOH has not responded to the records request. If issues of potential concern are noted upon receipt of this information, an addendum to this report will be created to discuss relevant findings.

On January 12, 2017, AKRF reviewed USEPA's computerized database for any environmental records for the Property. The Property was not identified in the USEPA's computerized database.

In AKRF's judgment, no other local records meeting the ASTM criteria are pertinent for the Property.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the client provide any pertinent information regarding the Property, specifically:

- The reason for performing the Phase I ESA;
- Whether they were aware of any pertinent current or historic activities at or near the Property, including but not limited to: hazardous substances or petroleum, waste management practices, filling or disposal drains, septic/sewer systems, and potable and non-potable wells;
- Owner and occupant information and whether they were aware of any previous Phase I ESAs or other potentially pertinent reports, plans or information;
- Whether any *environmental liens* or *activity and land use limitations* are in place or filed or recorded against the Property or whether there was pending, threatened, ongoing or past violations, litigation or enforcement action relevant to hazardous substances or petroleum products;
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of the chemicals used by this type of business);
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated; and
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property including current/past uses of the Property and adjacent properties.

The Phase I ESA was conducted as part of due-diligence associated with potential redevelopment of the Property. According to the questionnaire response, Mr. Robert Loeffler, the current Property owner and DDG were not aware of: any environmental liens or activity use limitations on the Property and property value reduction due to environmental issues. Mr. Loeffler indicated that there are no pending, threatened, ongoing or past litigation/enforcement related to hazardous substances or petroleum products; or any

obvious indicators related to the presence or likely presence of releases at the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report. A copy of the Phase I ESA questionnaire is included in Appendix D.

7.0 PREVIOUS STUDIES

No previous studies were provided to AKRF. Mr. Robert Loeffler, the current Property owner, indicated that to his knowledge, no environmental reports, audits, or investigations have been performed at the Property.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- A representative of the current Property owner was unavailable to accompany AKRF during the site reconnaissance and answer pertinent questions.
- The Property and area history was not conducted in five-year intervals. However, sufficient information about the history of the Property and surrounding area could be obtained from the available historical Sanborn maps, city directories, and available local records, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I ESA was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The term “Recognized Environmental Condition” means the presence or likely presence of hazardous substances or petroleum at the property, including the ground, groundwater, or surface water at or under the Property.

A summary of the assessment findings is presented below:

Recognized Environmental Conditions

- The Property was assigned an NYC (E) Designation for hazardous materials, of the Greenpoint-Williamsburg Rezoning in May 2005. The hazardous materials (E) Designation requires that a subsurface testing protocol be submitted to, approved by, and completed to the satisfaction of the NYC Mayor’s Office of Environmental Remediation (OER) before the issuance of any building permits associated with subsurface disturbance. OER will require appropriate remedial measures to be conducted prior to or as part of redevelopment (or renovation) involving subsurface disturbance or change to a more sensitive use.
- Historical Sanborn maps indicated that the Property located at 106-110 North 1st Street was developed with a parking garage between approximately 1942 and 1965. Although gasoline tanks were noted in the off-site portion of the parking garage on the Sanborn maps, potential abandoned or unregistered underground storage tanks (USTs) may be located beneath the Property. Potential buried debris from former on-site structures could contain historic fill of unknown origin.
- Historical Sanborn maps and the regulatory database information identified numerous industrial and automotive uses in the surrounding area between 1887 and 2007. Such uses with the potential to affect subsurface conditions beneath the Property included an auto parts rebuilding facility, Imperial Plating Co., garages and gasoline tanks, Brooklyn Coal Co., auto repair shops, a filling station, and various furniture and accessory manufacturers and factories. One active-status spill and one closed-status spill, both with documented subsurface contamination, were identified within 250 feet of the Property. Additionally, the site reconnaissance identified a dry cleaner with potential on-site operations on the north-adjacent block, approximately 50 feet north of the Property.

Other On-site Environmental Concerns (items outside the scope of E1527-13 like ACM, LBP and/or PCBs in building materials or fill/debris)

- Based on the presumed age of the building on Lot 16 (constructed between approximately 1916 and 1942), electrical equipment, lighting fixtures, and caulk may include polychlorinated biphenyl (PCB)- or mercury-containing components. No obvious leaks or odors were observed in connection with observed equipment or the lighting fixtures.
- Suspect asbestos containing materials (ACM) are present in the buildings. Suspect ACM were noted to be in generally good to fair condition.
- Based on the age of the building on Lot 16, lead-based paint may be present on indoor and/or outdoor surfaces. Painted surfaces were observed to be in generally good to fair condition.

Recommendations

- A subsurface (Phase II) investigation is recommended to determine whether former on- or off-site uses (including those identified as RECs above) have affected soil, soil vapor, and/or groundwater conditions in accordance with the (E) Designation requirements managed by OER. The Phase II

Investigation should also be conducted to ensure that soil excavation and groundwater dewatering activities (if required) are conducted in accordance with applicable regulations, to determine if vapor mitigation is warranted, and assess whether any other remedial or environmental provisions should be incorporated into the development plan.

- During any subsurface disturbance (if applicable), excavated soil and any debris should be handled and disposed of in accordance with applicable regulatory requirements. If any petroleum underground storage tanks are encountered, they should be closed and removed, along with any contaminated soil, in accordance with applicable requirements. Any evidence of a petroleum spill should be reported to the New York State Department of Environmental Conservation (NYSDEC) and OER and addressed in accordance with applicable requirements.
- If dewatering is required during potential future construction activities, water should be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) and/or NYSDEC requirements.
- Prior to any renovation or demolition activities with the potential to disturb suspect ACM, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all local, state, and federal regulations prior to any renovation or demolition that would disturb those materials.
- Unless there is labeling or test data that indicates that fluorescent lights, hydraulic equipment and other electrical equipment are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.
- Any renovation or demolition activities with the potential to disturb lead-based paint should be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62—Lead Exposure in Construction).

10.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Marc S. Godick, LEP
Senior Vice President

Adrianna Bosco
Environmental Scientist

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than DDG and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AKRF, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/10/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

FYN PAINT AND LACQUE	230 KENT AVENUE	NW 1/8 - 1/4 (0.145 mi.)	T238	386

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/10/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

ALL PLATING CORP.	154 NORTH 7TH STREET	NE 1/4 - 1/2 (0.286 mi.)	BC415	1031

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/12/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/12/2016 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

RADIAC RESEARCH CORP	33 S 1ST ST	W 1/8 - 1/4 (0.149 mi.)	N245	441

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/12/2016 has revealed that there are 4 RCRA-LQG sites within approximately 0.125 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/12/2016 has revealed that there are 4 RCRA-CESQG sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 8 NY SHWS sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 10/04/2016 has revealed that there are 11 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/14/2016 has revealed that there are 35 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 11/14/2016 has revealed that there are 2 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/14/2016 has revealed that there are 312 NY Spills sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there is 1 NY SPILLS 90 site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/12/2016 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.125 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 04/22/2013 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 10/01/2016 has revealed that there are 112 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste.

EXECUTIVE SUMMARY

Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

KEAP ST. STATION	KEAP ST. WYTHE AVE.	S 1/2 - 1 (0.950 mi.)	638	1529

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

OLD GAS STATION (Continued)

S108467160

DEC Memo:

"3/29/07 - Raphael Ketani. I visited the site today 281 Berry Street. I met Kevin Waters of P.W. Grosser Consulting (212) 653-8744 and Robert Kearns of American Environmental Assessment Corp. (631) 586-2000. American Environmental Assessment was doing the physical work of pulling the tanks. There was also a company that was doing the pipe, electrical line, tank and other structural mark-outs. The site is an old gas station with the following addresses: 128 to 134 Grand Street, and 251 to 255 and 259 to 263 Berry Street. The site is right on the corner and is opposite a school. Except for the old gas station building, a small square manhole and a set of cellar doors, there was nothing visible on the surface. American Environmental had already pulled the tanks out when I arrived at about 11:30AM. The two tanks were the only ones detected. The tanks were in very good shape and had no rust holes, but did have lots of puncture holes from the front loader that was used to get them out of the ground. They came out of a concrete vault. Mr. Waters said that the tanks had water in them and had previously been cleaned out. I looked inside and the tanks did look clean. There were only very slight odors of gasoline. I took PID readings of the soil that fell into the vault from outside it. I had readings of the 200s ppb, though I had one hit of 530 ppb and one hit of 2600 ppb. Mr. Waters said that the slight contamination had come from some old fuel piping that had been broken up and he thought some residual liquids had spilled onto the soil. Mr. Waters went into the square manhole and saw a steel beam nearby and some pipes. The cellar doors were opened and old pieces of wood and historic fill with ash and cinders were present. There was some space above the historic fill and the steel beams and pipe could also be seen. I asked Mr. Waters whether the tanks had ever been registered. He said he will look into the matter. Later, at about 4:00PM, Mr. Waters called me up to say that they broke through the floor of the vault and detected vapors of 50 ppm. They also found old pieces of wood with black gelatinous material on it and free product floating on a pool of water. He said the water table was 6 feet below grade. He said there was a creosote like odor. Mr. Waters took VOA samples of the water and a sample of the black gelatinous material. I told him the site will need many soil borings and sampling and to send me a plan to be approved by DEC. He said he will send the plan and the analytical results. 4/3/07 - Raphael Ketani. I tried to find the PBS registration for the 2 tanks that were removed. There were no listings for either the Grand Street addresses nor the Berry Street addresses. I left a message for Mr. Waters to call me regarding getting the tanks registered. 4/4/07 - Raphael Ketani. Mr. Waters called me back and asked how to get the tanks registered. I explained it to him. I also told him that he will have to submit a plan for doing soil borings throughout the property and taking groundwater samples. He said that Frank Castelano, project manager at P.W. Grosser, will do the investigation plan. 4/6/07 - Raphael Ketani. Mr. Waters sent me the following e-mail: This is Kevin Waters from PW Grosser. We received the results of the petroleum product ID and the results show that it is not petroleum based. Frank and I were wondering if there is anything else in the area that this substance could be from. The GRO/DRO lab data is attached. The analytical results that were attached to the e-mail indicated that there was no fuel oil (i.e. #2 oil or diesel) contamination and the only GRO detected was TOTAL GRO TPH. 4/10/07 - Raphael Ketani. I called up Mr. Waters and spoke to him about the results. He said that his crew is going back to break up the vault floor and do soil sampling. I asked

S108467160

him to take another groundwater sample for method 8260 just to see what specific analytes are present and their concentrations. He said he would do this. I asked him about registering the two tanks. He said they were both 550 gal. tanks. He said he spoke to Nick Lombardo of PBS and Mr. Lombardo told him they didn't need to be registered as the total site capacity was only 1100 gal. 5/2/07 - Raphael Ketani. I received the 5/2/07 UST Removal/Groundwater Sampling report from Kris Almskog of P.W. Grosser (631) 589-6353. 5/3/07 - Raphael Ketani. I reviewed the UST Removal/Groundwater Sampling report. The 1/26/07 Phase II Environmental Site Assessment performed by Associated Environmental Services indicates that soil samples from borings B-1 to B-3 are at or below the TAGM standards for VOCs. Soil boring samples B-1 to B-4 are below the RSCOs for SVOCs, except for several low exceedences of benzo series analytes and chrysene. However, groundwater samples from B-2 and B-3 show significant VOC contamination (up to 329 ppb total xylenes). The 3/29/07 analytical results for the groundwater sample and the sludge sample indicate that the groundwater is still contaminated with various gasoline VOC analytes that exceed TAGM. Though not nearly as high as the groundwater samples from 1/26/07. The sludge had some VOC contamination and large (3800 ppb bis(2-ethylhexylphthalate and pyrene 1300 ppb) hits, but the bis may be a lab artifact. Mr. Almskog proposes to install 4 new groundwater monitoring wells and take new soil and water samples. The proposed locations looked alright in Figure 2. I e-mailed Mr. Almskog that the submitted report and the proposed plan for additional investigation looked fine. I added that the well annulus should be filled with grout, not cuttings. Also, I stated that the wells should be developed after the grout cures and the water samples should be taken no earlier than 2 weeks from the date of development. 5/17/07 - Raphael Ketani. I received the following e-mail from Mr. Almskog today: Rafiel, Thanks for your comments regarding the proposed work plan. I met with the property developer yesterday to discuss the path forward. Based upon his upcoming construction schedule, they will be installing several geotechnical borings throughout the site in the next few weeks. In an effort to better determine sub-surface conditions, PWGC will witness these soil borings, and possibly have monitoring wells installed in these locations. Based upon the findings of the limited investigation during the geotechnical drilling, and the potential for construction excavation to begin in the next several months, the proposed work plan may be modified to better investigate areas not covered by the geotechnical and excavation work. I will contact you when we have a more solid schedule going forward. 6/6/07 - Raphael Ketani. Frank P. Castellano, Vice President of P.W. Grosser (631) 589-6353 sent me an e-mail requesting to be c-c'd on all future DEC correspondences. 6/29/07 - Raphael Ketani. Mr. Almskog called to say that the owner is thinking of digging out the entire site down 10 feet. He added that the original plan called for installing groundwater monitoring wells, but the dig out would preclude that. I told him that the course of action the DEC would prefer would be to dig everything out and then suck up all of the contaminated water. He said that was his idea, too. However, right now the owners are discussing which plan they will go with. I told him to keep me informed. Mr. Almskog also mentioned that there is a drum of oil or grease on the site. He said it belongs to spill case #0702880. Sharif Rahman of Spills Region 2 told Mr. Almskog that the owner of the former gas station has to take the drum away and dispose of it properly. Mr. Almskog told Mr. Rahman

Map ID
Direction

EPA ID Number

OLD GAS STATION (Continued)

S108467160

that he will have this done. I have combined the drum case with the active spill case #0613966 and closed spill case #0702880. 10/4/07 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a message. 10/17/07 - Raphael Ketani. Mr. Almskog called back. He said that the drum has been taken away and he has the manifest for it. The manifest was sent via e-mail and I printed it out. He added that demolition of the building will take place over the course of the next several weeks. P.W. Grosser will be on site during the demolition to monitor the soils coming out of the site and possibly install wells after the demolition is done. He added that end point samples will be taken after the basement depth is reached. I told Mr. Almskog that the groundwater should be collected if it has a sheen on it. He said he will do this. 11/29/07 - Raphael Ketani. I tried to contact Mr. Almskog, but could only leave a message. 12/4/07 - Raphael Ketani. Mr. Almskog left me the following e-mail today: I just left a message for you regarding the status at the above referenced site. According to the developer, the demolition of the existing structure is underway and it is anticipated that the concrete floor slab will be removed this week. Following removal of the slab, the plan is to begin excavating on the eastern portion of the site and move to the west, where the USTs were removed earlier this year. Once excavation in the vicinity of the removed UST occurs, PWGC will be onsite to document the removal effort and document sub-surface conditions and collect the necessary endpoint samples. When the developer gets closer to this stage, you will be notified so that we can discuss the path forward based upon what is found. 1/9/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a voice mail. 1/10/08 - Raphael Ketani. I received the following e-mail from Mr. Almskog: I just spoke to my client and have the following update for the above referenced site. The building that was on the property has been demolished and the slab on grade has been removed. There is a construction fence surrounding the site. The NYCDOB have approved the structural plans and the approval of the shoring plans is anticipated to be completed in the next two weeks. Following receipt of an approved shoring plan, the developer plans on beginning excavation immediately for the basement and to further investigate the area in the vicinity of the UST. I have expressed the need to begin the excavation/investigation as soon as possible to the developer and I will contact you when they begin the excavation in the area of the former UST area. Thanks Kris E. Almskog 2/25/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a voice mail. 3/6/08 - Raphael Ketani. Mr. Almskog returned my call. He said that the owner is again not moving forward on the project. The owner is claiming that he needs to get the permits to do the shoring before any digging can take place. The owner claims that he will have the permits in about 2 weeks. However, Mr. Almskog commented that this was an old story and seemed more like a delaying tactic. He said we'll see. 4/8/08 - Raphael Ketani. I spoke to Mr. Almskog. He said that the owner sent him an e-mail that he had to suspend work because the City stopped him due to down-zoning. I asked him what this meant. He said he didn't know. He added that the owner told him the work will resume once the stop order is lifted. I asked him to find out what was going on and to push the owner to get back to work because there is a school across the street. Mr. Almskog said he will call the owner and let him know that the DEC wants him to move on the project. 5/28/08 - Raphael Ketani. Mr. Almskog (631)589-6353 called and stated that the owner

OLD GAS STATION (Continued)

S108467160

still hasn't received the necessary permits to do the shoring work. However, this is expected to be resolved very soon. Mr. Almskog expects the digging to start in the next two weeks and he will call with a firmer date. 8/19/08 - Raphael Ketani. I spoke to Mr. Almskog. He said that he has been trying to get information regarding the site from the owner's representative, but no one has been returning his calls and the one contact he had left the company. He told me the management company is: CS Management, 410 Broadway, Brooklyn, 11211, Attn: Yol Soble. I sent a strongly worded letter to Mr. Soble requesting information about work at the site, registration of the tanks, and collection and sampling of contaminated groundwater. 9/15/08 - Raphael Ketani. I contacted Mr. Almskog today. He told me that Mr. Soble is no longer with CS Management. There is a new manager there now (he wasn't sure of his name). He said the CS Management is not going to build on the property right now as the financial backers have hesitated to spend the money due to the economy. However, he said, they will go ahead with the off-site investigation. He said that a plan is being put together right now. Mr. Almskog said that he will send it to me when it is finalized. I told Mr. Almskog that a PID meter survey will have to be done in the basements, first floors and elsewhere in the neighboring building and the school across the street. He said that it will be done and DEC will receive the results. 10/27/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a message. 10/30/08 - Raphael Ketani. Mr. Almskog called. He said that they did the air survey in the school on 10/10/08 - a report will be sent. They used a PID meter and found no hits of VOCs. They could not get access to the basement of the apartment building next door because no one was available. I told Mr. Almskog to go to the property databases, find out who owns the place, and send them a letter requesting access. He said that he will do this. Demolition of the old gas station will take place sometime during the next week and a half, and will be followed by excavation. After this, a determination will be made as regards how much more remediation is necessary. Mr. Almskog said that he will call me back with a progress report. 11/21/08 - Raphael Ketani. I tried to reach Mr. Almskog, but could only leave a message. 12/2/08 - Raphael Ketani. I contacted Mr. Almskog (631) 589-6353 regarding the site. He sent letters to the buildings next to the site, but they haven't received a response yet. One person refused entry. He asked that DEC send letters requesting entry to do the vapor survey. I told him that I will do so if he provides the addresses. He said that he will send the addresses via e-mail. Mr. Almskog said that nothing is happening at the site, but he will contact the developer. 136 Grand Street and 257 Berry Street are two addresses that need letters. For 136 Grand Street (block and lot 2392/13), the owners of record are: Cecilia Holzman 123 S. Second Street, Brklyn., 11211 For 257 Berry Street (block and lot 2392/7), the owners of record are: William S. Burg Property, LLC 111 S. Second Street, Brklyn, 11211 12/3/08 - Raphael Ketani. I sent out the letters to Ms. Holzman and to William S. Burg Property, LLC. 12/8/08 - Raphael Ketani. Today I received copies of the letters that P.W. Grosser Consulting had sent to Ms. Holzman and to the owners of 257 Berry Street. These letters requested permission to enter the buildings and take indoor air vapor readings. 12/22/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353 regarding progress with the indoor air surveying of the neighboring buildings. However, I could only leave a message as he was on vacation and wont

S108467160

be back until 12/29/08. 12/30/08 - Raphael Ketani. I tried to contact Mr. Almskog (631) 589-6353, but could only leave a message. 1/8/09 - Raphael Ketani. Mr. Almskog (631) 589-6353 left a voice message. He said that he had been out on vacation during the holidays and that is why he didn't get back to me until now. He said that he has had no response from the neighbors of the site regarding allowing him to do a vapor survey inside their buildings. He also has had no response from the developer of the site regarding collecting the contaminated water and removing any contaminated soil. 1/9/09 - Raphael Ketani. I spoke to Mr. Almskog. He said that there is no progress at the site and the management representative isn't returning his phone calls. He said that he would have talked to the owner, but he was not given that number. He said that the management representative is Isaac Stiems (stymes) (718) 599-8300. The new address of the management company is 116 Nostrand Avenue, Brklyn., 11205. I called up Mr. Stiems and left him a voice message threatening legal action if there is no progress regarding the remediation by 1/16/09. A little while later, he returned my call. We spoke about the site. I reminded him that there are children in the school across the street who may be affected by vapors from the contaminated groundwater at the site. He told me that he wasn't sure when the remediation will restart, but that it will be sometime in January. He said that the general contractor would know better. I told him that the DEC doesn't want to speak to the general contractor. I told him we need to speak with the owner himself. After about a minute on hold, Mr. Chaskiel Strulovitch (owner) got on the phone. I explained DEC's concerns about the site regarding the school across the street and the need to complete the remediation of the site. I told him that there is contaminated groundwater and soil. He asked How do you know the groundwater is coming from my site? It could be coming from somewhere else. He said that his site is clean. I told him that his site is a former gas station and as such it is the most likely site. I added that DEC has analytical results showing that there is groundwater contamination up to about 280 ppb for one analyte and that this is way above TAGM standards. He said that he understood what I was saying and that he will restart the remediation and remove the groundwater and soil anyway. I said that is what DEC wants. I asked him when this will start. He said that the remediation will begin sometime in January and no later than January 31. I told him that if the remediation does not take place by January 31, then the DEC will immediately refer the case to the Office of General Counsel. He gave me his phone number (718) 599-8300, ext 202 and his cell number (917) 385-1269. 1/30/09 - Raphael Ketani. I had not heard from Mr. Strulovitch that the remediation of the project had restarted. I called up Mr. Almskog and he said that he hasn't heard anything, either, and his calls haven't been returned. Therefore, I sent a Case Initiation Form to Legal. 7/21/09 - Raphael Ketani. The owners of the site have finally stated that they are willing to do the investigative and cleanup work. 8/4/09 - Raphael Ketani. Mr. Kahn of ESPL (212) 363-3775 called to let me know that the owners have paid all of their fines to DEC. He said that the owners told him to go ahead with the remediation project and so he will be sending DEC a work plan soon. Today I received the Executed Order on Consent from DEC's Region 2 Office of General Counsel. The effective date is 8/4/09. 8/11/09 - Raphael Ketani. Chris Almskog and John Eichler of P.W. Grosser (212) 653-8744 called me for a conference call. Mr. Almskog stated that the owners have retained P.W. Grosser. We discussed the site and what types of

OLD GAS STATION (Continued)

S108467160

contamination and environmental issues are present. Mr. Almskog stated that DEC will receive a work plan very soon. 8/12/09 - Raphael Ketani. Mr. Eichler (631) 589-6353 left a message today regarding work at the site. I tried to call him back, but could only leave a message. I stated that the gas tanks have to be registered. I also stated that it was good that the owner plans to dig out the property to four feet below grade. However, the contamination probably extends under the sidewalks and maybe beyond. The DEC will ask for borings through the sidewalks and across the street. All contamination must be removed. Mr. Eichler left a message that P.W. Grosser will put in wells on-site and off-site. Also, he stated that a PBS application will be filled out for the site. 8/20/09 - Raphael Ketani. Today I received the Remedial Investigation Work Plan dated 8/17/09 from P.W. Grosser. I reviewed the work plan. The only comments I had were that all soil samples and groundwater samples must be tested for either method 8021 plus MTBE or method 8260, the annulus should be filled with grout above the bentonite seal, that well development should take place no sooner than 24 hours after the grout has cured, and that well sampling should take place no sooner than two weeks after development. I approved the work plan and sent Mr. Eichler and Mr. Almskog of P.W. Grosser my comments. 9/11/09 - Raphael Ketani. I tried to contact Mr. Eichler (631) 589-6353 regarding progress at the site, but could only leave a message. 9/14/09 - Raphael Ketani. Mr. Almskog sent me an e-mail stating that he expected to get the approval from the client this week to start the investigation work. 9/15/09 - Raphael Ketani. At the request of Mr. Almskog, letters were again sent to Mr. Burg and Ms. Holzman requesting their assistance regarding the performance of indoor vapor surveys at their properties by P.W. Grosser. 9/16/09 - Raphael Ketani. Mr. Almskog left a message that excavation had restarted and a third UST was found at the site. The UST appears to be a 550 gal. waste oil tank in a concrete jacket. He will let me know what transpires. 9/21/09 - Raphael Ketani. Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593 called to ask about the letter she had received regarding testing the air in the building for vapors. She was concerned about having her building get a red flag and who was going to pay for getting rid of the vapors if they are found to be unhealthy. I explained to her that I wasn't sure about the red flag and that it sounded like a real estate issue. I told her that the owner of 128 Grand Street would be responsible for mitigating any vapors through the work of his consultant, P.W. Grosser. She said that some months back, she had water coming into her building from the neighboring property and that she ended up paying for the waterproofing. I told her that DEC would see to it that the owner of the site cooperates and installs a vapor mitigation system. We went over the subject and I tried reassuring her that any vapor issues would be resolved at the owner's expense. She said that she wanted to talk to the supervisor of the Spills Unit. I gave her Randall Austin's phone number. At the end of our conversation, she mentioned that they were driving piles next door. She put the phone to the window and I could hear piles being driven. I asked her what these piles were for. She said that they were putting in the piles for a foundation. I asked her how long this has been going on. She said that it has been happening all day. I contacted Mr. Almskog (631) 589-6353 and I asked him why the owner of the site was putting in foundation pilings. He said that he wasn't aware that pilings were going to be put in, except for the sidewalk shoring. I told him that they are driving piles right now. I added that contaminated soil

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

OLD GAS STATION (Continued)

S108467160

removal will be impossible with the pilings in place. Mr. Almskog said that this wasn't a problem. He said that he's been on a number of projects where soil was excavated between the piles. Mr. Almskog added that the remediation work takes place slowly, but that it gets done. Meanwhile, he said, he will talk to the owner about the pile driving. Before the conversation ended, I added that the 8/17/09 work investigation plan did not include a schedule regarding when the soil borings will take place, when the installation of the monitoring wells will take place, and so forth. I told him that this was required in the CAP in the Order. He said that he will send DEC an implementation schedule. I asked him about the tank registration. He said that he had mailed the registration forms to the owner last week for all 3 tanks. I asked him for an update regarding the owner information. He said that Chaskiel Strulovitch is still the owner, but, now, the company is called Grand Suites, LLC. He said that CS Management is part of Grand Street, LLC. The company address is 116 Nostrand Avenue, Brklyn., 11205. I made an unannounced site visit. I met Shagi Freed (347) 683-7677 of Wongold Construction, 30-81 54 Street, #2E, Woodside, NY, 11377 (718) 986-1816. The former gas station building had been torn down and some of the soil had been removed from the site. A pile driver was pushing thin, long steel pilings into the soil. Mr. Freed didn't tell me his title, but he said that he was in charge of the shoring and pile driving project. I asked him what was going on. He said that his company was driving steel pilings just to support the steel sheeting that will be installed to keep the sidewalk from falling into the site. He showed me an approved plan from the NYC DOB for the pile driving and shoring. Everything looked like it was going according to plan. All of the work was along the edge of the property. There were no odors. The soil profile in one exposed area was of medium yellow brown glacial outwash sand. It didn't have an odor and didn't look darkened by contamination. After this, I left the site. 9/22/09 - Raphael Ketani. A letter went out to Mr. Strulovitch, with a c-c to Mr. Almskog, stating that an implementation schedule must be submitted to the DEC for the boring, well installation and other work that was mentioned in the investigation work plan. 9/23/09 - Raphael Ketani. I received a message from Mr. Almskog (631) 589-6353 that a fourth UST was found yesterday. There was also some oily water in the vicinity. The tank was 5 to 6 feet below the sidewalk. I spoke to Mr. Almskog and he said that he will get a vacuum truck to the site to suck up the oil and water. He said that, from his experience, there shouldn't be a water table at so shallow a depth. He said that they had seen a slab when they were taking out the first two tanks from their vault. He is not sure whether there actually is a sub-basement below the site, but his crew will check on this. I reminded Mr. Almskog that all four tanks must be registered and that he should be prepared to find more tanks. He said that he will keep his eyes out for them. I told him to keep me informed. He said he will. 9/24/09 - Raphael Ketani. Randall Austin, Chief of the Spills Unit, told me today that he had spoken to Ms. Crandall (718) 384-5593 regarding the work that was taking place and the request that the P.W. Grosser consultants be allowed to enter her building to do air monitoring. She said that the odors outside her building were bad from the oil and that they were entering her building whenever she opened a window. She also said that her neighbor, Cecilia Holzman (718) 782-4313/(646) 321-8352, was having water and mud enter her building through the walls. Mr. Austin told her that the odors will be dealt with and asked me to see to it,

Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

OLD GAS STATION (Continued)

S108467160

and the problem with the mud and water. I contacted Ms. Holzman and she said that the problem has been going on for a year. She said that her property borders the former gas station property on Grand Street. She said that the NYC DOB won't do anything regarding the oil and water. She said that her building is at 136 Grand Street. I told her that I will contact the consultants and have them look into the matter and correct the problem. I contacted Mr. Almskog (631) 589-6353. I told him that his crew will have to put down either odor suppressing foam or do something else to abate the odors. I told him that people are complaining that the odors are coming into their apartments when they open the windows. He said the fourth tank will be removed tomorrow. I told him that a neighbor at 136 Grand Street has mud and water coming into her building from outside. I told him that this has been going on for a year and it is not stopping. I gave him Ms. Holzman's name, phone number, and address. He said that he will contact her and inspect the situation. Mr. Almskog said that he has an appointment to do the indoor air surveys from October 5 to October 10. 9/28/09 - Raphael Ketani. At 1:55PM on 9/25/09, I received the investigation work plan schedule for the project (see E-docs). Generally, it looked alright. I responded by e-mail stating that he should have a separate interval in the schedule for soil sampling when borings are performed, and another one for soil sampling when the wells are installed. I also wrote that the remediation may need its own schedule if there is going to be more than one activity, but that he can hold off sending me this until we know what the remediation will entail. Mr. Almskog also sent me an e-mail at 2:38PM on the same day. It was an outline of the activities that will take place in order to abate the odors (see E-docs). The outline looked acceptable. I spoke to Ms. Holzman (718) 782-4313/(646) 321-8352 today regarding the situation with the water and mud coming through her basement wall. She said that it is still continuing. She said that she has been trying for many months to get the owners of the former gas station to fix the problem. However, she has had no success. So she has hired a lawyer to help her. She said that there are molds from all of the wetness and they are affecting her breathing. I asked her whether she would be willing to have Mr. Almskog come over and do the indoor air testing as the DEC would like and to take a look at the situation in her basement. She said she would be willing. I gave her Mr. Almskog's phone number and asked her to set up the appointment. Ms. Holzman added that she was concerned about the stability of her building as they are digging close by. I told her that she should talk to Mr. Almskog and the owner to get the problems resolved. Ms. Crandall had left me a message on Friday, 9/25/09, at 3:12PM stating that she came back from a class field trip and her apartment smelled strongly of oil. She said that the windows had been closed all day and that a neighbor told her the odors were unbearable. She said that she turned red from the chemicals in the vapors and that her skin started to itch. Ms. Crandall said that this was because she is very sensitive to all chemicals. She added that the workers at the site put dirt on the oil to get rid of the odors. I tried to contact Ms. Crandall (718) 384-5593, but I could only leave a message. Next, I contacted Mr. Almskog (631) 589-6353. We spoke at length about the site, the work and how it was affecting the neighbors. Mr. Almskog said that he spoke to Ms. Crandall during last Friday at 3:30PM. She was pleasant and didn't seem upset. She said that the odors were strong in her apartment, but not as strong as before. He told her what they were doing to reduce the odors and

Site

Database(s)

EDR ID Number
EPA ID Number

OLD GAS STATION (Continued)

S108467160

mentioned that they were going to put BioSolve on the oil. He said that he spoke to Randall Austin, Chief of the Spills Unit, on Friday and explained the situation. He said that he is rushing the characterization of the stockpiled soil at the site so that it won't sit there for a long time. He said that, right now, nothing is happening at the site as it is Yom Kippur. However, Mr. Almskog stated that the work will resume tomorrow, 9/29/09. He said that the slab they had found below the site is the remains of another foundation. They broke through the slab and dug down. Mr. Almskog added that they dug down 16 feet at the former location of the first two tanks that were removed from the vault. He said that as they dug deeper, the soil got cleaner and the odors abated. The soil borings and wells will be installed at the end of this week. Mr. Almskog told Ms. Crandall that he will do the indoor air survey next week. He told her to talk to the NYS Dept. of Health about the vapors and her health concerns. Mr. Almskog spoke to Ms. Holzman's foreman. He said that Ms. Holzman refused the water proofing that the owner of the site had offered. He said that this offer was made 6 months ago. Ms. Holzman told Mr. Almskog that she is going to sue the owner of the site. I asked Mr. Almskog to reach out to her again and try to set up an appointment for indoor air surveying and to see the basement. He said he will try, but the owners told him not to contact her as they will try to deal with her. Ms. Crandall (718) 384-5593 called me back at 12:50PM. She said that she opened up her windows and could not smell the oil. She said that the soil covering the site had stopped the odors. She asked what was going to happen next. I told her that the work crew will start again tomorrow as today is a holiday. I told her that they plan to remove the oil contaminated soil this week. She said that she was happy about this. 9/29/09 - Raphael Ketani. Rocky Wenskus of P.W. Grosser (631) 589-6353/cell (516) 233-4692 called to request that I inspect the site after they do more excavating tomorrow. He wanted me to check on the thoroughness of their efforts to remove all of the contaminated soil. I told him that I will make a site inspection at about 2PM. He said that would be good. However, I told him that the contamination may not end at the property line and to be prepared to deal with contamination under the sidewalk and the street. He said he understood. 9/30/09 - Raphael Ketani. I visited the site today at 2PM at the request of Mr. Wenskus. I met Matthew Conlon of P.W. Grosser (office (631) 589-6353/cell (631) 664-2016; he works under Mr. Almskog and Mr. Wenskus and is the field hydrogeologist) and Shagi Freed (347) 683-7677. I toured the site. The construction company had dug out a long trench along the south side of the site. The trench ran along and under the foundation for the newly constructed building next door. The material exposed in the trench under the building consisted of rubble from an older building, yellow brown layers of sand and gravel, a black layer of ash, and what looked like a remnant of a foundation (see E-docs). There was a combination septic and weathered gasoline odor coming from the east end of the trench. Mr. Conlon said that they had dug out an old cesspool from this area. I put my PID meter near the soil just above this location and had a reading of about 220 ppb of total vapors. I told Mr. Conlon and Mr. Freed about this and they told me that this soil will be dug out and added to the stockpile of contaminated soil. Mr. Freed said that the pile will be removed this Friday morning. I told him to make sure it remains well covered by plastic as it is supposed to rain later this week. I added that if the rain percolates down through the contaminated soil, it will wash the contamination

OLD GAS STATION (Continued)

S108467160

into the clean soil below. Mr. Freed and Mr. Conlon said that they understood. I measured the vapor concentrations under the plastic for the stockpile. The PID readings were up to 11.3 ppm. I looked over the site. There wasn't much taking place. The shoring to protect the sidewalk had been completed. Mr. Conlon said that the site investigation and well installation will start this Friday and the first wells will be installed along the Berry Street side (west side) of the site. Mr. Freed said that his crew will start digging along the east side of the site. After this, I left. 10/1/09 - Raphael Ketani. I drafted a well installation letter at the request of Mr. Wenskus. Mr. Austin, Chief of the Spills Unit, approved the letter and it went out today. 10/14/09 - Raphael Ketani. I tried to contact Mr. Wenskus (631) 589-6353 regarding progress at the site, but could only leave a message. 10/15/09 - Raphael Ketani. Today I received a progress update via e-mail from Mr. Wenskus. It was a large e-mail. So I put it in the E-docs. The content of the e-mail was that they have been doing the boring and well installations for the past two weeks. The well across Grand Street could not be installed as the prospective location for the well was over a store's basement. A new location will be chosen. Originally, they were using a Geoprobe, but made no progress as they kept hitting refusal. So they switched to augering. Depth to water presently appears to be 50 feet, but this is below sea level. Vapor surveys with a PID meter resulted in no detections for the school or the neighboring buildings. Additional soil was excavated from the site. End point soil samples were sent to the lab for analysis. 10/19/09 - Raphael Ketani. Mr. Wenskus and Mr. Almskog called me in a conference call. They discussed what took place with the well installation program. They said that they managed to install a well across the street next to the school and two wells in the sidewalk along Berry Street at the perimeter of the site, but not in the sidewalk across Grand Street. They said that, at first, they used a geoprobe, but it hit refusal. Then they used an auger rig and managed to get three wells in down to the regional water table. However, no wells could be installed in the sidewalk across Grand Street as the basements for the buildings there extend under the sidewalk. They added that the drilling in this area is very difficult. Installation of the three successful wells took an even larger, stronger rig as the other auger rig kept hitting refusal. The driller believes that there is a boulder layer below at 32 to 36 feet below grade. Boulders were brought up within the site during excavation of the contaminated soil. It took a week to install the three wells. We agreed to the installation of one more well for the project for the time being. This well will be put through the sidewalk along Grand Street right at the perimeter of the site. This way, they will not encounter basements and they will have enough wells to triangulate the groundwater flow direction. They mentioned that they measured the groundwater level in the wells. Mr. Almskog said that they found the groundwater to be at greater than 50 feet below grade. The site, according to the USGS topographic maps, is at an elevation of 43 feet above sea level. I told them that this discrepancy may be due to a loss of porosity as a result of the boring. Clay and silt may have entered into enough pores such that the groundwater will need time to equilibrate slowly to its actual level. I told them to give the wells at least several days to reach their true groundwater level, and to proceed with the last well installation. They agreed to do this. 10/30/09 - Raphael Ketani. Mr. Wenskus sent me a site map depicting the location of the borings

S108467160

and well locations as of 10/22/09. It was attached to the following e-mail: Attached is a figure from the Berry and Grand Street site that shows the location of completed soil borings, monitoring wells and endpoint samples. We have achieved clean endpoints and soils at each location with the exception of SB-3. At SB-3 there is still some impacted soil at a depth of approximately 26-28 feet below grade. We are scheduled to collect groundwater samples next week from the four monitoring wells that were installed at the site. 11/13/09 - Raphael Ketani. Mr. Wenskus sent me an e-mail with an attached diagram depicting the locations of the borings, the wells, and the excavated area. He stated that the groundwater samples didn't have petroleum analytes, but chlorinated solvents were found. He also stated in the e-mail that contamination was found at depth at EP-3 and EP-4, but that it was excavated and that soil samples from later borings (EP-7 and EP-8) did not have petroleum analyte hits. I e-mailed back that the DEC needed a full report of the findings with analyte tables, and that a well needed to be installed on the edge of the site in the sidewalk along Grand Street. I remarked in the e-mail that we needed to see what was coming from upgradient. 12/1/09 - Raphael Ketani. Danny Sing of Don Carlo Environmental (718) 857-3100 called to say that the owners of the site are switching from P.W. Grosser to Don Carlo. He wanted to know what DEC was still owed. I told him that a well needed to be installed in the sidewalk which runs along the Grand Street side of the site, and that a full investigation report has to be submitted to the DEC. He asked whether the developer can start constructing the foundation as the sidewalk next to the site along Berry Street may collapse. I told him that the developer may do this anyway, but if all of the contamination is not removed, then it can be an expensive proposition to use soil treatment solution injections to get rid of the contamination. Mr. Sing told me he will send me an update by e-mail. 12/2/09 - Raphael Ketani. I spoke to Mr. Sing. He repeated his previous statement that the developer wanted to start foundation construction in order to prevent the sidewalk on the Berry Street side from collapsing. I told him that shoring had been installed along both the Grand Street and Berry Street sides of the site. He said he wasn't aware of this. I added that the DEC didn't see the need to start foundation construction as the shoring was in place. He said that he will go to the site very soon to see what the conditions are. He asked whether DEC wanted Don Carlo to take a groundwater sample from the Grand Street well at the time of the drilling. I told him No. Just to sample all of the wells once the Grand Street well is ready for sampling. I asked him what he will do if more contaminated soil is encountered. He said that it will be excavated and field screened with a PID. He said he will send off a representative sample to a lab for analysis. I told him that the DEC would like a copy of the analyses. Mr. Sing said that he will send the results. 12/23/09 - Raphael Ketani. I spoke to Mr. Sing (718) 857-3100. He said that no work is taking place at the site. He also said that Don Carlo Environmental has not been retained yet. He said that his company was given a verbal approval, but there are 5 owners and everyone has to agree on the remediation plan. He will let me know what takes place. 12/29/09 - Raphael Ketani. Mr. Almskog of P.W. Grosser sent me a copy of an e-mail that was sent to the owners of the site. In essence, the e-mail stated that P.W. Grosser had reports to issue regarding the removal of the tanks and soil sampling results. However, these reports will not be submitted to the DEC, nor the owners, until P.W. Grosser is paid for the work that was

Map ID

OLD GAS STATION (Continued)

S108467160

performed. He added that if payment is not received, the reports will not be submitted to the DEC, and, therefore, the case will not be closed and will be considered a site with contamination. Mr. Sing called and stated that Don Carlo has been officially retained by Grand Street LLC. They will mobilize either on 12/30/09 or 12/31/09 for installing the well in Grand Street. 1/13/10 - Raphael Ketani. I contacted Mr. Sing. He said that they have been trying to install a well along the Grand Street side of the property since 1/8/10, but they keep hitting refusal at about 30 feet. I asked him what type of equipment they were using to drill the well. He said it was a geoprobe and that they have damaged all of their penetration points. He added that the hammer for the geoprobe has also been damaged. I told him that it could be a big boulder down there. He said that he thought it was bedrock. I told him that bedrock is not so shallow in that area. I added that DEC wants a well along Grand Street, and that if one type of equipment doesn't work, then they should try another type. He said that he will discuss this with the owners. 1/22/10 - Raphael Ketani. I had a phone conversation today with Mr. Singh (718) 857-3100 (doncarlo@aol.com) as a result of a voice mail he had left on 1/21/10 and as a result of an e-mail he had sent also on 1/21/10. Mr. Singh had written that the well was installed 5 feet from the southeastern property line. He explained over the phone that this was really 5 feet from the neighboring property at 136 Grand Street (essentially 5 feet from the east corner of the site). He wrote that the well was installed last week to 44 feet below grade and that a groundwater sample was collected on 1/20/10. I told Mr. Singh that he should let the well sit for at least two weeks before sampling. I told him that everything is disturbed from the well installation and so the sample is not representative of ambient or normal groundwater conditions. We agreed to another round of sampling on February 19 for all of the wells. Mr. Singh had also asked whether the owners can construct the foundation on the site. I told him that DEC has not received a remediation report indicating that the contaminated soil has been completely removed. I told him that we have some soil end point data, but that's all. He said that he will put together the remediation report. I told him that the DEC needs pictures of the work, tables of end point results, manifests and other information. He said that he will include this. 2/2/10 - Raphael Ketani. I received an e-mail yesterday from Mr. Almskog regarding the status of the investigation and remediation report that is supposed to be submitted by P.W. Grosser to DEC. Mr. Almskog wrote that they have contract issues with the owners, Grand Suites, LLC, and that the report can't be submitted until this is resolved. The full e-mail is in the E-docs. 2/9/10 - Raphael Ketani. I checked the latest PBS registration for the site. The PBS registration is #2-611177 for 251-255 Berry Street. There are 5 tanks. Two 550 gal. gasoline tanks have been removed. The other 3 tanks were converted to non-regulatory use. These tanks are a 550 gal. gasoline tank, a waste oil tank, and another tank. However, this is not correct. All of the tanks that were at the site were removed. So the registration is not correct. A review of the 11/13/09 e-mail from P.W. Grosser indicates that there is significant contamination at depth at the location of SB-3. It is not clear why this location has such high contaminant levels. Grand Suites, LLC needs to conduct more soil borings in the eastern half of the site, including the area of the former service station footprint. Additionally, the DEC has not received the Site Investigation Report, nor the Remedial Action Work Plan. Therefore, the owners, Grand

S108467160

Suites, LLC, are in violation of the Order on Consent. Mr. Singh also sent me an e-mail requesting a letter whereby DEC orders the owners to conduct end point sampling throughout the site. I will send a letter concerning the four issues to Mr. Strulovitch. 2/10/10 - Raphael Ketani. John Urda, Assistant Regional Attorney, wrote his own letter. He sent this letter to Mr. Strulovitch today in place of my letter (see E-docs). 2/11/10 - Raphael Ketani. I received a call from Mr. Singh (718) 857-3100/cell (347) 728-0768. He said that the owner wanted something in writing from DEC requesting that the end point sampling be conducted. He also want the DEC to state in the letter that Grand Suites, LLC can go forward with constructing the building foundation. I told Mr. Singh that the DEC will not write such a letter. I told him that there is high contamination at depth at the location of soil boring SB-3, which is next to the UIC structure (a former garage dry well). I told him that, due to the results, the DEC is concerned that there is more contamination in the eastern half of the site. Therefore, more soil borings must be performed in this eastern area. Mr. Singh had no comment regarding the request for the additional borings. I told him that our legal counsel, Mr. Urda, had sent Mr. Strulovitch a letter indicating that he was in violation of the Consent Order as the site investigation report wasn't submitted by 12/17/09. I added that he owes DEC a \$50,000 fine and that the letter indicates the need for more borings and end point samples. Mr. Singh said that he understood. With that the conversation ended. Next, I talked to Mr. Almskog of P.W. Grosser (631) 589-6353. I asked him about the UIC structure. He said that, as best as P.W. Grosser could determine, it was a dry well that was within the footprint of the former garage building. He said that, from the soil analytical results for SB-3, material was probably dumped down the dry well. I asked him which were the reports that P.W. Grosser was holding on to pending payment by Mr. Strulovitch. He said that he has the UST Closure Report, the Indoor Air Resurvey Report, and the October 2009 soil sampling results report. 2/18/10 - Raphael Ketani. Mr. Singh sent me an e-mail with a letter attached which was the Preliminary Groundwater Sampling from MW-3 report. The letter was dated 2/16/10. The letter report concerned the preliminary groundwater results for MW-3. The VOCs and SVOCs were almost entirely non-detect. There were a small number of very low hits well below TAGM. However, there was a PCE hit of 15 ppb and a TCE hit of 8.2 ppb. There was also a groundwater elevation measurement of 58.25' below grade. This is very different from the other measurements for groundwater elevation which were a little above 46'. I wrote back asking whether the well had been properly developed. From my inspection of the site, I didn't remember a significant elevation change along the sidewalk that borders Grand Street. A 12 foot elevation difference just didn't seem possible. I wrote that the groundwater elevation should be resurveyed. I added that, when all of the groundwater chlorinated solvent concentrations are taken into account, it seems like the former waste oil UST site is the source of the PCE and TCE. I mentioned that the DEC still needed the full soil and groundwater results from P.W. Grosser to get the complete chemical picture. 2/22/10 - Raphael Ketani. Mr. Urda sent Mr. Strulovitch a letter today. The letter stated, amongst other things, that if the RIR is submitted by March 8, 2010, then DEC will suspend the February 10, 2010 Notice of Noncompliance. The RIR must include the followup indoor air survey results, analytical data, documentation of field activities, and a lab report with full groundwater analyticals. Also,

OLD GAS STATION (Continued)

S108467160

it was written that soil end point sampling must be performed throughout the site and that the contamination at SB-3 must be remediated. The PBS registration must be changed to reflect that all of the tanks have been removed. 3/8/10 - Raphael Ketani. Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593 called late today. She informed me that digging had taken place on 3/5/10 (friday) right next to her building (the new condominium building that is next to the site and fronts on Berry Street). The crew excavated along her foundation until they hit the footings which had been poured about October 2009. She said that the footings were 12 feet down and had been covered with fill material that had been brought from the outside. Ms. Crandall added that the DOB had stopped them from pouring more footings as they didn't have a permit. She also said that they told her that the DEC had given them permission to pour the footings. I told her that we never did such a thing. Ms. Crandall added that the owners use different addresses for the site for different agencies. They use 130 Grand Street for letters to the NYC DOB. Finally, she said that they took soil samples from the area where they were excavating. I told her that I will look into the matter. 3/9/10 - Raphael Ketani. I tried to contact Mr. Singh (718) 857-3100/cell (347) 728-0768, but could only leave a message regarding the excavating and soil sampling. Later, I contacted Mr. Singh. He said that what was going on was something different than what the caller stated. He said that they were doing soil sampling on thursday in the four sidewalls for the site. He said that they collected 18 soil samples and sent them off for processing. He said that he had PID readings for some of the samples and that the DEC will get the report. I told him that soil samples of the off site backfill are not valid samples. He said that he and his crew didn't sample off site fill, but only in place soils. His crew had to move some shoring supporting the wooden sheeting in order to take the samples. I stated that the DEC was requesting end point sampling throughout the site as there is high contamination in the dry well. I added that since the dry well was so contaminated, the DEC suspects that liquids were probably spilled on the former floor of the building that used to be on the site. I also mentioned that these liquids probably seeped through the floor and into the soil below. That is why the DEC wants sampling to take place within the footprint of the former service building. I told him that I will look for the report in the mail. 3/31/10 - Raphael Ketani. I hadn't received the soil end point report. So I tried to contact Mr. Singh at his office (718) 857-3100. However, I could only leave a message. 4/1/10 - Raphael Ketani. I hadn't received the soil end point report. So I tried to contact Mr. Singh at his office (718) 857-3100. However, I could only leave a message. 4/2/10 - Raphael Ketani. I hadn't received the soil end point report. So I tried to contact Mr. Singh at his office (718) 857-3100/cell (347) 728-0768. However, no one picked up the phone. 4/7/10 - Raphael Ketani. I tried to contact Mr. Singh, but he wasn't in. So I spoke to the president of Don Carlo Environmental, Romeo Santos. I explained to him that the DEC had requested some time back that a site wide end point sampling survey be performed. I told him that the DEC has yet to see this work take place. I added that back on 2/11/10, Mr. Urda had sent Mr. Strulovitch a letter stating that he was subject to a \$50,000 fine for not submitting the SIR by the due date and that more end point sampling needed to take place. I told Mr. Santos that end points needed to be taken within the footprint of the former service garage

OLD GAS STATION (Continued)

S108467160

as PCE contamination and other contaminants had been found in the dry well at the location of SB-3. Mr. Santos said that end points were taken in the sidewalls under the sidewalk and that the DEC should get this report very soon. I told Mr. Santos this was fine, but that the waste oil UST also appeared to be a source of volatiles. He said that he didn't think so and that he thought the contaminants were coming from off-site. I told him that I'll look at the report when I receive it. Later, Mr. Singh called me and said that the sidewall end point sample report was sent to the DEC today by Fed Ex. I told him that I will keep an eye out for it. Today I received the Tank Closure Report dated March 2010 and began my review. 4/9/10 - Raphael Ketani. I finished my review of the Tank Closure Report. The report shows that 18 soil samples were taken, 8 for the BS series on 1/27/10, and 10 for the EP series on 3/4/10. According to the site map provided, the locations of the borings appear to cover the site adequately. All of the analyses indicate that the contaminant concentrations are well below TAGM, except for the benzo series of analytes and their combustion products. These analytes are typically at the hundreds of ppb concentration at many sites throughout New York City. The other oil indicator analytes are at very low concentrations and suggest that there is very little oil contamination of the soil. Soil samples were taken at 10' below ground surface for the BS series of borings, and at 6' below ground surface for the EP series of borings. It is not stated in the report why the BS series of borings went down to only 10 feet. It is also not stated how they could go only 6 feet down for the EP series of borings and still get an undisturbed sample in the same location as the deeper BS sample. Also, I checked the PBS registration, #2-611177. Two tanks have status #5, closed and removed, but three tanks have status #3, converted to non-regulatory use. All of the tanks have closure dates, but they all need to have status #5. Also, I do concur with the removal of the soil in the north and south/southeast areas of the site. I spoke to Mr. Singh. He said that the BS series went down only 10 feet because this was one foot below the level that the owner will excavate all of the soil at the site. He said that the BS series of borings were through the ground. However, the EP series of borings were in the sidewalls of the site. That's why they are only 6 feet below the ground. Mr. Singh commented that there is soil contamination in the north and south/southeast parts of the site. He said that he told the owner, Mr. Strulovitch, that the soil has to come out. I told Mr. Singh that the DEC was in agreement with this plan. I told Mr. Singh that three of the tanks that were removed had a status of converted to non-regulatory use. I told him that this was incorrect and to change it to status #5, closed and removed. He said that he will do this. I added that there still is contamination in the dry well at the location of boring SB-3 that was put in by P.W. Grosser. I told him that it's about 26' to 28' down. He said that he will look into the matter. I told him that the contamination needs to be addressed some how. Next, I told him that there was a legal agreement between the owners and DEC that another round of groundwater samples have to be taken and another indoor PID survey of the school and the neighboring buildings. He said that he will have this done. I told him that the DEC needs a surveyed groundwater elevation flow map to the nearest hundredth of a foot. He said that this will be done. He asked that the DEC send a letter requesting that all of these actions be taken. I told him I will. A letter was drafted for Don Carlo Environmental wherein the owner was responsible, as per the Order on Consent, for

Map ID

Site

Database(s)

EDR ID Number
EPA ID Number

OLD GAS STATION (Continued)

S108467160

continuing the groundwater monitoring, submitting a groundwater flow map, conducting another indoor air PID survey, and registration of all five tanks as closed and removed. In the letter, DEC also requested that the contaminated soil in the north and south-southeast parts of the property be removed, and that the contaminated soil in the dry well be remediated. The letter was approved by Mr. Austin and sent out today. 4/13/10 - Raphael Ketani. I received the following e-mail from Taxy Texeira of Don Carlo: Please be advised that Don Carlo met with the owners of the subject property today and it was concluded to start with the excavation/remediation tomorrow (April 14, 2010). Also the PID survey will be performed within the basements of the adjacent buildings (apartment and school) and the corrected/updated PBS Application was submitted to the respective department for recordation. 4/19/10 - Raphael Ketani. I received an e-mail from Ms. Texeira. She wrote that the area of SB-3 is not a dry well, but just a contaminated area. She sent me 3 photos of the location of SB-3 (see E-docs). She also stated that the location of SB-3 is part of the area that they plan to remediate and that they presently have 120 cu. yds. of contaminated soil on site that is being stored for shipment. I wrote back that they needed to remove the contaminated soil very soon in order to minimize any odors. I also asked her to include in the remediation plan how Don Carlo will manage the deep contamination at SB-3. Ms. Texeira e-mailed me back that the soil will be hauled away tomorrow. She added that the contamination at SB-3 will be dug out as much as possible. I wrote that if the deep soil can't be dug out, then they will have to use soil treatment. 4/26/10 - Raphael Ketani. I received a call on 4/23/10 (while I was out for the day) from Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593/cell (718) 757-5664 (one of the neighbors). She stated that the owners of the site were putting in footings. Today, I contacted Mr. Singh (718) 857-3100/cell (347) 728-0768 and tried to find out what was going on at the site. He said that he wasn't sure, and that he will find out and call me back. Mr. Singh called me back. He said that the construction company is installing a grade beam to protect the sidewalk along Grand Street. He said that no footing or foundation work is taking place. The results for the soil end point samples that were taken some time ago have not come back yet. He added that it will take maybe three additional days for turnaround of the sample processing. I told him that it's alright. Mr. Singh asked whether the owners can install footings where the end points indicate that the soil meets or is below TAGM standards. I told him that this would also be alright. He said that he is putting a package of soil disposal manifests and other documents together to send to DEC. Mr. Singh mentioned that the contaminated soil at SB-3 was dug out down to 18 feet. He said that he purchased the soil treatment solution for treating the deep contamination from about 18 feet down to 28 feet. I told him that he will have to let the solution work for at least one month after it is injected. Then he will have to take a confirmatory sample. Mr. Singh said that he understood. I reminded him that groundwater samples still needed to be taken. He said that he will have this done. I tried to contact Ms. Crandall, but could only leave a message that the construction which was taking place was only the installation of a grade beam, not footings. 04/27/10 - Raphael Ketani. I made an unannounced site visit. I initially met the construction manager and the developer's representative. I saw that they had constructed a long footing along the Grand Street side of the property. The footing

OLD GAS STATION (Continued)

S108467160

ended before the northwest corner of the site (see E-docs). A backhoe operator was removing soil along the Berry Street side of the property. He had dug up some gray soil with a slight weathered gasoline odor (see E-docs). I pointed this out to the two people I had just met. They said that the soil will be removed from the site. I told them to remove it as soon as possible in order to prevent odor complaints. I looked over the site and didn't see any issues that needed addressing. The owner's representative told me that Mr. Singh and Mr. Santos were in the area and that they wanted to meet with me at the site. I agreed and stayed for their arrival. I met Mr. Singh and Mr. Santos. I pointed out the contaminated soil in the southwest corner (next to Ms. Crandall's building) that needed to be removed. Mr. Singh said that this is where the remote fills were and that the soil will be drummed up tomorrow. I mentioned that, as per the Order, Don Carlo had to submit another round of groundwater analytical data, a groundwater flow map, the soil end point data for the contaminated soil that was taken away, another round of indoor PID monitoring data, and the confirmatory soil sample data for the post-treatment sampling of the deep contaminated soil at SB-3. Mr. Singh said that he was aware of this and that he will submit the full report to DEC. After this, I left the site. 5/17/10 - Raphael Ketani. I received the 5/14/10 Subsurface Remediation Report from Don Carlo Environmental. I began my review. 5/18/10 - Raphael Ketani. I finished my review of the SRR. Two test pits (TP-1 and TP-2) were excavated on 4/14 and 4/16. One test pit consists of the area around SB-3. The other test pit concerned the L shaped area along the Berry Street and Grand Street sides. Five endpoint soil samples were taken from each pit on 4/20. The diagram showed where the test pits were, but not the endpoint locations. Also, there was no groundwater data. The Regensis HRC treatment solution was injected on 5/10. They were not able to gain access to the neighboring buildings or the school in order to perform a second round of indoor air monitoring. I spoke to Mr. Singh (718) 857-3100/cell (347) 728-0768 about the report. He said that he will send a new diagram showing the endpoint locations. He added that they will take confirmatory soil samples at the HRC injection site in one month. I asked him whether the staff from Regensis had recommended such a short wait time. He said that they had. I asked him what had transpired with the indoor air testing. He said that the Polish woman who owns the property on Grand Street simply refused to allow them to enter her building. Ms. Crandall told them that they had to have insurance before she would allow them to enter her building. Also, she said that she had to consult her attorney. The principal of the school across the street told them that they needed a permit from the School Construction Authority in order to do the indoor air survey. I told Mr. Singh that the second round of indoor air surveying would have been just to confirm the first round results, which showed no impacts from the site. I told him that he didn't have to do a second indoor air survey. I asked him what had happened to the gasoline contaminated soil that I had seen during my 4/27/10 visit. He said that the soil was drummed up and the manifest for the soil is in the SRR. Lastly, I told Mr. Singh that the DEC was owed the results of the next round of groundwater samples and the confirmatory soil sample from the SB-3 area. He said that groundwater sampling will take place this week. Mr. Singh also wanted a letter from the DEC approving the SRR and stating that foundation construction can start. I told him that I will see whether Mr. Austin, my supervisor, will allow me to write such a letter dealing

with foundation construction. I added that the monitoring wells must remain intact and accessible and the area of SB-3 must also remain accessible. He said that they will. With that, I told him that the DEC is approving the SRR. Later, Mr. Singh sent me the revised Figure 1 for the SRR. I looked it over and it showed the endpoint locations. I put it in the e-docs. 5/20/10 - Raphael Ketani. I submitted a draft letter to Randall Austin, Chief of the Spills Unit, approving the Subsurface Remediation Report. Mr. Austin approved the letter and it went out today. 5/24/10 - Raphael Ketani. Moishe Blum called requesting permission to build on the property. He was on a speaker phone. I could tell that someone else was in the room because there were conversations going on between him and the other person. I told him that we still needed to see the results of the confirmatory soil sampling and the next round of groundwater samples. He said that he wasn't going to build the first floor, just do other work. I told him that the DEC is not going to give permission to build in some area, but not in others, or to do certain work, but not other work. I said that we don't want to get into such a complex permitting situation. I added that DEC first wants to see the environmental project come to a conclusion and then we will say it's alright to build. Mr. Blum said that he understood and the conversation ended. 5/25/10 - Raphael Ketani. Don Middleton, Jr. of Middleton Environmental called to ask whether 128 Grand Street was close to closer regarding the spill. I asked him who he represented. He said that he represented a bank and they were wondering whether or not to give the owners of 128 Grand Street a loan for the building construction. I told him that a confirmatory soil sample still needed to be taken at the location of the contamination hot spot, formerly SB-3. I added that the soil analyticals may indicate that more treatment is necessary. He asked about whether any groundwater sampling needed to take place. I told Mr. Middleton that Don Carlo Environmental must take at least one round of groundwater samples. I added that the well closest to the former location of the buried waste oil tank had hits of chlorinated solvents and the DEC wants to see whether the solvents came from the tank or off site. Mr. Middleton said that he understood and the conversation ended. 6/15/10 - Raphael Ketani. Mr. Almskog of P.W. Grosser (631) 589-6353 called to inform the DEC that they have been subpoenaed to produce their records regarding the spill site. He said that he wasn't sure who was making the request or why. 6/18/10 - Raphael Ketani. Today Mr. Singh (718) 857-3100 sent me a report dated 6/17/10 containing groundwater analytical results for four (4) wells and confirmatory soil sample analytical results for a sample taken at 32 feet below grade where the treatment solution was injected (former SB-3 site - drywell). The results were completely non-detect for all 5 environmental samples with the exception of some chlorinated solvents which appeared to be coming from offsite and upgradient: tetrachloroethene trichloroethene cis-1,2-dichloroethene MW-3 (upgradient) 16 56 17 MW-1 (waste oil tank) 16 55 16 MW-4 (downgradient 8.7 62 14 MW-5 from former tanks) 19 58 15 I found the report to be acceptable and I told Mr. Singh that the DEC considered the remediation to be complete. Based upon the data in the case file and the 6/17/10 report, I have determined that the contamination has been removed from the site. Also, the owners plan to install a vapor barrier over the site before the above ground part of the building is constructed. As the contamination on site has been removed, I have determined that there is no threat to the public or the environment from conditions at the site. Therefore, I am closing the spill case.

OLD GAS STATION (Continued)

S108467160

7/7/10 - Raphael Ketani. Amanda Crandall, of William S. Burg Property, LLC (718) 384-5593/cell (718) 757-5664 called yesterday and wanted to know whether the site had been cleaned up and whether the owners and the developers were allowed to construct on the property. I told her that the soil and groundwater test results all indicated that the oil and gas contamination had been cleaned up. So, the spill case was closed on June 18, 2010. She said that was fine, and the conversation ended."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "7/28/16 - Obligado - Desk Duty - I spoke to Matt Carrol. They are actively digging for foundation for a development. Found soil contamination while digging. Assigned Santosh Mahat. 8/9/16 - Obligado - CSL sent cc to Matt Carrol via email. 8/10/16: Mahat e/c: DEC Mahat received an email update on the spill case. The ground water sample result were below CP 51 Guidance value. A complete report will be submitted to the Department once the excavation is completed. Matthew Carroll, PE ***** Retained Contractor Tenen Environmental 646.606.2332 x103 DEC is waiting for a report. 9/12/2016 - V. Brevdo Spill Case is transferred from Spill Prevention and Response to Remediation Section B due to project manager Santosh Mahat departure to the other DEC Program, as per 9/9/16 discussion between Randall Austin and Vadim Brevdo. VB 9/12/16 - Raphael Ketani. The spill case was assigned to me due to a caseload realignment. I checked the ACRIS property database for the ownership. The block and lot were 2358 and 6. I found a deed dated 10/15/15. The buyer was 125 Metropolitan Owner, LLC, c/o David Kramer, the Hudson Companies, Inc., 826 Broadway, NY, 10003. The latest documents have in ACRIS have Hudson Metropolitan, LLC at the same address. I checked for any

PBS records using alternate addresses I had found in the NYC DOB website. These alternative addresses were 123-125 Metropolitan Avenue and 92-94 North 3rd Street. I tried to reach Matthew Carroll, PE, by phone at Tenen Environmental (646) 606-2332 x103, but I could only leave a voice message. 9/23/16 - Raphael Ketani. Mr. Carroll called me back. He said that they excavated to the design depth and took soil end point samples and what they thought was a groundwater sample. No petroleum contamination was found in any of the samples. The case is with the NYC OER and so they put in a vapor barrier. The foundation slab has been installed and building will commence. The closer report will be sent soon."

Remarks: "historic spill - cleanup in progress"

DEC Memo: "12/5/15 TJD Recall - citizens complaints verified, multiple private vehicles impacted by product sprayed from burst hydraulic hose on pile driver at neighboring construction site. No contact personnel available at redevelopment site (125 Metropolitan Avenue). Photos on DECDOCS. 12/6/15 TJD Referall to DLE - ECO Cummings to perform site inspection 12/22/15 TJD Email received from Matthew Carroll @Tenen Environmental - uploaded to DECDOCS 12/23/15 TJD Email response to Tenen Environmental uploaded to DECDOCS. 4/26/16 TJD Email sent to Matt at Tenen Environmental requesting closure documentation. 10/13/16 TJD File review. Closure report has been submitted by Tenen Environmental. As per report, a total of 102.62 tons of fill material was excavated from the site as part of the site redevelopment process. The petroleum contaminated soil associated with the discharge from the pile driver was reported to be included in the total volume of soils excavated, transported and disposed of as part of the site redevelopment process. The consultant has included a map of the grid map of the site depicting those areas impacted by the reported discharge. Based upon the documentation provided the affected spill area has been over excavated during the site redevelopment process. No further action is required associated with the reported spill from pile driver. All documentation has been uploaded to DECDOCS. Spill closed."

Remarks: "caller reporting that her vehicle and the parking garage is covered with oil. spill caused by construction company next to talkers residence. Caller is looking for help as to what to do"

DEC Memo:

"6/23/15: Mahat DEC Mahat contacted Mr. Danny Singh inquiring more about the spill and its nature. He mentioned that during the excavation for the foundation they discovered some gasoline contaminated soil. Sample has been taken from the bottom of the open excavation. Work has been stopped until the laboratory result will be published. A work plan will be proposed to the owner to remediate the site. 7/6/15: Mahat e/c: DEC Mahat received an email from Mr. Singh providing property owner information: Mr. Mahat, Per our telephone conversation and your recent request, please see the following:
Property Owner: Grand 26, LLC 233 Kent Avenue, Apt. 4 Brooklyn, NY 11249 And/or Mr. Shai Iluz 150 Grand Street Brooklyn, NY 11249 Tel: 718-216-1500 As of Wednesday, June 24, 2015 gasoline contaminated soil was encountered during ongoing excavation at the site. Excavation was put on hold and grab/composite soil samples were collected and submitted for laboratory analysis. Soil samples will be analyzed for intended disposal facility's waste characterization requirements. Upon receipt of the laboratory analytical results a copy will be sent to you for your records. If further information is needed, please do not hesitate to contact me. Regards, Dhanraj Singh

7/17/15: Mahat DEC Mahat received an email from Mr. Singh updating the project: Mr. Mahat: Please note that the waste (soil) characterization for the soil samples taken and analyzed were submitted to a PA disposal facility. The facility accepted the soil and arrangements are being made to excavate and transport the soil off site to the designated disposal facility in PA. All soil removed from the site will be documented on legal waste manifest. I will coordinate with you as the job progresses and prior to the collection of endpoint soil samples. Regards, Dhanraj Singh 7/28/15: Mahat DEC Mahat received another email update from Mr. Singh. Mr. Mahat, To date we have removed twelve truck loads of gasoline contaminated soil from the mentioned site. Impacted soil was excavated in a safe manner whereas not to disturb the onsite one-story structure with excavation sidewalls sloped at 45 degrees angle down to termination depth of approximately 14 feet bgs. All excavated materials were manifested and transported offsite to a permitted disposal facility in Pennsylvania. We are at a point where the impacted soil was removed and excavation depth has to stop in order to secure the onsite structure. I will be collecting post excavation (endpoint) soil samples tomorrow and would like to backfill site to the desired grade. Kindly advise if you would like to come out to the site for inspection or we are permitted to sample and backfill. Regards, Dhanraj Singh Mr. Mahat, To date we have removed twelve truck loads of gasoline contaminated soil from the mentioned site. Impacted soil was excavated in a safe manner whereas not to disturb the onsite one-story structure with excavation sidewalls sloped at 45 degrees angle down to termination depth of approximately 14 feet bgs. All excavated materials were manifested and transported offsite to a permitted disposal facility in Pennsylvania. We are at a point where the impacted soil was removed and excavation depth has to stop in order to secure the onsite structure. I will be collecting post excavation (endpoint) soil samples tomorrow and would like to backfill site to the desired grade. Kindly advise if you would like to come out to the site for inspection or we are permitted to sample and backfill. Regards, Dhanraj Singh DEC Mahat left a voice message to Dhanraj Singh for a call back. 8/28/15: Mahat e/c: DEC Mahat received a closure report on the spill case. It has been uploaded on D2 for reference. Spill case is waiting for a closure report review. Review Pending. 9/8/15: Mahat DEC Mahat reviewed the report: WORK PERFORMED: Work performed involved: * Soil excavation, loading of trucks for legal transportation offsite to disposal facility. * During excavation, a 550-gallon previously used gasoline UST was which was encased with concrete was excavated and exposed. * The tank was purged and cut opened in order to access the interior contents. * Tank bottoms were removed and interior walls was scrape cleaned and made gas free. * All tanks contents removed were contained into a NYCDOT 55-gallon drum. * The tank loaded as a whole and disposed of as scrap metal including piping. * Upon completion of the tank removal process, soil remediation continued at the site. * A total of twelve (12) trucks transported 401.49 tons of gasoline contaminated soil from the subject property. * Five (5) post excavation soil samples were collected as grab samples from the bottom of the grave and the four (4) side walls. * Soil samples were field screened for petroleum utilizing a portable Photo Ionization Detector (PID) model PGM-30. Soil samples did not depict any smell of petroleum; however, discoloration in the soil was identified. * Due to structural issues, the excavation grave which was 11ft W x 18ft L x 14ft D was

S117974811

backfilled Soil samples collected were placed into laboratory certified glass jars, labeled BS-1 and EP-1 through EP-4 and documented on a Chain of Custody form. * The soil samples were submitted to York Analytical Laboratories in Stratford, CT for analysis using EPA Test Methods 8260 for Volatile Organic Compounds (VOCs) and 8270 for Semi-Volatile Organic Compounds (SVOCs). * Submittal of Site Remediation report to the NYSDEC Spills Unit for closure of open spill number 1503264. * Submittal of NYSDEC Petroleum Bulk Storage (PBS) application for the registration/deregistration of the two (2) removed tanks (1/1,080-gallon #2 fuel oil and 1/550-gallon gasoline USTs). FINDINGS: Laboratory analytical results of the soil samples identified one (1) low level VOC (Tetrachloroethylene) and nine (9) low level SVOCs (Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Fluoranthene, Phenanthrene and Pyrene) were detected in the four (4) endpoint wall samples which were collected at seven feet (7) below grade surface (bgs); contaminants detected were well below their respective regulatory guidance values. Laboratory analytical results were compared with NYSDEC Unrestricted Use Soil Cleanup Objectives. Conclusion/Recommendations: Based on the work completed (tanks and impacted soil removed from the site) and laboratory analytical results, BSD has concluded that the gasoline impacted soil was removed from the site in accordance with the NYSDEC remediation protocol; however due to site restrictions where limited working space allowed the removal of all contaminated soil, residual contamination were left onsite. BSD recommends that prior to the site restoration; a passive venting system together with a vapor barrier should be incorporated with the site renovation. Based on the report that is submitted on 8/28/15, the Department does not warrant any remedial investigation on the site. No further action is required. Spill case will be closed on NYSDEC Spill Database. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "1/15/08 CalledNotifier; Steven Uccellini, Project Engineer, J.R. Holzmacher (631)234-2220 ext.105. An excavator's hydraulic line ruptured at the entrance to the site. Spill was onto #4 gravel and soil below. Product did not resch sewer. Excavator to be fixed asap so that it can be moved and the spill can be cleaned. Field contact: Gerry Violet (917)378-2136. Sent soil contamination letter to: Steven P. Ucellini, Project Manager J. R. Holzmacher, P.E., LLC 300 Wheeler Road, Suite 303 Hauppauge, NY 11788 Received email from S. Uccellini. He directed G. Violet to excavate all affected amterial and place on and cover material with plastic as soon as the excavator is operable. He is concerned about groundwater depth which is 20 feet down. DEC Piper to respond. bf Piper arrived onsite. Contamianted soil was on poly sheeting. It will be sampled and disposed of . E-doc manifest when received. Closed."

Remarks: "EXCAVATOR LEAKING ON SITE:"

Contact Name: PAUL SANO
Contact Phone: (516) 322-3820
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND/VOUGHT 1/30/2002-VOUGHT-Site visit by Kolleeny, Sangesland and Vought on 11/19/2001. KC Transporters is a subcontractor for Empire State Oil (contact:Dave 718-627-5100). Owner of property is Manuel Sosa (was out of town at time of spill). Owner's representative was his daughter Olga Sosa (718-384-7490) who was on-site. According to Olga, KC had hired AL Eastmond and Sons to perform the cleanup. Eastmond began the cleanup including the vacuuming of free product. According to Olga at this point in the cleanup she was approached by Paul Sano from KC who asked her to sign a waiver relieving KC of all responsibility of the spill. Olga refused and as a result she ordered the cleanup to stop. The DEC arrived on-site and explained that she was indeed responsible for the cleanup as the owner of the property. She was given a list of contractors and agreed to choose one immediately. Paul Sano explained the reason for the spill was a missing section of pipe from the tank to the boiler. Olga and her brother (Dave Sosa) said they had not had the pipe removed and it was in place up until the delivery. They only noticed the missing section after KC Transporters repairmen had inspected the spill in the basement. Furthermore according to Dave Sosa a toolbox next to the missing section of pipe owned by the Sosas had oil stained handprints on it and was missing wrenches. The issue of how the pipe section was removed was never resolved. Visual evidence of overfill included the staining of the wall by the vent pipe and the oil stains out of manyways on the top of the tank. Officer Michael Mat of the NYSDEC arrived on-site and issued KC Transporters a ticket for failure to report a spill within 2 hours (see spill and call received times). Olga Sosa was also issued a ticket for not updating the name on the PBS registration after they bought the property from the previous owner.
11/21/2001-Petroleum Tank Cleaners (PTC) arrives on-site to complete cleanup and were hired by Olga. PTC arrived on-site and used speedy dry to pick up the remaining free product and steam cleaned the cellar and the vent pipe wall on the sidewalk. There were no floor drains or sewers affected and the entire cellar floor was concrete. For spill closure the following were requested (dates are when the materials were provided): 1) pictures of cleanup and letter of tank piping repair from Olga (1/03/2002) 2) Disposal manifests from PTC (1/30/2002). Spill closed by Vought 1/30/2002."

Remarks: "PROBLEM WITH OIL PUMP CAUSED PRODUCT TO SPILL - EASTMAN HAS BEEN CONTACTED FOR CLEAN UP - PRODUCT WAS VACUUMED OFF BASEMENT FLOOR AND THEN BUILDING OWNER'S TOLD THEM TO LEAVE"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 4/28/2003 - Zhao/DO: There are 4 transformers left on site (inside the cemetery) by a contractor. It was believed that the stain came from one of them. The stain is within the seminary storage area and there is no public access. RP wants to have those transformers removed ASAP. The DEC has advised the property representative (Chris Touhy) to secure the spill area and proper clean up procedures including sample analysis before clean up, and clean up methods upon PCB levels. A B Environmental Consulting firm is possible the involve contractor to remove the transformers and clean ups. A B Environmental's address is 1599 Ocean Avenue, Bohemia, NY; and phone number is (631) 567-6545. 10/27/03 TJD AB oil completed transformer removal and contaminated soil digout. Manifests and endpoint analysis included with report. No TAGM exceedances noted. Spill closed."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis notes: approx 15 gallons of oil on 6 of dirt, in TM 851, unable to see any defects at this time, unable to pressure test due to conditions. 1-sample taken, records show 410PPM dated 12/10/98. pressure tested unit, unit not holding pressure, leak appears to be coming from ground switch handle shaft, unit is 15 gallons low on oil. No records to show any sewer connections. We have to deenergize feeder which should be between 7 and 8pm, and will remove transformer monday 10-11-99. DEP is issuing a commissioners order requiring a complete cleanup of the vault by 8:00pm 10-10-99. Also they are issuing a notice of violation for the transformer not having a PCB label. E&S crew arrived at 14:50 hrs to begin excavation. 16:30 ERT reports, chem lab gave ert a verbal that oil sample is over 50ppm, lab seq # 99-10651 370 ppm. SPACE 49874 Dep Nancy Barsoum is back on location and is very satisfied, she will back tomorrow afternoon approx 5:00pm, also transformer is in the process of being drained. removed 460 gallons from transformer, draining is completed. EPA# NYP004044467. transformer in tm851 removed. 9 barrels of solids removed. found clogged drain in nwc of structure--no discharge--sealed drain perm. with garton plug, steamed and double washed with bg-760 and slix, cannot replace transformer at this time due to structural damage to walls. DEC Inspector notes: Duplicate of spill #9908351"

Remarks: "transformer in vault leaking material due to faulty equipment clean up unk sample taken coned#128344 pcb test done on 12/10/98 test results 410 ppm no callback necessary"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "e2mis no. 156962: 1/25/05 11:00 HRS R. CILENTO #44214 BQE REPORTS FINDING APPROX 1/2 GAL OF UNKNOWN OIL ON APPROX 250 GAL OF WATER IN TM45. THE SOURCE AND CAUSE OF THE SPILL IS UNKNOWN. THE EXISTANCE OF ANY SEWER CONNECTIONS, SUMPS, OR DRAINS COULD NOT BE VERIFIED AT THIS TIME DUE TO THE WATER AMOUNT. STANDING WATER HAD NO MOVEMENT. ENV STOP TAG# 35519 WAS PLACED AND ONE LIQUID SAMPLE TAKEN ON E PRIORITY FOR PCB ANALYSIS ON CHAIN OF CUSTODY #DD14543. THE UNIT COULD NOT BE PRESSURE TESTED AT THIS TIME DUE TO FEEDER BEING ENERGIZED, HOWEVER THE OIL LEVEL IS BEING CHECKED AND WILL BE REPORTED BACK TO THE DESK. HISTORICAL PCB RECORDS INDICATE 40 PPM DATED 11/27/01. CLEAN UP PENDING LAB RESULTS. ALSO THE ENGINEERING RECORDS WERE CHECKED AND NO CARD WAS AVAILABLE FOR THIS TM. UPDATE 1/25/05 14:30 HRS R. CILENTO BQE REPORTS THE UNIT FAILED THE PRESSURE TEST AND IS SCHEDULED FOR REPLACEMENT 1/26/05 AM. ALSO THE SAMPLE WAS TAKEN FROM THE UNIT. Wednesday, January 26, 2005 12:30 AM Lab Sequence Number: 05-00684-001 STRUCTURE: VAULT TM 45 EQUIPMENT: TRANSFORMER SERIAL #: 2311387 TOTAL PCB 107 ppm Update - 1/26/05 0100hrs epa# nyp004128542 1-26-05 16:00HRS R. CILENTO (NET) REPORTS, DRAINED TM, TAG ON UNIT READS 325 GALLONS AND REMOVED 285 GALLONS. ORIGINAL REPORT INDICATED 1/2 GALLON IN TM, THEREFORE 39.5 GALLONS UNCOUNTED FOR. UPDATE: 1/26/05 - 1715 BQE, REPORTS TRANSFORMER REMOVED FROM STRUCTURE. 1/26/05 = 22:00 Hrs = Env Ops Supv C. Fernandez reports that an Astoria Tanker removed 715 gallons of liquid from the structure. Env crew removed 2 drums of debris from structure and brought them back to 3 Av Yard under one trip rule. Env Ops Supv C. Fernandez called Clean Ventures to send their Vactor due to the fact that there was at least 15-20 drums of debris left in structure. Env crew and Clean Ventures crew arrived on location at 22:15 Hrs. From: Williams, Eugene Sent: Thursday, January 27, 2005 7:05 AM Subject: #2 Update for incident #156962 for TM-45 Environmental operations crew D. Lichtenstein, S. Adedapo, O. Jones, and D. Rodriguez along with Clean Venture >50 truck cleaned the vault of all debris and (3) more drums were generated with large debris, zone material, and PPE. The structure was double washed with 760, and Safe Wash; 150 additional gallons of liquid was also removed. the job was completed 100% and Stop Tag was removed; the (3) drums were transported back to stores at 3rd Ave Yard under the (ONE TRIP RULE). *** AS PER E. WILLIAMS, THE CLEANUP WAS COMPLETED AT 01:30 HRS. *** "

Remarks: "ON 250 GALLONS OF WATER: NO TO THE 4 QUESTIONS: COMING OFF THE 24 HOUR CLOCK: WOULD NOT COMPLETED BY 11AM THIS MORNING CONED # 156962"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 9/17/02 TJD Spoke with Romeo Santos of D.C. Environmental Service concerning site. Site is a vacant lot which reportably was a gas station in the 1930's. (6) unregistered 500 gallon vertically placed UST's were removed from site and contaminated soils noted during excavation. Consultant and/or owner did not register tanks prior to removal in accordance with PBS regulations 612.2 & 613.9. Soil samples collected with results expected 9/19/02. Consultant directed to submit analytical data to regional office upon receipt. A minimum of (3) groundwater monitoring wells are required. Owner Information: Dinalli Construction 6833 Shore Road Brooklyn Joe

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	21553
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	417
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	1
Waste code:	D005
Waste name:	BARIUM
Amount (Lbs):	7410
Waste code:	D007
Waste name:	CHROMIUM

bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which has started in 2011. Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the past ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. In 1999 RGJ contractor closed in place 14 USTs used to store VOCs. RGJ reported soil contamination around the USTs. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001, after Con Edison, the owner of the adjacent property discovered Volatile Organic Compounds (VOCs) under their parking lot and sued Fyn Paint Co. The investigation at the site revealed soil and groundwater highly contaminated with VOCs. After multiple phase investigations and negotiations, starting in January 2007, an IRM/pump and treatment of the groundwater was installed and operated. The RAWP was approved in 2009, and an excavation of the contaminated soil around six of the USTs constituting the source of VOCs was completed in 2010. Additional remedial design for a dual phase extraction system is being negotiated. In November 2011, RCRA Closure field work started under EPA supervision and it continued through 2012 performed by the Volunteer's consultant. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of a layer of antropogenic fill material (0-12 feet and the rest to 75 feet of medium and course sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River. This site is being remediated under a Voluntary Cleanup Agreement (see site no. V00380).

Env Problem:

Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are highly contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and ConEd parking lot. c) concentrations: Groundwater monitoring conducted at the site revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in few of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In July 2011, the RCRA closure work plan was approved and in November 2011, EPA started the RCRA site investigation as a response to the Department's request for emergency action. RCRA closure activities continued through 2012.

The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013. A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and coarse sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem: Nature and Extent of Contamination:a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes.b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2013.A Remedial Design for a dual phase extraction system was approved.

Health Problem: It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical

Update By: JHOCONNE
Site Description: The area of concern subject to this work is considered off-site from BCP site C224154 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224154 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Fyn Paint and Lacquer Co., Inc.- Off-Site is located in an urban area in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Site Features: The site consists of the areas surrounding the Fyn Paint facility. Site Geology and Hydrogeology: Based on information collected during the investigation of C224154, shallow soil consist fill material followed by medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (bgs). Groundwater flow direction is toward the west. The depth to groundwater is approximately 12 to 15 ft below grade. The East River is located approximately 500 feet to the west of the Fyn Paint site. Env Problem: Nature and Extent of Contamination: The remedial investigation for the C224154 site revealed: a) contamination: the soil, soil vapor and the groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes which have migrated off-site from C224154. b) areal/depth extent: the VOC plume from site C224154 extends across the footprint of the Fyn Paint building under the adjacent sidewalks, parking lot and streets. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in on-site and off-site monitoring wells. Additional investigation is necessary to delineate the plume emanating from the Fyn Paint site. Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Site Description:

Location: The Fyn Paint and Lacquer Co., Inc. site is located in an urban area at 230 Kent Avenue in Brooklyn, Kings County. The site is situated on the block bounded by Kent Avenue to the east, Metropolitan Avenue to the north, North First Street to the south and River Street to the west. Alternate addresses for the property are: 230-232 Kent Avenue; 76-80 River Street; and 29-37 North First Street. Site Features: The site consists of a 0.135-acre lot improved with an unoccupied two-story industrial/warehouse building with a gross floor area of approximately 5,862 square feet. A small basement contains the heating oil tank, furnace and controls for the sprinkler system. Current Zoning and Land Use: The site land use is currently recorded as Industrial and Manufacturing. Zoning for the property is M3-1, which is designated for areas with heavy industries that generate noise, traffic or pollutants. The on-site building is currently vacant. Past Use of the Site: Past land uses associated with the site include a chemical and coatings company (circa 1949) and paint and lacquer manufacturing (1959 - 2011). Prior to entry into the BCP, the site was managed under New York States Voluntary Cleanup Program (VCP). Under the VCP a dual phase extraction system was installed to address on-site and off-site contamination in soil and groundwater. The system has been operating intermittently since 2012. Site Geology and Hydrogeology: The ground surface at the property consists of concrete and asphalt pavement. The shallow soil beneath the property consist of medium and coarse grained brown sand with some silt and a trace of gravel. In general, the subsurface consists of interbedded layers of sand, gravel, clay and silt to approximately 65 feet below ground surface (fbgs). Groundwater flow direction beneath the property is toward the west. The depth to groundwater is approximately 12 to 15 fbgs. The East River is approximate 500 feet to the west of the site boundary. Nature and Extent of Contamination: A remedial investigation for the site was completed under the Voluntary Cleanup Program, site code V00380. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides/herbicides, and PCBs. The investigation identified

the primary contaminants of concern in the soil, soil vapor and groundwater as VOCs including acetone, ethylbenzene, toluene, and mixed xylenes from the 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during 50 years of manufacturing of paint and lacquer. Soil: VOCs in soil extend across the footprint of the Fyn Paint building and beneath the adjacent property and sidewalks to the north and west. The contaminants in soil include xylene at concentrations of up to 7,000 parts per million (ppm), acetone at 19 ppm, toluene at 4,000 ppm, and ethylbenzene at 1,700 ppm. Groundwater: During the groundwater monitoring sampling event conducted in October 2015, non-aqueous phase liquid (NAPL) and dissolved-phase contamination was detected in on-site and off-site monitoring wells. In on-site monitoring wells the dissolved toluene was as high as 16,000 parts per billion (ppb), xylene was as high as 13,400 ppb, and ethylbenzene was as high as 1,700 ppb. In the adjacent off-site monitoring wells the toluene was as high as 240,000 ppb, xylene was as high as 108,000 ppb, ethylbenzene was as high as 18,000 ppb, and acetone was as high as 35,000 ppb. An off-site monitoring well across Kent Avenue had toluene as high as 370,000 ppb. Sub-slab vapor: Sub-slab vapor samples were collected beneath the on-site buildings basement slab and the following VOCs were detected: acetone at up to 6,400 micrograms per cubic meter (ug/m3); benzene at 1,200 ug/m3; toluene at 180,000 ug/m3; xylene at 186,000 ug/m3 and ethylbenzene at 36,000 ug/m3. Contaminants in sub-slab vapor extend to the property boundaries and likely extend off-site.

Health Problem:

People may contact contaminated soils or groundwater if they dig below the surface. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion on-site. Further evaluation is needed to determine whether soil vapor intrusion is a concern for off-site structures.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Corrective Action Summary:

Event date: 11/29/1985
Event: RFA Completed

Event date: 02/10/1993
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 12/28/2000
Event: RFA Determination Of Need For An RFI, RFI is Not Necessary;

Event date: 12/28/2000
Event: RFA Completed

Event date: 09/24/2009
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/24/2009
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 09/24/2009
Event: CA550NR

Event date: 09/24/2009
Event: Corrective Action Process Terminated

Event date: 09/24/2009
Event: Date For Remedy Selection (CM Imposed)

Event date: 09/17/2013
Event: CA800YE

Facility Has Received Notices of Violations:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "2/8/05, 3:43 PM - e-mail from Matthew Madsen, Con Ed project manager: Remember that 'spill' we talked about this morning at Kent and Metropolitan? Well, as it turns out, what they were looking at was foam glass insulation (the typical configuration for the pipeline inside to out is pipe, coal tar, expanded foam glass insulation, and then a canvass wrap as an outer layer). During pre-work test pitting and sampling, all of these layers have been sampled in the past. The foam glass and canvas are non-ACM and have not turned up any hazardous constituents (the pore space in the foam glass does contain hydrogen sulfides, so there is an odor when you cut or crush the stuff). Any way you slice it, there is no oil spill/release at this location. Close out. (JHO) ~~~~~ e2mis no.
157121: 08-FEB-2005 10:45 HRS. CONSTRUCTION MGMT.DEPT.
CH.CONSTRUCTION INSPECTOR J.RUIZ EMP# 50415 REPORTS: WHILE ON LOCATION FOR REMOVAL OF A OIL PIPE LINE (KENT AVE PROJECT) FOUND APPROX. 50 GAL'S OF UNKNOWN OIL ON SOIL IN A TRENCH. NO WATER. OWNER OF SUBSTANCES IS UNKNOWN. MR. RUIZ MADE NOTIFICATION TO EH&S REMEDIATION MATHEW MADSEN, WHO WAS GOING TO CONTACT THE DEP. UPDATE 08-FEB-2005 11:50 HRS. MR.J.RUIZ REPORTS: THE NAME OF THE PROJECT IS THE #7 FUEL OIL LINE REMOVAL PROJECT AND IT IS UNDER THE CONTROL OF EH&S REMEDIATION. UPDATE 08-FEB-2005 13:55 HRS. ERT W.CAPUNE EMP# 85485 REPORTS: ARRIVED ON LOCATION 12:15 HRS. AFTER INVESTIGATION OF EXCAVATION FOUND SUBSTANCE TO BE FOAM GLASS. AS PER A CONVERSATION WITH EHS S.M.E. ANDREA SCHMITZ TO DISCUSS INCIDENT: THERE IS NO REASON TO BELIEVE THE FOAM CONTAINS ASBESTOS BUT WILL SAMPLE ANYWAY."

SPILL IS CONTAINED. NO SEWERS OR WATERWAYS AFFECTED. NO MOVEMENT IN THE WATER. NO SEWER CONNECTIONS. NO SUMPS. TAG # 43915 PLACED IN STRUCTURE. CHAIN OF CUSTODY FORM # CC16139 FILLED OUT AND MARKED 'E' PRIORITY. CLEANUP PENDING LAB RESULT. UPDATE: 05-2004 2200HRS LAB RESULTS RETURNED LSN# 04-08028-001 4476 PPM UPDATE: 05-OCT-2004 2244HRS WILL REMOVED FROM 24 HOUR PROGRAM DUE TO HIGH PCB COUNT UPDATE: 05-OCT-2004 2315HRS EPA # NYP-004-125-415 UPDATE: 06-OCT-2004 B BROWN REPORT FOUND D FAULT TAG# 01939 PLACED IN STRUCTURE M-3419 ON FEEDER 4B07 / 4B08. (INFORMATION FROM THE D-FAULT DATA BASE) 10-05-04 SIGNED BY ANTHONY CHRIMINI. UPDATE 10/21/2004 19:10 HRS... PER O.S. TINO FERNANDEZ... OVER 500 CLEAN UP IS STILL IN PROGRESS... HE REPORTS FOUND A CRACK ALONG THE MIDDLE OF THE FLOOR, THE CREW WILL SEAL WITH QUICK FORM CEMENT... E.VESCE UPDATE: OCT-21-2200HRS AS PER EMAIL FROM T FERNANDEZ 21:45 Hrs = 10/21/04 = Env Ops Supv C. Fernandez reports that after Feeders 4B07 & 4B08 were grounded and tagged by the FOD the Env crew removed 3 drum of solid debris and 1 drum of bagged asbestos arc proofing (removed by FOD crew). Crew used three - 5 gallon containers of BioGen 715 to try and remove greasy substance on floor. Left a length of matting on floor for UG crews to work on. Tag remains in place pending soda blast which cannot be done until UG finishes work on both feeders. All liquids were removed by an Astoria tanker and drums are to be picked up by an Astoria Transportation after midnight. Supervisor Fernandez left Cone Hives crew on location securing area for UG crews in AM. UPDATE 22-OCT-2004 2035HRS FLUSH SUPV G. WILLIAMS REPORTS CRACK IN FLOOR IS NOT SEALED AND REQUESTS VERIFICATION ON HOW TO PROCEED. ERT T. DELGADO WAS CONTACTED, HE STATED CRACK CAN BE SEALED, AND CONTINUE WITH GUIDELINES FOR OVER 500 CLEANUP. CCBORCHERDING 01581 UPDATE 23-OCT-2004 06:20 HRS. AN E-MAIL FROM K.VAVALLO: Update - 10-23-04 6:05am K. Vavallo Env. Ops. reports at 1:00 am Env crew removed 3 barrels of debris from MH 3419. An Astoria transportation truck

Spiller Company: 999
Contact Name: JOYCE AGUILLAR
Contact Phone: (818) 434-4823
DEC Memo: "12/06/2008-Zhune spoke to Joyce Agulan (818)434-4823. She is a tenant. She occupies the basement at 107 south 3rd St. She said the oil company overfilled oil. oil went to my windows to the plants. There is a very strong smell in my apartment. We are out from the apartment since last wednesday when this happened. She said they are staying with friends. Zhune spoke to Eddie(Super)347- 341-3676. He gave me the oil company phone # 718-626-7000 877-262-4570. I spoke to Joseph Lombardi 718-932-9075 from the oil company. He said he will send a crew to do the clean up. 12/07/08-Zhune responded to this site. Oil spill was cover with speedi-dry and there are a strong oil smell outside Joyce's apartment. Inside her apartment there are vapors. A tenant from 1st floor was also complaining vapors. 12/07/08-Zhune called to confirm clean up. Joyce said the oil company did not come. 12/08/08-Zhune called oil company. They said spill was cleaned up. 12/08/08 As per Eddie(Super) the oil company cleaned the spill. They cleaned the floor, the basement and removed the plants. Everything is cleaned. 12/09/08- Joyce called Zhune saying there is still oil smell in my apartment. I told her that I need to go and check her apartment. She said 6:30pm is going to be fine. 12/09/08-Zhune visited the site there are still vapors outside and slight vapors inside the apartment 12/10/08- Zhune called Joe Lombardi from the oil company. He said he will send back his men to clean up. 12/15/08- Joyce called and said vapors in my apartment are almost gone. there is still some smell but is going away. Last night I went to the basement because the light shut down. I noticed that there is still oil smell in the basement. 12/16/08-Zhune called Joe Lombardi and tell him that Joyce is still complaining smell in the basement where the oil tank is. He said that he will send his men to check. 12/22/08-Zhune called Joe Lombardi asked if they checked the basement. He said I called Eddie the super he went to check the basement and said everything is OK. 01/02/09-Zhune called Joyce to set up a date to inspect her apartment. She said there are still oil odor in my apartment and the basement. 01/02/08-Zhune inspected the apartment. Outside the apartment by the overfill line where the spill happended there is still oil smell. Inside the apartment and the basement there are no observable smell. Richard one of the roommate told me odors are more preceptible in Joyce's bedroom and the livingroom. He is staying with friends. 01/12/09- Joe Lombardi from Anker Tank Line and Zhune instected the site. AS per Joe the smell is maintenance problem. The vent line is just on joyce's bedroom window this line need to be cover(the mushroom). The fill line is dripping on the AST oil tank. Zhune called Libi (718)599-8300 x 210(Mangement) She said they will fix it. 01/21/09- Libi called. She said the tank is going to be removed. 01/30/09- Libi called and said the tank was removed. 04/10/09-Zhune called Tony Cancio he lives in the basement at this site to confirm if tank was removed. Tony said the tank is still in the same location in the basement. It had no been removed. The fill line is still in the same location. He said the apartments are using electric heater now. As per Tony there is no oil odors in the apartment. Spill Closed "

Remarks: "1121 The caller advised dispatch no water ways affected. The oil tank is above ground inside the home. Unknown amount of spill at this time."

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #149448: P. Tokarz was informed to enter and report a third party spill outside the North First Street Terminal Facility. It is reported that 10gal of motor oil spill from two containers left on River St just north of Metropolitan Ave. Photographs appear to show that oil seeped into the soil and onto the sidewalk. Oil containers were discarded by a third party along with about 20 tires. A cleanup crew is being dispatched to cleanup the oil spill and remove the oil containers. Cleanup vendor expected to be at

Remarks: site at 1600hrs. The cleanup was completed at 16:20 hours on 23-JUL-2003 by Vendor Allstate PowerVac. Oil containers were placed in drums and approximately 2/3's of a drum of contaminated soil was removed from the spill area. Drums were left at the marked and left at the site for sampling and disposal. Additionally, at the opposite end of the pile of tires was debris which appeared to be old 9x9 asbestos floor tile (Kentile?). At 10:30 hours 24-JUL-2003 called Department of Sanitation District 1 and reported the Dumping of tires, Autoparts and Tiles on River Street and Metropolitan Avenue. District Clerk Thatch stated that he will notify the responsible district for cleanup/ pickup."

REPORTS, FOUND APPROX 100 GALLONS OF HEAVY OIL ON 1000 GAL OF WATER. AT THIS TIME OIL APPEARS TO BE CONTAINED AND ALSO APPEARS THAT NO SEWERS OR WATERWAYS WERE AFFECTED. OIL WAS DISCOVERED WHILE PUMPING ADJACENT V4048. NO FIRE OR SMOKE OR PRIVATE PROPERTY INVOLVED AND NO INJURIES WERE RELATED TO SPILL AND NO WEATHER CONDITIONS CONTRIBUTED TO HAZARD OF SPILL. SUMP PUMP IN VAULT, AND PUMP NOT RUNNING. FEEDER INVOLVED IS 6B44. ENV STOP TAG# 13474 WAS PLACED. THE STANDING WATER THAT IS PRESENT HAS NO MOVEMENT . THERE IS NO SEWER CONNECTION, AND A SUMP IS PRESENT. ONE LIQUID SAMPLE WILL BE TAKEN FROM STRUCTURE. HISTORICAL RECORDS INDICATE 8PPM 11/10/99. UNABLE TO PRESSURE TEST VAULT BECAUSE FEEDER IS STILL ALIVE AND THE AMOUNT OF WATER. THIS JOB WILL BE TREATED AS A 50-499. ENV OPS CREW WAS SENT TO LOCATION ALONG WITH A SPILL VAN. ALSO OVER 50 TANKER WAS ORDERED. EPA # NYP 004 110 672. 12:45HRS R. JAMES REPORTS, WHILE UNDER 50 TANKER WAS DRAINING V4048, THEY NOTICED LIQUID MOVEMENT IN V1433 THEREFORE WE WILL CONTINUE DRAINING THE STRUCTURE WITH THE TANKER ON LOCATION. CLEANUP OF TANKER AND DISPOSAL OF LIQUIDS WILL BE BASED ON OIL RESULTS THAT WERE TAKEN IN THE ADJACENT VAULTS. OIL WAS ALSO FOUND IN V2597 AND V1856.VAULT 4048 IS BEING DRAINED. THE LIQUID LEVEL IN ALL VAULTS IS GOING DOWN. THE ESTIMATED OIL IS CHANGED TO THE FOLLOWING, A TOTAL OF 65 GALLONS IN THE THREE VAULTS (V1856,V2597, V1433) Update - 5/5/03 1500hrs R. James Env. ops mgr reports dep inspector Eves St. Jean arrived on location 1300hrs. Was shown spill area and told of clean up plans. At 1430hrs <50 tanker pulled off location and will handle liquids removed as >50 a new > 50 tanker will be sent out. 15:10HRS K. DAVIS (NET) REPORTS, THE TAG FROM VAULT 4048 FROM OLD INCIDENT 147277 WILL BE REMOVED AND A NEW TAG WILL BE PLACED WITH THE SAME TAG# 29637 AS THE THREE VAULTS FROM THIS INCIDENT (V2597,V433,V1856) 5/6/03=0350HRS O.S. B.BROWN ENVIR OPPS REPORTS PARTIAL CLEANUPS OF ALL VAULTS ARE DONE . NETWORKS TO REPLACE UNIT.ENVIR TAG#13474 REMAINS. Update on 5/6/03 by R.James: R. James called transportation at 1600 on 5/5/03 to inform the on duty Tanker supervisor that B/Q will be taking samples of the oil in the structures from which the <50 tanker drew oil. We will also take a sample from within any transformer that is found to be leaking. The transformer in vault 1856 was found to be leaking. Transportation informed R. James that the oil would not be discharged from the tanker until they the next day. They took their own oil samples from the tanker. All results from the structure and the transformer returned less than 50 PPM pcbs (see results above and below).R. James informed Transportation Supervisor J. Poje of the sample results at 0700 on 5/6/03 and e-mailed him those results. Lab Sequence Number: 03-03680-001 Date Approved: 5/05/2003 E2 Incident Number: 148227 Date Received: 5/05/2003 Chain of Custody ID: CC16729 Date Sampled: 5/05/2003

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POWER PLANT SPILL (Continued)

S110752147

Contact Name: ANGELA SABBET
Contact Phone: (718) 915-0573
DEC Memo: "5/19/11-HRAHMED-Spoke to Angela at NYPA. Spill happened from a generator which leaked approx. 80 gal of lube oil. They took the generator out-of-service. Spill was contained in secondary containment. They pumped out the oil within 2 hours. Spill has been cleaned. Received email from Angela. As per the email, Yesterday a spill occurred at one of New York Power Authority's Power Plants: Kent 47-79 River Street, Brooklyn NY 11211. The spill occurred around 5:15 PM. The spill occurred at the generator on site. The generator is fully contained within a Package. The package serves as a noise barrier and a containment unit to the generator. The cause of the spill was from a sensing line fitting, which broke. This sensing line fitting is located on the lube oil pump, which is at a 90 degree angle. The lube oil pump is connected to the generator housed in the package. Lube oil is used in the generator to cool bearings and to lube the rotor. A similar spill occurred on 5/3/2011 spill number # 1101209. We have replaced the hard fitting with a flexible fitting. This will ensure that the fitting will remain intact during operations. This case is closed. "

Remarks: "Spill within a generator and has secondary containment. Supervisor on scene now and starting cleanup. Spill is very similar to the spill on 05/03/2011 Spill # 1101209. Cleanup is in progress."

DEC Memo: "Sangesland spoke to Hardik Parekh at EEA Inc. He said the site is a vacant lot CSL sent to owner: Joe Matarese, 484 Union Ave, Brooklyn, NY 11211 EEA forwarded to DEC a copy of the Phase 2 report (see E-Docs) Case reassigned from Sangesland to Ahmed 10/27/11 - Austin - Spill Transferred from Ahmed to Rahman - end 07/16/13- Closure report in edocs.Summary from closure report: No VOCs were detected in the soil or ground water.A vapor barrier 20 mil HDPE was installed below the slab of the cellar and behind all foundation walls. A total of approx. 4764.38 tons of non hazardous soil was transported to the Clean Earth of NJ.In accordance with the RAP, EBC collected endpoint soil samples from across the Site from the final excavation needed for the new building's basement. Endpoint soil samples were collected at the approximate rate of one endpoint sample per 900 ft2 of excavation base as excavation within each section was completed. As shown in Figure 6, the Site was divided into five zones with the acronyms A, B, C, D, and E. From each of the five zones, EBC collected five endpoint samples. The samples were labeled A1, A2, A3, A4, A5, etc. The endpoint samples collected from Zones A, B and C were analyzed for SVOCs (8270) and metals, and the endpoint samples collected from Zones D and E were analyzed for VOCs, SVOCs,pesticides/PCBs, and metals. A copy of each of the laboratory reports for the endpoint soil samples is attached in Appendix E and the results are summarized in Table 1 - Volatile Organic Compounds,Table 2 - Semi-Volatile Compounds, Table 3 - Pesticides/PCBs, and Table 4 - Metals. No SVOCs were detected within any of the 25 endpoint samples at a concentration above NYSDEC Part 375.6 Unrestricted Use Soil Cleanup Objectives (SCOs). No metals were detected above Unrestricted Use SCOs within 22 of the 25 endpoint samples. Two of the endpoint samples in Zone B contained chromium at a concentration slightly above Unrestricted Use SCOs, but well below Restricted Residential SCOs. Zinc was detected slightly above Unrestricted Use SCOs within one soil sample collected from Zone A. Soil disturbance and intrusive activities were completed in accordance with the procedures outlined in the site specific CHASP and RAP approved by the NYCDEP in June 2008. No surface soils and/or fill were utilized for backfilling or grading purposes. NFA required.(sr)"

DEC Memo: "dec piPER RECIEVED CALL OFF HOURS. Caller reported 4 gallons and stated he has a crew onsite. A MISDELIVERY OF 100 gal led to a 4 gallon overfill from vent at sidewalk and gauge of tank in basement. Piper determined that a visit was necessary due to the misdelivery and a crew is not needed to clean 4 gallons. Piper arrived on site and obsreved 4 techs cleaning sidewalk. Basement was cleaned. It is estimated that approx 15-20 gallons was spilled. Piper spole w/ Metro the next day. Cleanup has been completed. Closed."

Remarks: "WRONG DELIVERY; CLEAN UP IN PROGRESS;"

Program: BCP
Site Code: 463657
Acres: 0.92
HW Code: C224159
SWIS: 2401
Town: New York City
Record Added Date: 05/01/2012
Record Updated Date: 01/06/2016
Update By: JHOCONNE
Site Description:

Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem:

Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan. Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Health Problem:

Dump: False
Structure: True
Lagoon: False

DEC Memo: "Sangesland spoke to caller. He said he works in the area and saw the site from the sidewalk. Site used to be a furniture manufacturer. Building has been leveled and an excavator was digging out the site into trucks. Caller did NOT smell anything, but said the soil looked unusually black. Caller has taken some pictures and will e-mail them to the DEC next week. 2/27/2006 E-mail with photos was received by DEC - Piper responded to the site. Area was fenced off and no construction work was being done. Piper did not smell any problem at the site. He will try to revisit the site on another day. 3/21/06- DEC Piper walked site and did not notice petroleum odors. Piper did see muni- gas meter and piping. Closed."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 9/3/2003 Sangesland received a letter from David Demone of American Sugar Refining, Inc. (718-387-6800). Included is a diagram and writeup showing the Oil Barge Line from the dock, through the bulkhead and into the building. This is the line that caused the initial leak into the river. According to the letter, the line was capped, cleaned and then removed in sections. Approx 225 ft of piping was removed including the stop valve and check valve above the dock at the hose connection. Spill Closed "

Remarks:

"under their dock is a line old line that recvd #6 fuel believes line may have holes in it causing some old #6 to leak into the river they had divers in the water today verifying this they need dec to call "

provided visual indication of petroleum contamination. Based upon this finding, the spill was reported to DEC. The laboratory results for soil and groundwater sampling conducted from this location did not show elevated VOCs and SVOCs. Since the Phase II work and spill reporting, the two 275-gal ASTs and associated containment in the vicinity of SB-7 were removed. Documentation from the contractor who performed the removal work attached to eDocs. The PBS registration was also updated to reflect the removal of the tanks.NFA required.Case closed.(sr) "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Phone: (917) 991-4030 CELL
DEC Memo: "Sangesland spoke to Mark Godick of AKRF. His company was doing work on a sewer hookup in this intersection when they found #6 oil in the excavation. This street is the route of a former Con Ed fuel line which MAY be the source. 10/15/09. By request of J.Krimgold, Joe O'Connell researched this case. Con Ed #6 oil pipe was indeed in close proximity to the excavation, However, during remediation work on this pipe all contaminated soil was removed. Post excavation samples were taken every 20 linear feet and display no contaminaton. Case closed. JK. "
Remarks: "DURING INSTATLLING UTILITY LINE FOUND CONTAMIANTED SOIL;; CONED LINE CLOSE BY MAY BE FROM THERE"

DEC Memo: "7/20/15: Mahat T/c: DEC Mahat contacted Kevin inquiring more about the nature of the spill and current situation. Contaminated soils were encountered under the tanks. Further remediation will be follow by the sheeting and shoring. A complete spill closure report will be submitted to the Department. Spill case is assigned to DEC Zhune as Daytime Runner. "

Remarks: "During a tank removal contaminated soil was found. Clean up will be done by next week, via soil excavation for a new building."

Site Description:

Actual:
14 ft.

Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of

approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination:Post-Remediation:Remediation at the site is complete. Prior to remediaton, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and itsdegradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride(VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor

Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where

deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination:Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Code: 463657

Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: Post-Remediation: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Site Code: 463657
Site Description: Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: A former on site warehouse which covered the property was demolished and a new foundation for a residential building has been installed. The new building is under development. Current Zoning and Land Use: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. Past Use of the Site: The site was operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The warehouse was mainly used for carpet storage until 2012, and was demolished. Contamination was mainly associated with a former loading dock located on the northwestern part of the site, where deliveries of chemicals were made to an adjacent building. Site Geology and Hydrology: Soil beneath the site consisted of approximately six (6) feet of fill materials mixed with fine to

coarse sand, silt and gravel, followed by approximately ten (10) feet of dark brown fine to medium sand with trace of gravel and silt, followed by silt layers alternating with layers of sand and gravel to approximately seventy (70) feet below grade. Depth to water at the Site ranges from approximately 9-13 feet below the existing floor slab or approximately 2.8 to 6.7 foot elevation. Groundwater on the site flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination:Post-Remediation:Remediation at the site is complete. Prior to remediation, the primary contaminants of concern at the site included the volatile organic compounds (VOCs) tetrachloroethylene (PCE) and its degradation products trichloroethene (TCE), cis-1,2-dichloroethene (DCE) and vinyl chloride (VC) in soil, groundwater and soil vapor. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Health Problem: Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in off-site structures.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: SMMARTIN
Site Description: The site is located in an urban area in Brooklyn. The site is a rectangular shaped parcel along the southern side of South 4th St, between Berry St. and Bedford Ave. Occupying almost the entirety of the site is a multi-story structure made up of a 7 story structure in the center flanked by two smaller 1 story structures. All three buildings were constructed in the early to mid 1900's and are in varying stages of deterioration. The Site previously had a variety of uses, including an adhesives factory and an electrofoaming laboratory, but always manufacturing. The eastern building has been listed as a warehouse since the 1970s, but also was used as a factory, including a dye factory. The Volunteer was not the property owner and withdrew from the VCP. The owner of the property did an independent renovation of the buildings.

Env Problem: In 1998, the following removals were recommended: Various wastes from the buildings, PBS tanks, contaminated soil with VOCs and SVOCs in excess of recommended soil cleanup objectives in TAGM 4046. Air sampling was also recommended. The building was renovated without of DEC knowledge and/or oversight.

DEC Memo: "04/07/08-Zhune responded this site. The suction line was leaking. Fire Department cleaned it up and disconnected the line. Tenants were complaint odors, no hot water and no heat. The Fire Department advised tenants to keep the windows open and for apartments with children to bring them to relatives. By the time that Zhune responded odors were slight. 04/09/08- Zhune visited this site. Spill was cleaned up. No smell on the apartments and boiler room. There were no cracks in concrete. As per Idelsa Rodriguez manager of the building cleaned up was ok. Spill closed "

Remarks: "6 STORY MULTIPLE DWELLING. LEAK FROM LINE GOING TO FURNACE. POSS 1 GALL ENTERED STORM DRAIN. FD ON SCENE. SPILL CONTAINED. SPILL CLEANED UP. TENANTS STILL COMPLAINING OF FUMES."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

about 5ft BG, they found odor during investigation in contaminated area. As per Ted there are no tanks on location and this property is recorded as E in DEP records. SYC Realty has bought this property recently. Person at SYC Realty is Pearo. (Cell: 917-468-6871) 01/26/06-Hiralkumar Patel. Spoke with Mr. Danny sing at Don Carlo. the alternate number for Danny is 718-857-9800 and FAX 718-857-2100. As per Danny, they going out on site for clean up process. they going to excavate soil and will take end point samples for analysis. once they get report from lab, they will submit us. The owner of this property: Bedford Loft LLC (main company is SYC Realty) 80 Clay Street, Brooklyn, NY 11222 Person at Bedford Loft LLC: Sam Pearo / Max Stark (718) 349-8067 Left message for Sam at Bedford LLC at 10:25AM 01/27/06-Hiralkumar Patel. the alternate phone number for Sam is (718) 302-5555. left message for Sam. 01/31/06-Hiralkumar Patel. Talked with Mr. Hiloy Porges (FAX: 718-504-4963) at Bedford Loft LLC. Max Stark is property manager. Sent out CSL to Max at Bedford. also faxed to Max, D. sing at Don Carlo (Fax 718-857-2100) and D. Cabbagestalk (NYCDEP, Fax: 718-595-4479) 02/24/06-Hiralkumar Patel. Spoke with Danny at Don Carlo. He has report ready and we will get it by monday 27th Feb 2006. End point samples came out clean. 03/03/06-Hiralkumar Patel. Spoke with Danny and as we haven't got any report he will hand delivered copy of report today/tomorrow. Received report from Don Carlo. Need to review. 03/06/06-Hiralkumar Patel. Abstracts of report: - removed eight 550 gal gasoline USTs from location. - a total of 100.81 tons of contaminated soil was removed from the site, transported to Soil Safe Inc., Bridgeport, NJ - no holes were observed on the tank walls. - removed five 55 gal DOT drums containing tank bottom material. - based on visual and olfactory evidence, there was some contamination localized in the area located on the north perimeter of the tank grave in the vicinity of the fill pipes. - remaining sections of the excavated pit showed no visible staining or smell of petroleum product. - a composite soil sample was taken from the stockpiled of contaminated soil. - five end point soil samples (EP-1, EP-2, EP-3, EP-4 & BS-1) taken from the four side walls and bottom of the grave. - no VOCs found in any samples. - no SVOCs found exceeding TGAM limit in any samples. - groundwater flow is assumed to be in a westerly direction. no groundwater was observed in the pit. - potable water is supplied by the municipality and there are no private wells in the vicinity of the tanks. - Eastmond pumped approx. 4400 gal of water out from the eight USTs. based on the analytical reports of endpoint samples, case is closed. NFA letter sent out to Max STark at Bedford. FAXed to D. Sing at Don Carlo and to Mr. D. Cabbagestalk at NYCDEP (E designated site)."

BROWNFIELDS:

Program: BCP
Site Code: 484026
Acres: 0.29
HW Code: C224177
SWIS: 2401
Town: New York City
Record Added Date: 07/02/2013
Record Updated Date: 09/02/2016
Update By: JHOCONNE
Site Description:

Location: The site is bounded to the north by North 6th St., to the west by Kent Avenue, to the south by BCP C224159, and to the east by mixed commercial/residential buildings. Site Features: The site is currently developed with a 2-story commercial/residential building (measuring approx. 125 ft x 100 ft). The first floor of the building is divided into individual tenant spaces operated by a coffee shop, deli, furniture store, clothing store, and storage area. A small sub-grade utility room exists beneath part of the first floor, where a boiler historically operated. One sump and two cleanout accesses, all with dirt bottoms, exist in the floor of the utility room. The second floor consists of 11 residential units. Current Zoning and Land Use: The site use is commercial and it is included in an M1-2/R6A (Manufacturing with a Residential Overlay) mixed use district. Past Use of the Site: Former Cleaners Sales & Equipment Corp., a dry cleaning fluid distribution facility and laundry supply distributor, operated onsite from approximately 1958 to October, 2002. Site Geology and Hydrogeology: USGS reports indicate the depth of the bedrock expected to be approximately 100 feet below ground surface (fbgs). Based on the local topography, groundwater most likely flows in the west-southwest direction toward East River, located 500 feet from the subject site. The depth to the groundwater is expected to be 8 to 10 fbgs.

Env Problem:

Nature and Extent of Contamination Limited information about site contamination has been obtained through investigations performed on an adjacent site, and investigations performed on the sidewalk in front of the site by NYSDEC (see former site no. 224177). Further investigation of the on-site portions of the site are planned. a) Contaminants: The primary contaminants of concern are tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE), 1,2-dichloroethene (DCE) and vinyl chloride (VC). In May and June 2013, NYSDEC performed limited investigation on the sidewalk in front of 135 Kent Ave. and identified these contaminants in soil, groundwater, and soil vapor. b) Area/depth extent: The extent of the contamination has not been determined yet. c) Concentrations: Soil: PCE concentrations were detected at concentrations as high as 1.6 ppm (compared with Unrestricted Use Soil Cleanup Objective of 1.3 ppm); VC was detected at concentrations as high as 0.064 ppb (compared with 6NYCRR Part 375-6.8(a) UUSCO of 0.02 ppm). Groundwater: PCE concentrations were detected as high as 870 ppb (compared with Ambient Water Quality Standard of 5 ppb); TCE was found at up to 33 ppb (compared with AWQS of 5 ppb), and DCE was found at up to 20 ppb (compared with AWQS of 5 ppb). Soil vapor: PCE was identified at a concentration of 25,300,000 ug/m3, TCE at 10,400 g/m3 and DCE at 7,060 ug/m3. Significant Threat: The site presents a significant human health threat due to the high concentrations of PCE, TCE, and DCE in soil vapor and the potential for exposures to site-related contaminants via soil vapor intrusion.

EPA ID Number

CLEANERS SALES & EQUIPMENT (Continued)

1006810542

Health Problem:	Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking contaminated groundwater associated with the site because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface in to the indoor air of buildings, is referred to as soil vapor intrusion. Environmental sampling identified impacts to the indoor air quality of the on-site building and immediate actions have been taken to minimize exposures. Additional evaluation is needed to determine whether soil vapor intrusion is a concern for off-site buildings.

Actual:
14 ft.

Site Description:

Location: The site is located in an urban area at 135 Kent Avenue in the Borough of Brooklyn, Kings County, NY. The site is bordered to the north by North 6th Street, to the west by Kent Avenue, to the south by a vacant 2-story warehouse (see BCP site no. C224159), and to the east by a three story building which appears to consist of a garage on the first floor with residential above. Single and multi-family residential is located across North 6th St. and newly-constructed multi-story residential towers are located across Kent Avenue. Site Features: The Site currently consists of a 11,000 sq. ft. (0.27 acre) 2 story brick building with commercial units on the first floor and residential units on second floor. Current Zoning/Use(s): The site is currently zoned M1-2 (manufacturing) with an R6A (residential) overlay. The site is located within the Greenpoint-Williamsburg Rezoning District, and is surrounded by mixed commercial and residential uses. The Site has a NYC Restrictive Declaration (similar to E-Designation) for Hazardous Materials (E-138) and Air Quality (E-227). Past Site Use(s): The Site was previously occupied by a warehouse which operated as a commercial dry cleaner supplies distribution facility (Cleaners Sales & Equipment Corp.). This facility operated from about 1958 to 2002. Cleaners Sales & Equipment Corp. has a USEPA ID no. NYR000113480 for hazardous waste generation (tetrachloroethylene, or PCE). Furthermore, the site is a registered Chemical Bulk Storage Facility (CBS No. 2-000353 for a 5,000 gallon aboveground PCE storage tank) and Petroleum Bulk Storage facility (PBS No. 2-608579 for a 3,000 gallon closed-in-place underground storage tank). Site Geology and Hydrogeology: Soil borings installed on a neighboring property identified fill materials consisting of medium-grained sand with some gravel and brick fragments to a depth of approximately 8 feet below grade. Beneath the surface fill layer is sand and gravel to a depth of at least 28 feet below grade. Groundwater is present at a depth of approximately 12 feet below grade. Groundwater flows generally to the west-southwest towards the East River, which is located approximately 550 feet west of the site. Borings done in the sidewalk on N 6th St showed sand to 28 feet followed by a clay layer and then silty sand at 35 feet. Groundwater was at 17 feet below ground surface. This site

has been accepted into the Brownfield Cleanup Program and, therefore, investigation and remediation will occur under that program. The site Index is C224177.

Env Problem: Nature and Extent of Contamination: Recent sampling was conducted as part of the Remedial Investigation for the adjacent BCP site. Soil vapor samples were collected from immediately in front of the loading dock for the former cleaner supply facility, which identified PCE at a concentration of 25,300,000ug/m3, and TCE 10,400g/m3 and cis-1,2-DCE at 7,060 ug/m3. Significant Threat: Based upon the soil vapor sampling results there is a potential for inhalation of the site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures. The NYSDOH made an evaluation of significant threat for this site. The site was accepted in the Brownfield Cleanup Program (BCP) and the Index # is C224177.

Health Problem: Volatile organic compounds related to the site in the groundwater may move into soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants in indoor air due to soil vapor intrusion for the on-site building and off-site structures.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL CSL has been send on 7/7/04 to S.C. TRUCK & AUTO REPAIR,INC., 125 Berry Street, Brooklyn, NY 11211. YK. 08/09/05- spoke to Antoinette Olliviere of HydroTech. They just took over this site several months ago and they are currently installing gw monitoring wells. S. Scharf 10/05- Antoinette Olliviere is discussing project with client, will get back to me. S. Scharf 12/05- send Ms. Doma, the owner, a stipulation agreement to sign after sendign the draft to Hydrotech to make them understand the procedure. 12/05- Ms. Doma rejects Hydrotech bid and is apparently declining to do the work at this time. refer back to Region to follow up. S. scharf 6/13/06 - Austin - Received copy (missing pages) of signed stip via fax from Hydrotech - reassigned from Scharf to Piper - he will review project to determine if this is a spill response or will go to Pet. Remediation Section - end 7/7/06- DEC Piper received signed stip agreement and RAWP. Piper approved RAWP and mailed approval letter to owner and hydrotech. Piper will visit site in afternoon.\\ 7/24/06- DEC Piper reviewed closure request summary report. As per report, approx 202 tons of containated soil was removed. 5 endpoints were collected and revealed 3 SVOC below TAGM in one sample. Based on excavation, findings, this case is closed , E-Docs if warranted."

DEC Memo: "Question is this TCE (PERC) or is it Petroleum? Is this managed by
DEC Spills? - Depends on the quantity Case is now being worked on by
Tyree - Matt Boeckel 631-249-3150 ext 241 04/25/12 Three hydraulic
lifts were removed. End point samples were taken from surrounding the
lifts. Some SVOCs exceedances observed in lab analytical data. One VOC
TCE was detected(1800 ppb)above DEC guidelines(1300 PPB)in one
sample. This detected level is not too high. Therefore, case is
closed.(sr)"
Remarks: "1800ppb on soil samples. No odor no staining"

DEC Memo: "report will send report shortly. 7/9/07- DECP iper recieved and reviewed RAP. As per RAP, a new building will go up. The siute is e-designated. The plan calls for soil removal and a new foundation. Soils will be disposed of properly. The RAP is in order though where the prior fill material came from is unknown. A subsurface investigation was conducted in the spring of 2007. The site was formerly residential and supplied by gas. GPR survey found no anomolies. Soil testing found elevated level of zinc over Eastern Background levels and minpor exceedances in SVOC's potentially related to historic urban fill or recent fill material. groundwater sample showed no elevated levels. Based on investigation and only one exceedance. This spill closed. NFA granted. Site to be excavated apporx 15 bgs for ne foundation. See e-docs if warranted."

Remarks: "FILL MATERIAL THAT WAS BROUGHT TO SITE FOLLOWING DEMOLITION, SUMMER OF 06, SUBSURFACE INVESTIGATION AS PART OF NYC DEP LITTLE E COMPLIANCE: LOW LEVELS OF SEMI-VOLATILES AND METALS ABOVE TAGM:"

Development LLC. 20 West 36th Street, 4th Floor New York, NY 10018
Ph. (917) 922-2415 email: chris@horrigancompanies.com Matthew
Horrigan email: matthew@horrigancompanies.com 9:53 AM:- spoke with
Frank. he mentioned that the property is being redeveloped as
residential building with basement. during excavation for basement,
they found three (3) 550 gal gasoline USTs, full of water. about 2-3
ft of soil contamination was found above the tanks. found dispenser
lines, but no other piping. based on dispenser piping location, Frank
suspects that the dispensers were right above the tanks and
contamination found at the site might have originated from the
dispensers. Brookside Environmental has removed tanks and associated
contamination and collected endpoint samples. sample results will be
available next week. 08/19/14-Hiralkumar Patel. received closure
report from Merritt Environmental (at 4:59 PM on 08/12/14). three 550
gal gasoline USTs were removed. all three tanks were filled with
water. final excavation was 24 ft long, 20 ft wide and 8 ft deep.
total of eleven (11) endpoint samples (2 from bottom and 9 from
sidewalls) were collected and analyzed. no contamination noted in
endpoint samples. based on submitted report, case closed."
Remarks: "During an excavation 3 gas tanks and contaminated soil was found.
Clean up is in progress."

DEC Memo: "Phase 2 - soil samples have contamination in it - Owner wants to move this to brownfields. 7/23/07 - Raphael Ketani. I have heard nothing in a long time regarding this site as to whether it is part of the voluntary cleanup program (VCP). So I talked to Jocelyn Shapiro, EG I of unit A of DER Region 2, as she is involved in some VCP projects. She said it wasn't her site and directed me to Jane O'Connell or the unit head, Dan Walsh, EG III. I spoke to Mr. Walsh. He said that there was a pre-application meeting in January 2007, but nothing else happened. I looked for the site in the DER database and found nothing. Therefore, I am going to start the process of investigating this site as a spill location and I will send out a CSL. The block and lot are: 02353 and 0013. The main address is 291 Metropolitan Avenue. The alternate addresses are: 146 Roebling Street and 206 to 212 North 4th Street. The site has two PBS records, #2-145726 and #2-455083. #2-145726 is a closed case with the name as Arvy Service Station Inc./Getty. Six 550 gas tanks are listed as administratively closed on 4/1/95. #2-455083 is active with the name G&A Auto Repair. One 250 waste oil tank is in service with the other six gas tanks listed as closed in place. There are two owners: C&H

Holding Corp., 1394 Third Avenue, NY, 10021; 291 Metropolitan Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I sent out the CSLs to both owners. 7/26/07 - Raphael Ketani. Eva Krocka of Minnow Associates (291 Metropolitan Avenue, LLC) called to say that the site is part of the brownfield program. I told her that the DEC doesn't have anything confirming this and that their site does not appear in the DEC Remediation database. She said that Advanced Site Restoration Co. (212) 809-1110 was remediating the site and was supposed to take care of everything. She said that DEC was sent reports. I told her that we have nothing in our files regarding the site. She said she will get back to me. A new search of the Remediation database revealed that 291 Metropolitan Avenue has made an application to be part of the BCP. The case number is C224124. The case manager is Sondra Martinkat of DER Region 2 Unit A. I spoke to her and she said that the site is not yet approved for the BCP, but she expected them to be so very soon. She said that she was willing to accept the spill case. I spoke to Randall Austin, Chief of the Spills Unit, and he told me to change the case manager to Ms. Martinkat. I changed the case manager to her name. 8/5/09: BCP termination letter sent by OGC (D. Tuohy) - see eDocs. Management of site reverts back to Region 2 spills. Transferred to R. Ketani. (JHO) 8/6/09 - Raphael Ketani. I was assigned the spill case yesterday. So I talked to the former case manager, Brian (York) Wong from Unit A of Region 2 DER. He said that he was waiting for the project to be accepted into the BCP, but this never happened as the corporation fell apart. He said that no cleanup or development has taken place regarding the case since 2007. I made an unannounced site visit and took several pictures (see E-docs). The site consists of a service station. There is an old, small, three story walk up apartment building to the west of the service station. The service station has a sign that displays G&A Auto Diagnostic Center (718) 486-3700. The apartment building is the other property that the corporation had owned. I met a person who worked at the service station. He said that a waste oil UST and the gas USTs were closed in place with cement. He showed me the many cement filled boring locations that are on site. He said that there were no problems. I asked him who he was, but he just said that he was someone who works here. However, he did say that C&H owned the site. After this I left. 8/7/09 - Raphael Ketani. I tried to contact Chris Tomasello of ASR (212) 809-1110 regarding the site and its ownership, but could only leave a message. I reviewed the October 2006 ISR. The elevation of the site is at 23' above mean sea level. Groundwater was encountered at a depth of 17' to 20' below grade. However, Section 9 of the ISR states that groundwater is 9' to 10' below grade. Groundwater flow direction is unknown. There is a school directly across the street to the northeast. Soil contamination that exceeds TAGM was present at SB-5 at 10' to 16.' Groundwater contamination with high exceedences was found at SB-2 and SB-3. There is also a page with case manager notes that refer to wells marked AOC and TW, but there are no diagrams depicting these wells in the case file. 8/10/09 - Raphael Ketani. Mr. Tomasello returned my call. He talked about the site. He mentioned that the partnership broke up and the property was sold about a year ago. The former owner was Robert Vigorito of C&H Holding Corp., 1394 Third Avenue, NY, 10021. Mr. Tomasello has had no contact with the former or present owners since then. I looked up the property ownership on Property Shark and on ACRIS. The property was sold on 9/6/09 or 9/15/09, respectively. The new owner is: 291 Metropolitan

S108294903

Avenue, LLC, 861 Manhattan Avenue, Suite 14, Brooklyn, NY, 11222. I wrote a revised CSL for the sole owner, 291 Metropolitan Avenue, LLC, and sent it out with a green return card. 9/10/09 - Raphael Ketani. The deadline for a response to the CSL was today and there has been no response from the owners of the site. I have not received the green return card, either. I will wait until 9/17/09 before sending a more strongly worded letter to the owners. 9/14/09 - Raphael Ketani. The CSL came back unopened and marked Unclaimed/Unable to Forward on the envelope. I checked PBS record #2-455083 for any contact information. The record showed the name Ismael Cisneros, Jr. (718) 384-4141. I spoke to Mr. Cisneros. He said that the owner had moved to Manhattan. I asked him who the owner was. He didn't want to say. However, he said that if I sent a letter directly to the service station, then he will forward it to the owners. I told him that I will do this. I resent the CSL to G&A Auto Repair, 291 Metropolitan Avenue, Brklyn, 11211 by regular mail and by green return card. However, according to the property database ACRIS, 291 Metropolitan Avenue LLC at 861 Manhattan Avenue is still listed as the owner. 9/21/09 - Raphael Ketani. I received the green return receipt card signed by Mendes. 10/29/09 - Raphael Ketani. The owners of the site failed to respond to the CSL by the deadline of October 14, 2009. So I drafted a strongly worded letter stating that the DEC will take legal action if the investigation plan is not received by November 13, 2009. The draft letter was submitted to Randall Austin, Chief of the Spills Unit, for his approval. 11/2/09 - Raphael Ketani. I spoke to Mr. Austin about the case and the letter that I wanted to send. He said that I should submit a Case Initiation Package. 11/3/09 - Raphael Ketani. I put together the Case Initiation Package and submitted it to Mr. Austin for his signature. Mr. Austin signed the CIP and it was hand delivered to the legal department. 4/26/10 - Raphael Ketani. John Urda, Assistant Regional Attorney for Region 2 of DEC, sent Jerrietta Hollinger, a principal of 291 Metropolitan LLC, a STIP agreement today by e-mail. Her address is: Jerrietta R. Hollinger, Esq. Ganz & Hollinger 1394 Third Avenue New York, New York 10075 Ms. Hollinger responded back by e-mail that she will submit the document to her members and get back to Mr. Urda in a week. 5/13/10 - Raphael Ketani. Ms. Hollinger sent the following e-mail to Mr. Urda: I expect to review the Stip with Mr. Cisneros next Tues. I am out of office tomorrow and Monday and will contact you by middle of next week. 5/20/10 - Raphael Ketani. Ms. Hollinger requested a change in the STIP package CAP that was sent to her by Mr. Urda. She wanted the deadline for submission of the Remedial Investigation Work Plan changed from 15 days to 30 days (paragraph one). Mr. Urda agreed to the change and sent her a STIP with a CAP wherein the owners have 30 days to submit the RIWP (see E-docs). 5/24/10 - Raphael Ketani. The owners of the site signed the STIP. 5/25/10 - Raphael Ketani. The Region 2 director signed the STIP and, thus, it was fully executed and in effect (see E-docs). 7/14/10 - Raphael Ketani. To date, the owners of the site have not submitted the RIWP. The deadline was June 25, 2010. I drafted a letter to Ms. Hollinger for the review of John Urda of the Office of General Counsel. Mr. Urda reviewed the letter and it was sent out today. 7/15/10 - Raphael Ketani. Ms. Hollinger called me today. She said that P.W. Grosser (the consulting company) is supposed to get back the groundwater analytical data for the site. They will send the DEC a report soon. 7/27/10 - Raphael Ketani. Ms. Hollinger called today. She said that Mr. Wenskus of P.W. Grosser is working on the analytical report for DEC and should submit it in the

S108294903

very near future. The report will state that the soil is alright, but that the groundwater is contaminated. I told Ms. Hollinger that, at the very least, the groundwater contamination needs to be delineated. 8/3/10 - Raphael Ketani. I reviewed the July 30, 2010 P.W. Grosser Phase II ESA report. The scope of the work was based on P.W. Grosser's 6/21/10 proposal and Advanced Site Restoration's October 2006 ISR. The tanks have fuel oil, waste oil, and gasoline. In October 2006, the site was operated only as a car repair shop. Groundwater is at about 18' to 20' below grade and flows north-northwest. ASR found contamination in soil borings at SB-1, 3, 5, and 6. There were also elevated levels of arsenic, cadmium and lead at SB-1. There was elevated groundwater contamination at SB-2 and SB-3. There had been no subsequent investigations or remedial efforts since ASR's 2006 investigation. P.W. Grosser did a Phase II in July 2010. The locations of SB-1, 3, 5, and 6 were utilized for this investigation. P.W. Grosser took soil samples to 20' below grade. Groundwater was sampled from SB-1 to SB-3. The soil results for VOCs and SVOCs were below TAGM RSCOs. Arsenic, cadmium, and lead were below the RSCOs. However, mercury was above its respective RSCO. The groundwater results from SB-6 (downgradient) were completely non-detect. However, there was 22 ppb of naphthalene at SB-3 and 392 ppb of naphthalene at SB-2, with several other low exceedences. MTBE was 421 ppb at SB-1 and 1370 ppb at SB-3. SB-2 had 112,000 ppb of MTBE and 6 other VOC exceedences above 1,000 ppb. P.W. Grosser recommends removing the tanks and quarterly monitoring. I sent an e-mail to Mr. Wenskus (631) 589-6353 with the following questions and comments: 1) why wasn't a boring done in the vicinity of the fuel oil tank to the northwest? 2) is the fuel oil tank a UST or an AST? 3) was staining observed in the vicinity of the fuel oil tank? 4) why wasn't a boring conducted directly to the northwest of the gasoline tanks? 5) why weren't borings conducted next to the waste oil tank? The DEC concurs with the removal of the gas and oil tanks. Groundwater should be collected from SB-2 in order to reduce the MTBE concentration at this location. 8/6/10 - Raphael Ketani. Mr. Wenskus responded back by e-mail today: 1) Due to the presence of debris in the area, PWGC was unable to access the immediate vicinity of the fuel oil tank. During the inspection, PWGC did not see evidence of an AST in the area of the fuel oil tank as identified on the figure. Additionally, PWGC utilized the figure that was provided in the 2006 ASR Phase II for approximate locations of borings and other site conditions. 2) This is unknown at this time; however, according to the ASR report, the fuel oil tank is a UST. As stated above, there was no evidence of an AST in that vicinity. PWGC will contact the property owner to confirm the presence of the fuel oil tank. 3) No staining was observed in the area where the fuel oil tank is reportedly located. 4) As stated above, Mr. Cisneros wanted to confirm the findings of the 2006 Phase II and requested that only the impacted borings from that Phase II be re-sampled. 5) The exact location of the Waste oil UST was unknown and PWGC placed the boring SB-1 in the vicinity of the former boring. The location of SB-1 in the PWGC site plan; however, is incorrect. In addition, the tank locations on our site plan are approximate, based upon the ASR Phase II site plan. The site plan will be corrected to show the correct location of boring SB-1. I responded back and stated that the DEC still wants a boring performed to the northwest of the gas USTs, next to the waste oil tank, and next to the fuel oil UST to the northwest. Also, P.W. Grosser must submit a site plan which is to scale and

S108294903

which shows the actual location of all appertenances, tanks and pump islands. Mr. Wenskus replied back that the borings will be performed. 8/12/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that he informed the owners about DEC's request for additional investigative work. However, he has not heard back from them. 8/18/10 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the drilling for the three additional borings will take place on 8/24/10. 9/27/10 - Raphael Ketani. I received the Supplemental Phase II Environmental Site Assessment report dated 9/22/10 from P.W. Grosser. I began my review. 9/28/10 - Raphael Ketani. I finished my review of the Supp. Phase II. There was no soil contamination above TAGM standards. However, groundwater was found to be impacted. LNAPL was found near the waste oil tank and oil based liquids in the tank. Concentrations of total VOCs were detected up to 128,988 ppb in the immediate vicinity of the gas USTs. SB-2 was the most contaminated groundwater location. SB-3 had elevated groundwater contamination. P.W. Grosser recommends the following: proper closure of the gas and waste oil USTs removal and disposal of all impacted soil injection of oxidants to breakdown the contamination collection of end point samples installation of groundwater wells removal of LNAPL quarterly groundwater monitoring I sent an e-mail to Mr. Wenskus asking him to proceed with the remediation as soon as possible. 11/19/10 - Raphael Ketani. Mr. Wenskus sent the November 2010 Remedial Action Plan by e-mail. I reviewed the plan and it formalized and expanded the remediation plan that was initially described in the Supplemental Phase II. The RAP looked fine, but they weren't planning to install a monitoring well downgradient of the waste oil UST. So I let Mr. Wenskus know that the DEC wanted a well installed in this location and to submit a revised site map showing this well. Mr. Wenskus responded back that a well will be installed downgradient of the waste oil UST. 2/25/11 - Raphael Ketani. I spoke to Mr. Wenskus (631) 589-6353 and asked him about progress on the site. He said that the owners had received P.W. Grosser's proposal. They told him that they needed to secure funding for the project. However, that was back a couple of months ago. Mr. Wenskus hasn't heard anything since. I asked Mr. Wenskus to contact the owners anyway and to try and find out what is happening. Ms. Hollinger sent me an e-mail asking whether there was any type of funding that could be obtained for doing the additional work. I wrote that there wasn't and to commence the work immediately. 3/2/11 - Raphael Ketani. Today I received the January 27, 2011 investigation and remediation work proposal and cost estimate from Mr. Wenskus at P. W. Grosser. I reviewed the proposal and it seemed to cover the work that the DEC had asked to be performed. I spoke to Mr. Wenskus (631) 589-6353 and told him that the DEC found the proposal to be acceptable. I asked him whether he had heard from Ms. Hollinger. He said that he hadn't. I told him to call her and to let her know that the DEC is concerned that no progress is being made. He said that he will. 3/3/11 - Raphael Ketani. Mr. Wenskus sent Ms. Hollinger an e-mail (with me as a c-c) stating that the DEC had the approved work plan. He also wrote in the e-mail that P.W. Grosser was ready to go to work on the site as soon as a retainer is submitted. 3/7/11 - Raphael Ketani. Mr. Wenskus said that he hasn't received approval yet to start the work. 4/5/11 - Raphael Ketani. I received an e-mail today from Mr. Wenskus as a c-c. In the e-mail, Mr. Wenskus stated that he hasn't heard from Ismael Cisneros, Jr. in two weeks. In response, I sent an e-mail to Mr. Urda of DEC Region 2 stating that it appears as if work at the site has come to a standstill for this

spill. 4/22/11 - Raphael Ketani. Mr. Wenskus sent an e-mail to M I Mechanical requesting a startup date for the work at the site. Ms. Hollinger responded back by e-mail that Mr. Cisneros was out of town, but would be back next week. Once he is back, Ms. Hollinger wrote, Mr. Cisneros will set up a starting date. 4/27/11 - Raphael Ketani. I sent an e-mail to Ms. Hollinger asking whether Mr. Cisneros had returned and whether a starting date had been picked. 5/17/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that the work will re-start during either later June or early July 2011. 6/6/11 - Raphael Ketani. Mr. Wenskus sent me an e-mail that work will resume at the site on July 18. 7/7/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 sent me an e-mail that work will start on July 18. He expects the work to take 2 weeks. 7/14/11 - Raphael Ketani. Jerry Hickson of G. Construction Enterprises (631) 206-3700 ext 100 called. His company will be pulling 7 tanks on either tuesday or wednesday. They will remove 3 gas tanks, 3 diesel tanks, and 1 waste oil tank. 7/20/11 - Raphael Ketani. I received the following e-mail today from Mr. Wenskus: The implementation of the approved RAP began today. The site activities today included the following: Expose the seven onsite 550-gallon tanks to determine their current condition, Assess the tanks to determine their contents (each contained oily water) Pump the tanks out approximately 2,200 gallons removed Each tank, with the exception of the waste oil tank was encased in concrete. No tanks were removed from the ground today; excavation of the tanks will continue tomorrow. 7/22/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called me in a conference call with Jen Lewis of P.W. Grosser. He said that the 7 USTs had been removed. There was a concrete slab beneath them. The tanks were all in good shape. However, there were signs of a little associated pipe leaking. The contractor had excavated 15 feet down to remove the contaminated soil, but there still was contamination and he hadn't reached the water table, which is at 18 feet below grade. Mr. Wenskus and Ms. Lewis were asking whether the digging could stop as the contractor would have to get a larger machine, and this would take time, and as he would also have to get special permits for digging deeper. Mr. Wenskus added that the contractor had dug pretty close to the building and the sidewalk and they didn't want to jeopardize their integrity. I told Mr. Wenskus that the contractor could either install shoring to hold up the sides of the hole or backfill and do treatment solution injections where there still is contamination deep down and under the sidewalk. Mr. Wenskus opted to backfill and treat. I asked him whether the contractor could dig out more contamination laterally. Ms. Lewis said that he could. I told Mr. Wenskus and Ms. Lewis to do all of the calculations necessary, including permeability, to determine what it will take to effectively treat the remaining contamination. They said that they will. Later, Mr. Wenskus (631) 589-6353 called me back. He said that he talked to his supervisor about the treatment solution injections proposed for the contaminated dry soil. They agreed that the solutions would work initially, but that they would stop as soon as they would dry out and, therefore, wouldn't be very effective. Mr. Wenskus will have the contractor get a larger excavator and dig deeper. I asked him about the contamination under the sidewalk. I added that this couldn't be left in place. He said that he wasn't sure where the contamination will end. I told him to keep field screening with a PID meter and to eventually take end points to determine whether they needed to excavate further. He said that he will. 9/12/11 - Raphael Ketani. I

tried to contact Mr. Wenskus (631) 589-6353, but I could only leave a message regarding progress at the site. 9/13/11 - Raphael Ketani. Mr. Wenskus called me back. He said that the work at the site has stopped as P.W. Grosser isn't getting paid. The owners, 291 Metropolitan LLC, want to save some money with the remediation project and want to put in fewer wells and do less soil removal. He said that 80 tons have already been removed, as best as he can guess (he doesn't have the disposal manifests). A large covered soil pile is sitting at the site. Mr. Wenskus said he told them that the DEC had approved the work plan and so any changes were not likely to be accepted. After this, the conversation ended. 9/15/11 - Raphael Ketani. I reviewed the November 2010 RAP for the work schedule. While the tanks (item 1) had been removed, the soil excavation was not completed by the allotted time as more soil needed to be removed than had been previously estimated. I sent Mr. Wenskus an e-mail requesting a revised work schedule. 10/13/11 - Raphael Ketani. I contacted Mr. Wenskus (631) 589-6353. He said that 291 Metropolitan LLC still hasn't paid P.W. Grosser for the rest of the work. So nothing is happening. Mr. Wenskus said that he had spoken with Ms. Hollinger about a couple of weeks ago, but she gave no indication that payments would be forthcoming. He said that he will try contacting her today. As no work had been taking place for over a month, I drafted a letter to 291 Metropolitan, LLC stating that they were in violation of the STIP and the environmental law. The letter was sent to Mr. Urda and approved. I sent it out today with an October 28 deadline for re-starting the work, or else legal action will be taken. 10/20/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 called regarding the soil excavation and planned well installation. She said that P.W. Grosser dug out a lot more dirt than had been planned and that this has become very expensive. She asked what could be done about this and whether the number of planned groundwater monitoring wells could be reduced in order to save money. I told her that contaminated soil has to be dug out to the extent practical and that if they have to remove the sidewalks to do it, then that's what is necessary. I added that P.W. Grosser should be screening the soil with a PID meter as they go so that they can see whether there is more contaminated soil to remove. Then, once they have very low PID hits or no hits, they can take end point samples and have them analyzed to be sure that they have removed all of the soil with elevated contamination. Ms. Hollinger asked whether one or two wells could be cut out from the plan. I told her that the DEC didn't ask for more wells than were necessary in order to monitor the groundwater contamination. I added that if contaminated soil is left in place and the groundwater starts circulating through it, then the groundwater will carry weathered gasoline and vapors downgradient to the school behind the service station. I said that, so far, there are no vapors in the school, but this can still happen if contaminated soil is left. I mentioned that there are kids in the school. She said that she was just concerned about how much soil was removed because it was truck loads and truck loads. I told her that P.W. Grosser was removing what was necessary and that this is good. Ms. Hollinger said that she will talk to Mr. Wenskus and discuss the issue. Then she will get back to me. Later, Ms. Hollinger sent me the following e-mail: After we spoke, I had a telephone call with Rocky. He said he was in the middle of finishing another project but would review the test results and call you next week to see if it is possible to amend the plan to be more economical and to make certain contamination is cleared. The necessary wells

S108294903

will then be installed. As mentioned the work done to date cost more than twice the estimated amount. Soil Safe carted away 447.2 tons of soil. 10/26/11 - Raphael Ketani. Mr. Wenskus (631) 589-6353 called with a progress update. He said that, right now, work still has not resumed. He said that he had spoken to Ms. Hollinger about the site and the soil contamination that still exists. He said that the concentrations of the individual analytes is in the hundreds of thousands of parts per billion for the soil in the sidewalk of the pit that is next to the sidewalk. I told him that this soil, the soil under the sidewalk and possibly the soil under the street must come out. Mr. Wenskus said that the additional remediation will be performed as in the approved RAP. He mentioned possibly collecting the contaminated groundwater. I told him that it would probably be cheaper to dig out the contaminated soil and get rid of the contamination once and for all. Then he wont have to worry about groundwater contamination. I also told Mr. Wenskus that I will let Mr. Urda know about the impass with Ms. Hollinger. 10/27/11 - Raphael Ketani. I made an unannounced site visit today. I took 3 pictures. I could see a gravel area where the gasoline USTs used to be and a sandy soil area where the waste oil UST used to be. There was no other changes to the site conditions. So I left the site. 10/28/11 - Raphael Ketani. A Case Initiation package was signed by Hassan Hussein, Supervisor of the RCRA-Remediation Unit, and sent to the Office of General Counsel. 11/29/11 - Raphael Ketani. Ms. Hollinger (212) 517-5500 sent me an e-mail that the well installations will take place soon. I responded back that the excavation also needed to resume. 12/27/11 - Raphael Ketani. Nick Pressly of Pressly & Associates Inc. (607) 264-9521/cell (607) 435-9589 called. He said that he has been retained by Ms. Hollinger to continue the work at the site. We discussed the present site status and what still needed to be done. Mr. Pressly said that the DEC will receive a work plan by January 9, 2012. 1/18/12 - Raphael Ketani. Mr. Pressly sent me the 1/9/12 work plan by e-mail. The plan called for the installation of 6 soil borings and the construction of 4 monitoring wells. Some of the wells would be constructed in such a manner as to allow their use for SVE or air sparging. I found the locations of two of the proposed wells to be unacceptable as they are not downgradient of the former gasoline UST locations and the waste oil tank location. Also, if some wells are used for SVE or air sparging, then they can't be used for groundwater monitoring. So more wells are needed. They also did not mention continuing the excavation both deeper and under the sidewalk. Lastly, they did not mention sending the DEC the manifests for the soil that has been excavated, nor product collection or quarterly groundwater sampling and reporting. I sent an e-mail to Mr. Pressly indicating the disapproval and the need for including the above comments in a new work plan. Mr. Pressly sent me the manifests for the soil that had already been removed. I spoke to Mr. Pressly (607) 264-9521/cell (607) 435-9589 about the above comments. There is a 1 inch well next to the waste oil tank. He believes that there is a lot of oil on the water table. Due to the waste oil, air sparging will not be possible. The waste oil will be addressed in a separate plan. Mr. Pressly will add two additional wells due to the presence of the LNAPL. The other well positions can be adjusted to be downgradient. SVE wells will be installed near the sidewalk in an upgradient position. Borings will be done right up against the sidewalk. Wells for just monitoring during SVE or air sparging will be installed. He will resubmit the work plan next week. Also, he expects to start the

G&A AUTO REPAIR (Continued)

S108294903

work by January 30, 2012. I told him that will be fine. 1/25/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me the 1/20/12 Revised Subsurface Investigation Work Plan for installing SVE wells, AS wells and monitoring wells. I reviewed the work plan. 1/30/12 - Raphael Ketani. I finished my review of the 1/20/12 work plan. There was one proposed monitoring well far upgradient of the waste oil UST and no well directly downgradient of the waste oil UST. I determined that they should install wells at positions that are a short distance downgradient of the waste oil UST and the former tank field. I also stated that there should be separate monitoring wells at P.W. Grosser's SB-7 boring, which had NAPL, and at P.W. Grosser's SB-3, which had contaminated groundwater. I added that groundwater extraction should take place at SB-3 and product collection should take place at SB-7 before AS or SVE takes place. Lastly, I asked for the details of the proposed AS and SVE systems: soil permeability, air flow or vacuum calculations, material specs and the design layouts. I sent a letter disapproving the work plan and including the above comments. The due date for the revised work plan was set at February 29. Mr. Pressly sent me a revised map/plan for the locations of the proposed monitoring wells. I responded back that the well for the waste oil UST should be more upgradient than sidegradient. I asked him to fix this and then the plan would be fine. Also, he will hold off installing the SVE and AS wells for now. 2/1/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 sent me an e-mail containing the second revision of the Revised Subsurface Investigation Work Plan. Four instead of five wells were proposed, but the locations were as requested in DEC's 1/30/12 letter. However, there was no mention of extracting contaminated groundwater at SB-2 and product at SB-7. I responded back and let him know about the deficiencies. Mr. Pressly wrote back that, presently there were no wells at SB-3 and SB-7, these were only former soil boring locations. However, a well will be installed at the former location of SB-3. He asked that installing a well at SB-7 for product collection be put on hold for now so that the work plan can be approved and work can proceed. I responded back that the DEC was approving the 2/1/12 work plan and to proceed with the investigation. Mr. Pressly wrote that the work is tentatively scheduled to start on February 8. 2/3/12 - Raphael Ketani. Mr. Pressly sent me an e-mail that the drilling will definitely start on February 6. 2/6/12 - Raphael Ketani. Mr. Pressly called today. He said that he was at the site, but that there was a problem. He stated that the downgradient well for the waste oil UST would be right against the wall of the building. So it can't be drilled right there. He suggested moving the well's locations to where the A in LNAPL (for SB-7) is on revision 4 of the map which is attached to the 2/1/12 work plan. This would still put the well in a downgradient position. I told him this would be fine. 2/8/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today with an update. First, he stated that P.W. Grosser's boring SB-7 was found to be much closer to the waste oil UST than was drawn on the map. He put in a new well mid-way between the building and the UST about 3 feet from SB-7. However, no oil was found, only a sheen. Mr. Pressly believes that the oil that was found at SB-7 was very localized and that maybe P.W. Grosser hit the edge of the tank pit that was holding the free oil. Once the pit was nicked, the oil flowed to the location of SB-7. I told Mr. Pressly this was possible. He responded by saying that he will re-drill SB-7 and put in a 2 inch recovery well. Also, there was

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

no odor of gasoline at SB-7 and that it looks like there are 2 plumes. One for the gasoline that is flowing due north, and another plume that is flowing more northwest. A boring was done through the sidewalk. It was found to be a gasoline contamination hot spot. So an extra sparge well was installed in the center of the former UST field. A well was put in at SB-3, but no odors of gasoline were found. Another well by the building had gasoline odors. A well couldn't be put in far downgradient inside the building as the geoprobe wouldn't fit. The soil profile is from 6 to 8 feet of silt and clay, then glacial till, and finally at 19 feet below grade there is gravelly brown sand. Groundwater is at about 22 feet below grade. 2/9/12 - Raphael Ketani. Mr. Pressly called me today. He said that they had overdrilled SB-7 and found a black slime on their augers when they pulled them up. He believes that the slime is sludge from the waste oil tank. Next, they moved the rig over to where the waste oil tank used to be and drilled another hole. However, they didn't find oil, but hit a cavernous spot many feet down. When the equipment was pulled out, he could see pieces of metal in the cavern. Another hole was drilled and they hit gasoline contaminated groundwater. Mr. Pressly said that it smelled like weathered gasoline. 3/9/12 - Raphael Ketani. I spoke to Mr. Pressly (607) 264-9521 today. He said that he found 1500 to 2000 ppb of MTBE in the perimeter wells. He recommended to the client to have more wells put in. Two sparge wells have been installed. He also recommended to the client to have the site capped very soon. The other wells don't have MTBE, but do have BTEX. Groundwater appears to go northwest. An upgradient well was installed, but the MTBE is about 1500 ppb. However, the southeast part of the property is full of concrete urban fill. The waste oil tank is above the fill. They broke tools trying to drill in the southeast part of the property. 3/14/12 - Raphael Ketani. I received the 3/8/12 Subsurface Investigation Report from Pressly & Associates. I began my review. 3/16/12 - Raphael Ketani. I finished reviewing the SIR. The investigation work took place from 2/6/12 to 2/13/12. Monitoring wells MW-1 to MW-3, SVE-1 and HVE-1 were constructed of 2 inch PVC. MW-4 was constructed of 1 inch PVC. Refusal was hit at 3 locations to the southeast of MW-3. There was native soil at MW-1 to MW-3 and at SVE-1 down to 18 feet bgs. The soil consisted of fine to medium sand with silt and clay. Urban fill was encountered at MW-4 and HVE-1 to 15 feet bgs. Below 15 feet, there was native sand. Groundwater was encountered at 18 feet bgs (elevation 80' to 83'). SB-7 had a 1 inch PVC riser with oil sludge at the bottom. HVE-1 was installed within the footprint of the waste oil UST excavation patch. Waste oil was not detected within the former waste oil tank area (MW-4 and HVE-1). A 3 inch band of oily soil was observed at 19 feet bgs. MW-2 had 113 ppm of total VOC vapors at the 15 to 20 foot interval. SVE-1 had from 173 ppm to 332 ppm of total VOC vapors from 5 to 20 feet below grade. The soil sample from SVE-1 had the highest total VOCs at 112910 ppb. Groundwater total VOC concentrations varied from a low of 927 ppb at MW-1 to a high of 21,169 ppb at SVE-1. NAPL was not seen on the water table at any location. A subsurface release was not detected in the soil and the groundwater within the former waste oil UST area. The elevated VOC concentrations at SVE-1 correspond to the former location of a fill line. The higher concentrations at SVE-1 and lower concentrations at MW-2 suggest that the source is upgradient near the sidewalk. The MTBE concentrations suggest that it has migrated beyond SVE-1 and MW-2. The sludge at SB-7 is considered to be an anomaly by Mr. Pressly. In the report,

G&A AUTO REPAIR (Continued)

S108294903

it is recommended that another monitoring well be installed to the northwest in order to monitor the MTBE. The pavement should be replaced at the location of the excavation in order to prevent groundwater mounding and infiltration. Additional wells should be installed for the SVE/AS system for recovering the MTBE. Lastly, the SVE/AS system should be installed to remove the VOCs. A letter was drafted for the review of Hassan Hussein, EE 3 and head of the Hazardous Materials Unit. The letter was addressed to Mr. Pressly and approved the SIR and the recommendations. However, the DEC requested that soil samples be taken upgradient of SVE-1 in order to fully delineate the extent of the contamination. A deadline of April 20 was set for starting the work. 3/22/12 - Raphael Ketani. The letter was approved by Mr. Hussein and was sent out today to Mr. Pressly and to Ms. Hollinger. 4/25/12 - Raphael Ketani. Mr. Pressly (607) 264-9521 left me a message today. He said that he needed more time to contract a drilling company and mobilize to start the work that was requested in the 3/22/12 letter. I gave him until 5/25/12 to start the work. 5/9/12 - Raphael Ketani. Mr. Pressly sent me an e-mail. He stated that the additional monitoring wells will be installed on May 29 and the piping and other parts of the SVE/AS system will be installed during the same week. 6/19/12 - Raphael Ketani. Mr. Pressly sent me an e-mail stating that the new monitoring wells and the SVE/AS system had been installed. A report containing the system results will be forthcoming in the near future. 8/7/12 - Raphael Ketani. I reviewed the Pressly & Associates 7/23/12 Supplemental Subsurface Investigation Report. The supplemental investigation took place during 6/5/12 to 6/14/12. MW-5 was installed to the north and downgradient. MW-6 was installed to the southeast of SVE-1 through the sidewalk that runs parallel to Metropolitan Avenue. The SVE system consists of 3 SVE wells (SVE-1 to SVE-3) and 5 AS wells (AS-1 to AS-5). The SVE wells averaged 60 scfm, 40 psi with a ROI of 20 feet. The AS wells averaged 4 scfm, 4 psi with a ROI of 10 feet. Total VOCs at MW-5 were 13.1 ppb. Total VOCs at MW-6 were 22,530 ppb. The system was started on 7/20/12. The AS operating pressure was 3 psi with a flow rate of 4 scfm. The SVE well head vacuum was 45 inches of water and a total flow rate of 120 scfm. A grab air sample was taken with a summa canister and the results will be available in two weeks. Pressly & Associates recommends collecting system PID, flow and pressure data from individual SVE/AS wells on a quarterly basis and the collection of well head vacuum readings from on site wells to evaluate the effective ROI of the system and the collecting of SVE off gas samples on a quarterly basis. Quarterly reporting will be made to the DEC for the system. I found the SSIR to be acceptable and drafted an approval letter for the review of Mr. Hussein. The requirement that confirmatory soil samples be taken once remediation by the SVE/AS is deemed complete was added to the letter. A deadline of October 31, 2012 was set for the submission of the first quarterly SVE/AS system report. The letter was approved and was sent out. 8/16/12 - Raphael Ketani. Jay Stockwell of Blue Zs Realestate, LLC (212) 965-0298 called. He said that he was a real estate developer and he was interested in buying the property. He said that the present owners are trying to sell it again. He said that he was interested in putting up an apartment building with stores in the first floor. He asked how long it would take for the SVE/AS system to remediate the site. I told him that they started the system during July 2012. So it has not been running long. I told him that my best estimate for how long it will take to clean up the site is one year.

S108294903

However, every site is different and there is a lot of contamination under the sidewalk and the street. Mr. Stockwell said that this was what he had expected. With that, the conversation ended. 11/9/12 - Raphael Ketani. I tried to contact Mr. Pressly (607) 264-9521 by e-mail regarding the first quarterly SVE/AS remediation report was due on 10/31/12, but the e-mails bounced back. I then left a message on his voice mail. I tried contacting Mr. Pressly at his cell phone (607) 435-9589, but I could only leave a message. Next, I tried to contact Ms. Hollinger (212) 517-5500, but, again, I could only leave a message. Later, Ms. Hollinger called me back. She said that she thought the September 2012 quarterly report had been submitted. She said that he was paid for the report. She will try calling him later to see what happened to the report. 11/12/12 - Raphael Ketani. Ms. Hollinger sent me an e-mail stating that Mr. Pressly was sending me the report. 11/26/12 - Raphael Ketani. I received the 11/26/12 SVE/AS OM&M Status Report. I reviewed the report. An exhaust sample was collected on 7/19/12. There were 8 VOC hits in the sample. Another exhaust sample was collected on 9/22/12. There was only 1 hit of 41 ug/m3 of methylene chloride. The next site visit will be on December 4, 2012. I had no comments and approved the report. 11/28/12 - Raphael Ketani. Ms. Hollinger sent a letter to John Urda, Region 2 Assistant Regional Attorney, stating that the ownership of the property had been transferred to 291 Metropolitan Realty, LLC. Also, Mr. Pressly sent me an e-mail stating that he was still balancing the SVE/AS system. 12/4/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called today. He said that he was going to meet with the attorney for the new owner, Joel Grunfeld, 277 Classon Avenue, Brooklyn, 11238, (917) 470-3650, jig@sygrealities.com. He will try to explain to him that the SVE/AS process has to continue and that the DEC wants the site cleaned up. Regarding the SVE and AS system. There is an SVE well and a monitoring well next to the sidewalk hotspot. The radius of influence of each SVE well is assumed to be 20 ft. The radius of influence for each AS well is assumed to be 15 to 20 ft. However, a pilot test was never done to find out the real radius of influence. The estimated radius was taken from information regarding a sandy soil. I told Mr. Pressly to keep the DEC informed regarding what transpires at his meeting and whether he will be retained. I added that Ms. Hollinger should be told that her client is still responsible for the contamination. Mr. Pressly said that he told her this. 12/5/12 - Raphael Ketani. Mr. Pressly called. He met with Mr. Grunfeld. Mr. Grunfeld said that he wanted to remediate the site as quickly as possible so that he can build a new building there. Mr. Pressly brought up the idea of solution injection to treat the contamination. He also explained that whether solution injection is used or excavation, the additional remedial actions may cost from \$50,000 to \$100,000. Mr. Grunfeld was concerned about the range of pricing, but he told Mr. Pressly that he wanted things to move forward. Mr. Pressly explained to me that he will send a work plan for installing a well in the sidewalk and a well in the road in order to find out what the concentrations of the contaminants are at these locations. He added that the SVE and AS functioning will be modified in order to try and remove more of the contaminants. 12/7/12 - Raphael Ketani. Mr. Pressly (607) 264-9521/cell (607) 435-9589 called. He said that the owner wants to build his building quickly and has contacted the NYC OER in order to move the process along for the remediation of the site. Mr. Pressly stated that the drilling contractor is hesitant to drill in the street due to logistical

G&A AUTO REPAIR (Continued)

S108294903

reasons and would prefer to install wells in the adjacent sidewalk and across the street in the distant sidewalk. Mr. Pressly added that he would like to install additional wells in the sidewalk in order to laterally delineate the contamination. After this, he would install SVE/AS wells in the edge of the sidewalk where it meets the road which have a 20 foot radius of influence (the road is 40 feet wide) in order to remove any contamination under the road. I told him that this sounded fine. He said that he will talk to the owner about this and put together a work plan. 12/27/12 - Raphael Ketani. Shaminder Chawla of the NYC OER (212) 442-3007/ shaminderc@dep.nyc.gov/100 Gold Street, 2nd Floor, New York, NY 10038 sent me the following e-mail: 291 Metropolitan Avenue property has a new developer/owner who has approached us to enter NYC Voluntary Cleanup program. Previous owner has a stip agreement and an approved RAP (with multiple SVE points) from you. Their development/ remedy has changed and includes excavation of entire property to at least 10 to 12 feet depths. OER is sending them back to field to conduct additional soil, soil vapor and groundwater investigation. OER informed them that they need to approach you and get spill approvals exclusively from DEC. We will accept your approved RAP and add additional requirement that we need to issue Notice to Proceed. I forwarded this information to Mr. Pressly and he responded with the e-mail below: Hi Rafiel, The last time I emailed Joel Gruenfeld was about a week ago and he said he was going to get back to me regarding a proposal I sent about 2 -3 weeks ago to investigate the road and the sidewalk. For this I had proposed 5 soil borings with 3 to be completed as MWs to get lateral and southern extent. I had also advised him to get OER involved sooner than later. I have not heard back from him. since. I also gave him options to clean the on-site groundwater problem quicker using chemical oxidation with direct push (20 points) to facilitate building construction. In addition, I had proposed SVE AS system as possible remedy for sidewalk/ road to be incorporated into any new building construction. NYC VCP may be good to make this an engineering/institutional control? The building design was recommended to include a special XP equipment room for this purpose in the basement. I'll give him a call and let you know what I find out. Best, Nik 12/28/12 - Raphael Ketani. Charles Sosik, PG, Environmental Business Consultants (631) 504-6000, ext 112/csosik@ebcincny.com called me today. 1/2/2013 - Raphael Ketani. I spoke to Mr. Sosik today about the remediation of the site. He said that he has been in contact with the NYC OER and they told him to talk to me about what should be done. We discussed the site history and what Mr. Pressly's company had been doing regarding SVE and AS. Mr. Sosik said that he went to the site to see what the present conditions were and found that the SVE air blower and other equipment was missing. Mr. Sosik also asked for the P.W. Grosser 9/22/10 Supplemental Phase II and the Pressly and Associates 3/8/13 Subsurface Investigation Report. I sent him the reports. Later, he sent me the EBC 12/28/12 Phase II Work Plan. I reviewed the work plan. Four soil borings will be installed: B1 to B4. Soil samples will be taken from 0 to 2 feet below grade and from 10 to 12 feet below grade. The soil and groundwater samples will be tested via methods 8260, 8270, 8082 for PCBs, 8081 for pesticides and methods 6010 and 7471 for metals. Temporary well MW-6 will be installed at boring B4. Wells MW-1 to MW-3 and MW-6 will be sampled for groundwater. Soil vapor testing will be performed at 4 locations at 12 feet below grade. Subslab, soil gas and indoor air sampling will

Map ID
Direction
Distance
Elevation

Site

Database(s)

EDR ID Number
EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

take place for VOCs. I drafted a letter approving the work plan with comments. First, soil sampling should take place at the most contaminated horizon. If no contamination is found at the boring location, then a sample should be taken just above the water table. Soil borings must also be performed at the locations of the Pressly & Associates wells SVE-1 (extremely high total VOCs) and MW-6 (high total VOCs) and to the south of MW-6 to confirm the contaminant concentrations. All results should be compared to the CP-51 standards for soil and the TOGS 1.1.1 standards for groundwater. Additionally, TCLP method 1311 must be used to test for lead and the results must be compared to the limits in Part 371.3(e). A revised work plan must be submitted by January 31, 2012. The letter was sent to Mr. Hussein for his review. 1/3/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. According to deed dated 11/27/12 shown in ACRIS, the new owner for 291 Metropolitan Avenue, Brooklyn, 11211 (block and lot 2353/13) is 291 Metropolitan Realty, LLC, 199 Lee Avenue, Ste 693, Brklyn, 11211. Another company is also at this address, 64 St. James Realty, LLC. Later, Mr. Sosik sent me an e-mail stating that the boring work will start on 1/4/13. Later, Mr. Sosik sent me a revised Phase II Work Plan dated 1/3/13 which was also a Scope of Work. This work plan incorporated the comments from the DEC 1/3/13 letter. Otherwise, it was the same work plan. However, more comments were generated. These were that the Department still wanted a boring in the street south of MW-6. Also, subslab soil vapor sampling must take place at three (3) locations along the west wall of the garage and at two (2) locations along the east wall of the garage. The extra boring location and the extra soil vapor sampling locations were indicated on two attachments to the DEC work plan approval letter. Lastly, all seven wells must be sampled during the same sampling event and well redevelopment should take place if necessary for the older wells. The letter was submitted to Mr. Hussein for his review. 1/14/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with an attachment indicating where the Department wanted a boring in the street and additional soil vapor samples within the garage footprint. Later, Mr. Sosik sent me the following e-mail: The work plan was approved with conditions on 1/3/13. We accepted those conditions and returned the revised plan as requested the same day. The work has already been completed. Eight soil gas samples is a lot of samples for a property this size. Also we cannot access the 3 western locations you are requesting. As you know the bulk of the contamination is in front of the building in the former tank area. There is no difference between conditions beneath the garage and those outside of the building as all are taken at the basement level depth. The four samples provide good coverage across the site and will be representative of conditions. The highest concentrations will be in the SG2 location and will represent a worst case condition. Subsequent to this, I called Mr. Sosik (631) 504-6000, ext 112. We discussed the soil vapor sampling. He said that the issue was that he could not get a piece of equipment into the garage, due to its low clearance, that can bore down 12 feet to take soil gas samples. I told Mr. Sosik that he didn't need to go down 12 feet. That the Department simply wanted more information regarding what the vapors may be in the shallow subsurface. Mr. Sosik responded that he could have holes drilled by hand and then have samples taken. I told him this would be fine. He said he will do this, but that he thought there were too many vapor sampling locations for a site this size. I told him that, from my professional experience, the number of

S108294903

sampling locations were alright. Mr. Sosik agreed to do the work. 2/6/13 - Raphael Ketani. I spoke to Mr. Sosik today. He said that the vapor sampling took place, but the street boring hasn't been done. A permit is needed to perform this boring. 3/8/13 - Raphael Ketani. I received 3 documents for the site from Shaminder Chawla of the NYC Office of Environmental Remediation. These documents included a pdf containing Tables 2 to 11, which consisted of soil, groundwater and vapor data. The second pdf contained boring logs for borings B1 to B5. The last pdf contained 6 maps with soil, groundwater and soil gas data. I looked at all of the information. The data tables showed that there were significant soil exceedences at borings B1, B2 and B5 for VOCs and SVOCs when compared to the CP-51 standards. Some metals, such as lead and mercury also had significant exceedences in samples from the shallow subsurface, but the results were for total metals, not TCLP analysis. So it was not clear whether these results were a concern. Groundwater exceedences of the TOGS 1.1.1 standards were present in samples from MW-2 and MW-6. Mr. Chawla wrote that the site will be excavated down to 11 feet below grade. However, this doesn't address the contamination under Metropolitan Avenue to the south of MW-6. 3/12/13 - Raphael Ketani. A conference call took place between Mr. Chawla, Hannah Moore (engineer) and myself. We discussed the site and the environmental issues present. It was mentioned that excavation will take place down to 11 or 12 feet below grade. This will remove all of the shallow contamination. However, there is contamination at the water table which is 18 to 20 feet down. Ms. Moore and Mr. Chawla stated that this will be addressed by the injection of treatment solutions at depth. I told them that the most contaminated areas are B1, B2, B5, MW-2 and MW-6. They said that these areas will be targeted. I also stated that more investigation needed to take place south of MW-6 to see how much contamination is under the street. I asked that a treatment and investigation work plan be submitted by Mr. Sosik. They said the DEC will receive the work plan. 3/18/13 - Raphael Ketani. I reviewed the February 2013 Remedial Investigation Report that was submitted by Environmental Business Consultants. It was a compilation of the reports that had been submitted by the previous consultants and also contained many Sanborn maps. The only new information was the soil vapor and sub-slab vapor data. BTEX was found at a maximum of 21.29 ug/m3 in the soil vapor. The sub-slab vapor reached a maximum of 31.07 ug/m3. PCE concentrations at all 4 soil vapor sites and in the 3 sub-slab vapor sites varied from 4.13 ug/m3 to 37.8 ug/m3. TCE was present in 1 of the 4 soil vapor locations at 0.537 ug/m3 and in 1 of the 3 sub-slab vapor locations at 4.89 ug/m3. According to the report, the results were below NYS DOH monitoring levels for the soil vapor guidance matrix. Next, I reviewed the February 2013 Remedial Action Work Plan. They will do community air monitoring, remove all tanks, remove soil and fill exceeding the restricted residential standards, sample and have analyzed all excavated material, collect and analyze the end point samples, install a vapor barrier, generally excavate to 12 feet below grade - though they will excavate deeper in the UST and pump island areas, if necessary, inject chemical oxidants to reduce groundwater contamination. The health and safety plan was included in the document. A Remedial Action Report will be submitted by the EBC. I found both the Remedial Investigation Report and the Remedial Action Work Plan to be acceptable. However, I noted in the letter that they must compare all of the soil analytical results to the unrestricted residential standards in CP-51 and the groundwater

S108294903

results to TOGS 1.1.1. Also, all contaminated soil which is found at 12 feet below grade which exceeds the unrestricted standards will have to be removed. 3/19/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 4/11/13 - Raphael Ketani. I received and reviewed the EBC 4/11/13 additional 3 borings report. The borings were conducted in the vicinity of MW-6. They were designated as B6 to B8. B6 was just to the west of MW-6. B7 was about 17 feet west of B6. B8 was about 13 feet east of MW-6. Sampling was continuous from grade to 20 feet bgs. The sample with the highest PID detection in the respective boring and the sample at the bottom of each boring were retained and sent to the lab for analysis. The total VOCs ranged from 432 ppb in the 18 to 20 foot sample from B7 to 113,100 ppb in the 18 to 20 foot sample from B6. B6 had the most contamination in the 18 to 20 foot sample with the highest analyte concentration as 32,000 ppb of total xylenes. B7 had the most contamination in the 3 to 5 foot sample with the highest analyte concentration as 4160 ppb total xylenes. B8 had the most contamination in the 13 to 15 foot sample with the highest analyte concentration as 8400 ppb of ethylbenzene. The SVOC results were mostly non-detect with many low benzo series hits in the 3 to 5 foot sample from B7. However, naphthalene hits were present in the 18 to 20 foot sample from B6 and in both samples from B8. I drafted a letter approving the report and stating that the Department required the remediation of the contamination at the locations of B6 to B8 and MW-6. The letter was submitted to Mr. Hussein for his approval. 4/17/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out with a due date of May 24, 2013 for the submission of the work plan for remediating the contamination under the sidewalk and the street. 4/24/13 - Raphael Ketani. Mr. Sosik submitted an addendum to the 3/2/13 RAWP dated April 24, 2013. The only change from the previous RAWP was that treatment solution injections will take place in the vicinity of MW-6 in order to remediate the soil contamination at this location. I approved the addendum and responded via e-mail, but I strongly warned Mr. Sosik that he and 291 Metropolitan Realty were responsible for obtaining all of the necessary permits to conduct the injections and must consult with Con Edison, the NYC DEP, the NYC DOT and other concerned parties regarding the work he intends to perform. I also warned him that confirmatory soil samples and groundwater samples will need to be taken in each treatment area and that if the results are still well above the CP-51 standards and the TOGS 1.1.1 standards, then solution injections will have to be done again. I told him to make sure that the solutions travel to the contamination under the road. 6/14/13 - Raphael Ketani. I called Mr. Sosik (631) 504-6000, ext 112 regarding progress at the site. He said that the service station building will be demolished next week. This will be followed by the site excavation the following week. 8/12/13 - Raphael Ketani. I called Mr. Sosik today to find out what progress had been made at the site. He said that the building had been demolished and test pits had been performed to characterize the waste. The soil results indicated that they could dispose of the material at either Clean Earth or Soil Safe. However, the excavation contractor has not made contact with Mr. Sosik in some time. The permits are in place and NYC OER has given the go ahead to do the work and to construct the building. I told Mr. Sosik that the permits have expiration dates. So he should get ahold of the contractor and start the work before they expire. Mr. Sosik said that he knows this and he will call the contractor and find out what the hold up is regarding doing

S108294903

the excavation. Mr. Sosik said that he will send an e-mail when he has a definite start date. I told him that will be fine. 8/27/13 - Raphael Ketani. A meeting took place today at the office of the NYC OER. In attendance were Mr. Grunfeld, Mr. Sosik, and Dan Walsh, Mr. Chawla and Ms. Moore (212) 442-6372 of the NYC OER, and myself. The meeting was held in order to iron out some of the details of the work that will take place and associated matters. The topics discussed included: excavating the site down to 12 feet below grade, treating all of the hot spots (both within the building footprint and under the Metropolitan Avenue sidewalk) with solution injections, monitoring truck traffic and dust, monitoring odors and noise during the excavating and construction, the submission of a work plan for the excavating and solution injections to the DEC for approval and sending progress updates to OER and DEC. Mr. Grunfeld stated that digging should start tomorrow and continue for two to three months. An estimated 3,000 cu. yds. of soil will be removed. The soil will go to Soil Safe in Carteret, NJ and Prospect Park, NJ. Soil Safe will supply all of the trucks. Manifests will be received by EBC for each load of soil. A vapor barrier, VB20, will be installed as part of the building construction. Mr. Sosik stated that there will be 8 injection points. I mentioned that confirmatory soil samples and groundwater samples will need to be taken 1 month after each injection round. Mr. Sosik said that this will be done. One of Mr. Grunfeld's assistants mentioned that the floor of the excavation will remain as open dirt until the soil treatment is finished. After this, a concrete slab will be poured. I mentioned that removing as much of the soil contamination was important because VOCs can get washed down into the groundwater by the rain, make there way under the school which is downgradient and result in vapors coming up into the school. Mr. Grunfeld said that they will make sure that the soil is treated. He also stated that the school will be notified about the excavation plan. I asked whether the community board had been notified about the impending work. Mr. Chawla said that they had been. One of Mr. Grunfeld's assistants stated that the dirt trucks will enter and leave the site from Metropolitan Avenue, not the street next to the school. Work will start at 7:30AM and end at 3:30PM. I suggested that both dust and noise monitoring take place during the excavating in particular. I also added that the soil results must meet the unrestricted residential standards and the groundwater must meet the TOGS 1.1.1 standards for the case to be closed. Everyone agreed that they understood what was to take place and the meeting adjourned. 10/18/13 - Raphael Ketani. I spoke to Kevin Brussee and Mr. Sosik (631) 504-6000, ext 112 by phone regarding progress at the site. They mentioned that the construction crew had been working at the site for only 6 full days. They had to do some site preparation work before conducting the excavating. The excavating is taking place starting at the rear of the property and they will work towards the front. Right now, they are digging just to make the pit for the building. They will dig to remove the contamination later. The crew is putting in the footings, but only in the back. Progress reports are being sent to the NYC OER and will be sent to the DEC. I received 9 Daily Status Report documents for the period from 9/11/13 to 10/15/13. They indicated that the contaminated soil was being sent to Soil Safe in New Jersey and that the clean soil was being sent to the Malanka Landfill in New Jersey. Pictures of the clean soil showed red brown glacial till with a few boulders and cobbles and a good percentage of fines. The north half of the site had been excavated by 10/15/13. A

S108294903

vapor barrier was installed under the footings. Concrete buttoning up had been done in the northwest corner where the neighboring building was still standing. Other pictures showed rebar form work taking place in the northeast corner by 10/15/13. I had no comments about the reports. Later, Mr. Brussee sent me the following documents: Soil Safe 8/28/13 approval letter for receiving excavated soil from 0 to 6 feet below grade Fill Material Certification Letter dated 9/3/13 for the Malanka Landfill for soil originating from greater than 6 feet below grade Test Pit location map with the 7/16/13 soil analytical report I reviewed the documents, but had no comments. 10/28/13 - Raphael Ketani. Mr. Brussee sent me some pictures of a previously unknown UST that was uncovered under the southeast corner of the property. He explained in the e-mail that: One 275-gallon UST was encountered at 291 Metropolitan Avenue today. I will prepare an updated PBS application once excavation is completed just in case we find another one later. Although there were some rust holes in the tank, it does not appear as though the tank leaked. The tank is still full and no contaminated soil below the tank was observed. A tank removal company will be retained to cut and clean the tank, and I'll be sure they issue a NYCFCF tank removal affidavit. I responded back by e-mail that a site map from ASR dated 8/6/09 shows the existence of a waste oil UST at the same location. I added that people need to look at the old maps and see where other features may be in order to avoid tearing them open and creating a spill. 10/29/13 - Raphael Ketani. I reviewed the October 28, 2013 Daily Status Report. Seventeen truck loads of contaminated soil were sent to Soil Safe. Excavation in the southeast corner of the site went down from 0' to 6' below grade. The foundation wall was installed in the northern part of the site. Troy Cutter came and removed the 275 gal. tank after it had been cleaned out. Picture 4 of the report shows a worker shoveling out thick sludge from the tank. The tank appears to have been filled completely with sludge. The air monitoring results were within ambient air limits. I approved the report. However, I sent an e-mail to EBC stating that the DEC wanted confirmation that the area where the UST had been emptied was clean. Later, Mr. Brussee sent me 3 photos showing the handling of the tank and the work area after the tank was emptied and removed. The floor in the area looked clean. 11/4/13 - Raphael Ketani. Mr. Brussee sent me copies of the tank removal paperwork. 12/2/13 - Raphael Ketani. I spoke to Mr. Brussee (631) 504-6000 regarding progress at the site. He said that they had basically dug down 12 feet below grade throughout the site. However, there is one corner with gray soil. He added that they want to remove this area of gray soil and then bring in a geoprobe to put in the injection wells. The construction crew may be putting in footings now. Otherwise, nothing else significant is happening. 12/18/13 - Raphael Ketani. I had a phone conversation with Mr. Sosik (631) 504-6000, ext 112. He said that the contractor is presently removing the contaminated soil in the excavation pit. Also, a drilling rig was lowered into the pit in order to drill holes for treatment solution injection. I told Mr. Sosik that the contractor should follow the soil contamination in order to remove as much contamination as possible. 2/12/14 - Raphael Ketani. I tried to contact Mr. Sosik regarding progress at the site, but I could only send an e-mail. 2/24/14 - Raphael Ketani. I made an unannounced site visit today to see the physical status of the site. I took a few pictures. A large pit had been excavated. The building was being constructed. The steel frame had been partially completed. Workers were pouring concrete and

G&A AUTO REPAIR (Continued)

S108294903

doing masonry work. The sidewalk did not appear to have been dug up in order to remove the contamination at the location of MW-6 and borings B-6 to B-8. In fact, the plywood wall along the sidewalk obscured the location of MW-6 and B-6 to B-8. There were viewing portals in the plywood walls, but there was nothing else to see except the construction that was taking place. So, I left the site. 2/26/14 - Raphael Ketani. I spoke to Mr. Sosik (631) 504-6000, ext 112 today regarding the submission of the remediation report. He told me that the remediation hadn't been completed yet and that is why DEC didn't get the report. He added that the contaminated soil was dug out from under the sidewalk. End point samples were taken about 2 months ago in the excavation pit. The injection points were installed, but the solution injections have not taken place yet. He wasn't sure why. Mr. Sosik will send the NYC OER Interim report. However, he was not sure when this report will be completed as he has to follow a very specific format and there is a lot of information to include in the report. 5/20/14 - Raphael Ketani. As progress reports have not been submitted. I sent Mr. Sosik (631) 504-6000, ext 112 an e-mail requesting the NYC OER Interim Report. 5/21/14 - Raphael Ketani. Mr. Sosik responded by e-mail stating that there will not be an Interim Report. A Final Report to OER will be submitted. Mr. Sosik added that it will take several weeks to put the report together. 6/23/14 - Raphael Ketani. As I hadn't received the Final Report from Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927, I left a voice message on both of his phones requesting this report. 8/25/14 - Raphael Ketani. Since my last voice message to Mr. Sosik, we had discussed the submission of a final report for the site. He had told me weeks ago that the NYC OER had a rigid format that must be followed regarding report submission and what each report must contain. So, he couldn't submit the final report at the time. However, he had told me that he would send it eventually. As the report still hasn't been received, I sent him [(631) 504-6000, ext 112/csosik@ebcincny.com] an e-mail requesting it. 11/25/14 - Raphael Ketani. As Mr. Sosik hasn't sent the final report, I sent him another e-mail requesting the report. 11/26/14 - Raphael Ketani. Mr. Sosik responded by e-mail today that the site is on his list of projects to finish. He added that there were endpoints taken from the sidewalk and injections performed. 3/10/15 - Raphael Ketani. I sent an email to Mr. Sosik (631) 504-6000, ext 112/(631) 357-4927 /csosik@ebcincny.com requesting the closure report. 6/26/15 - Raphael Ketani. As there has been no response from Mr. Sosik in some time, I sent an email to Ms. Hollinger (jrhollinger@juno.com) stating that the Department was owed the closure report as part of the requirements of the Stipulation Agreement in order to close the spill case. Ms. Hollinger responded back that she was waiting to hear from the R.P.'s attorney. 6/29/15 - Raphael Ketani. I made an unannounced site visit today. The building had been completely constructed. It appeared that they had finished construction just recently as the planting areas between the sidewalks and the street were still just areas of dirt. I saw some construction workers standing outside the front of the building (which faces the school). They were not going into the building and the building itself was locked and dark. I took a picture of the building and the sidewalk along Metropolitan Avenue which still had access ports for 3 wells. After this, I left the site. 9/16/15 - Raphael Ketani. The excavation within the footprint of the new building was deep enough (about 20 feet) to remove the great majority of the soil contamination and almost all of the

Map ID

EPA ID Number

G&A AUTO REPAIR (Continued)

S108294903

groundwater contamination. The only soil contamination which remained was in the area of the former remote fill port, which was under the utilities and could not be removed easily or treated. Given the present condition of the site, I determined that the spill had effectively been remediated and that the residual contamination was not a threat to the public or the environment. Therefore, I closed the spill case effective today."

Site Description:

This is a new BCP application which pertains to properties located at 285 and 291 Metropolitan Ave., Brooklyn, Kings County. This site is approximately 0.25 acres in size in an urban area. Surrounding uses are commercial and residential. Directly to the north, across the street from the site on North 4th Street, is a public school. The site consists of an automobile repair facility (former gas station) and a neighboring garage with residential uses on the second floor. The future use for this site is residential and commercial. Suspected and known contaminants are petroleum and metals and MTBE which are impacting the soil and groundwater. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility. Review of application terminated since the applicant is no longer an entity authorized in NYS to make the application. Following termination of the BCP application, the site was referred back for investigation and remediation under spill no. 0607903.

Env Problem:

A limited investigation was performed on 291 Metropolitan Ave in October 2006 and spill number 0607903 was assigned. From four soil borings, one soil sample was collected from each. From another two soil borings, two samples were collected from each. From two borings, a grab groundwater was collected in each. The groundwater was contaminated with BTEX compounds and MTBE. Additional investigation will be required to define the extent of contamination.

Site Description: Location: The project site is located at 99-101 South 5th Street aka 337 Berry Street (Block 2443; Lot 6 formerly known as Lots 6, 37 & 41), Williamsburg, Brooklyn; an urban borough within New York City and within Brooklyn Community District 1. The site is approximately 15,870 square feet. Site Features: The main site feature is an abandoned warehouse that was owned by the City of New York's Landmark Preservation Commission (LPC) and used as a Salvage Warehouse. This building is specifically located at 337 Berry Street or the former lot 6. Lots 37 and 41 are vacant. Current Zoning and Land Use: This Site is currently inactive and is zoned M1-2/R6, Special Mixed Use District (MX-8). The surrounding parcels are currently used as residential condominiums and/or apartment buildings and light ground floor commercial spaces. Past Use of the Site: An architectural salvage program was started at the warehouse on the Site in 1980. Salvaged items such as doors, windows, fences, and decorative elements, were sold to the public. The program ended in 2000 due to budgetary constraints. Former lots 37 and 41 were originally housed with two story residential buildings from ca. 1868. All three former lots (6, 37 & 41) were listed as an E Designation Site in the Greenpoint-Williamsburg Rezoning EIS where an auto body shop was suspected to exist at some point, specifically on Lot 41. Site Geology and Hydrogeology: Fill material exists at depths between 0-5 feet below ground surface (bgs). Soils consist of well-graded sand (ranging from fine to coarse) with silt. Small to large sized gravel and cobbles exist at all depths. Bedrock was encountered at depths ranging from 27 to 42 feet bgs and appears to slope downward to the north with the topography towards the East River. Groundwater exists at approximately 45-47 feet bgs and flows west towards the East River.
Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.
Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Contact Phone: (607) 435-9589
DEC Memo: "8/9/16 : Mahat On 8/3/16, DEC Mahat talked to the BCP PM Ms. Sweet and she notified that the spill was called in due to finding of contaminated soil during the tanks removal. Soil samples (GW if they encountered any) will be taken as per CP 51 Guidance. Nick Pressley ***** Environmental Consultant/Contractor Pressley Associates, LLC 607.435.9589 Melissa Sweet ***** NYSDEC BCP PM 518.402.9614 melissa.sweet@dec.ny.gov NYS BCP SITE: C224233 As per Mr. Pressley, a complete report will be submitted to the Department for a review. Further investigation/work or the closure of the case will be decided once the report is furnished. DEC is waiting for Tank Removal report. 8/11/16: Mahat DEC Mahat left voice message to Mr. Pressley to call back with the progress on the report. Spill case has been assigned to DEC Zhune as Day Time Runner. 8/19/16- Nick sent the UST Removal/Spill Report dated August 19,2016. 8/22/16-Zhune reviewed the report. As per the report eight the tanks (Tank #1 and Tank #2) were removed and eight end-point soil samples were collected from bottom and sidewalks of tank #1. As per Nick the samples from sidewalk (North, South, East, T1W) were sent to the lab. but they were not analyzed for VOCs based on not evidence of spill. The soil analytical result for the bottom samples indicate ND VOCs or SVOCs. Four endpoint samples were collected from tank #2. The analytical result indicated m,p xylene 0.914 PPM, o-xylene 1.01 ppm and total xylene 1,92 PPM at 9 feet bgs in sample Base -1 exceeding the acceptable limit. 8/23/16-Zhune sent the following email] Based on the xylene concentration in endpoint sample UST-2 . WE need to know What is the future use of the site. 8/23/16 Nick sent the following email Intended Use - Mixed Use (Residential with Retail on Ground floor also there will be section dedicated to Community Space) I requested closure based on the relatively low Xylene concentration at only one end of the tank 2 excavation and the engineering constraints for the location which is 9 feet deep and on the edge of the property next to the sidewalk. 8/23/16-Zhune sent the following email to Nick. What vapor mitigation efforts are going to be use in the development such us a vapor/moisture barrier or SSDS?. 8/23/16-Nick email to Veronica. I did ask about that and they don't believe the DEC has made a decision on that. I can ask Melissa Sweet who is the DEC project mgr

under the BCP. 8/23/16- Nick email to Veronica. I just spoke with Melissa and it is a Site that would typically be required to have vapor mitigation but the project is still in the early stages and an RAWP has not yet been completed. Please contact her if you wish to discuss 9/14/16- Melissa Sweet sent the following email. The owner intends to install a vapor/moisture barrier under the building. Would they need to install something in the parking lot as well? Both tanks that were removed were within the footprint of the parking lot. Xylene exceeded the unrestricted soil cleanup objective (SCO), however it is still well below the restricted residential SCO, which is what the site is remediating to. 9/14/16-Veronica email to Melissa Do you have any objection if I close this spill. Please email your contact #. 9/14/16-Melissa email to Veronica I have no problem with closing the spill. My contact information is below. Based on Melissa email and as per J. Vought this spill is closed."

DEC Memo: "Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up. 9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf 4/30/08 Sent Old TTF letter to: Jerry Lebedowicz Williamsburgh Square LLC 52-47 Browvale Lane Little Neck, NY 11362 Address obtained from tank closure application. bf 5/2/08 Received message from J. Lebedowicz to call him back. bf 5/5/089 Received call from J. Lebedowicz tank was closed. Athena Environmental sampled after tank was removed. bf 6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690 ppb) in sample B-3. Faxed nfa letter to Mr. Lebedowicz. Fax: (718)229-7111. Also mailed letter to him at address above. NFA. bf" Remarks: "3K TANK FAILED PETRO TITE WITH A LEAK RATE OF -.161GPH."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis #133803 Notes: 10-5-00 1 pint transformer oil leaked from unit down side of ground handle, unit and onto floor of structure (sees a stain). Also affected sump in structure which has approx 15gal water in sump with a film. Upon checking sump pump which was working upon arrival, he disconnected and checked valve to find a trace of oil was released. Historical records indicate 5ppm from 9/99. Unit was pressure tested and found to be OK. Oil level was OK. PCB sample taken. Packed handle with diapers and plastic bags. Checked adjoining manhole and no oil was found. Cleanup was completed as of 1800hrs. All debris removed--two drums brought back to 3rd ave. Sump was already cemented. Sample returned 39ppm PCBs. 10-6-00 Repair to leak on ground switch completed. Transformer pressure tested OK. Ron Cosentino reports the following: On 10-6-00, it was discovered by the Equipment Group, that an existing oil sample was found and it indicated an oil sample was taken from vault 5511 on 8/8/00. The analysis indicated that the results were 50ppm PCBs. This was not in the main saver system. All departments involved were notified. They were instructed that all waste generated will be treated as >50ppm. An additional sample was taken and returned 48ppm. "

Remarks: "SPILL WAS FROM A TRANSFORMER IN A STREET VAULT - 1 PT WAS THE APPROXIMATE AMOUNT SPILLED. IT WAS SPILLED TO APPROXIMATELY 15 GALS. OF WATER. IN THE VAULT - THERE WAS A SUMP PUMP. THE SUMP PUMP ACTIVATED AND PUMPED OUT THE WATER - CONTAINING THE OIL. FIGURES INDICATE LESS THAN 1 PT OF MATERIAL WAS RELEASED INTO THE PUBLIC SEWER SYSTEM. CLEAN UP WILL BE CONDUCTED BY CON-ED. CON ED #133803"

DEC Memo: "TTF sent to property manager: Mr. Martin Gurshon 233 Broadway - Suite 2704 New York, NY 10279 11/20/09. J.Krimgold reviewed the letter report submitted by Pro Test Enviro and dated 10/30/09. According to the letter the tank system failed the test due to a leak in the supply and/or return lines. The damaged portions of these line were replaced and the tank system retested and passed. During excavation of piping contaminated soil was encountered. This soil was excavated, drummed and properly disposed of. End point samples show no contaminant above TAGM limits. Case closed."
Remarks: "1518 The caller advised dispatch the tank has failed their test and requested to obtain a spill number. No water ways have been affected. This was just a tank test failure. The owner will be incharge of the fixing of the system. At this time chemicals have spilled. 4000 gallon underground tank."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was MULQUEEN HE THOUGHT IT HAD BEEN CALLED IN. TOOK TWO (2) BORINGS AT THE O2 LEVEL FOUND SEMI-VOLATILE HYDROCARBONS @ 1200-1500 PPB. NOTING AT 15-17' LEVEL (GROUNDWATER INTERFACE EST. AT 17'). SITE HAD BEEN AN ADHESIVE MFG. FACILITY. THINKS THIS IS SOURCE . FUEL OIL LOCATED IN BASEMENT. RECOMMENDED THAT CLIENT DO ADDITIONAL BORINGS, JACK HAMMERING THROUGH BASEMENT FLOOR, TO DETERMINE LATERAL EXTENT. WOULD BE HAPPY TO HAVE SOMEONE INSPECT THE SITE AND/OR BE AVAILABLE WHEN ADDITIONAL BORINGS ARE DONE. CALL HIM IF YOU OR SOMEONE ELSE WOULD LIKE TO DO THIS. JOE O'CONNELL FROM HAZ WASTE REMEDIATION IS TAKING LEAD FOR ADDITIONAL SAMPLING FOR HAZ WASTE AND VOLUNTARY CLEANUP ACTION. 06/16/06: This spill is transferred from Mike Mulqueen to Mr. Koon Tang. 08/12/2013 - Brevdo. 17 year old spill. No groundwater contamination confirmed. No petroleum odor complaints received by the Department. No file exists which would demonstrate presence of petroleum contamination. With this lack of information and given that spill is 17 years old, there is no rational and/or justification for the Department to request site owner to investigate, which would require drilling through concrete slabs within the building to pursue contamination which has not been proven to exist. Based on the above, I (V.B.) am selecting to close this spill case. Spill case is closed effective 3/12/2013."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 5/8/90, 11:00 AM; 20 line between N. 7th & N. 8th St. on Kent Ave. #6 oil leaked 10 gallons to street, ~800 gallons in vault removed by AAA contractors by 11:30AM. Upon arrival at 11:00 AM, observed oil in vault, oil surfacing from ground at point of excavation. Con Ed planning to introduce low-pour oil into the line and reduce pressure. Howard Fickersen, Supt. of Maintenance & Construction for Underground Transmissions (Con Ed) -(718) 706-2077. He reports there sre 230,000 gallons of oil in pipeline (~2.5 miles long). Con Ed's North 1st Street terminal started packing the line with low our oil at 9 AM, expect it to be complete in about 2 hours. (AJS) 5/8/90, 2:15 PM: returned to scene. Excavation of line continuing along pipeline sections towards N. 8th St. J&B Waste Oil, working for AAA, is picking up oil. J&B is pumping oil from the ground while Con Edison is excavating pavement area. (AJS) 11/15/94: REASSIGNED FROM SIGONA TO ENGELHARDT ON 11/15/94. APPENDIX B SITE NO 25/45. TRANSFERRED FROM ENGELHARDT TO O'CONNELL. Update 6/9/06 Spill closed based on final site investigation report located in eDocs App. B Site 25. (SKA) "

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL WAS A SULLIVAN SPILL. REASSIGNED TO ENGELHARDT ON 4/27/95. NO EVIDENCE OF ANY SUBSURFACE INVESTIGATION AT THIS SITE. 4/2/03: APPENDIX B SITE NO 25/45. TRANSFERRED FROM ENGELHARDT TO O'CONNELL. 1/25/05: Limited Subsurface Investigation Report submitted. This report covers 5 locations where the pipeline is scheduled to be closed in-place as opposed to removed. This spill location (N. 7th and Kent) is one of the locations to be closed in-place. (JHO) 2/23/05: e-mail from Matt Madsen, Con Ed Remediation: Contaminated soil was found in the excavation for the above referenced project between N6th St. and N7th St. Clayton Group Services will collect samples today or tomorrow. In addition to waste class parameters, I have asked Clayton to have the samples run for Modified 8100 so we can try to fingerprint the material. I will continue to keep you posted as we get additional information. (JHO) 3/10/05: E-mail to Madsen: Matt: As we discussed on Friday, these are my comments on the Limited Subsurface Investigation for Pipeline #7 . 1. Only one boring location (BH-8, located at North 8th St.) exhibited visible contamination during drilling activities. Lab results for the sample collected at this boring exhibits elevated concentrations of several PAHs. Since this is the location of a know historical release (NYSDEC # 9300512) I think additional sampling is warranted. you indicated that the excavation has reached this intersection, and that additional samples may be collected during the excavation work. Also, this section may be removed, based on field conditions. In either case, an effort should be made to remove any contaminated soil that is encountered. Samples should be collected at the frequency approved in the construction work plan. 2. Please submit revised drawings without the word Proposed boring locations. 3. Please submit an electronic copy (PDF format) of the entire document, including Appendices. (JHO) 3/1/05: Response from Madsen: Jane: Additional samples have been collected - I'll get them tabulated, plotted and over to you as soon as we have them. I've also asked Clayton to make the requested revs to the figures and provide electronically. I can either have them reissue the original report with the corrected figures (electronically) and issue an addendum for the additional samples or hold the report until we have the new data and issue an entire new report with the additional data. Let me know what you would prefer. (JHO) 4/5/05: Revised Limited Subsurface Investigation Report submitted. (JHO) 5/13/05: Letter to Con Ed approving results

NORTH 7TH ST & KENT AVE (Continued)

S103271745

of Limited Subsurface Investigation: The data generated from the initial soil borings indicated only one area of concern (Kent Avenue at North 7th Street). This was the location of an historical release (NYSDEC spill # 9300512, spill date April 12, 1993). The concern at this location was visual evidence of contamination in a soil boring. The corresponding sample from that boring was submitted for lab analysis and the results indicated very low concentrations of several SVOC compounds. Although these concentrations were below the applicable TAGM value of 50 ppm, as a precaution the Department requested additional sampling in this area to confirm that there was no impact from the historical release. Subsequent sampling was completed in February 2005. Two additional soil samples were collected in the vicinity of the southwest corner of Kent Avenue and North 7th St. (the documented location of the historic release). No contamination was observed during collection of these samples. Analytical results of these samples correlate with the initial sample results. Results of soil sampling and analysis for the 5 sections of pipeline scheduled to be closed in-place indicate there is little or no residual contamination in the soil related to the pipeline. While there are low levels of SVOCs in soil surrounding the pipeline, these concentrations do not exceed the TAGM guidance of <50 ppm per constituent. These results are also indicative of urban fill conditions, as opposed to fuel oil contamination. With the exception of the North 7th St. intersection, there was no visual evidence of contamination observed in the soil borings. Based on these results, the Department concurs that no further remediation is required for these sections of the pipeline to be closed in-place. Close out spill number. (JHO) "

placed in for foundation walls. No signs of discoloration however soil was not original in place soil and as such contaminated soil was mixed with clean soil. Vought spoke with onsite foundation forman (Jay Chiang 347-278-6641) and as per Chiang site was formerly a warehouse and is being developed for residential buildings. Signage on site shows owners as: Hope Street Partners, LLC 295 Madison Avenue New York, NY 10017 and construction corp as: Yuco Construction Corp. 295 Madison Avenue New York, NY 10017 Vought spoke with Loren Cannon (architect 212-529-8110) and former environmental consultants are Patrice Piton (fax:212-935-5935)and Dave Pelletier (KTR and Jade Environmental-212-906-9410). Dave Pelletier (cell:914-882-6074) Betty Lin(cell:917-566-9377 fax:718-767-4524) also arrived onsite who was working for foundation contractor with Jay Chiang and Vought provided DEC requirements. Vought also received call and spoke to Piton and Pelletier and they will be coming to site immediately and will ensure no further work until PID monitoring is performed. Vought sent letter with immediate requirements of: 1)PBS registration 2)submission of CAMP 3)covering of stockpiles with plastic and the following to be performed by 10/29/07: 4)sampling of contaminated soil pile and proper disposal 5)sampling of soil left in place under expected depth of foundation (18'bg) 6)installation of vapor barrier and possibly SSDS 7)possible further soil and groundwater sampling 09/26/07-Vought-Received call from and spoke to Piton and owners address is: Raymond Yu Hope Street Partners LLC c/o Yuco Management 295 Madison Avenue 34th Floor New York, NY 10017 Fax: 212-994-2250 09/27/07-Vought-Received message from Bishop and returned call. Bishop stated odors were present in apartment in morning when he awoke and requested PID survey. Vought called and spoke to Piton who provided Vought with cell from Pelletier. Vought called Pelletier and left message to return call and also left info for Bishops and need of PID survey. Vought sent Bishop email copy of 9/25/07 requirement letter. Vought received call from Riverkeeper Craig Michaels (914-478-4501x242 fax:914-478-4527) and informed him that groundwater contamination was not encountered and that gasoline USTs onsite were source of contamination and informed him of corrective measures. Vought also faxed him copy of spill notes. 10/03/07 I was at the site this morning. Soil excavation took place on last Monday and going on till today. Continuous air monitoring is done as the soil is being removed from the site. This is a construction site for a proposed residential building. End point sample will be taken with DEC's presence. (SR) 10/11/07 End point sampling was scheduled today by Jade Environmental in presence of DEC. I was there at around 11:00 AM and found that they partially backfilled the excavation without taking end point samples. Therefore, no sample was taken today. I told Jade Environmental (Dave Pelletier) that the backfilled area needs to be reexcavated and after taking end point sample and confirming it is clean, they can backfill again. (SR) 03/19/08 Closure report in edocs. All end point samples came back clean, below TAGM. Spill closed. Report in edocs. (sr) 11/24/09 Spill closure letter issued as per request from property owner. (sr) "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN Sangesland spoke to Alex Aversen of Cosmos Environmental. He said the site was a gas station many years ago. He believes all of the tanks were pulled. The site is now being sold and Cosmos Envir. was hired by the potential buyer to do soil borings which came up hot. Owner: Mr. Scott Spector (718-218-9127) Williamsburg Garage LLC 177 South 4th St Brooklyn, NY 11211 Contaminated Soil Ltr sent to owner 03/22/04 Message from Alex Aversen, they are scheduled to begin excavation of contaminated soil identified during Phase 2 on April 1. Spoke to Alex. As per Alex, property former garage, four 550's removed pre 1999. Will submit results of Phase 1 and 2, endpoint sampling plan, disposal facility information, etc. Groundwater expected to be approx. 30 feet below grade. Rommel 5/7/04-Vought-Spoke with Averson (516-984-5006) and no tanks found as of yet. Excavation to 30' and will extend to 34'. Averson asked to perform STARS gasoline parameter analysis on one bottom sample for initial characterization. Vought required 8260/8270 analyses and stated that the Department required collection of at least five endpoint samples and one groundwater sample. Averson agreed that these samples will be collected later. 5/18/04-Vought-Received call from Averson that Stars sample was in and he wanted to discuss results. Vought called Averson and left message to return call. 5/21/04 Reassigned from Rommel to Sun. 06/03/04 File Update by Sun: On 05/17/04 DEC received a fax from Avracen the analytical result of one end-sample clected from a 34-feet excavation. The concentrtrations of VOCs that exceed TAGM 4046 RSCO standard are: 910 ppb (Benzene), 9,700 ppb(m,p-Xylene), 5,500 ppb (o-Xylene),and 4,900 ppb (Toluene). 06/03/04 File Update by Sun: On 05/27/04 Sun sent a letter to Scott Spector (property owner) and Avracen (consultant) a letter requiring the following by 06/28/04: 1) submission of a Site Assessment including soil and groundwater investigation results. The assessment must also include a groundwater sample from each former tank field location and from each pump island/remote fill port greater than 25 feet from the tank field, 2) surrounding property sketch and 3) registration of petroleum bulk storage facilities. 07/01/04- File Update by Sun: On July 1, 2004, the Department received from Alex Avracen the analytical result of one groundwater sample (MW-1). The result lists the chemical compounds which exceed the TAGM 4046 RSCOs. The result showed that the total BTEX had concentration of 4,510 ug/l, including 170 ug/l for benzene concentration, 410 ug/l for ethylbenzene concentration, 1,900 ug/l for toluene concentration, 1500 ug/l for m+p xylene and 530 for o xylene concentrations. Other chemical compounds were: 780 ug/l for 1,2,4 trimethylbenzene, 63 ug/l for, 1,2,4,5 tetramethylbenze, 240 ug/l for 1,3,5 trimethylbenze, 140 ug/l for n-propylbenzene, 120 ug/l for naphthalene, 130 ug/l for p diethylbenzene, 690 ug/l for p-ethyltoluene, 5 ug/l for p-isopropyltoluene, 13 ug/l for sec-butybenzene, 11 ug/l for tetrachloroethene and 2ug/l for trichloroethylene. 07/02/04-File Update by Sun: On 07/02/04 Sun sent a letter to Scott Spector (the property owner) requiubg complete delineation of soil and groundwater contaminations, submittal of an Investigation Summary Report followed by a Remedial Action Plan. The site is E -designated site that is currently being redeveloped as a

S106385559

residence. Since development of this site prior to remediation may pose a health risk to future residents, the Department recommended that a Remedial Action Plan be approved by the Department prior to site development. The Department set a deadline of July 23, 2004 for signing the Stipulation Agreement. 12/13/05: On 12/17/05, Sun sent a letter to consultant, Rachel Altman of Hydrotech that the Department approves the Remedial system; specifically the injection of Oxygen Releasing Compounds (ORC) for in-situ remediation of residual petroleum-impacted soil and groundwater at the subject property. The Department also approves the vapor barrier and passive ventilation system proposed by Hydrotech. The Department requires that in applying ORC injection, the groundwater must be sampled on a regular basis for dissolved oxygen, pH, redox, alkalinity and SVOC. (Sun) 03/15/06: On 03/15/06, Sun sent an email to Rachel Ataman of Hydro Tech as follows: The Department approves your proposed plan to install four (4) monitoring wells on the sidewalk adjacent to the Site and one monitoring well across South 4th Street, as shown on the attachment of your email dated 3/14/06. The Department requires five days advanced notice of any work at the site, including the installation of vapor barrier and Passive Venting System at the subject site. (Sun) 03/23/06: On 03/23/06, Sun sent the following email to Rachel Ataman of Hydro Tech: The soil samples must be taken and analyzed from the monitoring wells during their installation. The soil will be sampled continuously with a PID. The deepest dry soil sample and the sample with the highest PID reading in each boring/well will be sent for EPA Method 8260/8270 analyses and the results will be sent to the Department. If no PID readings are exhibited, then the soil sample will be taken from immediately above the water table. A groundwater sample will be obtained at each well location and submitted for EPA Method 8260 & 8270 analysis. (Sun) 07/05/06: Sun approves the monitoring and remedial measures proposed by Advanced Cleanup Technologies, Inc., as follows: The Department approves your proposed monitoring and remedial measures described in your email below: 1. Installing five (5) conventional ground water monitoring wells at the locations previously proposed by Envirotrac Environmental Services in their Site Plan dated June 9, 2006. Four of the monitoring wells would be installed along South 4th Street and one monitoring well would be installed in the southwest corner of the property. Ground water would be sampled from each of the monitoring wells and analyzed for gasoline constituents in accordance with EPA Method 8260. 2. Installing three (3) soil vapor points approximately 20 feet apart along the southern wall of the building currently under construction. These soil vapor points would be installed to a depth of approximately 15 feet which corresponds to the base of the building's foundation. Soil vapor samples would be collected and analyzed for gasoline constituents in accordance with EPA Method TO-15. In the event gasoline constituents are found to be present in soil vapor samples, mitigation measures would have to be implemented, including installation of a vapor barrier acceptable to the NYSDEC and active ventilation of the building's basement. (Sun) 09/06/06-Sun: Sun received an email dated 09/04/06 from Paul Stewart of ACT (Consultant for RP) as follows: We completed our Investigation Summary Report on this property on August 8th but have not yet been paid by the property owner. We expect payment in the next 7 days at which time we can release our report to the NYSDEC. As I had mentioned over the telephone, we found 2 feet of free product monitoring well MW-10 beneath the sidewalk. We are looking into

downhole pumps that can skim product off the water table in 2 inch wells. I believe X-Tech makes such a product skimmer. I will forward our report and recommendations for product recovery as soon as we receive payment from the property owner . (Sun) 09/27/06-Sun: Sun approves the Remedial Action Work Plan submitted by PW Grosser, dated september 2006 with additional requirements. (Sun) 10/13/06-Sun: Sun received an email from Kris Almskog og PW Grosser to incorporate the following changes to the original RAP: *Addition of section 2.3.1 Effluent Air Treatment w/ GAC - brief discussion of potential air phase GAC system (if needed). *Addition of section 4.2.3 Indoor gas sampling - indoor air samples to be collected from elevator shafts following sub-slab vent system start-up. *Addition of section 4.2.4 Sub-slab vent system sampling - sampling of sub-slab vent system to be done to determine if further action is needed (GAC system) *Addition of section 4.2.5, and revisions to sections 2.3 & 3.1.3 - to reflect the addition of a warning beacon in the event of a fan or power failure, and the requirement for annual inspections and record keeping of fan maintenance. *Section 3.1.1 changed from 32 to 20 injection points, Figure 3 was also updated (some points were moved slightly) based upon structural engineer's request. *Section 6.0 - Addition of It is understood that, if indoor gas sample concentrations, sub-slab vent system emission sample concentrations and/or groundwater contaminant concentrations do not meet applicable guidance values and groundwater quality standards in a reasonable time frame, the NYSDEC may request further action such as additional investigation and/or remedial action. *Appendix D Sub-slab ventilation system drawings - addition of the ventilation fan warning beacon system notes and drawings. (Sun) 10/16/06-Sun: Sun sent an email to Kris Almskog of PW Grosser approving the revised RAP dated October 2006. (Sun) 10/27/06-Sun: Sun approves the Rev.1 of Remedial Action Plan, submitted by P.W. Grosser, dated October 2006. (Sun) 7/3/07-Sun: Sun sent the follwing email to Kris Almskog of PW Grosser (Consultant for the RP) Hi Kris, The New York State Department of Environmental Conservation (the Department) has received and reviewed the addendum for the approved Remedial Action Plan (RAP), submitted by P.W. Grosser Consulting (PWGC), dated June 27, 2007. The addendum proposes to modify the design of the sub-slab depressurization system. PWGC proposes the installation of four vertical four inch diameter PVC well screens, to a depth of approximately 11 feet below basement slab, in the vicinity of the elevator sumps. The Department approves the addendum to the approved RAP. The Department requires five days advanced notice of any remedial work at the site. (Sun) 11/28/07-Sun: Sun received the following email from Kris Almskog of PW Grosser, Joe, As discussed, PWGC is no longer representing North Development Group on any projects, including 185 South 4th Street. PWGC and North Development Group could not work out financial issues and as a result we have ended our relationship. Although an initial RAP approval letter was issued from the NYSDEC October 27, 2006 (see attached), and a follow up addendum request was made June 27, 2007, PWGC has not been involved in implementing the plan. With the exception of design services, and installing chemical oxidation injection wells (fall 2006), PWGC has not witnessed or does not have any knowledge of any chemical injections, vapor barrier instillation, sub-slab venting system instillation, gw sampling during the past year, sub-slab soil gas sampling during the past year, indoor air sampling, and/or sub-slab venting system sampling and testing that has occurred at the site. PWGC has not been to the site since spring

of 2007 and as such I am not aware of what stage of development the building is in at this time or what the future schedule entails. As you requested, the main point of contact for the development project is Mr. Isaac Hager Cell (917)497-2424 Office (718)599-8600 Office address 217 Havemeyer Street, Suite 500 Brooklyn, NY 11211 I apologize in the delay of making this notification. As we discussed on the phone, PWGC did everything we could to try and make the relationship work so that we could assist North Development Group with their environmental issues, but we could not continue to negotiate any further. Thanks for your understanding in this matter. Please contact me if you have any further questions. (Sun) 11/29/07-Sun: Sun received the following email from Charles Sosik, Joe, I wanted to inform you that we have been retained by North Development as the Environmental Consultant for the project. You may remember that I was previously involved with this site when I was with PW Grosser Consulting and personally prepared the DEC approved remediation plan. As of this date a liquid boot vapor barrier has been installed in the lower cellar area and we are preparing to implement the chemical oxidant injection program. We am also making arrangements to install the sub-slab vent system adjacent to the elevator shaft. I want to make a slight modification to the vapor extraction point to facilitate installation. Please contact me with any questions, correspondence, etc. Thanks. Charles B. Sosik, P.G. Principal EB C Environmental Business Consultants Ph: 631.924.0870 Fax: 631.924.2870 (Cell: 631.357.4927 csosik2@optonline.net (Sun) 11/30/07-Sun: Sun sent the following email to Charles Sosik (New Consultant for RP) Dear Mr. Sosik: Thanks for informing me that you have been retained by North Development as the Environmental Consultant for the project. I have been very disappointed and displeased about RP's (Mr. Issac Hager) failure to implement the addendum to the approved Remedial Action Plan submitted by PWGC, dated June 27, 2007 , and approved by DEC dated July 3, 2007. I may write a letter to NYC DOB recommending suspension of construction permit for failure to implement RAP in a timely manner. I am preparing a Stipulation Agreement to be sent to Mr. Issac Hager for his signature. This is an E-site as you are aware of. Please call me ASAP to discuss the status of this project. (Sun) 12/11/07-Sun: Sun received the following email from Charles Sosik, consultant for RP, Joe, The vent well installation was completed on Friday. Drilling was extremely difficult and a second slab was encountered, however they are complete. Manny Lilimpakis was the driller. He said that he used to work with you. Anyway we are ordering the oxidant chemicals tomorrow and should have them in a week. When Manny returns he will install manholes on all of the injection wells. I will notify you as soon as we schedule the injections. Please contact me if you have any questions. (Sun) 2/14/08-Sun: Sun received the following email from Charles Sosik, Joe, We performed an oxidant injection at the site last Monday (2/4/08). We had a lot of trouble with the injection wells, with many of the wells not taking sufficient volume of oxidant. We made up for this by injecting greater volume in the functioning wells. We are trying to determine the best way to rehabilitate the non-functioning wells. In the meantime we will do a round of sampling in 2 weeks or so to determine where we are at. We will get back to you at that time with a plan to proceed under these conditions. Call if you have any questions. Thanks. Charles B. Sosik, P.G. (Sun) 4/2/08-Sun: Sun received the following email from Charles Sosik, the consultant for the RP: Joe, just a quick note to update

you on progress at the site. We began daily product recovery from the monitoring wells in the sidewalk in front of the building using a product only pump. After one week of this the only well which recharges product is the well furthest east (upgradient). It consistently shows a of gasoline. We are monitoring all wells on a weekly basis. The vent system piping is being completed and we are ordering the fan and alarm system. We have not performed additional chem.-ox injections. We are still looking into alternative ways to extend the depth of the injection well. We will provide a formal status report to you next week. Charles B. Sosik, P.G. (Sun) 07/15/08-Sun: Sun sent the following email to the consultant, Charles Sosik, Hi Charles, What is going on at this site? When are you going to complete your Chem-ox injection? Your immediate response is urgently requested. (Sun) 8/1/2008 - Project reassigned to Feng. 12/10/2008 - Reviewed Project Status Report, 11/24/2008, submitted by EBC. ChemOx was injected 2/2008. The vapor barrier installation is completed. The sub-slab venting system is completed installing, fans and alarm have been ordered and received. Indoor air and sub-slab vapor samples were collected in the cellar area, show slight number. spill buddy pump was used to remove product. Letter to North Development Group requiring a RIWP. The RIWP will include 1) surrounding map, 2) contour maps, 3) clarification of which wells were used for ChemOx injection, 4) delineation plan of the product plume, 5) endpoint samples information. The RIWP due 1/19/2009. (RJF) 12/22/2008 - Site visit and met Charles Sosik and Isaac Hanger onsite. The new building is occupied already. It may not be feasible to install wells inside the building. Will start with three wells, upgradient, downgradient and crossgradient to delineate the product plume. Work Plan shall be on time. 12/23/2008 - Conference call with Patrick Boyle (Green Park Financial), Gregory Mentel (ERM), Charles Sosik (EBC). From the SanBorn maps, there are no other sources were found. The facility is still the closer and very possible source of the product in the sidewalk. EBC will put together the product id results into the work plan. (RJF) 1/26/2009 - email from Charles Sosik. The drilling is scheduled for this week. 1/27/2009 - Reviewed Remedial Investigation Work Plan (pdf copy only), dated 1/19/2009, by EBC. 3 monitoring wells were proposed, all the wells will be survey upon completing the wells installation. The work plan is approved. Letter to North Development Group and requires the investigation report to be submitted by 3/2009. (RJF) 3/11/2009 - Reviewed the Phase II Investigation Report, dated 2/27/2009, by EBC, pdf copy. On February 12, 13 and 19, 2009, Soil Mechanics Drilling Corp installed three monitoirng wells MW-11, MW-12 and MW-13 offsite. PID reading in MW-12 at 38-40 feet and 40-42 feet bg. 4 soil samples were collected for VOCs and SVOCs. 110 ug/Kg 1,2,4-Trimethylbenzene, and 65 ug/Kg 1,3,5-Trimethylbenzene in MW-12 at 40-42 feet. The others are ND. Groundwater table at 42' bg. 4 groundwater samples were collected for VOCs and SVOCs, all ND. The previously installed wells were gauged and found product in most of them. MW-5 (0.22'), MW-7 (0.39'), MW-8 (0.59') and MW-10 (2.01'). EBC recommends to remove product by passive collector and absorbent socks, quarterly monitoring program and chemox following product removal. Email to Charles Sosik (EBC). 1) check the wells inside the building for monitoring of the plume and the post ChemOx application; 2) RAP for a more aggressive product removal system other than passive collector and absorbent socks, such as dual phase, multi phase or pump-and-treat system. RAP due by 5/2009. (RJF) 3/12/2009 - Meeting with Charles Sosik (EBC), Zev

S106385559

Chaskelson and Sem from North Development Group. DEC does not accept passive collector to remove product due the significant amount of product in most of the wells. A Stipulation Agreement was handed to North Development Group and they will return it next week. Bail down test will be scheduled before an active system is designed. More discussion of the alternatives to remove product may be warranted upon bail down test results. (RJF) 3/17/2009 - Conference call with Charles Sosik (EBC), Mark Fisher (EMG), Patrick Boyle and Ashley Owen (Green Park Finanacial), and Gregory Mentel (ERM). DEC required a more aggressive remedial alternative such as total fluid recovery beyond hand bailing and skimmer because significant amount of product. EBC will be doing the bail down test and slug test to determine the product recharge rate, permeability, etc. Data will be ready in a few days after the tests. RAP to include the monitoring program and implementation schedule. (RJF) 3/30/2009 - Stipulation Agreement implemented. Copy to North Development Group and EBC. 3/31/2009 - Reviewed Remedial Action Work Plan (RAP), dated 3/2009, by EBC, pdf copy. EBC proposes to do hand bailing/skimming of product, and to install Total Fluid Recovery system upon evaluate the effectiveness of hand bailing/skimming. ChemOx will be injected upon removing all of the product. Comments to EBC. (RJF) 4/3/2009 - Reviewed Revised Remedial Action Work Plan, dated 4/1/2009, by EBC, pdf copy. Plus gauging data of February 2009 and April 2009, no product was observed in the April 2009 gauging event. M. Tibbe provided comments on the Revised RAP. (RJF) 4/6/2009 - Revised Remedial Action Work Plan, emailed by EBC 4/6/2009, pdf copy. EBC proposes to install a Total Fluid Recovery System and to perform chemical oxidation injections at the site to remediate soil and groundwater contamination. Prior to the operation of the Total Fluid System, hand bailing and/or skimming of the free-phase product will be performed. Two additional monitoring wells, MW-14 and MW-15 will be installed prior to the installation of the total fluid recovery system. Approval letter to North Development Group. Remedial Action Report due 9/2009. (RJF) 8/27/2010. Re-opening letter sent to Isaac Hager at three separate addresses. He acknowledged receipt at the 390 Berry Street address. Breen 10/15/2012 Sangesland spoke to a rep doing a Phase 1 for a mortgage bank. He said there is now a 12 floor building on the site that was built before the spill case was closed out. There is also a new owner (who is now trying to get a bank to approve the building) 1/25/2013 Sangesland spoke to Charlie Sosik about ongoing work and possible closure for this case. Case was assigned to George Breen, but as of 1/25/2013 Austin switched responsibility to Vadim Brevdo. 02/03/2014 - V. Brevdo Received Spill Closure Report and Spill Closure Request dated January 31, 2014 from Environmental Business Consultants. 02/05/2014 - V. Brevdo Project Status and Spill Case Closure Decision Former Parking Lot, 185 South 4th Street, Brooklyn (Spill No. 0313533) The property consists of a single 9,000 square foot parcel which is improved with a new 13-story residential building with cellar and parking garage. The area around the property is a mix of commercial use office / residential buildings. A community park is present across the street. Spill case was opened when petroleum contaminated soil was discovered during site investigation in February-March 2004. No USTs have been encountered on the site and only low levels of VOCs were detected in the former UST area. In Summer 2006, additional site investigation was conducted involving installation and sampling of ground water monitoring wells. Environmental Business Consultants (EBC) completed

S106385559

indoor air and sub-slab vapor investigation in November 2008. At the Department's request an additional delineation of contaminants in the groundwater was conducted in February 2009. Remedial actions conducted at the site are as follows: Excavation and Removal of 3,257 tons of gasoline impacted soil from the site via excavation 75 feet wide, 50 feet long and 45 feet deep. The entire area of the basement was sealed with Liquid Boot vapor barrier system in 2008. The cellar utilized as a parking garage was sealed with epoxy sealer. Based on the results of the sub-slab and indoor air testing, the Sub Slab Depressurization System (SSDS) was installed as a precaution, although its activation was not warranted. Chemical Oxidant remediation was performed at the site in February 2008. Post remedial ground water monitoring demonstrated a significant reduction of VOCs in the ground water. Thin layer of free phase gasoline product was reported in monitoring wells located in the sidewalk in front of the property. Free product was remediated using Liquid Phase Hydrocarbons (LPH) Recovery technology from February to April 2008. Qualitative Exposure Assessment conducted by EBC indicated that there is no significant migration of the contaminants off the property. Potential exposure pathways to current residents of the building were addressed via source removal, absence of significant levels of petroleum VOCs in sub-slab vapor, the presence of vapor membrane, the thickness of the building concrete slab and installation of the SSDS system. EBC also determined that there is no threat of off-site vapor exposure. Considering the degree of source removal, absence of contaminants in the soil and ground water on-site at levels exceeding cleanup guidance and groundwater standards, absence of vapor exposure and absence of off-site contaminant migration, EBC has submitted Spill Case Closure request on February 3, 2014. The Department reviewed project related documents, spill case closure request and determined that closure of this spill case is appropriate at this time. Spill Case is closed effective February 5, 2014. V. Brevdo "

Remarks: "tank leakage, but tanks were removed years ago but found this while doing soil borings."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY This spill Lead_DEC Field is Imdadul Islam: with effect from 02/02/05 07/01/05- The site's contaminated soil(1,500 cft) was excavated and removed. The contaminated GW is being addressed by injecting ORC by LiRo Engineers pursuant to DEC's approval. Reviewed the Jan-Apr/05 monitoring report. In general, the GW quality has improved but recent data reveals that one upgradient well (MW-4)in the south-western area of the site is having increase in contamination. Special investigation is required to identify the source/reason for this increase. In north-eastern area, 2 downgradient wells(MW-5 & MW-6) showing persistent contamination level. ORC socks may be installed in these two wells as recommended. Installed this monitoring report in the eDoc Folder. Routine monitoring to continue.- II 10/12/05- Reviewed the May-Aug/05 monitoring report. August/05 GW sampling showed much lower VOC levels at MW-4 (135ppb total VOCs, compared to 1053ppb in May/05). Wells MW-5 and MW-6 still show persistent VOC levels. However ORC socks have been installed in them and will be monitored to evaluate their effectiveness. Filed the report in the eDoc.-II 11/15/2005- Latest GW monitoring data (Aug/05) presented by the consultant in the meeting with DDC and DEC reveal that minor exceedances of TVOCs still exist in three monitoring wells with the max. at little over 100ppb. A large body of downgradient well data show that the contamination has not migrated offsite, and falling contaminant levels in the treatment area indicate low potential of future migration. Based on the historic site condition and data, it was decided by Koon to close the spill case and issue NFA letter.- II"
Remarks: "THEY WERE DIGGING AND THEY WERE GOING TO REMOVE GAS TANKS THERE WHEN THEY NOTICED A GASOLINE SMELL COMING FROM THE GROUND.THEY WILL REMOVE THE TANKS TOMORROW AND ANY CONTAMINATED SOIL.DAN WEISSMAN TOLD THEM

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TRANSFERRED FROM Y.KRIMGOLD. URS installed a pump & treat system to address free product and dissolved-phase groundwater contamination, but the system was not very effective in recovering product, possibly due to local geology. They are currently performing IRM with absorbent socks in wells with free product, reportedly this is very effective. Wells without product have little or no dissolved-phase contamination. - J. Kolleeny 4/4/05 Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK 11/2/2005 Free product site - wells - MW-4,5,8. Reviewed report dated September 2005.Wells were unaccessible due to construction. Manual frre product recovery is performed.AZ 1/12/2006 Changed status from Priority 1 to Priority 2 as per Jon Kolleeny request. AZ 5-17-2006 I received a call from Peter Sambalis (tank manager for DOT) about NYCDOT 372 Kent Ave. Yard. They closed in place 600 gal gasoline tank at 372 Kent Avenue. A geologist from Finley and Nicol obtained groundwater samples from 4 geoprobe wells. The wells showed MTBE contamination in groundwater. David Oloke (F&N 631-586-4900). The tank was filled with concrete May 2, 2006. It's unknown the site was registered. They used more tanks at the site - DOT has in its files PBS application from 1997 showing that 550 gal gasoline tank and 2,000 gal fuel oil tank removed. I instructed them to check if there are wells around 600 gal tank which was closed in place in May 2006. The wells should be sampled. If no wells exist at this location they should be installed. AZ 7-27-2006 Received a report from F&N. MTBE are found at the site in all wells (up to 663 ppb). Further delineation is required. AZ 7/28/2006 Contacted David Oloke (631-586-4900- F&N). There are two permanent wells at the site. It's unknown who installed them. F&N did not check/gage these wells because it was not in their contract-scope of work. They installed temporary wells by Geoprobe. AZ 12/4/2006 Reviewed quarterly monitoring report dated August 31, 2006. On January 1, 2006, Greyhawk was assigned responsibility for this site. GWET was apparently built but details are not available. During last monitoring event the system trailer was observed and the four extraction wells located. Absorbent socks are in wells. Product sheen persists in MW-07 and MW-08. MW-07 is located 40'downgradient of the former UST (#2 fuel). GW sampling was not performed. Roux recommended continue gw monitoring, continue using absorbent sock for product recovery, research construction and operational history of the onsite GWET system, conduct a full round of gw sampling after product sheen is no longer observed. AZ 2/1/2007 Reviewed tank closure report for

372 Kent Avenue. 600 gal UST was abandoned in place. F&N performed tank closure on May 2, 2006. They installed four temporary wells about 2' away from the tank. GW sampling showed MTBE contamination in all four wells ranging from 358 ppb to 663 ppb. F&N recommended delineation of the plume. AZ 6/21/2007 Report dated January 31, 2007, was submitted to DEC. Report stated that plan for additional investigation will be submitted to DEC. F&N discovered contamination associated with 600- gal UST abandoned in place in May 2006. F&N recommending further investigation/delineation. F&N report was given to Roux for copying and subsequent investigation/delineation. AZ 8-22-2007 Reviewed Williamsburg Bridge DOT Report dated June 15, 2007. On February 28, 2007, Roux performed a round of semi-annual groundwater sampling. No free phase was present at the site. MW-12 could not be accessed and MW-04 was dry. Seven monitoring wells were sampled (MW-05 through MW-11). No free product sheen was detected.. Neither VOCs (including MTBE) nor SVOCs were detected in any of the site monitoring wells, including MW-09, which is located approximately 40 feet downgradient of the 600-gallon abandoned UST. According to Roux: Therefore, MTBE detected in the groundwater adjacent to the abandoned UST in May 2006 appears to be a localized impact. A GWET system to remediate contaminated groundwater was constructed at the site but no record of its operation has been made available. However, contaminated groundwater was remediated using EFR and petroleum-absorbent socks. EFR was discontinued after the concentrations of contaminants in groundwater were below NYSDEC AWSQGVs for two consecutive monitoring events. Roux recommended performing another site-wide semi-annual sampling round. If its results are below NYSDEC AWSQGVs then they will petition for NFA. It is critically important to sample MW-9 since it is located directly downgradient from the UST abandoned by URS in May 2006. AZ 7-10-2008 Reviewed semi-annual monitoring report for the site for the period of July through December 2007. A 4,000 gallon fuel oil UST and a 550-gallon gasoline UST were used at the site.. The 4,000-gallon tank was abandoned in place and filled with cement. 550-gallon gasoline UST was removed and replaced with a new 600-gallon UST. Initial investigation performed in 1998 by Ballard Consulting showed that soil contamination is fairly localized and not a significant contributor to groundwater contamination, therefore, soil remediation was not recommended at the site. Removal of free phase product was recommended. In April 2000 URS initiated a free phase product recovery program as an interim measure. (IRM), which involved monthly removal of free-phase product from monitoring wells MW-04 and MW-05 by enhance fluid recovery (EFR) using a vacuum truck. Absorbent socks were also installed in monitoring wells. Seven new monitoring wells were also installed at the site. based on the results of their investigation, URS recommended no further action for unsaturated soil and a groundwater extraction and treatment system (GWET). On August 16, 2001, DEC approved GWET system. According to Roux, documents available to for review by Roux do not indicate whether the GWET system ever operated or for how long. On January 1, 2006, Greyhawk was assigned responsibility for the site to replace LiRo-Kassner. On May 2, 2006, Fenley and Nico (F&N) abandoned 600-gallon on site gasoline UST by filling it with concrete slurry. MTBE was detected in the four temporary groundwater wells adjacent to each of the four sides of the UST at concentrations ranging from 358 ppb to 663 ppb. MTBE was detected in soil samples but all below the DEC Recommended Soil Cleanup Objectives (RSCO). On August 22, 2007, Roux performed a

WILLIAMSBURG BRIDGE DOT -DDC (Continued)

S102662919

round of semi-annual groundwater sampling.. Five wells were sampled. MW-07, 12 and 5 were inaccessible. Neither VOCs (including MTBE) nor SVOCs were detected in any of the site monitoring wells.including MW-09, which is located approximately 40 feet downgradient of the 600-gallon abandoned UST. These concentrations are consistent with February 2007 semi-annual sampling event.Therefore, MTBE detected in the groundwater adjacent to the abandoned UST in May 2006 appears to be a localized impact, and does not affect groundwater downgradient from this UST. Roux recommended site closure and NFA for this site because no free product has been detected in any monitoring well for the past two gauging events. AZ 7-14-2008 I contacted Brian Morrissey over the phone. I requested inclusion of the latest soil sampling results in the report. They will forward them to DEC. AZ 8-4-2008. Roux provided additional info regarding soil conditions at the site. In 2001 DEC (Jacob Krimgold)approved no further action (NFA) for soil. Based on the above information, the spill is closed. An e-mail was sent to Roux/Greyhawk/DDC/V. Brevdo. AZ 4-21-2009 Received and reviewed Historical Soil Sampling Data dated December 29, 2008. The data supported closure of this spill. The report recommended properly abandoning all monitoring wells associated with this spill. DEC concurred via e-mail to Roux/NYC DDC. AZ 12-7-2010 LiRo reported that during well closure some free phase product was discovered in two wells. The recommended hand bailing, monitoring and fingerprinting. The following e-mail was sent to LiRo/DDC: Thanks Steve. We will have to reopen this spill number. I approve proposed hand We will have to reopen this spill number. I approve proposed hand bailing, monitoring and fingerprinting. Could you send me a copy of this letter in MS Word format? AZ 2-3-2012 Contacted S. Frank and requested info detailing how many quarters the product was observed and how many quarters no product was observed at the site. S. Frank will get back to me with this info. AZ 2-6-2012 The following e-mail was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, This site had localized soil and groundwater contamination including free phase product. Contamination was caused by 4,000 gal #2 fuel oil UST, which was abandoned in place. In 2000 URS initiated a free phase product recovery using a vacuum truck. Routine site monitoring was performed from April 2006 to December 2007. As a result of the recovery efforts and monitoring, spill #9700718 was closed by DEC on August 4, 2008. However, on November 18, 2010. LiRo field personnel conducted a site visit to determine monitoring wells status in preparation for well decommissioning. Approximately 0.10 feet of free product was detected in well MW-07 and sheen observed in well MW-04. A product sample was collected from well MW-07 on February 1, 2011, and submitted for a fingerprint analysis. Results of the analysis indicated that the product is weathered #2 fuel. DEC re-opened spill #9700718 and hand bailing of product was initiated. Also, absorbent socks were placed in wells with free product. Free product was encountered at the site between December 2010 and February 1, 2011. Since February 1, 2011, no product was encountered during three quarterly monitoring events. The latest monitoring was performed on January 9, 2012. Based on the results of well gauging, LiRo requested closure of spill number 9700178. This request is granted. Before well decommissioning, all existing wells must be gauged and checked for the presence of free product. The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to: 1. The off-site migration of petroleum contaminants that was not addressed

by this evaluation. II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval. III. Information received, in whole or in part, after the Department's spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or IV. Fraud in obtaining this approval for inactivation. Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department's files regarding this release may not be maintained indefinitely. Sincerely, Alexander Zhitomirsky AZ "

room in the basement and approximately 2 gallons came by the vent pipe onto the sidewalk. NO drains, no soil impacted, No odor in the building. Riteway is doing the clean up. Lana (Building mnager) 718-387-0500 3/24/14-Zhune spoke to Lana (Manager building). She said the building is a commercial building and only the ground floor is occupied (office), the other four floors are vacant. I noticed oil odor and went to the basement. I saw approximately 30 galons of oil. I called the oil company and the oil company sent Riteway to clean the spill. No odor complaint from people from the office. 5/20/14-David from Riteway emailed the spill closure letter dated 5/20/14. On March 24, 2014, Riteway Tank maintenance Corp. was contracted by Statewide Oil and Heating to address an overfill. Upon arrival, Riteway noticed the tank overfilled and product had discharged from the stick well onto a solid and sound concrete floor in the tank room (approximately 5-10 gallons was discharged). The oil had already been contained and absorbed with oil absorbent granules and white pads. The floor was then scrubbed and clean with with bio-degradable degreaser. The site is clean and free from contamination. Spill closed."

Remarks:

"Oil spilled to concrete. Clean up is in progress."

Site Description:

Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.382 acres in size with a single story vacant warehouse covering the entire site. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

Env Problem:

Nature and Extent of Contamination: During the Remedial Investigation, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for

S116550038

VOCs. Based upon the results of the RI, the primary contaminants of concern include the VOCs trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Soil - During the investigation in January 2014, TCE was detected at concentrations of up to 88 parts per million (ppm), above the restricted-residential SCO of 21 parts per million (ppm). With the exception of 2 samples, TCE was detected in all other samples above the unrestricted use SCO of 0.47 ppm. Low levels of SVOCs, including benzo(a)pyrene at 1.99 ppm and chrysene at 1.82 ppm, were detected at concentrations exceeding the UUSCO. In addition, metals including mercury at 4.24 ppm, copper at 100 ppm and lead at 122 ppm were detected at concentrations exceeding UUSCOs. Site-related soil contamination does not extend off-site based on the available data. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Metals detected in groundwater at concentrations exceeding the standards include mercury at 3.5 ppb, copper at 332 ppb and lead at 1640 ppb. It should be noted that these metals were detected in unfiltered samples. Site-related groundwater contamination does not extend off-site based on the available data. Soil vapor - TCE was detected at concentrations of up to 1,600,000 ug/m3 and cis-1,2-DCE at concentrations of up to 15,000 ug/m3. Elevated concentrations of contaminants in soil vapor were found at the property boundaries and may extend off-site.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. Additional sampling is needed to evaluate the potential for soil vapor intrusion to impact off-site structures.

approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

Env Problem: Nature and Extent of Contamination: During the Remedial Investigation, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern include the VOCs trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Soil - During the investigation in January 2014, TCE was detected at concentrations of up to 88 parts per million (ppm), above the restricted-residential SCO of 21 parts per million (ppm). With the exception of 2 samples, TCE was detected in all other samples above the unrestricted use SCO of 0.47 ppm. Low levels of SVOCs, including benzo(a)pyrene at 1.99 ppm and chrysene at 1.82 ppm, were detected at concentrations exceeding the UUSCO. In addition, metals including mercury at 4.24 ppm, copper at 100 ppm and lead at 122 ppm were detected at concentrations exceeding UUSCOs. Site-related soil contamination does not extend off-site based on the available data. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Metals detected in groundwater at concentrations exceeding the standards include mercury at 3.5 ppb, copper at 332 ppb and lead at 1640 ppb. It should be noted that these metals were detected in unfiltered samples. Site-related groundwater contamination does not extend off-site based on the available data. Soil vapor - TCE was detected at concentrations of up to 1,600,000 ug/m3 and cis-1,2-DCE at concentrations of up to 15,000 ug/m3. Elevated concentrations of contaminants in soil vapor were found at the property boundaries and may extend off-site.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. Additional sampling is needed to evaluate the potential for soil vapor intrusion to impact off-site structures.

Site Code: 492995
Site Description: Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.382 acres in size with a single story vacant warehouse covering the entire site. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012

by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

87 KENT AVENUE (Continued)

S116550038

Site Description:

Site Location: The site is located at the corner of Kent Avenue and North 9th Street in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site is approximately 0.382 acres in size with a single story vacant warehouse covering the entire site. The site is surrounded by mixed commercial and residential property uses. Current Zoning and Land Use: The site has an E-designation as part of the Greenpoint-Williamsburg Rezoning and is included in the M1-2/R6A mixed use district. The property is currently vacant. Past Use of the Site: From approximately 1980 to until 1998, the site was operated by Barouh Eaton Allen Corp., a manufacturer of typewriter ink and printer products. The building was used from 1998 to 2010 for warehousing and distribution by Lucky Paper Inc. (eastern portion), a distributor or restaurant supplies, and by LJJ, Inc. (western portion), a clothing wholesaler and distributor and from 2010 to 2012 by 200 Supplies Corp., a plumbing supplier. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

Env Problem:

Nature and Extent of Contamination: During the Remedial Investigation, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern include the VOCs trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Soil - During the investigation in January 2014, TCE was detected at concentrations of up to 88 parts per million (ppm), above the restricted-residential SCO of 21 parts per million (ppm). With the exception of 2 samples, TCE was detected in all other samples above the unrestricted use SCO of 0.47 ppm. Low levels of SVOCs, including benzo(a)pyrene at 1.99 ppm and chrysene at 1.82 ppm, were detected at concentrations exceeding the UUSCO. In addition, metals including mercury at 4.24 ppm, copper at 100 ppm and lead at 122 ppm were detected at concentrations exceeding UUSCOs. Site-related soil contamination does not extend off-site based on the available data. Groundwater - Compounds exceeding the groundwater standards include TCE at a maximum concentration of 520 parts per billion (ppb) and cis-1,2-DCE at 14 ppb. Metals detected in groundwater at concentrations exceeding the standards include mercury at 3.5 ppb, copper at 332 ppb and lead at 1640 ppb. It should be noted that these metals were detected in unfiltered samples. Site-related groundwater contamination does not extend off-site based on the available data. Soil vapor - TCE was detected at concentrations of up to

Health Problem: 1,600,000 ug/m3 and cis-1,2-DCE at concentrations of up to 15,000 ug/m3. Elevated concentrations of contaminants in soil vapor were found at the property boundaries and may extend off-site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Direct contact with contaminants in the soil is unlikely because the site is covered by a building and pavement. Volatile organic compounds in groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site occupancy or development. Additional sampling is needed to evaluate the potential for soil vapor intrusion to impact off-site structures.

Update By:	JHOCONNE
Site Description:	

The area of concern subject to this work is considered off-site from BCP site C224188 and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224188 for further information regarding the status of the site in the Brownfield Cleanup program. Site Location: 87 Kent Ave - Off-site is located in the Williamsburg area of Brooklyn, Kings County. To the north of the site is North 9th Street, to the south is North 8th Street, to the west is Kent Avenue, and to the east is Wythe Avenue. Site Features: The site consists of the areas surrounding by 87 Kent Ave. Current Zoning and Land Use: The site is included in the M1-2/R6A mixed use district. Site Geology and Hydrogeology: The surface topography in the surrounding area is generally flat, gradually sloping northwest towards the East River. Based on reports compiled by the United States Geological Survey (Brooklyn, NY Quadrangle), the property lies at an elevation of approximately 20 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). Based on information collected during the investigation of C224188, The soil beneath the site is miscellaneous fill at depths of up to eight feet. This is underlain by a fine to medium sand with silt and clay layers of varying thicknesses. United States Geological Survey reports indicate that the depth to bedrock at the site is expected to be approximately 100 feet below ground surface. Groundwater is approximately 15 feet below ground surface. The East River is the nearest surface water body, approximately 700 feet to the northwest. Groundwater beneath the site flows in north-northeast direction.

Env Problem:

During the on-site Remedial Investigation for site C224188, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for on-site include trichloroethene (TCE) and cis-1,2-DCE. Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Further investigation is needed to fully delineate the extent of off-site contamination.

Health Problem:

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

VOUGHT 10/8/10 - Austin - Reassigned from Tang to Spills staff - end
02/15/12-Hiralkumar Patel. 1:05 PM:- visited site. found two lots
along Wythe ave containing auto junk parts. both lots were fenced and
locked. spoke with Isaac Dahan (718-387-8883) in next door repair
shop at 426 Wythe Ave. he mentioned that they used to use these lots
before, but stopped about two years ago and since then the lots are
locked and no activities. no sign of spill found in visible areas
through locked fence. based on site observations and nature of spill
report, case closed."

Remarks: "CALLER STATES UNKNOWN SALVAGE YARD AT ABOVE LOCATION IS SCRAPPING
VEHICLES AND VEHICLE FLUIDS ARE RUNNING OFF INTO STREET AND POSSIBLE
INTO THE EAST RIVER. CALLER WISHES REPORT TO BE CONFIDENTIAL BUT CAN

BXANDERS

Site Description:

Location: The site is located in the Williamsburg section of the borough of Brooklyn, NY. The site has approximately 175 feet of frontage along Driggs Avenue and 100 feet of frontage along North 8th Street. Site Features: The property is currently developed with an asphalt-paved parking lot, with a small unoccupied attendant's booth. Current Zoning and Land Use: The property is currently a vacant parking lot. The site is zoned commercial/industrial/high density residential (M1-2/R6A and R6B). Allowable uses include light manufacturing, warehouses, wholesalers, and multi-story residential buildings. Past use of the site: Based on a map dated 1855, the property is believed to have been occupied by a manufactured gas plant (MGP). The MGP was demolished by 1887. By 1942, southern portions of the site were developed with a garage. Between 1942 and 1951, the garage was converted to an industrial building and occupied by a chair manufacturer. The chair manufacturer was replaced by a transformer manufacturer circa 1965 and later by food warehouse circa 1991. Both buildings were demolished in 2006 and replaced with the existing parking lot. Geology and Hydrogeology: Soil at the site is described as historic fill materials to a depth of approximately 15 feet below the surface followed by native brown fine sand with silt and some clay. Groundwater is present at approximately 12 feet below ground surface, and flows to the northeast.

Env Problem:

Nature and Extent of Contamination A Remedial Investigation (RI) was conducted at the site in August and September 2015. Soil and groundwater samples were analyzed for Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), Metals, Polychlorinated Biphenyls (PCBs) and Pesticides. Soil vapor samples were analyzed for VOCs. Soil borings in the southern half of the site encountered refusal between 18 and 21 feet below ground surface (bgs), in the vicinity of the suspected former MGP gas holder foundation. A source area near the location of the former MGP gas holder is suspected due to the presence of non-aqueous phase liquids (NAPL) and elevated levels of petroleum VOCs, chlorinated VOCs (CVOCs), and naphthalene. The following are the results for each medium sampled: Soil: Results of the RI show that fill materials are present to a depth of approximately 15 feet below ground surface (bgs). Chlorinated and petroleum-related VOCs were reported above Unrestricted Use Soil Cleanup Objectives (SCOs) in samples collected in the southern portion of the site from 10 to 21 feet bgs. Compounds included benzene (up to .89 ppm) and chrysene (up to 3.3 ppm). Naphthalene (up to 620 parts per million (ppm)) and vinyl chloride (up to 2.6 ppm) were detected above Restricted Residential SCOs in the the southern portion of the site from 10 to 21 feet bgs. The Restricted Residential SCOs for naphthalene and vinyl chloride are 12 ppm and .02 ppm, respectively. SVOCs were detected above Restricted Residential SCOs throughout the site at all sampled depths. Compounds included benzene (8.6 ppm), benz(a)anthracene (150 ppm) benzo(a)pyrene (86 ppm), benzo(b)fluoranthracene (100 ppm), chrysene (120 ppm), dibenz(a,h)anthracene (4.2 ppm), and indeno(1,2,3-cd)pyrene (27 ppm). Off-site investigation of soil was not conducted as part of the RI. Groundwater: Chlorinated VOCs were reported above Ambient Water Quality Standards (AWQS) at all of the sample locations, with pure solvent found in the southern portion of the site and elevated concentrations (up to 1,200 parts per billion, or ppb, of cis-1,2-Dichloroethene) in the southeast corner of the site. The AWQS for cis-1,2-Dichloroethene is 5 ppb. Benzene and SVOCs

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

FORMER STERLING TRANSFORMER CORP. (Continued)

S117363438

were also detected above AWQS in several monitoring wells. Benzene was detected between 4,300 and 18 ppb in the southern portion of the site. SVOCs including ben(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene were detected between .02 and .35 ppb predominantly in the western portion of the site. Data indicates potential off-site impacts in groundwater related to this site. Soil Vapor: Chlorinated solvents were reported in all of the soil vapor samples, with the highest levels (vinyl chloride = 116,000 ug/cubic meter) in the eastern portion of the site. Petroleum-related compounds were generally found at low levels in soil vapor. Benzene was the highest petroleum-related compound at 1,240 ug/cubic meter, detected in the western portion of the lot. All other petroleum related compounds were detected between 2.26 ug/cubic meter and 390 ug/cubic meter. Data indicates potential off-site impacts in soil vapor related to this site.

Health Problem:

Since the site is fenced and covered by asphalt or concrete, people will not come into contact with site-related soil and groundwater contamination unless they dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there are no on-site buildings, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. In addition, sampling indicates soil vapor intrusion is a concern for off-site buildings.

S107415911

samples indicated contamination at site and reportedly USTs were present. They said a lot of remediation work was done at site in 2006, I told them that remediation work should be done under aegis of spill case, with review and approval by DEC. Gave them my email address and they said they will forward to me documentation of work done by end of week, and we will take it from there. I also contacted Rachel Ataman of Hydrotech (they did investigative work in 2005), and she emailed me pdf of Oct. 2005 Phase II report, complete with figs. (in eDocs). - J. Kolleeny 10/02/2007: This spill case was transferred to A Doronova. 11/02/2007: Reviewed Request for Spill Closure submitted by AST on behalf of ZAGS Broadway, LLC. They conducted Phase II in January 2007, advanced 23 soil borings, collected 45 soil samples and 5 groundwater samples. 13 USTs were removed from the site from three different locations. UST removal was done by Mercury Tank and Pumping, Inc. This company also collected one (1) end-point soil sample from the bottom of excavation area I. No other end-point samples were collected from excavation walls or from excavation area II and III. Lab results for soil samples: VOCs were detected in three soil samples: SB-9(15), SB-9(17) and SB-11(15). However these concentrations do not exceed the TAGM RSCOs. CVOCs were detected above TAGM RSCOs in soil samples: SB-7(15), SB-7(20), SB-11(15), SB-14(25) and SB-19(20). Lab results for groundwater samples: 5 samples were collected. Slightly elevated concentration of o-xylene was detected in MW-2 (7,58 ppb). None of the remaining VOCs were detected in the four other wells. From SVOCs bis(2-ethylhexyl)phthalate was detected in all five wells above NYSDEC standards. None of the other SVOCs were detected in the collected samples. There no soil borings were advanced in the vicinity of former USTs fields. No groundwater contour map or groundwater flow direction were presented in this report. A table with groundwater elevation is absent. No lab results presented for one end-point soil sample collected after USTs removal; no UST removal report from contractor was included; lab data sheets and chain of custody are also absent. Called and spoke to Pamela Oelrich of ATC (project manager). Asked her to submit all missing documentation. She promised to contact the owner and then call me back. AD 11/27/2007: Received an email from Pamela Oelrich with attached requested documentation. Downloaded it to E-docs. Will review. AD 02/2008: The documentation submitted is incomplete. It includes analytical results dated January 24, 2007 and statement from Mercury Tank & Pump, Inc. verifying removal of eleven 550-gallon UST, one 1200-gallon UST and one 4,000-gallon UST and piping from the site. Information on end-point soil samples is missing; no groundwater contour map or groundwater flow direction were submitted. A table with groundwater elevation is absent; no complete UST removal report from contractor was included. The removed tanks were not registered with DEC. AD 05/27/2009: Called and left a message to Mr. Salamak of Mercury Tank and Pump regarding UST closure reports. AD 12/09/2009: Called and left a message to Mr. Salamak. AD 04/22/2010: Received a call from Mr. Richard Hookir of EcoSystems Strategies, Inc. (phone: 845-452-1658) regarding this site. This company was hired to perform Phase I Investigation. Explained him situation with site, and what type of info is missing in order to consider spill case closure. AD 11/12/2010: Called and spoke with Mr. Hookir of EcoSystems Strategies, Inc. regarding investigation in the area of the former USTs. Mr. Hookir said that his company did performed such investigation, and soil sample data indicated elevated levels of

FORMER GAS & WAREHOUSE (Continued)

S107415911

contamination. The site is currently vacant and slated for re-development with 11-story mixed commercial and residential building. The remediation will be performed in conjunction with site re-development. The site will be remediated by excavation of the contaminated soil. A RAP will be submitted to DEC for its review and approval. The developer is now in the process of obtaining building permits from NYC. A report for additional investigation was required to be submitted to DEC. Changed site priority to P1. AD 11/29/2010: Received an e-mail from P. Ciminello of Ecosystems saying: I sent a draft of the Work Plan (which has the relevant sections of the previous reports attached) to the Client before Thanksgiving and am waiting for authorization to send it to you. I am certain that I will be directed to forward it to you today. Sorry for the delay. AD 11/30/2010: Received an e-mail from Ecosystems: Please see the attached Work Plan regarding the above-referenced property. If you have any questions, please contact Paul Ciminello. Thank you. Natalie Conklin Administrative Assistant Ecosystems Strategies, Inc. 24 Davis Avenue Poughkeepsie, NY 12603 845-452-1658 Ph 845-485-7083 Fax natalie@ecosystemsstrategies.com DL the submitted RAP to eDocs. AD 12/2/2010: Called and spoke with Mr. Ciminello of Ecosystems regarding the submitted RAP. Asked to submit a hard copy of the plan. AD 12/06/2010: Received a hard copy of the plan. Will review. AD 12/07/2010: Reviewed the work plan. It proposes excavation of the area of contamination with collection of end-point soil samples, followed by post-remediation groundwater monitoring. If removal of all contaminated soil will not be feasible due to site conditions, in-situ chemical oxidant will be applied to the excavation to address residual contamination. Three new groundwater monitoring wells will be installed on the sidewalk. Wells will be surveyed and groundwater flow direction will be established at the site. A vapor barrier will be installed beneath planned on-site building. A sub-slab depressurization system may be installed at the site if elevated levels of VOCs remain in the soil after excavation. AD 12/08/2010: Spoke with Richard of ESS regarding the RAP. Asked him to submit a site plan with a depiction of the footprint of the proposed building and to clarify the depth of basement excavation. Discussed the RAP with J. Kolleeny of DEC. AD 12/17/2010: Received an e-mail from Mr. Hooker: Per your request, please find attached a copy of a site plan for the proposed on-site structure at the above-referenced property. The cellar parking garage extends from north to south along the entire western half of the site (i.e. beneath the commercial space and includes the area of known petroleum contamination). The proposed depth of construction excavations for the parking garage will be to +4 -8 . The elevation of the existing grade on the western boundary is at + 18 -7 i.e. the construction excavations will be to approximately 14 below surface grade. Please call me if you require additional information or have questions. Thank you, Richard Hooker Project Manager Ecosystems Strategies, Inc. 24 Davis Avenue Poughkeepsie, New York 12603 845-452-1658 phone 845-485-7083 fax richard@ecosystemsstrategies.com 12/20/2010: Received an e-mail from Mr. Hooker: This email is intended to provide you with the required advanced notice that excavation in the vicinity of the petroleum contaminated soil at the above-referenced site will begin on December 27, 2010. The excavation work on this date will be limited and performed with the objective of obtaining waste characterization samples. Most of the excavation of petroleum contaminated soil will take place after waste characterization sample data have been

approved by the receiving repository. At this time is anticipated that these excavations will begin on January 4, 2011. Please call me if you have any questions. Thank you, Richard Hooker Project Manager Ecosystems Strategies, Inc. Discussed the site with J. Kolleen of DEC. Will issue an approval letter. AD 12/22/2010: Issued and sent the approval letter with the following comment: " If field indications of petroleum contamination are encountered during excavation of other areas of the site, the impacted soil should be removed to the extent feasible and confirmatory end-point soil samples should be collected. DL pdf copy to eDocs. AD 12/27/2010: Received an e-mail from Mr. Hooker: Ainura, The excavation work to obtain a waste characterization sample that had been scheduled for this morning has been postponed until tomorrow because of the weather. Thank you, Richard 12/28/2010: Received another e-mail from R. Hooker: Ainura, Please note that this work has been further postponed because of the weather conditions. Piles of snow on the local streets around the project site are preventing delivery of the excavation equipment. At the moment it is anticipated that excavation will begin on Monday (1/3/11), but I will keep you informed of any changes to the schedule. Thank you, Richard 02/23/2011: Called and spoke with R. Hooker regarding site status update info. He said that remedial excavation did not begin yet. later received an e-mail from him saying: Ainura, Per our phone conversation, this message confirms that excavation of previously identified petroleum contaminated soil located in central western portions of the site has not yet begun. At such time as the excavations are scheduled, I will notify you via email. Thanks, Richard Hooker Project Manager Ecosystems Strategies, Inc. 24 Davis Avenue Poughkeepsie, New York 12603 845-452-1658 phone 845-485-7083 fax richard@ecosystemsstrategies.com AD 03/18/2011: Received an e-mail from R. Hooker: Ainura, This message is to inform you that excavation and trucking of the remaining contaminated soil at the site will recommence on Monday (3/21/11). I will be at the site from 7.00 a.m. and can be reached at 914 475 4132. Thank you, Richard Hooker Project Manager Ecosystems Strategies, Inc. AD 06/28/2011: Called and spoke with R. Hooker of ESI. He said that the remediation of the site was completed a month ago. Asked him to send an e-mail summarizing update info. AD 09/15/2011: Called and spoke with R. Hooker of ECI. He said that summary report is ready and in under review by RP. The report will be submitted to DEC in two weeks. Additional wells were not installed after excavation. AD 10/14/2011: Received an e-mail from EcoSystem Strategies saying: Please see the attached report for the above-referenced property. Thank you. Natalie Conklin Administrative Assistant Ecosystems Strategies, Inc. 24 Davis Avenue Poughkeepsie, NY 12603 845-452-1658 Ph 845-485-7083 Fax natalie@ecosystemsstrategies.com DL the report to eDocs. Will review. AD 11/16/2011: Reviewed the report. The report states that remedial actions including excavation of contaminated soil and application of RegenOx were performed at the site in spring of 2011 (March through May), in conjunction with the site redevelopment project. Approximately 3,370 tons of petroleum impacted soil were removed from the site and approximately 1600 lbs of RegenOx were applied into the excavation pit. End-point soil samples were collected. Laboratory analysis of the end-point soil samples indicated no detectable concentrations of VOCs above minimum detection limits. In addition, a vapor barrier was installed beneath the planned on-site building to prevent intrusion of any residual petroleum vapors. Based on these actions, Ecosystem recommends closure of NYSDEC Spill Case No.

0508266 associated with the property. GW grab samples were not collected from the excavation pit, though GW was encountered. Post-remediation groundwater monitoring was not performed at the site. To discuss closure request with J. Kolleeny of DEC. AD 11/23/2011: Discussed the site with J. Kolleeny of DEC. It was decided that closure request cannot be approved at this time due to non-compliance with the approved RAP, which included post-remediation GW monitoring. To send a letter. AD 11/30/2011: Issued and sent a letter to Mr. Orcus stating that the data submitted indicate that groundwater sampling was last performed in 2010, prior to site remediation, and that no post-remediation groundwater monitoring was implemented, although its implementation was included in the approved RAP. Required that an additional well be installed as per the approved RAP on the sidewalk in the vicinity of the remedial excavation area and that a round of post-remediation groundwater sampling be performed to ensure that residual petroleum contamination is not present in the groundwater at the site. The results of the sampling round should be submitted to NYSDEC along with recommendations for further action or spill closure, as appropriate. DL pdf copy of the letter to eDocs. AD 04/12/2012: Sent an e-mail to Mr. Ciminello of ESS with a request for site status update. later received an e-mail from Mr. Hooker saying: Hi Ainura, Thanks for your message. We just got the groundwater lab data back a couple of days ago and the results are good. I m preparing a letter requesting closure of the spill file based on the data. You should expect to receive the letter in the next week or so. Thanks, Richard Report is due April 20, 2012. AD 04/20/2012: Received an e-mail from ESS with an attached report. DL the report to eDocs. Will review. AD 04/26/2012: Reviewed the report. It states that on March 27, 2012, one temporary groundwater monitoring well (TW-1) constructed of one-inch PVC casing and 0.01-inch slotted PVC well screening (screen interval from 5 to 20 feet below grade) was installed by Enviroprobe personnel under direct supervision of ESI. The well was located immediately southwest (and hydrologically down gradient based on the presumed direction of groundwater flow in the vicinity) of the area where petroleum contaminated soil had been previously excavated. Subsurface soils encountered during installation of the well were comprised of medium reddish brown sand becoming coarser with depth. Groundwater was encountered at 12 below surface grade. No field evidence of contamination was noted in the soil and no positive PID measurements were recorded. Purging and sampling of the monitoring well was conducted on March 29, 2012. Sample TW-1 was submitted for laboratory analysis for volatile organic compounds using USEPA Method 8260. No VOCs were detected above guidance levels in sample TW-1. Naphthalene (guidance level 10 ?g/L) was detected at 1.0 ?g/L. No other VOCs were detected above laboratory minimum detection limits. The consultant states that no field evidence of contamination was encountered in subsurface soils during well installation and laboratory data document the absence of VOC impacts to groundwater. These results support the conclusion that on-site soil remediation performed at the site and documented in the ESI Spill Closure Report, dated October 2011, effectively removed the potential on-site source of groundwater contamination. No further investigation is recommended. The findings of the ESI Spill Closure Report, dated October 2011, together with this Letter Report, document the remediation of contamination associated with NYSDEC Spill #0508266. Based on these findings, ESI requests closure of the spill file. To

DEC Memo: "02/23/11 Responded to the site on 02/22/11. Soil excavation is being conducted at the site presently. Eleven 550's found close to the south 6th street area. Tank were pumped out by PTC. Onsite supervisor Al Regino told me that the tanks did not have product in it and were encased in concrete. However, contaminated soil was discovered around the tank area and were stockpiled on a plastic sheet for offsite disposal. End point samples were taken from the tank area. Environmental consultant ECO Systems Strategis Inc.(sr) 04/07/11 Spoke with Richard Hooker, Project Manager for the site from Ecosystems Strategies, Inc. Tank closure report for the newly found tank will be sent to DEC by next week.(sr) 08/12/11 Tank closure report in edocs. Eleven(550's) gasoline and one 550 gallon fuel oil

DEC Memo: "12/30/14-Vought-This spill reassigned from DEC Zhune to Vought as Vought also working on spill 1216805 with NYCOER Chawla and Moore which is two lots away and upgradient from this site. See that spill also for further information. Vought copied following notes from Spill 1216805: 12/19/14-Vought-Sent reply to OER Moore with cc to OER Chawla that Hannah, According to the reports for 1216805 and the block/lot maps the most contaminated groundwater flows from 223 North 8th towards 207 North 8th. I would call in a spill for the following reasons: -Down-gradient VOC concentrations are ten times higher at 207 North 8th suggesting an on-site source.-Prior site use of 207 North 8th as a private garage suggesting petroleum use and possible storage. -Groundwater concentrations at 207 North 8th will require at least quarterly monitoring via installation of sidewalk wells (if the site is to be developed) to ensure a decreasing VOC trend attributable to attenuation. -PCE in soil vapor may require DOH review and possible SSDS (unless this site has been reviewed with Jane O or Bob C during OER/DEC routine meetings). As I manage the almost adjacent site, it would make most sense for me to manage 207 North 8th as well. As such I would much appreciate if the spill caller to the hotline was to mention my name be placed in DEC Remarks. Hope this helps and feel free to forward this email onto the developer/responsible parties. Submission of a Remedial Action Report (RAR) that describes the remedial activities, certifies that the remedial requirements have been achieved, defines the Site boundaries, lists any changes from this RAWP, and describes all ECs and ICs to be implemented at the Site. 12/29/14-Vought-Sent email to OER Moore as to if spill at 207 North 8th was called into Spills Hotline. OER Moore replied that she would return call to Vought to discuss. Vought had teleconference with OER Chawla, Moore and Wong and they noted that 207 would be excavated to below groundwater and Vought noted DEC would require collection of groundwater sample from

S117394139

excavation during development of that site under separate spill number. OER Moore will have spill called in to hotline and note Vought as PM so that Vought could manage both spill sites due to proximity. Construction and maintenance of an engineered composite cover consisting of a 4 inch thick concrete slab across the southern 70 feet of the Site and a 4 inch thick concrete patio across the northern 30 feet of the Site to prevent human exposure to residual soil/fill remaining under the Site. The entire Site will be capped, there will be no exposed soils, vegetation, or landscaping; 12/30/14-Vought-Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff 8/19/16-Vought-Sent letter to OER Moore with cc to OER Chawla that Hannah, We just received a FOIL request for the above site and I see there are no updates since my last notes of 12/30/14 where I noted that Sent email to OER Moore with cc to Chawla and Morris that Hannah, The Spill is indeed assigned to me and I look forward to the collection of the groundwater sample post excavation and dewatering. I would much appreciate if you could forward me any pertinent reports NYCOER received so I can review them as well as complete our files. I would also appreciate if you could forward or send the owner/developer contact information (I will hold off on contacting them as you are facilitating our requirements for the collection of samples). Please note as well that after further thought we should also collect soil sidewall endpoint samples (if possible) to ensure complete site characterization as well as to ensure no vapor intrusion from possibly contaminated soil sidewalls. If needed I can formalize this in a letter to the developer. Thanks as always, -Jeff And my requirements at that time were DEC Requires: 1)Submission of a RAP including collection of bottom groundwater sample and soil sidewalls (if possible) as development of site includes excavation to groundwater as per NYCOER 12/29/14. 2)Submission of reports submitted to NYCOER as per email dated 12/29. 3)Vapor or moisture mitigation into new development. 4)cc to OER Chawla/Moore/Morris and PW Grosser. I have attached the spill notes for your reference as well and would much appreciate any updates you have or resending those updates if already sent. Thanks. OER Moore replied Hi Jeff we re looking into it and will get back to you. Thanks. 8/19/16-Vought-Received email reply from OER Chawla with cc to OER Moore/Glass that Since the spill was called in during investigations back in 2014, development project has been stalled and no work is ongoing. See email from consultant below. Kate Glass is managing this site for us. RIR and RAWP were finalized in 2014. Kate will be voiding their NTP. Give me call if you need any additional info. In below email string was email from PW Grosser Almskog to OER Glass dated 2/17/16 that Katherine, I look forward to working with you on this and other OER projects in the future. The project

redevelopment has been on hold for the past few years and no development or excavation activities have taken place since the remedial investigation and the Remedial Action Plan were submitted to OER. The property owner is evaluating proposed development design plans and is hoping to start construction activities in 2017 at this site. Once the redevelopment plans are finalized, I will be in contact with you to determine if a revised RAWP or addendum is needed based upon modifications. Please let me know if you have any additional questions. Thanks 8/22/16-Vought-Reviewed Remedial Investigation Report (PW Grosser Jennifer Lewis) dated May 2014. Vought added report to D2. Report prepared for: North Eight NY, LLC 900 Grant Avenue Brooklyn, NY 11211 Remedial Investigation Report (PW Grosser)-May 2014: The development project consists of a new six story residential building with a cellar. The lot size of the property is 25 feet by 100 feet and the first through six floors of the building will occupy the south 25 feet by approximately 55 feet. The first floor will be underlain by the cellar which will extend an additional approximate 15 feet north into an open air areaway and sump pump room. The remaining 30 feet north of the cellar will remain near sidewalk grade and will exist as a concrete paved courtyard. The cellar level will consist of utility rooms, a laundry room, a boiler room, the areaway, and an accessory room to a first floor dwelling unit. The site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of the elevator pit and step footings. Site E designated with NYCOER. Former oil tank on site as per NYCDOB permit in 1992. Scope of work included five soil borings with collection of eleven soil samples, installation of three monitoring wells and five soil vapor probes with three samples collected for analysis. Water in monitoring wells is 7-11'bg but may be perched. Groundwater flow to the northwest and soils are 3-10' of historic fill underlain by sandy clay. Generally, the soil beneath the site consists of approximately 3 feet of historic fill material overlaying a layer of brown to black sandy clay that extended to a minimum depth of 30 feet. Anomaly noted during GPR survey in rear portion of property. Soil analyses showed up to 460ppb xylene(SB-2 20-23'bg). Groundwater analyses showed up to 1.2ppb benzene(MW1), 31ppb ethylbenzene(MW1), 11ppb xylene(MW2), and 250ppb naphthalene(MW2). Soil vapor analyses show up to: 15ug/m3 PCE(SV002), 19.8ug/m3 benzene(SV001), 144ug/m toluene(SV001), 31.4ug/m3 ethylbenzene(SV001), 113ug/m3 xylene(SV001). PWGC recommends that a Remedial Action Work Plan be prepared and submitted to address the proper handling of on-Site soils and groundwater and the installation of appropriate engineering controls based upon the development plans and the quality of the soil to remain in place following development. In appendix was Phase I from PW Grosser noting performance of GPR survey with detection of anomaly in rear of property. Remedial Action Work Plan Stipulation List (PW Grosser)-10/3/14. Vought added RAWP and Stipulation List to D2. P.W. Grosser Consulting (the consultant) hereby submits a Remedial Action Work Plan (RAWP) Stipulation List for the 207 North 8th Street (the Site) to the New York City Office of Environmental Remediation (OER) on behalf of North Eight NY, LLC. This letter serves as an addendum to the RAWP to stipulate additional content, requirements, and procedures that will be followed during the Site remediation. The contents of this list are added to the RAWP and will supersede the content in the RAWP where there is a conflict in purpose or intent. The Site will be excavated to a maximum depth of approximately 15 feet below sidewalk level for the installation of

the elevator pit and step footings beneath the cellar for an approximate 850 cubic yards of off-site soil removal. Groundwater is estimated at approximately 7 to 11 feet below grade and excavation for the cellar will require excavation into the groundwater. RAWP includes CAMP, establishment of restricted residential SCOs. The rear yard area (northern 30 feet of the Site) will be excavated approximately 0.5 feet below sidewalk grade for the installation of the concrete patio. Approximately, 1,000 tons of soil will be excavated and removed from this Site. Collection and analysis of end-point samples to determine the performance of the remedy with respect to attainment of SCOs. Installation of a vapor barrier system beneath the building slab and outside foundation sidewalls below grade. The vapor barrier will consist of a combination of Grace Construction Products Preprufe 300R for horizontal applications and Preprufe 160R for vertical applications. Both vapor barriers are constructed of a high density polyethylene film; Preprufe 300R is 46 mils thick and Preprufe 160R is 32 mils thick. A letter from the manufacturer stating the compatibility of the vapor barrier with observed on-Site contaminants and manufacturer's cut sheets for the vapor barrier are included in Appendix B. A RAR will be submitted to OER following implementation of the remedial action defined in this RAWP. The RAR will document that the remedial work required under this RAWP has been completed and has been performed in compliance with this plan. 8/22/16-Vought-Sent letter approving of RIR and RAWP and Stipulation list pending inclusion of quarterly groundwater sampling, use of Unrestricted SCOs, and collection of bottom groundwater endpoint sample. Letter added to D2 and sent to North Eighth with cc to OER Chawla and Moore with email that Kris, Please see the Department's attached review letter of the RIR and RAWP and Stipulation list for the above referenced site. An original of the letter is in the mail to North Eighth LLC. Please provide an update on the status of the site. Thanks 9/6/16-Vought-Received hardcopy of DEC requirement letter returned to DEC from US postal service and envelope noted insufficient address and unable to forward. No resending of letter via US mail as Vought in active correspondence with consultant. DEC Requires: 1)Confirmation of RP's mailing address as last DEC letter returned as undeliverable. 1)Update on development plans for site as per the RAWP and RIR 2)Continuation of quarterly sampling of groundwater. 3)Use of Unrestricted SCO's as per CP-51 versus NYCOER using Restricted SCOs 4)Collection of groundwater sample from excavation to examine for possible attenuation after source removal 5)cc to OER Chawla/Moore/Morris and PW Grosser (Kris Almskog) as site E designated"

Spiller Company: 001
Contact Name: MICHAEL BORELLO
Contact Phone: (917) 217-7334
DEC Memo: "Consultant was hired to do a Phase 2 on this property for City Little e designation. They found small amounts of SVOC and Pesticides in shallow soil borings (2ft depth) 3/5/08 - Raphael Ketani. I looked up the site in the PBS, but it wasn't listed. The block and lot are 2312 and 22. According to ACRIS, the owners are Tadeusz and Krystina Zablocki, 75 Berry Street, Brooklyn, 11211-1917, and Michael Lichtman, 132 Greene Street, New York, 10013. The environmental company is Environmental Building Solutions. The contact is Michael Borello (917) 217-7334. I sent a CSL to the owners. 3/11/08 - Raphael Ketani. Today I received a letter from Joseph Horowitz, PE, 76-06 137 St., Flushing, 11367 ((718) 544-5105). The letter stated that a Phase II was currently taking place. Previously, a Phase I was performed for the site and submitted and approved by NYC DEP. NYC DEP is involved because the site has an E designation. Mr. and Mrs. Zablocki plan to construct a four story building. The building will require a foundation which is 10 feet deep. Excavation will be at least to a depth of 10 feet. Clearance sampling will take place and the remediation work will be incorporated into the construction work. Mr. Horowitz stated that DEC will get a copy of the Phase II ESA and the Phase III Work Plan. Mr. Horowitz stated that he, Mr. and Mrs. Zablocki, Michael Borello, Principal, Environmental Building Solutions, LLC, 295 Madison Avenue, Suite 1826, NY, 10017, and Innocent Taziva, NYC DEP ((718) 595-3585) should all be copied on any correspondence from DEC. The NYC DEP reference number is 08DEPTECH159K/04DCP003K. 3/12/08 - Raphael Ketani. I left a message for Mr. Horowitz that the DEC would like the contaminated soil to be removed immediately and that we would like the end point soil sample analytical results. Mr. Horowitz called me back. He said that the site is half an open yard and half a garage. He said he is waiting for the necessary permits to demolish the garage. Otherwise, they can't move forward. He said that the owners are as anxious as DEC to move forward and get rid of the contaminated soil. Groundwater samples were taken and he is waiting to receive the analytical results. 3/18/08 - Raphael Ketani. Today I received the Phase I for the site from Mr. Horowitz. I reviewed the document. The entire document was lightly reproduced as it may have been printed from a copy of a copy of the Phase I document. The pages in appendices IV and V were too light to read. However, these were mostly maps and neighboring property descriptions, respectively. I had no other comments regarding the Phase I. 3/24/08 - Raphael Ketani. I received a call today from John Zablocki, one of the owners (646) 361-6839. He said that the engineer he had hired was billing him for all kinds of things. He also wanted to know if he needed to contact DEC before doing the site excavation for the contaminated soil. I told him he didn't have to wait for DEC's approval, but he would need to provide DEC with documentation that he had characterized the soil, and had sent it to the appropriate disposal site. I added that DEC would also need manifests for the loads of soil. I told him that soil borings would have to be taken to delineate the extent of the contamination, unless he already knows this. I told him that DEC had already received some information regarding the level of the contamination. He asked whether he can take the soil samples himself in order to save money. I told him he could and I explained the entire process of soil contamination delineation, sending the samples to a laboratory,

EPA ID Number

VACANT/ COMMERCIAL (Continued)

S109060194

submitting a soil sampling plan to be approved by DEC before the work starts, the analytical methods to be used and other details. In the end of our 45 minute conversation, I informed him that hiring an environmental professional, particularly a person with a PE might be the best way to go, even if it is expensive. I told him that this person will know what to do and the ins and outs of the process. I added that the bank may cut his funding if a PE doesn't oversee the job. I told him to be careful as regards what he does with his project. He said he plans on building a 6 family apartment building. I told him that he should be very careful that the work is done properly. He thanked me for all of the information and the conversation ended. 3/26/08 - Raphael Ketani. I received the (Draft) Subsurface Soil and Groundwater Investigation report dated 3/13/08 from Environmental Building Solutions, LLC. I reviewed the report. I finished my review of the report. The soil analyticals showed that there were hits for SVOCS in the soil. These were the combustion series of analytes in the 0' to 2' sample and the 14' to 16' sample for B3. There were low level exceedences of TAGM for the 0' to 2' sample. Only a small number of hits were present in the other samples. The samples were almost entirely non-detect for SVOCS. Almost all of the samples were also non-detect for VOCs. Most of the hits were in B-2 in the 0' to 2' sample. The groundwater sample had only some low level SVOC exceedences of TAGM. The boring location map shows that the drilling sites were widely spaced. I wrote a letter to Mr. Horowitz stating that there should be more borings. 3/27/08 - Raphael Ketani. I spoke to Mr. Horowitz (718) 544-5105 about the site. He said that the Zablockis received the DEC letter requesting 3 additional borings and soil samples. He said that he doesn't want to try to do the borings and get the analytical results for the soil samples as this will take a lot of time. He said that the City program they are involved with gives them a tax break for constructing on their property, but only if they have the foundation under construction before the end of June 2008. He said that what DEC is asking for will take too much time. He said that all of the soil will be dug up anyway and handled as hazardous material due to the pesticide hits. I told him that is fine, but DEC still doesn't know what the subsurface conditions are. I told him that the site is 100 feet long and that 3 borings are just not enough to characterize the subsurface. I told him that he doesn't have to go down any further than 15 feet and that the analytical results just need to show the 12 most common VOCs and the 12 most common SVOCS. I told him that there are dozens of environmental and remediation companies and that someone has to have equipment available to do a few borings on short notice. He said that he will call me back later. Mr. Horowitz called a half hour later and asked how many soil samples would be needed. I told him to send off the 3 dirtiest ones. He said nothing is really dirty. I told him that is fine. He asked that he be allowed to order testing via STARS for VOCs and SVOCS. I told him that will be fine. He said that he will talk to the Zablockis and get back to me. Later, Mr. Horowitz sent me an e-mail memorializing the agreement between him, the Zablockis, and DEC. The agreement stated in the e-mail is: borings will take place March 31 or April 1, 3 borings opposite the existing locations will go down to 16', the dirtiest sample will be collected, analyses will be done via STARS methods 8260 and 8270, results will be presented in an Addendum to the Phase II. 4/1/08 - Raphael Ketani. Mr. Horowitz sent me an e-mail containing a DRAFT letter for Mr. Taziva of NYC DEP. He asked me to comment on the parts

VACANT/ COMMERCIAL (Continued)

S109060194

of the letter mentioning correspondences between him and me. The statements regarding the correspondences appeared accurate. A made a copy of the DRAFT letter and put it in the paperfile. His DRAFT letter also mentions that the 3 additional borings were performed on April 1, 2008 and soil samples were sent to the laboratory for 24 hour turn around. 4/4/08 - Raphael Ketani. Today I received the final Subsurface Soil and Groundwater Investigation report dated March 13, 2008 from Mr. Horowitz. The report was accompanied by a cover letter to Mr. Taziva of DEP dated 4/2/08. The cover letter states that a vapor barrier will be installed. The report did not include the soil analyses for the 3 additional borings that were requested by DEC. I had no comments regarding the letter, nor the report. 4/8/08 - Raphael Ketani. I received the analytical results for the 3 additional borings that were performed. The respective samples were B-6, B-7, and B-8. All of the results for VOCs and SVOCs were completely non-detect. I spoke to Mr. Horowitz regarding the analytical results. I asked him why the numbering order goes 6, 7, and 8. He said that he was just following the numbering system from the previous reports. He said that no samples were missing. I asked him why the analytical sheets say that the sample type is GRAB when they are supposed to be the soil cores. He said that the samples are from the soil borings. 4/9/08 - Raphael Ketani. Yesterday, I received the Subsurface Soil Investigation Addendum dated 4/4/08 from Mr. Horowitz. I reviewed the document. The analytical results for borings B-6, B-7, and B-8 were the same as the ones I had previously reviewed on 4/8/08. However, borings B-1 and B-3 were in different locations than in the 3/13/08 report. Also, the Addendum depicts boring B-4 at the location of B-2 and boring B-5 is at the location of B-3. The Addendum puts B-3 at the location of B-1 of the 3/13/08 report. Additionally, I never received the analyticals for B-4 and B-5. I tried to contact Mr. Horowitz to discuss this, but could only leave a message. 4/10/08 - Raphael Ketani. Mr. Borello of Environmental Building Solutions, LLC (646) 290-5925, exr 25 called me back. He said he was sorry for the confusion. He e-mailed me the three different site plans showing the different stages and placements of the series of borings and the well. He also e-mailed me the analytical results for 3 composite samples that were taken to characterize the soil. The analytical results were mostly non-detect with only a handle of low hits of SVOCs. 4/11/08 - Raphael Ketani. Mr. Horowitz sent me the entire analytical package from Environmental Testing Laboratories for the 3 composite samples, along with copies of the Chain of Custody Forms and the 3 different boring location site plans. I reviewed the package and had no comments. Based upon the analytical results in the March 13, 2008 Phase II, the analytical results in the Addendum to the Phase II dated April 4, 2008, and the April 10, 2008 soil characterization testing results package, I am closing the spill case. I sent an NFA letter to Mr. Horowitz, with a c-c to Innocent Taziva of DEP. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM MONITORING. 402 Metropolitan Avenue, Brooklyn Owner: Estate of James J. Mannix and Joseph M. Mattone Leased by: Joseph Macchia - Northland Marketing Spill #8907310 reported on 10/24/89 when four 550 gallon underground storage tanks (USTs) failed a tank test. Spill #9212269 was reported on 1/28/93 when Soil Mechanics (hired by the Estate of James Mannix and Joseph Mattone) installed three on-site monitoring wells and encountered 3 1/4 feet of gasoline in MW3. Spill # 9213355 reported on 3/2/93 when six 550 USTs failed a tightness test. Repairs were made to the stick box and vent lines and the tanks passed a retest on 4/2/93 3/9/93 Case No. R2-0941-93-03 initiated. 12/6/94 Order on Consent No. R2-0966-93-03 signed by Joseph Macchia. All three spill numbers cited in Schedule B - Petroleum Discharge and Clean-Up Violations. After the signing of the Consent Order, Macchia contracted Berninger Environmental as their consultant. Including the three wells installed by Soil Mechanics, there is now a total of thirteen monitoring wells both on and off-site. The site is currently on a monthly monitoring and bailing schedule. According to the February 2001 Monitoring Report, the hottest well is MW-3 (in the middle of the property, downgradient of the tank mat) with a total of .97 feet of floating product. The report also indicates that a total of 304 gallons of free product has been bailed from the site wells during these monthly visits. In numerous meetings and letters dated 8/12/98 and 1/22/99 and 9/30/97, DEC required Northland to periodically perform Vacuum Enhanced Fluid Recovery (VEFR) until the tanks are removed and a permanent remediaton system installed. According to DEC's file, VEFR was only performed on five occasions with a total of 267 gallons of free product recovered. 9/12/03 Letter mailed to Joe Macchia requiring additional investigation and remediation. 09/23/03 Reassigned from Rommel to Sun. 02/12/04-Sun-File Update by Sun: -On 09/22/03, Joe Sun sent and also faxed a letter and Stipulation Agreement to Joseph Macchia, Jr. of Northland Marketing Corp. requesting complete delineation of petroleum contamination, submittal of Investigation Summary Report followed by a submittal of a Remedial Action Plan. The investigation must include, but not limited to the following: (1) Confirm groundwater flow direction by surveying site wells, (2) Install additional wells to delineate the contamination to the west, (3) Implement a sampling program, on a quarterly basis, for all non-product monitoring wells and analyze for EPA Method 8270 B/N and 8021 including MTBE, (4) Determine the type of product in MW-9 via product ID analysis, (5) Repair MW-3. Currently the cap for the 2 PVC casing cannot be placed due to insufficient clearance between top of casing and its manhole cover. The PVC casing needs to be shortened. The Department set a deadline of October 3, 2003 for signing of the Stipulation Agreement by the Respondent. -Monthly Monitoring Report (January 2004, by Berninger Environmental, Inc. (Water Berninger,

402 METROPOLITAN AVE. (Continued)

S100494817

631-588-2251): The monitoring wells were gauged on 12/22/03. The free phase products were detected on three monitoring wells: 0.59 feet on MW-1, 0.93 feet on MW-3 and 1.20 feet on MW-6. Snow/ice covered the following monitoring wells: MW-7, MW-8, MW-12 and MW-13, and thus those wells were not gauged. Consultant's Report stated that it appears that other contractors are working on site, areas fenced off with locked gates, thus denying access to monitoring wells, for at least the sixth time drum for bailing product is missing, various utility mark outs, missing well designation markings etc.

-02/12/04-Joe Sun called the Manager of the current Used Car4 Services on-site (Alex Tulchistka, 718-388-2424) about what kind of construction activities are being performed onsite. He replied that no new construction activity is performed and no fence or locked gate was installed onsite as far as he knew. Joe Sun then called Walter Berninger again and informed him the conflict information from the Car Service Manager. Berninger will take the picture next time when they perform the monitoring activity and provide more details on gauging the monitoring wells.

12/30/04 File Update by Sun: On 12/21/04, Joe Sun mailed a letter to Kenneth Raisch and Christopher Todd of The Estate of James Mannix and Joseph Matton informing them that the Remedial Action Plan (RAP) submitted by their consultant, Advanced Site Restoration (ASR) has been reviewed by the Department and has the following comments: - ASR proposed two remedial approaches for managing the petroleum-contaminated soil to be excavated on site. The first approach, transport off-site and proper disposal, is approved by the Department. The alternative, stabilization/solidification approach, is not approved as proposed. If ASR still wishes to pursue this approach the Department has the following comments and requirements which need to be addressed and a revised RAP needs to be resubmitted for review:

1. To evaluate the effectiveness of the proposed remedial process on the subject site, the horizontal hydraulic gradient at the site must be determined, and the hydraulic conductivity and porosity of the soil must be estimated. The seepage velocity and direction of the ground water flow must be calculated.
2. Redraft the Soil Remediation section (page 5) for clarity, and refer to the product as cold mix asphalt as is done in the applicable Beneficial Use Determination (BUD) approvals.
3. The use of the term cement based (page 6, second to last paragraph) is potentially confusing. The 2001 amendment to BUD Approval 93-0007 allows for the addition of Portland Cement to improve the physical properties of the product, but the petroleum contamination is still stabilized with asphalt emulsion.
4. The sampling schedule required by the BUD (sampling method, analytical method, number of samples and timing of samples) should be tabulated and included in the RAP.
5. The proposed uses for the cold mix asphalt (see page 6, second to last paragraph) are not consistent with the BUD (see 2001 amendment to BUD Approval 93-0007, Operational Requirements, bullet 2). Use of this material as a substitute for conventional asphalt pavement would be a more appropriate application. The Department has the following comments regarding the proposed free product recovery and groundwater remediation. These issues must be addressed in the revised RAP:

1. Provide the formula used to calculate the amount of BioRem required.
2. The plan to periodically re-inoculate the site with BioRem is troubling. If conditions are suitable for the constituent bacteria in BioRem to grow, re-inoculation would be unnecessary. If conditions are unsuitable for growth, the addition of more of the same bacteria will not change things. BioRem should be contacted to

402 METROPOLITAN AVE. (Continued)

S100494817

learn the optimum conditions for growth, and the acceptable concentrations. A sampling plan to determine if conditions on the site are within these ranges should be provided for review. BioRem should also provide information about the terminal electron acceptors utilized by their proprietary bacteria so the attenuative capacity of the site can be estimated, and compared to the concentration of residual contamination. This comparison is best done with TPH data, rather than the STARS list of compounds for gasoline spills that is usually requested. 3. There is a potential for LNAPL to be present in areas outside the limits of the proposed excavation. If this is confirmed, depending upon the estimated amount of LNAPL, another technology in addition to BioRem may be required for remediation. 4. The 8 to 18 month time frame allotted for bio-remediation is considerably longer than the 7 to 14 weeks stated in the BioRem H-10 Specification Sheet. A soil and ground water monitoring plan to track the bio-remediation should be developed, and included for review in the re-drafted RAP. 5. The RAP should have a provision that samples will be collected and analyzed at the discretion of the ASR site supervisor (see page 9, second to last paragraph) or the direction of the DEC project manager. 6. If soil excavation does not commence soon after the product is removed from the wells with the vac-truck, the wells should be monitored daily for free product and the vac-truck recalled when appropriate. 03/01/05 File Update by Sun: On 02/28/05, Sun sent a letter to the property owner informing him that the Department has reviewed the revised remedial action plan (RAP), prepared by Advanced Site Restoration, LLC dated February 17, 2005. ASR proposed to excavate the contaminated soil and dispose of property off-site and use Bio Rem product H-10 for subsurface bioremediation of hydrocarbon contamination in groundwater. ASR also proposed to remove the free product with a vacuum truck if free-floating hydrocarbons are detected. The Department approves the revised RAP proposed in Reference 1, as noted below: 1. Collection of Soil Samples: As per DER-10 Section 5.4, soil samples must be collected from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the bottom for every 900 square feet of bottom area. In all cases, samples should be biased toward locations of highest expected contamination as indicated by field evidence or PID measurements. 2. Salvage of Existing Groundwater Monitoring Wells: Page 4 of the revised RAP in Reference 1 under Section 5.0 Groundwater Remediation stated that ASR will attempt to salvage any groundwater observation wells still existing on the site. If additional wells are needed, they will be installed strategically, to maximize the data that can be obtained. It should be noted that according to the historical data, free product was detected in monitoring wells MW-1, MW-3, MW-6 and MW-11. These four monitoring wells and other existing wells must be restored at the same locations or at the locations to be consulted with the Department if they were destroyed during excavation. 11/11/05: Sun received UST Closure Report for the subject site, dated 11/07/05. 11/23/05: Review of the monthly report dated 10/19/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb, and MTBE ranged from <NDL to 6,300ppb. A total of 16 Monitoring wells were gauged and sampled. Only one well (MW-11) had free phased product with thickness of 0.23 feet. (Sun) 12/13/05: Review of the monthly report dated 11/10/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb (October, 2005), and MTBE ranged from <NDL to 6,300ppb (October, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased

402 METROPOLITAN AVE. (Continued)

S100494817

product with max thickness of 0.49 feet. (Sun) 02/21/06: Review of the monthly report dated 02/10/06 indicated that Total BTEX ranged from <MDL to 13,060 ppb (December, 2005), and MTBE ranged from <NDL to 10,000ppb (December, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.27 feet. (Sun) 11/14/06-Sun: Based on the Quarterly Report, dated 9/11/06, BTEX ranged 5,258 to 11,180 ppb, and MTBE ranged from 170 ppb to 8000 ppb. (Sun) 04/13/07-Sun: Sun the following email to Chris Tomasello: Hi Chris, I have reviewed the Remediation Progress Report, submitted by ASR, dated January 2007. The Department approves the following recommendations: 1. Stop sampling MW-4, MW-5, MW-6, MW-8, MW-10, MW-12, MW-13. and MW-16. 2. Continue to sample and monitor the remaining groundwater monitoring wells for VOCs only using EPA 8260 method. 3. Continue to monitor the concentrations of BTEX, MTBE, and Total VOCs from MW-1, MW-2, MW-3, MW-11, and MW-14. 4. Continue to monitor the plate counts to determine the colony count for the bacteria. Upon review of the analytical results of new round of groundwater sampling data, the Department will determine if quarterly sampling event shall continue or petition for a NFA is warranted. The Department requires five days advanced notice of any remedial and/or monitoring events at the site. (Sun) 07/17/07-Sun: Review of the Remediation Progress report dated June 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that a total of five (5) groundwater monitoring wells were sampled on 5/2/07. Of the five (5) samples analyzed, four (4) indicated a total BTEX concentration of between 150 and 6,700 parts per billion (ppb), and the remaining one (1) well had total BTEX concentrations of non-detect level. MTBE was detected above the New York State Water Quality Standards in two (2) of the five (5) groundwater monitoring wells. The concentration of the MTBE in both of these two (2) groundwater monitoring wells, was the lowest ever recorded during the twenty month samplin period. High levels of dissolved hydrocarbons have historically been detected in MW-14. MW-14 continues to show the highest levels of dissolved hydrocarbons, although they are at the lowest levels recoreded during twenty month history of sampling the site. Low levels of dissolved hydrocarbons also appeared in MW-1, MW-2.MW-3. AST proposes to monitor the concentration of BTEX, MTBE, and total VOCs by collecting and analyzing groundwater samples frm Mw-1, MW-2, MW-3, Mw-11 and MW-14. ASR will continue to monitor the heterotrophic plate counts to determine the colony count for the bacteria. ASR will continue to document the downward of the residual contamination, to demonstrate that concentrations will continue to acceptable TAGM 4046 Groundwater Standards. 07/20/07-Sun: Review of the groundwater sampling report dated July 14, 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that the groundwater sample collected from MW-14 wells on 7/12/07 indicated a total BTEX concentration at 318 parts per billion (ppb), including Benzene concentration at 52 ppb, and MTBE concentration at 340 ppb. MW-14 has been historically the hot spot with highest BTEX and MTBE concentrations. Based on these low concentratiuons of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE, the spill is closed and NFA letter will be issued. (Sun) 08/16/07-NFA letter was sent to RP and ASR. (Sun) "

Proposed development includes two residential buildings with full cellar. Entire property will be excavated approximately to the depths of 10 feet below grade. Napthalene was detected in soil (250 ppm) as well as in groundwater (21 ppb). I will call you later today to discuss this spill and proposed excavation. Vought added attachment to E-docs and sent email to OER Chawla that After review of the below data the Department requires collection of groundwater sample at boring location SP-2 due to the high level of VOCs. Furthermore, the Department may require soil remediation beyond the proposed foundation depth of 4'bg after review of the soil and groundwater analyticals. The Department may also require installation of a vapor mitigation system pending receipt and review of a remedial action plan if warranted. Please also note that if groundwater contamination is noted then the Department will require complete delineation of the groundwater and submission/approval of a RAP prior to development. Feel free to call me on my cell at 917-577-1728 if you or others wish to discuss, Thanks for your patience as always.

5/3/13-Vought-Received call from and spoke to OER Chawla and they will be installing soil boring location by SP2 and he will move well proposed across street towards a downgradient location of SP2 in case of possible necessity of groundwater contamination delineation. Site will be excavated for new residences to a depth of 10'bg (into water) with installation of a moisture barrier. 5/30/13-Vought-Received email from Rothenberg that Hi Jen, I have attached the soil and groundwater results for the most recent investigation at the above spill site. We have surveyed all six of the monitoring wells twice to make sure that the survey is correct because the survey results are showing a cone of depression. The original three wells still show a flow direction consistent with the March 2013 survey and with the known regional flow (towards the west-northwest in the direction of the East River). We believe that the additional wells (MW-4 - MW-6) are being impacted by an outside influence including a nearby subway tunnel or dewatering activities at the multiple construction sites in the immediate vicinity of the Spill Site. Therefore, we have removed MW-4 - MW-6 from the groundwater flow diagram. Please do not hesitate to contact me with any questions. Let me know when you have reviewed the results and are available for a conference call to discuss them.

6/20/13-Vought-Spoke to OER Chawla and sent email that Shaminder, I have reviewed the below groundwater and soil analyticals and the Department has no further requirements with respect to soil and groundwater delineation and we look forward to the preparation of the RAP and Closure Report when ready for review and submittal. Thanks, 6/26/13-Vought-Complete file review by Vought for purposes of data entry: Email from OER Chawla to Vought-4/8/13. Email that During site investigations, a spill was called in. Proposed development includes two residential buildings with full cellar. Entire property will be excavated approximately to the depths of 10 feet below grade. Napthalene was detected in soil (250 ppm) as well as in groundwater (21 ppb). I will call you later today to discuss this spill and proposed excavation. Vought received attachment in mail noting that there were elevated VOCs and SVOCs in groundwater and site to be developed with two 6-story residential apartments. According to the EEA s Phase I ESA, the site (lots 11 and 13) was historically utilized for many purposes since approximately 1941: as a factory, machine storage, as a shellac warehouse, a gymnasium, welding fabrication, meat and poultry supply business. Lot 13 is presently developed with a 1-story building. Lot 11 is currently a paved

parking lot. Soil VOCs:1,2,4-Trimethylbenzene (max. 13 mg/kg in SP-2), Naphthalene (max. 250 mg/kg in SP-2), Toluene (max. 0.85 mg/kg in SP-2), Ethyl benzene (max. 3.8 mg/kg in SP-2), Methylene chloride (max. 3.2 mg/kg in SP-1) . Groundwater: VOCs: Naphthalene (max. 21 ug/L) Soil Vapor: SV-3:1,2,4-Trimethylbenzene (max. 85 ug/m3), 1,2,4-Trimethylbenzene (max. 18 ug/m3), Chloroform (max. 290 ug/m3), EthylBenzene (max. 46 ug/m3), o-Xylene (max. 68 ug/m3), p- & m-Xylenes (max. 230 ug/m3), Toluene (max. 100 ug/m3). Groundwater flow to the northwest towards adjacent residential commercial properties. Depth to water is from 4-9'bg. Added report to E-docs. Email from HydroTech (Ataman) to OER Chawla-4/8/13. Email that Shaminder the building plans were recently changed so that excavation will only be to 4 feet below grade. Thanks, Rachel Ataman Email from Vought to OER Chawla-4/11/13. Email that Shaminder, After review of the below data the Department requires collection of groundwater sample at boring location SP-2 due to the high level of VOCs. Furthermore, the Department may require soil remediation beyond the proposed foundation depth of 4'bg after review of the soil and groundwater analyticals. The Department may also require installation of a vapor mitigation system pending receipt and review of a remedial action plan if warranted. Please also note that if groundwater contamination is noted then the Department will require complete delineation of the groundwater and submission/approval of a RAP prior to development. Feel free to call me on my cell at 917-577-1728 if you or others wish to discuss, Thanks for your patience as always, Email from HyroTech (Sasha Rothenberg Ph:718-636-0800) to Vought-5/1/13. Email that The OER has approved the sampling plan I sent to you a few weeks ago for additional soil and groundwater sampling at the above-referenced spill site. They have also provided us with the letter needed to obtain the necessary sidewalk permits. However, we would still like to make sure that the DEC is approving this plan before we start the work. Please let me know as soon as possible if you approve the plan or have any comments, questions or concerns. Email from HydroTech (Rothenberg) to NYCDEP Jennifer Pati-5/30/11. Email that have attached the soil and groundwater results for the most recent investigation at the above spill site. We have surveyed all six of the monitoring wells twice to make sure that the survey is correct because the survey results are showing a cone of depression. The original three wells still show a flow direction consistent with the March 2013 survey and with the known regional flow (towards the west-northwest in the direction of the East River). We believe that the additional wells (MW-4 MW-6) are being impacted by an outside influence including a nearby subway tunnel or dewatering activities at the multiple construction sites in the immediate vicinity of the Spill Site. Therefore, we have removed MW-4 MW-6 from the groundwater flow diagram. Please do not hesitate to contact me with any questions. Let me know when you have reviewed the results and are available for a conference call to discuss them. Attached data was same from 4/8/13 email from OER Chawla to Vought above. Email from OER Chawla to Vought-6/4/13. Email that Jeff:ttached are sampling results for above spill. Sampling was conducted in May as per your guidance and approval. Like to discuss these with you tomorrow afternoon. Let me know when you are free. Thanks, Shaminder Vought added results to E-docs. Groundwater sample from three monitoring wells installed in May 2013 show 110ppb naphthalene(MW6), 44ppb naphthalene(MW4) and 31ppb naphthalene(MW5). Email from Hydrotech Environmental (Rothenberg) to Vought-6/13/13. Email that Jeffrey, I

S113406055

understand from your conversation last week with Jennifer Pati at the OER that you would hopefully have time to review to most recent dataset for the above-referenced spill today. We have a meeting tomorrow morning with the developer and investors and they would like to know whether the department will be requiring any additional delineation or if we move forward with preparing a Remedial Action Work Plan. Please let me know if you have had the time to review the results. Thank you, Sasha Email from Vought to OER Chawla-6/20/13. Email that Shaminder, I have reviewed the below groundwater and soil analyticals and the Department has no further requirements with respect to soil and groundwater delineation and we look forward to the preparation of the RAP and Closure Report when ready for review and submittal. Thanks, Email from Hydrotech (Rothenberg) to Vought-6/26/13. Email that Jeff, Thanks for helping us with this. I want to make sure it's clear that excavation for development purposes will only be to 4 ft or less depending on the final building plans. The impacted soil was only detected well within the water table (9-11 ft). Therefore, the impacted soil within the saturated zone will not be removed as part of development. Thank you. Sasha Email from Vought to OER Chawla-6/28/13. Email that Shaminder, If I remember correctly you noted that as part of the BCP or E program (I don't recall which program this site is in) that an SSDS or appropriate vapor mitigation techniques will be installed and that there will be a deed restriction on the site. As long as this is the case, the Department has no objections to excavation to 4' or less. I will call you know to follow up, -Jeff 8/16/13-Vought-Received email from HydroTech (Rothenberg) that Good Afternoon, Please find the drafts of the RIR and RAWP for 219-223 North 8th Street aka 230-232 North 9th Street VCP project for your review. Vought sent reply that Sasha, I have attempted to use dropbox before but our Computer Services frowns from using third party share services as it interferes with some of our programming and security. Please download the file to: <https://fts.dec.state.ny.us/fts/> You can use this for all submissions to DEC as it agrees with our computers so to speak, Thanks. 9/4/13-Vought-File review to date: Email from HydroTech (Rothenberg) to Vought-8/22/13. Email that I have uploaded and shared with you the PDF of both the RIR and RAWP for this site. I will use this for all future DEC submissions. Vought added RIR and RAWP to e-docs. 9/24/13-Vought-Continued file review by Vought: Remedial Investigation Report (HydroTech)-June 2013. Report prepared for: 223 North 8th Street Partners, LLC 223 North 8th Street Brooklyn, NY Site is used for parking and commercial business as well as a one story commercial building currently occupied by an athletic center and offices. Future use of site is two (seven story residential buildings connected by a partially excavated one story parking garage and lobby at the first floor level. The top of the 12 slab for the first floor lobby and parking garage will be 3 feet below grade surface. The top of the slab for the elevator pits will be at 7 feet below grade. Excavation is anticipated below the water table only for the elevator pits. Site formerly used as a wagon house, meat and poultry supply business, junkyard, residential purposes, shellac warehouse, machine storage and welding fabrication, gym, artist retail supply and offices. Eight soil borings installed across site and six monitoring wells installed, five soil vapor probe samples and one outdoor ambient sample. Depth to groundwater is 4-9'bg and flow is to the west. Groundwater sample from three monitoring wells installed in May 2013 show 110ppb naphthalene(MW6), 44ppb naphthalene(MW4) and 31ppb

naphthalene(MW5).Soil VOCs:1,2,4-Trimethylbenzene (max. 13 mg/kg in SP-2), Naphthalene (max. 250 mg/kg in SP-2), Toluene (max. 0.85 mg/kg in SP-2), Ethyl benzene (max. 3.8 mg/kg in SP-2), Methylene chloride (max. 3.2 mg/kg in SP-1) . Groundwater: VOCs: Naphthalene (max. 21 ug/L) Soil Vapor: SV-3:1,2,4-Trimethylbenzene (max. 85 ug/m3), 1,2,4-Trimethylbenzene (max. 18 ug/m3), Chloroform (max. 290 ug/m3), EthylBenzene (max. 46 ug/m3), o-Xylene (max. 68 ug/m3), p- & m-Xylenes (max. 230 ug/m3), Toluene (max. 100 ug/m3). UST was suspected in sidewalk along south wall of building evidenced by a threaded pipe protruding from the sidewalk... Magnatometer survey performed and possible UST in sidewalk. Two attempts were made to install soil boring at vent pipe but refusal at 3'bg and one soil boring installed 4 feet away from vent and soil samples had no VOC's. Remedial Action Work Plan (HydroTech) August 2013. Proposed remedial action will consist of Citizen Participation Plan, CAMP, Track 4 Soil Cleanup Objectives, installation of an 8 building slab, installation of vapor barrier system, collection and analysis of endpoint soil samples, removal of UST and closure of petroleum spills, demarcation of residual soil/fill, transport and off-site disposal of soils, screening of excavated soils, implementation of storm water pollution prevention measures, submission of a RAR, Submission of an SMP, deed restriction with listing of engineering and institutional controls. Property will continue to be registered with an E-Designation by NYCDOB. Institutional controls will include prohibition of vegetable farming, use of groundwater without treatment, disturbance of residual contaminated material and higher level of land usage without OER approval. 6/26/14-Vought-Received email from HydroTech (Erica Johnston) that Good Afternoon, Work has begun at the above referenced Site. As the reports reflect, shoring and lagging activities have begun. One UST was uncovered yesterday, and we are in the process of emptying and disposing of the tank. Trucking has not yet begun at the Site, as the disposal facility is pending. Please let me know if you have comments on the reports. Thank you. Sincerely, Vought reviewed site and groundwater contamination is minimal and does not require off-site delineation at this time however may be considered pending review of the Remedial Action Report. Vought sent email reply to HydroTech with cc to OER that Erica, Thank you for the update and we have no comments on the below reports and look forward to receiving the Remedial Action Report. As always, the Department requires the removal of the grossly contaminated soil and any free product encountered during excavation activities. I will be on vacation from 7/2-7/15 and if any emergency issues arise during this time, please call the Spills Hotline at 1-800-457-7362. Regards. 7/25/14-Vought-Email from HydroTech Johnson on 7/7 that Good Morning, Please find the daily reports for 7/1/14-7/3/14 for this site attached. I apologize for the delay. Today s daily report will be sent this afternoon. Thank you. Sincerely, Erica Johnston. Vought added reports to D2. Reports note that on 7/1 UST tank bed was excavated further and endpoint samples collected from bottom and three sidewalls and remaining sample will be collected when excavation is complete. Air monitoring showed no significant results. Email from Johnson on 7/8 noted that Here is the report from 7/7/2014. Trucking/excavation is continuing today. Please let me know if you have any comments. Thank you. . Vought added 7/8 report to D2 and report noted continued soil loading for disposal facility and air monitoring showing ..no anomalies and no problems encountered . Planned activities for next week include excavation and

trucking. 12/16/14-Vought-File review to date by Vought: Email from HydroTech (Johnston) to Vought-10/24/14. Email that Good Afternoon Mr. Vought, Please find the tank removal summary letter for the above referenced tank attached. Please review and let me know of any comments you may have. I am hoping to get the Spill closed for the Site. Please let me know of any other information you will need. Thank you. Letter from HydroTech(Johnston) to 223 Partners, LLC - 10/6/14. Letter was addressed to: Mr. Jeffery Amengual 223 North 8th Partners, LLC 223 North 8th Street Brooklyn, NY 11211 Work performed included removal of one 6000-gallon UST. 5781 gallons of oil liquid was removed from UST and all accessible petroleum contamination was removed... and four endpoint samples were collected. Endpoint results are all under CP51 Unrestricted SCOs. Some SVOC exceedences noted however but are within background concentrations attributable to fill material. Report concludes that based on endpoint samplesit appears that the impact from the tank has been remediated . Email from HydroTech (Johnston) to Vought-11/18/14. Email that Mr. Vought, Good morning. Just following up regarding this spill site. Have you had the chance to review the letter? And can you please let me know if there is any other work to be done? Thanks very much. Email from OER Chawla to Vought-12/15/14. Email that Jeff: Above Spill has been remediated by removing 6000 gallon UST from this Site. All petroleum contaminated soils have been removed and end point samples were obtained. A tank closure report was submitted to you in October. Remediation on this is being performed under City VCP. So far, 5,700 tons of soils have been removed from this property. This is Track 4 remediation with vapor barrier and concrete capping as well as Site Management Plan for long term. Let me know if you need any additional information to close this Spill. Thanks, Shaminder. Vought called and spoke to OER Chawla and he will send development plans via email to DEC due to soil contamination from April 2013 at a depth of 10-12'bg and development plans including a vapor barrier. OER Chawla also noted that site may redeveloped with ventilating basement garage. Vought sent email to OER Chawla as well that Shaminder, I look forward to the redevelopment plans for the site as per our discussion today. I have also copied HydroTech above as well as Erica had sent me earlier emails requesting an update on the DEC review. As per my Spill Notes for today, Vought called and spoke to OER Chawla and he will send development plans via email to DEC due to soil contamination from April 2013 at a depth of 10-12'bg and development plans which include a vapor barrier. OER Chawla also noted that site may redeveloped with ventilating basement garage. I look forward to hearing from you or HydroTech and thanks for your and their patience on the long review time. 12/18/14-Vought-Received email from OER Chawla that Jeff: Here are details on development at this Site. The proposed future use of the Site will consist of (2) 7-story residential buildings segments connected by a partially excavated 1-story parking garage and lobby at the first floor level. The top of the 12 slab for the first floor lobby and parking garage will be 4 feet below grade surface. The top of the slab for the elevator pits will be at 8 feet below grade. The first floor will contain amenity, support and mechanical spaces. Remedy for this Site includes: 1. Track 4 cleanup 2.Collection and analysis of eight end-point samples to determine the performance of the remedy with respect to attainment of SCOs. 3. Installation of a vapor barrier system beneath the building slab and outside foundation sidewalls below grade. Grace Preprufe 300R membrane beneath the building slab and Grace Preprufe

160R membrane behind the foundation walls will be used in this project. 4. Construction and maintenance of an engineered composite cover consisting of 8 thick concrete building slab across the footprint of the new building. Let me know if you need anything else. Thanks. Vought sent summary email to NYSDOH Hughes and question as to if an SSDS or indoor air samples upon development are required. 12/18/14-Vought-Received email from OER Moore that Shaminder just forwarded me your email on this Site, and I wanted to follow up about the off-site data we found nearby. Question is if you think this data is related to spill 1216805 or if you think a new spill should be called in. 12/19/14-Vought-Sent reply to OER Moore with cc to OER Chawla that Hannah, According to the reports for 1216805 and the block/lot maps the most contaminated groundwater flows from 223 North 8th towards 207 North 8th. I would call in a spill for the following reasons: -Down-gradient VOC concentrations are ten times higher at 207 North 8th suggesting an on-site source.-Prior site use of 207 North 8th as a private garage suggesting petroleum use and possible storage. -Groundwater concentrations at 207 North 8th will require at least quarterly monitoring via installation of sidewalk wells (if the site is to be developed) to ensure a decreasing VOC trend attributable to attenuation. -PCE in soil vapor may require DOH review and possible SSDS (unless this site has been reviewed with Jane O or Bob C during OER/DEC routine meetings). As I manage the almost adjacent site, it would make most sense for me to manage 207 North 8th as well. As such I would much appreciate if the spill caller to the hotline was to mention my name be placed in DEC Remarks. Hope this helps and feel free to forward this email onto the developer/responsible parties. 12/29/14-Vought-Sent email to OER Moore as to if spill at 207 North 8th was called into Spills Hotline. OER Moore replied that she would return call to Vought to discuss. Vought had teleconference with OER Chawla, Moore and Wong and they noted that 207 would be excavated to below groundwater and Vought noted DEC would require collection of groundwater sample from excavation during development of that site under separate spill number. OER Moore will have spill called in to hotline and note Vought as PM so that Vought could manage both spill sites due to proximity. 1/6/15-Vought-Received email from HydroTech (Johnston) that Hello All, Is there any update on the closure of this Spill? We are looking to obtain the closure so we do not run into any delays. Please advise on this. Thank you very much. If any other information is needed please let me know. Vought sent email to NYSDOH Hughes with cc to OER Chawla and HydroTech Johnston that Mike, Any update on the below email regarding petroleum contaminated soil vapor samples at the above site collected via NYCOER requirements? We received an inquiry from the consultant (copied above) on the status of the spill. Many thanks as always, -Jeff 1/22/15-Vought-Received email from NYSDOH Hughes that ... I reviewed the narrative and attached information for the referenced site. The levels of VOCs detected in soil vapor would unlikely affect the indoor air of the proposed residential structures via soil vapor intrusion. The installation of a vapor membrane should provide an added measure to further prevent any vapor migration. The installation of a sub-slab depressurization system is therefore not warranted and unless there are significant penetration in the floor pit/vapor barrier of the elevator shaft then indoor air samples would also not be necessary. If there are changes to design or actual construction of the buildings then further evaluation may be necessary. Please let me know if you need anything

further. Vought sent reply to HydroTech (Johnston) that Erica, The Department has conferred with NYSDOH and based on the levels of petroleum contamination to soil vapor, no SSDS is warranted at this time. Furthermore, unless there is a significant penetration in the floor pit/vapor barrier with the elevator shaft, then indoor air samples are not necessary. Please confirm there have been no changes to design or the actual construction of the buildings and also confirm whether the elevator shaft is to significantly penetrate the vapor barrier. Thanks. 2/5/15-Vought-Received email from HydroTech (Johnston) that Hi Jeff, To answer your questions: There have been no changes to the design/construction of the building. The elevator shaft will be located -4 4 below grade. 2/6/15-Vought-Sent reply to HydroTech (Johnston) with cc to OER that Erica, Thanks for the info. Please confirm as well the status of the PBS Registration for the site so that I may close the case. -Jeff. Vought received email reply from HydroTech (Johnston) that Hi Jeff, Please see the attached PBS registration form. It was sent out yesterday, along with a 500 dollar check. Spill closed by Vought due to submission of PBS Registration, removal of soil contamination from site to the extent feasible, groundwater VOC concentrations within natural attenuation ranges, development of site with vapor barrier and review by NYSDOH and removal of source. Spill closure letter added to D2 and sent to: 223 North 8th Partners, LLC 223 North 8th Street Brooklyn, NY 11211 with cc to OER Chawla and Wong and HydroTech."

Remarks: "800 Sq.foot property with contaminated soil through to the watertable."

Contact Name: KIM SOMERS
Contact Phone: (631) 504-6000
DEC Memo: "5/27/16-Zhune spoke to Kim Somers from Environmental Business Consultant (631)504-6000. Kim said the site is being develop under the City OER the Voluntary Clean up program (VCP. They were doing excavation and discovered black staining soil from 9' bgs. They excavated it down to 16'. They could excavated any further due to large bolders. They excavated to 16' by machine and hand to the groundwater interface. They collected groundwater and soil samples . 5/31/16-Vought-Received email from OER Chawla with cc to OER Wong on 5/29 that Jeff: As discussed earlier, a spill was called in today at above address. Please let me know who is DEC PM for this Spill. This Site is under active remediation. We want to coordinate DEC requirements to close this spill. Please see below consultant s recommendation for chemical oxidation. Thanks. In email string was also email from EBC Kimberly Somers that William/Shaminder, A spill was called in to NYSDEC today for 349 Grand Street. Spill #1602016 was assigned to the Site. The spill was a result of black-stained petroleum-impacted soils identified at the Site encountered at approximately 9 ft below grade during excavation activities on May 26, 2016. PID readings of the stained soils were in the 50 ppm range and contained odors. The area of the stained soils are identified on the attached map. The stained soils were excavated horizontally and vertically to a depth of approximately 16 ft below grade (bg). Groundwater was detected at 16 bg. Excavation efforts were made by machine and hand to remove as much of the impacted soil as possible; however further excavation is hindered by two large boulders and an adjacent support beam. The remaining area of stained soils appear to be approximately 1 x 2 ft in size and extends approximately 1-2 feet deeper. One soil sample and one groundwater sample were retained from the bottom depth of the excavation for laboratory analysis of VOCs

S118705056

and SVOCs (8260/8270, CP-51). Both samples were expedited for a 24-hour turn-around time. For safety issues, the excavation to 16 ft bg was backfilled. EBC plans to reopen the excavation on Tuesday to apply a chemical oxidant to the residual soils that cannot be further excavated. Results of the soil and groundwater sample will be forwarded to OER and NYSDEC upon receipt from the lab. Please contact me with any questions. 5/31/16-Vought-Sent email reply to OER Chawla with cc to OER Wong, DEC Zhune and EBC Somers that Shaminder, The spill is assigned to Veronica Zhune and she is copied above and you can also reach her at (718)482-7305. In order to assist Veronica and due to the below proposal of chemical oxidant use beginning today, I will answer the query. As per Veronica s Spill Notes: 5/27/16-Zhune spoke to Kim Somers from Environmental Business Consultant (631)504-6000. Kim said the site is being develop under the City OER the Voluntary Cleanup program (VCP. They were doing excavation and discovered black staining soil from 9' bgs. They excavated it down to 16'. They could excavated any further due to large boulders. They excavated to 16' by machine and hand to the groundwater interface. They collected groundwater and soil samples. We look forward to the analyses of the soil and groundwater samples. Please let us know the development plans as well for the site (e.g. depth of proposed development, vapor or moisture barriers or SSDS). If NYCDOH is reviewing the site as part of the OER BCP then we will most likely not need to consult with NYSDOH on development. With respect to the below proposed use of a chemical oxidant, is EBC referring to a biodegradation enhancer (e.g. ORC) or a breakdown catalyst (e.g. sulfate injections)? Regardless of which, the Department will not approve addition of any ORC or oxidizer injections until we have reviewed the soil and groundwater analyses, determined if it active remediation is truly warranted, as well as consider possible down-gradient impacts of any dissolved groundwater contaminants that could be released by the ORC or injections (especially when there are no sentinel wells installed to monitor effects to possible groundwater plume). I am sure the development schedule is a factor and as such we will make every effort to review the soil and groundwater analyses, development plans and detailed remedial proposal, once received. Note as the injections were proposed for today, I have copied EBC as well, Thanks. 6/1/16-Vought-Received cc on email from EBC Somers to OER Wong that William, Attached, please find the results of the soil and groundwater grabs from the base of the excavation at 349 Grand Street where stained soils with odors were observed (Spill No. 16-02016). No VOC or SVOCs were detected in the soil sample. Results of the groundwater show exceedances for two VOCs and two SVOCs. The laboratory results will be forwarded to the NYSDEC PM for review. One page attachment included one groundwater sample analytical for sample collected 5/26/16 that showed no BTEX and showed 5.1ppb n-butylbenzene and 8.2ppb sec-butylbenzene. Vought sent email to EBC Somers with cc to all that Kim, Please send the lab results, site plan with sampling locations, possible UST history, as well as development plans to Veronica. Assuming that there are no higher concentrations on the site than those in the below attachment, the Department will concur with a natural attenuation approach to VOCs in groundwater. At this time, the Department continues to disapprove of use of any chemical oxidants as the VOCs to date in groundwater are again within attenuation range. Thank you and we look forward to AKRF s report. Vought received email from EBC Somers that Thank you Jeffrey. The laboratory results should be ready today and

S118705056

will be included in the report submitted to NYSDEC. 6/1/16-Kim Somers sent the following email. The attached letter report summarizing the sampling results of the excavated area at 349 Grand Street where stained soils with odors were detected has been submitted to Veronica Zhune at NYSDEC. Please retain a copy for your records 8/4/16-Zhune sent the following email to Kim I reviewed the letter report for the above site. The Department requires the submission of the Development plans for review in order to consider closure of the spill case. 8/8/16-Kim Somers emailed the spill closure report dated 1 June,2016. The report stated that stained soils with odors encountered at the site on May 26,2016 were removed to the fullest extent possible. An endpoint soil sample was retained from the bottom of the excavation for laboratory analysis. Groundwater exposed in the excavation was also collected for laboratory analysis. No free-phase product was observed on the expose groundwater. The analytical result indicated no petroleum related VOCs or SVOCs were detected above part 375.6 Unrestricted Use soil cleanup objectives. Two gasoline related VOCs or SVOCs were detected above groundwater quality standards in the groundwater samples. Based on the information in the report this spill is closed."

Remarks: "unknown petroleum staining found in soil. Plans to excavate remaining soil and use an oxidant on any water."

DEC Memo: "1/31/08 - Raphael Ketani. I spoke to the private citizen who reported the spill, Sandy Baez (718) 986-5237. He said that it's in front of 188 Havemeyer Street, between South 3rd Street and South 4th Street. He said that it's mostly on the sidewalk and a little in the street. Next, I contacted Shawn Donohue of DEP (718) 595-5000. He said that another citizen called in the same spill as occurring in front of 188 Havemeyer Street. This person is at (646) 691-7700. There was no information on how the oil spilled or who spilled it. The site is block and lot 2433 and 27. It's a corner red brick building. It is 4 stories tall with apartments above and commercial stores on the ground floor. The owner is listed as 182 Havemeyer Corp., 243 South 4th St., Brklyn, 11211. I will send a CSL to the owner and tell him he has to get someone to clean it up. The CSL was sent out today. Based upon the small size of the spill and the fact that a CSL was sent to the owner, I am closing the spill case. "

RESIDENTIAL CONSTRUCTION SITE (Continued)

S108637679

DEC Memo:

"06/14/07-Vought-Called Mark Salamack and tanks were removed and soil samples were collected by PTC and he is no longer working on job. Vought received message from DEC Austin that call was received from consultant Frank Galden (646-542-3465 fax:973-334-1692). Vought returned call to Goldberg and left message to return call to DEC. Vought sent residential construction soil contamination letter to owner of property as per ACRIS. Vought spoke to Frank and site being developed for residential. Six buried 550-gallon gasoline tanks were found and were registered and removed. Soil contamination is extensive and soil endpoint samples were collected (sidewall and bottom). Horizontal extent is yet to be determined. No groundwater investigations to date (excavation to a depth of 30') and clean sand was encountered at 30' upon which samples were collected. No dispenser islands found and fill pipes were removed via excavation. Varying depths of excavation in site. No further work will occur until soil disposal of stockpiles can be removed. Proposed foundation for new building will be at five feet. Gasoline odor in fill material. DEC will be contacted for a site visit. Galden will return call to DEC with owners information and research if site is E designated. DEC requires: 1)endpoint soil samples 2)delineation of soil and groundwater contamination 3)vapor barrier and possibly SSDS 4)investigation of remote fill ports and dispenser islands (if applicable). 06/21/07-Vought-Received call from Galden and he left message with owners contact information: Old Fulton Landing LLC. 55 Washington Street Brooklyn, NY 11201 Attn: Michael Zazza Phone: 718-643-9082 As far as site progress all contaminated soil has been removed and endpoint analyticals show clean soil. Additional soil remains to be disposed of that is stockpiled. Vought explained that vapor barrier will be required regardless of endpoint analyticals. Remote fills pipes were excavated and endpoint samples were collected at fill port location. 06/21/07-Vought-Sent letter requiring 1)collection of endpoint samples 2)delineation of soil and groundwater contamination 3)installation of vapor barrier and 4)submission of dispenser island/remote fill locations. Letter has one month deadline. 09/16/08-Vought-Receved notification from DEC Austin that he received message from Frank Galden (NRT 646-542-3465) with respect to update on spill. Vought called and spoke to Galden and requesting status or report review. 09/23/08-Vought-Reviewed report dated 7/8/08 and received on 7/15/08 from Assessment Resources & Technologies, Inc. (Frank Galdun 212-785-0266 fax:212-785-0234). Excavation to a depth of 34 feet and groundwater not encountered. Site contained several structures that were used for residential, commercial and light manufacturing operations. USTS were housed in building that faced South 8th Street. Total of six 500-gallon gasoline USTs were present formerly used by a historical garage that operated onsite. Redevelopment will be for residential uses and at time of this review, Vought was notified that foundation and vapor barrier were already in place. A total of 32000 tons of contaminated soil was removed from the site. Fourteen endpoint samples were collected and results showed only 4870ppb xylene(S(22'bg sidewall) and additional excavation was performed and results showed non-detect. As a precautionary measure, ART had recommended that a sub-slab vapor barrier be installed beneath the concrete floor slab of the building that is proposed for construction. 09/24/08-Vought-Called Galdun and left message requiring written confirmation of specifications for vapor barrier and presence of absence of remote fill ports. Vought sent letter requiring submission

Remarks: of documentation of the vapor barrier and of a site plan with dispenser and remote fill port locations to owner to DEC within two weeks or case may be referred to NYCDOB, NYCDOH and NYSDOH. 09/25/08-Vought-Received letter from ART dated 9/25/08. A sub-slab vapor barrier was installed. The barrier consists of 6 mil polyethylene sheeting with a 12-inch sheet edge-to-edge sealed overlaps. The barrier was installed beneath the entire slab. An 18 inch layer of base gravel was placed beneath the vapor barrier. The concrete floor is seven inches in thickness. No evidence was found of piping that may have extended to the adjoining sidewalks of the property . Spill closed by Vought as DEC requirements from 9/24/08 were met and No Further Action Letter sent to owner. "

DEC Memo: "Historical rail link to piers. Now a vacant lot. City Parks Dept is developing the site as a Soccer field and a new building on the site. Found tank while installing footing. Tank has been pulled, contractors will be overexcavating the site to build the new building. A total of 8 endpoints will be taken after all the excavation is done. Previously a Phase II was done on the site and several ground water samples were taken and came back clean. 07/17/13- Langan prepared closure report. The site is entering the final phase of redevelopment as Bushwick Intel Park, a multiple-use public park managed by NYC DPR. The project construction contractor encountered an abandoned 3,000 gallon UST at a depth of approx 9 ft below ground surface. The tank was removed in 2011. The bottom of the tank was in direct contact with soil and groundwater. Petroleum sheen was observed on the surface of the water inside the excavation. Langan collected eight end point soil grab samples, two from the bottom of the excavation, one sample from each wall. VOCs were not detected in soil samples. Neither VOCs nor SVOCs were detected in the ground water sample at conc above the NYSDEC TOGS Class GA standards. NFA required.(sr)"

S108956674

witnessed the tank removal but there was few inches of sludge at the bottom of the tank. Soil excavation is being done today at the former tank location, contaminated soil discovered at the tank bottom. I did smell petroleum at the excavation area and recommended covering of the stockpiled soil to prevent spreading odor. I also told them to collect soil sample from the bottom of the tank excavation to characterize the soil. There was no liquid product observed at the excavation hole during my visit, but later on, I got a call from Fred Barrilla saying that they discovered free product at the hole after my departure. I strongly recommended to take pictures, samples of the product from the hole. Fred said air monitoring is being done continuously and actions will be taken as per health and safety plan previously submitted to DEC. There are two other spots where they found anomaly on GPR survey on the site. (SR) ***** The site is designated with a Hazardous Materials E (E-138) as part of the Greenpoint-Williamsburg Rezoning Action (CEQR#04DCP003K) ***** 02/20/08 Preliminary Phase II was done in September 2006. Five soil borings were performed. Elevated VOCs and SVOCs were detected in soil and ground water. PW Grosser performed supplemental investigation in October 2007. Several elevated VOCs were identified at B 14, several SVOCs were also identified above RSCOs limit across the site. Three ground water samples were collected from B12, B15 and B16. VOCs in ground water were within the NYSDEC GQS. In January 2008 investigation, Area of B-14 (Center of the site) has elevated VOCs along the south wall and excavation bottom at north side. Recent VOCs in end point soils are: Benzene 500 ppb, Ethylbenzene 8900 ppb, m+p-Xylene 30,000 ppb, n-Propylbenzene 16000 ppb, Isopropylbenzene 7400 ppb; VOCs concentration in ground water are: Benzene 110 ppb, Isopropylbenzene 300 ppb, Naphthalene 1800 ppb, Ethylbenzene 69 ppb, 1,2,4 Trimethylbenzene 590 ppb, p-Isopropyltoluene 1200 ppb, n-Butylbenzene 1200 ppb. End point samples along N 9th street will be collected, was not taken due to additional excavation. Soil and GW testing at western side of the excavation also required. RAP and Phase II report are in the file. Case referred to Remediation section for further management. (SR) 02/25/2008: This spill case was transferred to A. Doronova. AD Spoke with F. Barilla of PWG and scheduled site visit for Friday, February 29, 2008. 02/29/2008: Visited the site with J. Kolleeny. Fred Barilla of PWGC and David Yedelson (attorney) met us at the site. They showed property grounds with three areas of concern. There are some high hits of petroleum contamination in groundwater sample from test pit TP-3 (few thousand ppb), no soil analytical data was available for this boring. Also some elevated levels of VOCs and SVOCs were detected in the Excavation pit B14 (Benzene - 110ppb) It was agreed that the consultant will provide DEC with a work plan for some additional groundwater delineation through installation of a few GW wells and to include in this plan some remedial actions such as: RegenOx application into the excavation pits and excavation of the soil in the area of test pit TP-3. AD 03/07/2008: Received a copy of work plan from F. Barilla of PWG. Will review. AD 03/10/2008: Reviewed the work plan. Monitoring wells locations have to be changed. Spoke with F. Barilla of PWG. Asked him to relocate the wells and indicate on the site diagram extent of excavation. Amar Nagi of DEC requested preparation of the STIP for this site to ensure implementation of the required by DEC investigative and remedial actions. AD 03/11/2008: Prepared the STIP with a cover letter and CAP. Spoke with F. Barilla of PWG. Informed him about DEC decision to issue the STIP and

213 NORTH 9TH STREET (Continued)

S108956674

additional requirements to the investigation plan. Faxed him the site diagram with locations for four more wells. Sent the STIP to Mr. Simon Dushinsky of the Rabsky Group, LLC. with cc: J. Kolleeny - DEC; F. Barilla - PWG and file. AD 03/13/2008: Spoke with D. Yedelson. He was disagree with Paragraph 3 in STIP. I referred him to J. Urda of DEC. Spoke with J. Kolleeny regarding this site. AD 03/14/2008: D. Yedelson sent an email to Ms. Suzanne Y. Mattei of DEC with request to schedule a meeting. AD 03/25/2008: Spoke with D. Yedelson. He would like to schedule a meeting with DEC regarding Paragraph 3 in Stipulation Agreement. AD 03/28/2008: D. Yedelson copied me an email he sent to Ms. Mattei of DEC with request of time extension to execute the stipulation until the issue with Paragraph 3 in STIP will be resolved. Forwarded his email to John Urda of DEC, because of legal issues involved. Spoke with J. Urda. AD 04/03/2008: Received a copy of email from D. Yedelson to Ms. Mattei of DEC in which he states that his client will submit the requested remedial and investigatory work plan today and Mr. Yedelson is scheduling the field work. STIP was not signed yet. Forwarded this email to J. Urda of DEC. AD 04/07/2008: Received a Supplemental Investigation Workplan from PWG. Spoke with J. Urda. AD 04/09/2008: Spoke with J. Urda and L. Oliva of DEC regarding submitted investigation work plan. They confirmed that I can review the work plan and issue an approval letter if applicable, without signed STIP. AD 04/14/2008: Sent an approval letter to Mr. Dushinsky of Rabsky Group, LLC.(owner). (cc: J. Kolleeny-DEC; F. Barilla-PWG; eDocs). Spoke with Fred Barilla of PWG, to make sure they will collected soil samples from soil borings. AD Received an email from F. Barilla of PWG. 05/02/2008: Spoke with D. Yedelson regarding backfilling of the excavation pit. They plan to do it on Monday, May 5, 2008. Will visit the site prior the backfilling. AD 05/05/2008: Visited the site with J. Kolleeny of DEC. Met with F. Barilla of PWG and D. Yedelson. Newly installed monitoring wells were surveyed and sampled. GW labresults are not ready yet. End-point soil samples results from excavation around TP-3 did not indicated VOC concentrations above required standards. Approved to backfill excavation pit in the vicinity of TP-3. Asked to collect six additional individual end-point soil samples from the excavation pit along 9th street and along the night club building. Requested to submit a summary report with conclusions and recommendations. AD 05/14/2008: Received hard copies of laboratory results. Will review. AD 08/14/2008: Called and left a message to F. Barrila regarding the report submission. AD 09/16/2008: Received a Spill Closure report. Will review. AD 10/01/2008: Spoke with Fred Castellano of PWG, asked him to submit PDF copy of the report. AD 10/06/2008: Received requested CD with the report. Was not able to DL it to eDocs due to oversized format. AD 10/10/2008: Reviewed the report. Some data is missing. Called and left a message to F. Castellano regarding re-submisssion of CD. AD 10/14/2008: Called and spoke with Cris of PWGC regarding new PDF copy of the report and some missing data (analytics for end-point samples SW-1B through SW-4B, and map with location of soil samples CS1 through CS-7). He said that requested data will be submitted in a few days. AD 10/17/2008: Received a phone call from Z. Youngman of PWGC. He sent CD with PDF copy of the report today with some changes. We will recieve it probably Monday, Oct. 20. AD 10/21/2008: Received a reduced size PDF copy of the spill closure report. DL to eDocs. A requested summary table with results for samples SW-1 trough SW-4 was presented. Regarding samples CS1 trough CS-7 Mr. Youngman explained that they

were collected for waste soil characterization. AD 10/22/2008:
Discussed the site with J. Kolleeny of DEC. Issued a NFA letter addressed to Simon Dushinsky of Hope Street Holdings. (cc: J. Kolleeny-DEC, D. Yudelson - attorney, Zeb Youngman-PWGC, file). This decision was made based on submitted analytical data and remedial actions performed at the site. In addition, this site is listed as E restricted by NYCDEP, so future mitigation work such as: - removal of any additional contaminated soil found during pre-construction excavation at the site; - installation of vapor barrier beneath new slab; - installation of sub-slab depressurisation system; will be required at the site by the NYCDEP in conjunction with the construction of the proposed building. AD "

Pleaseant St., Apt. 2 Brookline, MA 02446 bf 11/13/06 On 10/12/06, received letter from Sandra Maislen in response to ttf letter. Reviewed letter and the attachments. The fill line, stick line, and vent line failed. I called Petroleum Tanks to see if they remember detecting any contamination when lines were replaced. I was told Mark Salamack was the person in charge of the tank repairs. He was in a meeting at the time of the call and I left a message for him to call me. Mr. Salamack (718-624-4842) called me back and told me that there was no observed contamination and no elevated reading on the PID meter used at the time of the repairs. NFA. bf"

DEC Memo: "gasoline contaminated soil need to track down the property owner and then prepare/send a contaminated soil letter. 11/21/05 - Mr. Ted Firetog, Attorney of owner which is Dekalb Aquisition Entity called. He said they never got any letter from DEC. He aslo mentioned a report was given to Ed Rossan when Ed was out at the site for inspection on July? I requested Mr. Firetog to submit the report to me for review. - KST 12/2/05 - Mr. Firetog fax a letter requesting closure. I called him back and asked for the report again. He said he will eamil to me by Monday. - KST 12/8/05: Case transfered to Andersen. Reviewed above noted Waste Characterization Report. No Furthur action letter sent. Low level contamination due to old fill material. Acetone present probably from laboratory analysis. 12/29/05-Vought-Received message from Jack Eisenberg (917-494-9097) regarding status of spill. Vought referred call to DEC Andersen. 05/17/07-Vought-New File review by Vought due to possible concerns that this site contributing to contamination at open spill #068858 at 234 North 9th Street. Waste Characterization Report (PW Grosser)-12/5/05. 24 samples collected beneath concrete slab to characterize soil quality . Two samples from each boring were collected. ...it is our understanding that the purchaser intends to excavate the entire site to a depth of twelve feet . Soil analyticals show: 220ppb benzene(WC-03 8-12'bg), 210ppb benzene(WC-11 8-12'bg), 1700ppb xylene(WC-12 2-4'bg), 87ppb benzene(WC-12 8-12'bg). Remedial Action Plan (PW Grosser)-March 2006. Site formerly contained three gasoline USTs as per Sanborn maps, and one 1500-gallon fuel oil UST as per Phase I. Collection of 32 soil samples and five groundwater samples via installation of twelve soil borings. Depth to groundwater is approximately 8-12' below grade. Vapor barrier installation specifications included. Remedial action plan calls for excavation of soil in two areas of concern. and excavation up to a depth of ten feet. Closure Report will be submitted once items in Remedial Action Plan are completed. Subsurface Investigation Report (PW Grosser)-3/27/06. 14 soil borings performed and Soil analyticals show: 1100ppb benzene(SB1 12-16'bg), 1700ppb xylene(Sb1 12-16'bg), 5500ppb tert-butylbenzene(SB1 12-16'bg), 1400ppb benzene(SB2 4-8'bg), 13000ppb xylene(SB2 4-8'bg), 51000ppb tert-butylbenzene(SB2 4-8'bg), 10000ppb toluene(SB2 4-8'bg), 220ppb benzene(WC-03 8-12'bg), 210ppb benzene(WC-11 8-12'bg), 1700ppb xylene(WC-12 2-4'bg), 87ppb benzene(WC-12 8-12'bg). Groundwater analyticals show: 660pp benzene(GW-01 20-24'), 170ppb toluene(GW-01 20-24'), 270ppb ethylbenzene(GW-01 20-24'), 340ppb xylene(GW-01 20-24'), 420ppb napthalene(GW-01 20-24'), 3200ppb benzene(GW-02 14-18'), 2200ppb toluene(GW-02 14-18'), 270ppb ethylbenzene(GW-02 14-18'), 1600ppb xylene(GW-02 14-18'), 3900ppb napthalene(GW-02 14-18'), 37ppb benzene(GW-03 18-22'bg), 7ppb ethylbenzene(GW-03 18-22'bg), 15ppb xylene(GW-03 18-22'bg), 170ppb napthalene(GW-03 18-22'bg), 69ppb benzene(GW-04 20-24'bg), 11ppb toluene(GW-04 20-24'bg), 600ppb ethylbenzene(GW-04 20-24'bg), 86ppb napthalene(GW-04 20-24'bg), 470ppb benzene(GW-06 15-19'bg), 9ppb toluene(GW-06 15-19'bg), 11ppb

ethylbenzene(GW-06 15-19'bg), 46ppb xylene(GW-06 15-19'bg), 110ppb naphthalene(GW-06 15-19'bg). Slight petroleum odor and sweet chemical odor noted in boring logs. Vought referred new information to DEC Carlson for possible spill reopening. 5/17/07: Spill reopened. Called DEP Project Manager and left message : Terrell Esesen NYCDEP 59-17 Junction Boulevard Flushing, NY 11373 Phone: 718-595-4473 Called PW Grosser project manager and left message: Kris Almskog: 631 589 6353, krisa@pwgrosser.com Spoke to Terrell Esesen. DEP issued a notice to proceed with redevelopment. He has not heard anything since. A Notice of Satisfaction (required for a building department CO) has not been issued. Indoor air sampling is required for a notice of satisfaction. CC DEP on correspondence. Spoke to Kris Almskog. The building was demolished. Excavation was not started yet. Split samples were collected in coordination with spill 068858. He will send info on split samples and an update on redevelopment. 5/18/07: Sent letter requiring endpoint sample collection, a RAP addendum with the location of excavation and a workplan for groundwater treatment, delineation north and south of the planned building. 5/21/07: Spoke to Kris Almskog. Hot spots were already excavated. Endpoint samples were not collected. Test pits will be dug to find to collect soil samples at the depth that was excavated. Will submit site plan with proposed well locations. Will submit RAP after well installation. Test pits expected to be dug on Friday. Footing have been installed. Vapor barrier installation planned in the next couple of weeks. 6/6/07: Spoke to Kris Almskog. Test pits were dug in the areas excavated, endpoint samples were collected at the depth that was excavated. Wells will be installed soon. Some foundation work has been completed. 6/20/07: Emailed Kris Almskog to followup on status. 6/22/07: Received email from Kris Almskog: Due to changes in surface elevations due to construction activities, groundwater was observed at approximately 8' BGS at SP-01 and 10' BGS at SP-02, at the time of the sample event. Because of a slight staining in the soils in the SP-01 7-8' sample, a second sample was collected from 10-11' BGS (below the water table). Results are summarized in the attached table. VOCs in the endpoint samples from this round of sampling were all below NYSDEC RSCO, with the exception of 4-Isopropyltoluene in SB-02. This is a significant decrease when compared to the results detailed in the March 27, 2007 Subsurface Investigation Report. Due to site conditions due to construction, the installation of the monitoring wells was temporarily postponed. It is estimated that the wells will be installed in approximately 2-3 weeks. Following installation and collection of gw samples, a report detailing the soil endpoint and gw sampling results will be prepared and submitted. As detailed in the March 2006 RAP, there will be no living space on the first floor of the finished building, just parking and a recreation area, and a 20 mil HDPE vapor barrier will be installed beneath the buildings slab. The vapor barrier and the slab will be installed next week. Once access is available, we will install the 3 monitoring wells detailed in our work plan. 6/25/07: Performed site visit. Pilings were being installed. Pilings installed to 8 ft, (10 ft for elevator pit). Vapor barrier in rear portion will be installed this week. 6/29/07: Received email from Kris Almskog indicating that the slab was not yet installed, well installation tentatively planned on July 13, requested additional letter with well locations for DOT permit. 7/2/07: Sent letter with specific well locations for DOT sidewalk permit. 7/12/07: Called PW Grosser to confirm well installation date. Well installation delayed for DOT sidewalk permit.

8/9/07: Left phone message for Kris Almskog to followup on well installation/sampling. 8/13/07: Received phone message from Kris Almskog. Three wells were installed. They will be sampled and the results submitted. 9/21/07: Left voice message for Kris Almskog to followup on update report. 10/12/07: Left voice message for Kris Almskog (cell: 516-807-6899) to followup on site status and update report submission. 10/18/07: Reviewed subsurface investigation report. Soil samples collected from two test pits at depth of excavation in hotspots. No VOCS except isopropyltoluene. SVOCs that are likely from fill. Four monitoring wells installed. Max BTEX 2760 ppb (MW4), MTBE ND. Sent letter requiring RAP for groundwater treatment, quarterly monitoring, and submittal of indoor air sampling results that is required by DEP. 3/4/08: Reviewed letter dated 2/8/08. Letter concludes there may be an off-site source to the east, although the property to the east is residential. Spoke to Kris Almskog, requested that an additional well be installed to the east, on the sidewalk. 3/5/08: Issued a letter requesting an additional on-site well and an additional off-site well. 3/31/08: Received phone call from Ted Firetog following up on site status. 4/2/08: Reviewed well installation report dated March 19, 2008. Report did not include boring logs or gauging data. Spoke to Zeb Youngman, he will send data. 4/3/08: Received phone call from Ted Firetog following up on site status. Theodore Firetog Attorney and Counselor at Law 111 Thomas Powell Boulevard Farmingdale, NY 11735-2251 Received boring logs, well construction logs, and gauging data. Groundwater flow is south/southwest. 4/15/08 - Carlson: Sent letter requiring a well on the south side of N 8th street, and quarterly gauging, sampling, and reporting. 5/8/08 - Carlson: Spoke to Ted Firetog. He proposed waiting to install an additional well until after the next quarterly sampling period. He will offer recommendations on well installation in the next quarterly report. 8/28/08 - Carlson: Reviewed Quarterly Report dated July 28, 2008. TVOCs 3,421 ppb in MW4. The groundwater flow direction is unclear. Sent letter requiring delineation workplan by 9/28/08. Additional wells are required to confirm groundwater flow direction and to delineation petroleum groundwater impact. 12/8/08 - Carlson: Spoke to Ted Firetog. An additional well is still required upgradient to confirm the possibility of an off-site source. 1/14/09 - Carlson: Spoke to Ted Firetog, they will submit workplan for upgradient sampling. Issued letter and stipulation agreement requiring workplan for upgradient delineation. (Ted Firetog: tfiretog@eniinternet.com, Zeb Youngman: zeby@pwgrosser.com) 1/22/09 - Carlson: Reviewed workplan. One upgradient sampling point requested. Sent letter requiring a revised workplan, three wells required. 9/30/15 - Raphael Ketani. I reactivated the spill case today. The site is 55 Roebling Street in Brooklyn. The spill took place on 6/30/05 and was called in on 7/1/05. The site used to be a gas station and was developed into an apartment building. The block and lot are 2314 and 1. The latest deed is dated 5/12/06. The latest owner is Roebling Park, LLC, 320 Roebling Street, Ste 316, Brooklyn, 11211. Three gasoline USTs and one 1500 gallon fuel oil UST were removed. Twelve soil borings were performed on 9/29/05. Thirty two (32) soil samples were taken. The VOC results for all of the samples were almost entirely non-detect. However, 210 ppb of benzene (limit 60 ppb) was discovered in the 8' to 13' interval sample from WC-11 (west side of property/downgradient). The 8' to 12' sample from the WC-12 boring (west side of property/downgradient) had 87 ppb of benzene. The 2' to 6' sample and the 8' to 12' sample from boring

WC-12 were the only ones to have many VOC hits and some exceedences. A high m&p xylene hit was present at this location. High naphthalene hits were present in samples from the 8' to 12' interval at WC-2 and WC-3 (east side of property/upgradient). However, the results were below the 12,000 ppb limit for soil. The SVOC results for the WC series of samples were primarily hits of the benzo species of analytes, along with their associated combustion products and some other common SVOCs. The SVOC results suggest that historical fill underlies the entire site, which is typical for this former industrial/residential area. The former gas station building was demolished during 2007. Two hot spots, areas of concern, were excavated to 10 feet bgs on 5/30/07. Soil end point soil samples were taken on 5/30/07. The results for SP-1 for the 7' to 8' interval and the 10' to 11' interval were almost entirely non-detect for VOCs. SP-2 for the 9' to 10' interval had several low to high (150 ppb) VOC hits and 390 ppb of 4-isopropyltoluene, but all of the other VOCs were non-detect. The SVOC results contained very high exceedences for the benzo series of analytes and their associated combustion products. Some foundation work for the apartment building was completed during 2007. The construction plans included the installation of a 20 MIL vapor barrier. Monitoring wells MW-1 was installed downgradient on 4/5/07. Monitoring wells MW-2 (upgradient on property), and MW-3 and MW-4 (south side of property along North 8th Street/ sidegradient) were installed on 8/8/07. Groundwater was found to flow east to west and to be situated from 8 feet to 12 feet below the site. MW-1 was sampled on 4/9/07 and the results were almost entirely non-detect for VOCs. The other 3 wells were sampled on 8/13/07. MW-2 was almost entirely non-detect. The results for MW-3 were mostly non-detect for VOCs with 13 hits. Eleven of these hits were moderate to high in concentration (300 ppb). MW-4 was mostly non-detect with 13 hits. Twelve of these hits were high to extremely high concentrations to 1400 ppb. Benzene in this sample was 130 ppb, naphthalene was 1100 ppb and total xylenes were 1780 ppb. Except for naphthalene and a few other SVOCs, there were no SVOC hits in these groundwater samples. Groundwater samples were taken on June 5th, 2008 from wells MW-1 and MW-3 to MW-7 (MW-5 was installed east of MW-3 in the sidewalk along North 8th Street; MW-6 was at the eastern end of the property; MW-7 was in the very eastern corner of the property and upgradient to abandoned well MW-2). The VOC results for MW-1 and MW-5 to MW-7 were almost entirely non-detect. MW-3 had 17 VOC exceedences with 220 ppb benzene, 700 ppb naphthalene, 300 total xylenes and 390 1,2,4-trimethylbenzene. MW-4 had 15 VOC exceedences with 66 ppb benzene, 380 ppb naphthalene, 870 ppb total xylenes and 440 ppb 1,2,4-trimethylbenzene. Groundwater samples were taken only from MW-3 and MW-4 on July 8, 2008. MW-3 had 12 exceedences with 190 ppb benzene, 720 ppb naphthalene, 390 ppb total xylenes and 240 ppb 1,2,4-trimethylbenzene. MW-4 had 12 exceedences with 57 ppb benzene, 400 ppb naphthalene, 1170 ppb total xylenes and 630 ppb 1,2,4-trimethylbenzene. 10/1/15 - Raphael Ketani. With the exception of the soil samples from WC-11 and WC-12, the VOC analytical results were almost entirely non-detect for these onsite borings. The only consistent hits and exceedences were for the benzo series of analytes and their associated combustion products, which is typical of historical fill. Thus, the source(s) of the contamination appear to have been removed and the data suggests that the site has been remediated. This is also true as regards the groundwater results from the June 2008 round of samples. The only groundwater samples which

Map ID

Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

FORMER GAS STATION (Continued)

S106969319

had many VOC exceedences were those for MW-3 and MW-4. The results for MW-6 and MW-7 were almost entirely non-detect, implying that there is no upgradient source. A search of the Google Earth air photo did not reveal any upgradient gas stations in the vicinity of the property. Additionally, the reasons for the increases in the VOC analyte concentrations from June 2008 to July 2008 could be due to seasonal fluctuations in the water whereby the residual product which is still in the soil in the area of MW-3 and MW-4 was able to come out of the soil with the drop in the water table. Though the water table elevations are not recorded in the reports. July is usually a time of low precipitation. So this is plausible. The vicinity of MW-3 and MW-4 may have had a fill box at one time and this fill box may have leaked. Thus, product entered the soil in this area and remains there. Also, as utilities are typically under the sidewalk, the area of residual contamination is not a candidate for excavation nor treatment. In light of all of the information in the case record, I have determined that any residual contamination is not a threat to the public or the environment. Therefore, I am closing the spill case effective today. "

DEC Memo: "1/22/15: Mahat DEC Mahat received spill regarding petroleum vapors

that was called in by NYC Health personnel inquiring about the nature of the vapor issue in the building. DEC Mahat called and spoke to NYCDOH who noted that highest PID was 32 ppm closest to the foundation wall in the basement of 234 North 9th Street. DEC provided email address to obtain a report of the NYC Health Inspection which was received and uploaded on D2 for reference. DEC Mahat also contacted impacted party (Mr.Tobias Englund : 646.331.0116) inquiring about the status of the vapors. He mentioned his condo apartment has been flooded four times in past year and there is an ongoing legal issue between the property developers at 219-223 North 9th Street (which is immediately adjacent and adjoins) 234 North 9th Street. The impacted party smelled strong gasoline vapors in the basement on Monday morning and reported it to FDNY. FDNY responded to the site,

EPA ID Number

VAPOR COMPLAINT (Continued)

S117534770

was unable to perform any corrective action as the issue was only vapors and requested him to call them back if the situation got worse. Mr. Englund mentioned he stayed in a hotel on Monday night, as well as his four kids and wife, and he also mentioned that the vapor has been dissipated over time and came back again on Wednesday night.. A site visit is schedule by DEC Mahat and DEC Vought on 1/23/15 @ 10am. 1/23/15: Mahat There is also a closed Spill case (# 0608858) on the impacted site (234 North 9th Street) and the Project Manager was DEC Vought. This previously closed spill on the impacted site was due to contaminated soil and groundwater possibly related to two former 275-gallon #2 fuel oil ASTs that were on site. Contaminated soil in this closed spill was excavated and a vapor barrier was placed in the excavations prior to backfill. There is also an open spill case (# 1216805) on 219-223 North 9th Street, (directly adjacent to and adjoining the impacted site) that is also managed by DEC Vought. This site is a former garage that is now being redeveloped under the NYCOER E designation program. There has been documented soil contamination as well as groundwater contamination on this site as well and Vought noted that NYSDOH Hughes reviewed soil vapor concentrations for this site and only required a vapor barrier. DEC Vought and DEC Mahat performed a site inspection on 1/23 and met with wife of Tobias (Yvette) as well as Erica Johnston who was from Hydrotech who is consultant on 219-223 North 9th Street to evaluate the source of the vapor issue. Both building (impacted party) and new construction site were and are e-designated sites. Both sites as per Spill records also have petroleum contamination in soil and GW. During the site visit, DEC noted a gap between the foundation wall for 234 North 9th Street and the foundation for 219-223 North 9th Street. The gap was in a lower spot causing any possible accumulated rain water to seep into space and furthermore, there was also wet and accumulated debris by gap suggesting that it had received a significant amount of water at some point in the recent past. DEC Staff noted it may be possible that the excess amount of water may flowed under the foundation of the impacted site and have disturbed the contaminated soil underneath causing a rise of vapors in the basement. DEC required construction manager of 219-223 North 9th Street to immediately patch the gap and also later received the email conformation that the work was done. DEC informed Yvette of additional possible measures should vapors reoccur such as removal of drywall and floor and sealing of cracks in foundation (if found) as well as possible installation of an active SSDS if needed. DEC noted that as both sites have soil contamination, that this work if desired would be the responsibility of 234 North 9th Street (as they have soil contamination from closed spill) and possibly 219-223 North 9th Street. Yvette noted that the vapors no longer present and agreed to stay in residence over the weekend and notify DEC immediately if they reoccur. If vapors do not reoccur and problem was solved by grouting of water seepage, then DEC will arrange another confirmatory site visit with NYCDOH. DEC Mahat requested review and editing of these notes by DEC Vought who performed such review and edits and sent a copy of these notes in spill report as well as NYCDOH report and picture of seepage location to NYSDOH Hughes with cc to NYCDOH Allan Friedman, DEC Vought, Austin and Demeo. 1/26/15: Mahat DEC Vought and DEC Mahat talked to DEC Hughes about the possible solutions to the vapor issue. Option A: Sealing finished dry wall and floor. Option B: Removing dry wall and floor to find the source and seal. Both options will be followed up by DOH indoor air investigation. Mr. Tobias will

Map ID

EPA ID Number

VAPOR COMPLAINT (Continued)

S117534770

talk to his board members to go with option B. DEC Mahat is waiting for a call back from Mr. Tobias for follow up investigation. 2/2/14: Mahat DEC Vought and DEC Mahat spoke with Mr. Englund about the current situation of the vapor issue in his basement. He mentioned that the situation has gone a lot better. However, DEC recommended him to apply foam that will work as a vapor barrier. This application of foam will temporarily resolve the issue. A permanent measure will be taken when his Condo Board will approve the Option B mentioned above. 2/6/15: Mahat DEC Mahat left a voice message to Mr. Englund confirming the application of the foam on the basement. DEC is waiting for a call back. 2/9/15: Mahat DEC Mahat received a call from Mr. Englund mentioning that he will apply foam in the basement as a temporary measure. Mr. Englund will notify DEC on 2/11/15 once it is complete. 2/28/15: Mahat DEC Mahat received a call from Mr. Englund confirming that he has applied foam in the basement and on the process of retaining the contractor for further remediation. DEC will be notified once he retained a contractor. 4/6/15: Mahat DEC Mahat left a voice message to Mr. Englund to call back with status of the retaining contractor. Also, a possible DOH inspection of the basement if the process is taking any longer. 5/28/15: Mahat DEC Mahat left a second voice message to Mr. Englund inquiring about the status of the retaining contractor for investigation. Also, offered him a DOH inspection meantime. 7/30/15: Mahat A site visit has been scheduled between NYCDOH, DEC, and Mr. Englund on 7/31/15. 7/31/15: Mahat DEC Mahat, DEC Omar, DEC Vought and NYCDOH made a site visit and performed an indoor air survey. NYCDOH will produce a written report that will be supplied to the Department shortly. Further directives will be based on the NYCDOH report. 8/24/15: Mahat DEC Mahat contacted Mr. Englund and received a confirmation that the building is vapor and odor free. Mr. Englund has requested to close the case based on the DOH report. Spill case will be closed in DEC Spill Database. No further action is required. "

DEC Memo:

". city E designation Phase 2 done found petroleum contaminated soil & water. No petroleum tank on site.... probably from a neighbor Geo Environmental has been hired by the potential purchaser of the site. They are VERY actively trying to resolve the environmental issues so they can move on with rehabing the existing building on the site. There will be limited excavation on the site, mostly in the basement to accomodate new footings to allow additional floors to be added to the existing building. Week of 11/20 Geo Environmental will be doing additional soil borings in the area to identify the source of on site contamination. 03/13/07-Vought-File review by Vought: Revised Remedial Action Workplan (GZA Geoenvironmental-Sharissa Singh-212-594-8140). The existing building will not be demolished but renovated to accomodate residential condominiums . Petroleum contamination result of migration from upgradient property (a former gasoline service station) . Site was formerly used as bakery building. Existing foundation systems are to remain in place. In addition a new self leveling concrete slab will be poured on top of the existing slab to further protect and seal the occupants from the subsurface contaminationa sub-surface ventilation system will be installed

S108295646

. NYCDEP Innocent Taziva required excavation of B6, however GZA feels excavation is not warranted at this location. Proposal to excavate soils around B2. NYCDEP also required sub-slab contamination system however GZA feels sub-slab is not warranted. Sub-slab depressurization system pilot test performed to determine radius of influence. One AST on-site (possibly 275-gallon) #2 fuel oil. ...soil exhibiting petroleum odors at 4-6 feet below the basement slab . Groundwater flow to the southwest. Fill material below site(sand, silt, brick and glass) may be contributing to SVOCs. Petroleum odors also noted in B6 at 6-8' below grade. Indoor air samples were also collected from inside residence. ROI pilot test for SSDS show 29' radius of influence. Air monitoring plan will be implemented during construction. Excavation of soils around B2 will extend into the soil horizon until no visual evidence of petroleum contamination is noted (approximately 1 foot into the groundwater table) . AST will be removed from basement. Indoor air concentrations of VOCs do not exceed the background levels of VOCs in homes studied by NYSDOH and USEPA. Remedial action report will be submitted. Soil analyticals show: 38500ppb toluene(B2 4-6'bg), 57200ppb ethylbenzene(B2 4-6'bg), 141600ppb xylene(B2 4-6'bg), 519000ppb 1,2,4-trimethylbenzene. Groundwater at depth of approximately 4-6'. Groundwater analyticals show: 7ppb naphthalene(MW2), 6ppb tert-butylbenzene(GW2), 17ppb sec-butylbenzene(GW2), 17ppb n-butylbenzene(GW2). As per Singh no signs of leaks at ASTs and all supply/return lines were above ground. Refual obtained immediately downgradient from gasoline station. Vought called NYCDEP Wuthenow (718-595-4426). DEC requires: 1)sub-slab depressurization system 2)collection of endpoint samples and analysis for 8260/8270 3)installation of four monitoring wells(three in adjacent sidewalk and on offsite adjacent to suspected source) and determination of groundwater flow direction 4)investigation of offsite gasoline source that is under construction as per Singh. 03/14/07-Vought-Performed site visit to offsite former gasoline station as per Singh, Building removed from site and soil excavated down to approximately 4' below grade. Piles began to be driven into soil. No signs of petroleum odor or staining. Possibly one remote fill port on sidewalk of building. Building address as per work permits is 66 Roebling Street. Inpsection of PBS database and spills database show no records for this address. Spills database shows former spill closed by DEC Carlson (#0503901) with some residual soil contamination left in place (210ppb benzene WC12, 1700ppb xylene WC12 both at depths of 2-4' below grade). Vought called GZA Singh and requested that she return call with source of information that site was formerly gas station. Property Shark database shows building was formerly three story brick warehouse. Stop work order placed on propety fence from DOB. No site activity or personnel at time of visit. Information for suspected gasoline station at 63 Roebling: Owner/Developer: Roebling Park LLC 320 Roebling Street #316 Brooklyn, NY 11211 DOB Emergency Contact: 718-802-3687 Contractor: YBG Construction of New York Issaac Schwartz 199 Lee Avenue Suite 617 718-782-1018 fax 718-782-1482 Empire Pile-718-241-3900 Vought called DOB and they do not have case in database. Vought called Issac Schwartz and left message that continued construction may cause health impacts without proper investigation and remediation (if applicable). Vought also explained that if callback was not received then both DEP and DOB would be contacted. Vought called Empire Pile and left message to return call. Vought called DEP Wuthenow and he will return call with E designation

AUNT HEDDY'S BAKERY (Continued)

S108295646

of site. Vought received callback form DEP Wuthenow who indicated that site was E designated. 3/15/07-Vought-Received call from Issaac Schwartz. As per Schwartz work has stopped due to illness of contractor. Issac stated that RAP was sent to DEC Walsh and DEC Brezner. Vought discussed installation of monitoring wells, necessity of vapor barrier and possibly further investigation/remedial action. 03/16/07-Vought-Received call from Issac Shwartz (917-282-6071 office:718-218-8330) and Kris Almskog-PW Grosser (631-589-6353). As per Kris previous finding shows groundwater flow direction in opposite direction as GZA flow direction. Vought discussed Waste Characterization Report for former gasoline station site and soil sample analyticals. Vought also provided name and number for Sharissa Singh to PW Grosser so split sampling and witnessing of well installation/determination of flow direction could be documented by both parties. Required them to contact Department when drilling date is scheduled so site visit may be performed. 3/20/07-Vought-Spoke to DEC Walsh and he never received report nor knew of site. Vought called Schwartz and left message to resend report as none was on file with the DEC. 03/20/07-Vought-Spoke to Schwartz and he will contact PW Grosser for copies of RAP. Received message from Schwartz that PW Grosser will be sending in RAP. 05/16/07-Vought-Complete File Review by Vought: Phase I & Phase II Environmental Site Assessment Report (GZA)-10/16/06. Purpose of Phase II was to investigate the presence of Little E Designation by NYCDEP. Site is occupied by Aunt Heddy's Bakery. Two (275-gallon) ASTs in basement. Four soil borings performed on 9/20/06. Groundwater at depth of 9-10'bgs. Additionally visual and olfactory evidence of petroleum-like contamination were noted in B-1, B-2 and B-4. Based upon the above findings GZA concludes that a petroleum release at an adjacent or upgradient property has resulted in contamination of the groundwater beneath the site. GZA recommends that a sub-slab depressurization system be installed at the Site... Soil analyticals show: Soil analyticals show: 38500ppb toluene(B2 4-6'bg), 57200ppb ethylbenzene(B2 4-6'bg), 141600ppb xylene(B2 4-6'bg), 519000ppb 1,2,4-trimethylbenzene. Groundwater at depth of approximately 4-6'. Groundwater analyticals show 22ppb acenaphthene. Sampling and Analysis Plan (GZA) submitted to NYCDEP Heath-11/7/06. Proposal for GPR survey to find buried tanks and lines, the installation of four soil borings in the basement, collection of soil samples from under basement slab to a depth of 6' below slab and collection of three groundwater samples from site, five wells in sidewalks to determine possible offsite contributions and determination of groundwater flow. Plan shows same boring well locations as those in 10/16/06 report without soil or groundwater analyticals. Remedial Action Workplan (GZA)-1/9/07. Show additional groundwater analyticals of 6ppb tert0-butylbenzene(GW2), 17ppb sec-butylbenzene(GW2) and n-butylbenzene(GW2) Letter from DEP Wuthenow to GZA Singh-1/25/07. Based on our review of the submitted documentation, DEP finds the RAP inadequate. The petroleum impacted soil detected around soil boring B-6 must be removed and disposed of in accordance to all applicable federal, state and local regulations. DEC should be notified of the petroleum release. Revised Remedial Action Workplan (GZA Geoenvironmental-Sharissa Singh-212-594-8140)-2/9/07. The existing building will not be demolished but renovated to accomodate residential condominiums. Petroleum contamination result of migration from upgradient property (a former gasoline service station). Site was formerly used as bakery building. Existing foundation systems are to remain in place.

In addition a new self leveling concrete slab will be poured on top of the existing slab to further protect and seal the occupants from the subsurface contaminationa sub-surface ventilation system will be installed . NYCDEP Innocent Taziva required excavation of B6, however GZA feels excavation is not warranted at this location. Proposal to excavate soils around B2. NYCDEP also required sub-slab contamination system however GZA feels sub-slab is not warranted. Sub-slab depressurization system pilot test performed to determine radius of influence. One AST on-site (possibly 275-gallon) #2 fuel oil. ...soil exhibiting petroleum odors at 4-6 feet below the basement slab . Groundwater flow to the southwest. Fill material below site(sand, silt, brick and glass) may be contributing to SVOCs. Petroleum odors also noted in B6 at 6-8' below grade. Indoor air samples were also collected from inside residence. ROI pilot test for SSDS show 29' radius of influence. Air monitoring plan will be implemented during construction. Excavation of soils around B2 will extend into the soil horizon until no visual evidence of petroleum contamination is noted (approximately 1 foot into the groundwater table) . AST will be removed from basement. Indoor air concentrations of VOCs do not exceed the background levels of VOCs in homes studied by NYSDOH and USEPA. Remedial action report will be submitted. As per Singh no signs of leaks at ASTs and all supply/return lines were above ground. Refusal obtained immediately downgradient from gasoline station. Letter from DEC Vought to Chris Horrigan-3/13/07. Letter sent requiring: 1)collection of soil samples from excavation 2)installation of SSDS system 3)delineation via installation of monitoring wells (three wells on sidewalk adjacent to site and one well by suspected offsite source of contamination . Email from DEC Vought to GZA Singh-3/14/07. Excavation will occur to water table and since soil source will be removed vapor barrier only required (SSDS not required). Vought also required installation of monitoring wells and sent her requirements for installation of vapor barrier as per NYSDOH specs. Email between Vought to GZA Singh-3/15/01. Singh identified suspected source site as 55-63 Roebling which was formerly used as filling station. Vought called Wuthenow and left message to return call and repeated requirement to install soil and groundwater borings in sidewalk of suspected source at 55 Roebling. Final Remedial Action Workplan (GZA Singh)-3/20/07. The existing building will not be demolished but renovated to accommodate residential condominiums . The petroleum contamination encountered beneath the slab of the building is characterized as residual contamination and is the result of migration from an upgradient property . New concrete slab will be poured on existing slab to further protect and seal the occupants from the subsurface . Remedial action includes excavation of soil at SB-2 and collection of endpoint soil samples, installation of a 10 mil vapor barrier, delineation via installation of off-site and on-site monitoring wells. Report maintains that contamination observed in B2 at 4'6"bg due to capillary fringe contamination from groundwater table. Three borings installed in sidewalks (two on Roebling St and one on North 9th Street). SSDS pilot test was also performed on 1/4/06 showing effective ROI of 29'. Air monitoring plan will be implemented during excavation activities. Indoor and outdoor air quality samples were collected and show VOCs below NYSDOH background concentrations. GZA also performed risk for vapor intrusion as per EPA Guidance and no significant risk. Plan also includes installation of four monitoring wells and determination of groundwater flow as required by NYSDEC. GZA will send in Remedial

Action Report (RAR) with remedial actions at site submitted to DEC and DEP. Email from GZA Singh to DEC Vought-4/2/07. Notice that drilling will proceed on 4/5 and 4/6 and request if anything was heard from owner of 55-63 Roebling. DEC requires: 1)vapor barrier installation 2)collection of endpoint samples and analysis for 8260/8270 3)installation of four monitoring wells(three in adjacent sidewalk and on offsite adjacent to suspected source) and determination of groundwater flow direction 4)investigation of offsite gasoline source that is under construction as per Singh 5)cc to DEP. 05/17/07-Vought-Called Sharissa to approve Final Remedial Action Work Plan and to inquire about submission of results for sidewalk borings mentioned in same Plan. Vought spoke to Sharissa and soil was excavated to groundwater and endpoint samples were collected and results were received from lab and have not been examined to date. Four wells were installed and they were sampled for soil and groundwater and report will be sent to DEC. Soil and groundwater results show no contamination in front of 55-63 Roebling Street. Excavation will be backfilled, vapor barrier will be installed and new slab will be poured. DEC will send reponse letter once RAR is received and DEC will require quarterly groundwater sampling for one year. Vought instructed Singh to file FOIL request for info on 55-63 Roebling. 10/05/07-Vought-Reviewed Remedial Action Report (GZA Cela) dated September 2007 and received on 09/24/07. Building being redeveloped as residential condominiums. Soil was excavated and endpoint samples were collected. Vapor barrier was installed in two parts, The first membrane was installed over the excavation after backfilling. The second membrane was installed over the existing slab and beneath the 4-inch thick self-leveling concrete slab. Four additional monitoring wells were installed. Groundwater at depth of 6'b below grade and flows to the north-northwest. Four additional soil borings were performed in surrounding sidewalks and converted into groundwater monitoring wells. Borings showed fill material to depth of 8'bg and clayey silt below. The absence of physical evidence of petroleum contamination in boring B-1 (which was installed at 55-63 Roebling Street) indicated that the source of the contamination was not likely the upgradient, former gasoline station . ASTs were also removed from basement as site will be using natural gas. Soil was excavated to depth of 1.5' below the water table and final depth of excavation was 3.5 to 4 feet below the basement slab. Six tons of soil were removed from the site. Four soil sidewall samples were collected. Soil analyticals show minor dibenzo(a,h)anthracene exceedence (PAH) up to 88ppb attributable to fill material. Groundwater analyticals show 8ppb acenaphthene. No further groundwater monitoring required due to non-detect VOCs in past two groundwater sampling events. Vought sent No Further Action letter with cc to NYCDEP. Spill closed by Vought. "

Remarks: "DURING SOIL AND GROUNDWATER SAMPLING, CONTAMINATED SOIL AND GROUNDWATER WAS DICOVERED AT THIS LOCATION:"

COMPENSATE, ESPECIALLY DURING THE COLD WEATHER. RAVENSWOOD IS RUNNING LOW ON FUEL AND CON ED IS REQUESTING THAT THE PIPELINE IS ALLOWED TO GO BACK IN SERVICE. HE CITED THAT THERE WAS NO PRESSURE DECAY DURING TESTING. I TOLD HIM THAT IT WAS PROBABLY A FALSE POSITIVE, DUE TO EXTREME COLD WEATHER. SINCE THIS WAS AN EMERGENCY, I TOLD HIM THAT THEY COULD PUT THE LINE BACK IN SERVICE, PROVIDED THAT THE EXCAVATED AREA IS ROADPLATED AND MONITORED. IF THERE IS ANY OTHER SIGNS OF OIL, THEN THEY ARE REQUIRED TO LAY THE PIPELINE UP AND DO REPAIRS AND CLEANUP. 1/22/97 UPDATE GHK: 10:00 ACCORDING TO JOHN MITCHELL, U.T. THE LINE IS STILL PRESSURIZED. 10:05 MET KAREL KONRAD/CHRISTINE KOVARI ONSITE. HE INDICATED THE FOLLOWING: THE OIL IN THE MANHOLE AND TRENCH WAS SAMPLED AND ANALYZED FOR FINGERPRINT AND PCB'S. THE RESULTS FROM THE TRENCH REVEALED PCB CONCENTRATIONS OF 98 AND 142 PPM. ADDITIONAL SAMPLES WERE COLLECTED TODAY. THE OIL IN THE MANHOLE REVEALED 36 PPM PCB'S. THE FINGERPRINT REVEALED HEAVY FUEL OIL. ALL ANALYTICAL WAS PERFORMED BY CON ED'S ASTORIA CHEM LAB. CON ED WILL PERFORM A SITE CHARACTERIZATION AND INSTALL TWO TO THREE 6 RECOVERY WELLS WITHIN THE EXISTING EXCAVATION (APPROXIMATELY 10 FEET INTO GROUNDWATER) AND INSTALL AT LEAST ONE UPGRADIENT AND ONE DOWNGRADIENT MONITORING WELL. CHRISTINE KOVARI WILL BE THE CON ED PROJECT MANAGER. 2/11/97: GHK update from C. Kovari (Con Ed Remediation) - no oil in recovery wells. 2/13/97: GHK at site with John Mitchell and Christine Kovari. Will return next week to see if any oil enters wells. If it does they will sample for oil ID, if not will analyze ground water for VOCs and SVOCs via 8021 and 8270 in Friday Feb. 21.

~~~~~ e2mis no. 103-173: 18-JAN-1997 15:15 HRS FUEL OIL LEAK ON 20 INCH FUEL PIPELINE #7 MH# 4353 AT INTERSECTION OF NORTH 10 ST. AND KENT AVE. BKLYN. ABOUT 1000 GAL. OF #6 FUEL OIL CONTAINED IN MH AND ADJOINING EXCAVATION SITE. CLEAN UP IN PROGRESS. 19-JAN-1997 15:43 HRS U.T. STILL EXCAVATING HAVE NOT LOCATED LEAK AS THIS TIME. coming off of the 24hr. diminimus program. Location is at the  
northwest corner of Kent Ave. when they went to the scene to clean  
they found light oil seeping through the walls. Will apply agent to  
clean walls and them they need to find the source of the oil because  
it will be continuous. ConEd#158995"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL OIL IS ALSO LEAKING ONTO ROADWAY (DELANCY STREET/FDR DRIVE). In East River and on promenade. #6 oil from pipeline. Booms in place, pipeline de-pressurized. 3000 gallons entered East River, 3000 gallons on promenade. 2200 gallons recovered. All low pour #6 oil, which was switched into line after incident earlier this month [9509864]. Happened during pressure test at 60 psi. Oil came up through test station. MEG has booms in river, vacing oil off promenade, MEG vessels down by Seaport trying to recover oil, dirt berm on promenade to contain oil. 1600 - jackhammering asphalt on promenade for UT to assess pipeline. Took Rich Miller downstream to assess damage and observe MEG's skimmer boat with USCG. Separate phase product observed on East River around west footing of Williamsburg Bridge, and south to Pier 17/Manhattan Bridge area. Heaviest impacts south of Seaport in Seaport Marina - hulls coated with oil. NYH&R Club very heavy pockets of oil - worst yet. Also floating hospital and heliport heavily impacted. 1720 - 4 skimmers, deflection boom and absorbents being deployed. (GHK) 11/28/95, 0745 hrs: vaccumed oil from skimmer to Hudson Ave frac tank. John Moran (212) 460-6961. Recovered 3100 gallons land, 1600 gallons skimmer. 70 yards contaminated soil. 12 boats, 43 staff (MEG) 3 skimmers. Line clamped at 23:15 hrs. There is oil at Givernor's Island. Approx 12400 feet of boom in river, another 3900 feet on standby at Hudson Ave. 1145 hrs - boat ride to re-assess impacts. 1149 - free product north of Con Ed head house huggin promenade - no boom in place in this area. May be migrating from under adjacent pier. 1201 - smaller MEG boat replacing spent sorbents and replacing south of Pier 17. 1211 - floating hospital area - areas of sheen, one pocket of free product. 1230 - 2100 gallons recovered from water. 1412 - Con Ed to continue through night, MEG to continue recovery operations, scale down land recovery. 11/29/95: Sr. Chief Alheim, USCG - recovered 2200 gallons from river. Moved skimmer into Seaport area. 11/30/95: Upon arrival saw petroleum in excavation and containment boom immediately outside excavation. Nothing else. USCG - boom around Pier 17 to east dock of Health & Racket Club. On PM boom watch: hotsoy (hot water at 200 deg F, 3000 psi) on white yacht, Mystique. Clean wooden hull historical ship by hand. (GHK) 12/1/95: On scene with USCG, DEP, MEG and NOAA. To assess condition of pilings and bulkhead and approve a cleaning agent (cirticlean?alconox?). Explained DEC's stance on cleaning

agents, NCP product list. EPA states may be acceptable for use. Was previously used in Port of Philadelphia. According to MEG, amount recovered 9420 gallons gross, of which 4820 gallons is oil. Inspection of bulkheads and docks: heavy staining by leak location, pipeline headhouse and 500 yards north. Also heavy staining under Manhattan Bridge just south of where new FDR pilings start. Also impacts onshore under Brooklyn Bridge, and stripe of oil all along pier. (GHK) 12/1/95, 1300 hrs: meeting at Governor's Island with USCG, Con Ed, NYCDEP. USCG concerned that Con Ed does not have a Qualified Individual for communications with Coast Guard and other agencies. Con Ed concurs that communications need to be improved from this aspect. USCG to initiate training of QIs with Con Ed and NYSDEC. Alternatives discussed by Con Ed include reactivation of barging at East River for oil deliveries. In meantime, evaluate repair/replacement of pipeline. Smart pigging to be initiated in 1996. (GHK) 12/1/95 1530 hrs: DEC staff observed MEG using foaming detergent on the schooner attached to the barge Progress. Gave USCG a statement. (GHK) 12/5/95: Pier 17 inspection. Miller Girls barge is hotsying pilings on east side of pier. There are absorbent booms around Pier 17 and historical boat Ambrose. Note: sweeps along south side of pier near the Ambrose are spent and giving off sheen between floating dock and bulkhead. Also hotsying piles on north side of dock near Peking. Heavy sheen on East River at South Street and John Street from under pier. Heavy on north side of NYH&R Club pier piles. Sweep north of NYH&RC OK, sweep by shuttle OK. Thus far 2200 gallons recovered on land, 2620 gallons recovered on river. Tour at 2:30 PM with USCG, Con Ed, MEG (low tide). Worst area is land/beach/seawall from head house to Williamsburg Bridge. Hotsying is very effective - USCG signed off on Pier 17 and Peking. 12/15/95: Final inspection with USCG Sr. Chief Alheim. 3 spots that needed to be cleaned. Cleared by USCG of shoreline cleanup, no more sheen or SPP. (GHK) 1/23/96: phone call from Tom Bishop (Con Ed) re: no.3 pipeline. Workplan? Low pour oil solidifies at 30 degrees. They are heating the line to remove as much oil as possible (only works in localized areas; will freeze what they can't remove. Thus far 50,000 gallons removed. May begin process on 1/29/96. Cooling coils are at East River end of line; slope towards Hudson Avenue end; additional dams using dry ice. (GHK) APPENDIX B SITE 24. Update 5/10/06 This spill is closed based on Site Investigation Report for App B Site 24 in eDocs. (SKA)"

DEC Memo: "Contaminated Soil Letter sent to: Kiska Group Mr. Selin Zkyuz 170 North 11th St Brooklyn, NY 112 05/24/06 Sharif Rahman- Rec'd Phase II report prepared by Hydro Tech Environmental,Corp. The site is a NYCDEP 'E' designated site. Borings were installed to investigate the subsurface soil and ground water quality.High concentration of VOC's(SP: Benzene-84,200 ug/kg,Toluene-79,900 ug/kg, Ethylbenzene-51,700 ug/kg, Xylene, Naphthalene-5,180,000 ug/kg) and SVOC's are present in soil and ground water(Benzene- 402ug/L, Toluene- 112 ug/L, Ethylbenze- 26.6 ug/L, Naphthalene-727 ug/L). Visual and olfactory evidence of petroleum was also identified in soil probes.Presence of signifcant level voc's/svoc's warrants long term soil and ground water remediation.Consultant recommended for excavation of the contaminated soil and injection of ORC to treat impacted ground water. Case has been transferred to Remediation Section B. 6/21/06 - Tang, reviewed site assessment report dated 5/3/06 by HydroTech. GW impact is minimal. Bulk of the contamination is in soil. Since this is an E designated site by NYCDEP and DEP has already approved a work plan to excavate the contaminated soil, DEC will not require GW remedy. Spoke to Kathy DeVoe of HydroTech, informed her to submit the end point sampling results after all the contaminated soil are excavated. Will track this as a P3 site. - KST 9/11/06 - HydroTech, Kathy Devoe wrote: We will be starting the field work at the above referenced Site on Monday,September 18, 2006. We are expecting the field work to last approximately 3 days. If there is any change in the scheduling I will let you know. - KST "  
Remarks: "SOIL SAMPLE FAILURE. CLEAN UP IS NOT IN PROCESS."

analysis. Report will be sent to K Patel. Environmental Consultant: HydroTech, Ezgi Karayel, 718-636-0800, 631-457-3236.

02/27/13-Hiralkumar Patel. 9:45 AM:- visited site. met Ezgi and project manager from development company. construction site includes lot # 10, 11, 28 and 30 on block # 2322. lots 10 and 11 are located along N 8th ST and lots 28 and 30 are located along N 7th St. a school is located across the N 7th Street. there will be two seven story apartment buildings with shared basement parking garage. for basement garage, site will be excavated to 8 ft bg along N 8th ST and to 12 ft bg along N 7th St. two excavations noted at site: one along N 8th st and second in half area along N 7th St. found water in excavation along N 8th St. Ezgi mentioned that groundwater is around 5-6 ft bg and water in excavation is mixed of groundwater and rain water. no sheen or petroleum/chemical odors noted at site. due to heavy rain since last night, site is covered in mud, so could not inspect excavation along N 7th ST. crew installing piles in excavation along N 7th St. two tanks found in excavation, at opposite end, along N 8th ST. Ezgi mentioned that construction site includes two properties along N 8th ST: 246 and 248 N 8th St. due to total size of 1,100 gal, no requirement for PBS registration. informed Ezgi to register tanks, if anymore tanks found which will exceed total capacity of 1,100 gal. asked Ezgi to collect endpoint samples from bottom of foundation excavation to support spill closure. she mentioned that NYC OER requires endpoint samples and installation of vapor/moisture barrier. during inspection, noted two monitoring wells on sidewalk along N 8th St, in front of property. Ezgi mentioned that wells were not installed by owner of construction site. asked Ezgi to check wells for any product. Ezgi will send contact information for property owner and developer. Block 2322: 1) Lot 10: 246 North 8th Street 2) Lot 11: 248 North 8th Street 3) Lot 28: 255 North 7th Street 4) Lot 30: 247-251 North 7th Street no PBS or other spill record found for any of the involved lot. 03/19/13-Hiralkumar Patel.

11:51 AM:- spoke with Ezgi. she mentioned that both tanks are removed from the site, but no further excavation happened due to water in excavation. property owner is waiting for dewatering permit from NYC DEP. Ezgi will call as soon as permit received. 05/29/13-Hiralkumar Patel. 3:24 PM:- spoke with Ezgi. she mentioned that no further excavation happened in former tank area. as redevelopment work is not in progress, asked Ezgi to collect endpoint samples from former tank excavation area. she mentioned that soil sample was collected from soil stockpile removed from former tank area, for disposal purpose. she will send waste characterization sample results and some pics for review. informed Ezgi that the department may require collection of soil and groundwater samples after reviewing waste characterization sample results. 3:37 PM:- received email from Ezgi including tank removal affidavit (for two 550 gal USTs), disposal manifests and result of waste characterization sample. no VOCs found in waste characterization sample (WC-13) which was collected near one of the UST location. some SVOCs found in waste characterization sample.

06/10/13-Hiralkumar Patel. reviewed available documents. 1) abstract of Phase I dated 04/28/2006: - property located at 247-251 N 7th St, 253-255 N 7th St (Lots 28 and 30) and at 246-248 N 8th St (Lots 10 and 11) - topographic elevation of the site is approx. 14 ft above mean sea level - groundwater flow direction in the vicinity of the site is toward the West, in the direction of the East River - as per property owner, monitoring well installed in driveway of building 251 and outside building 278B in order to determine the depth to

groundwater for geotechnical purposes - as per 1965-1992 sanborn map, building 246 appears to be occupied with a print spraying facility  
----- building 246 was occupied by a print spraying facility for approx. 31 years ----- 2) abstract of Remedial Investigation Report dated July 2012: - site A: 247-251 and 253-255 N 7th St - site B: 246 & 248 N 8th St - proposed future use of the site will consist of two separate 7-story building developed over a common parking garage - basement slab of site A will be approx. 8'-8" bg and basement slab of site B will be approx. 4'-8" bg -----  
cellar will consist of parking garage, mechanical rooms, bicycle storage, elevator and stairs - first floors will be used as mechanical rooms, lobby, rental units and outdoor recreating area - second to sixth floors will consist of rental units and mechanical rooms - units on seventh floor will have set-back terraces - installed 20 soil borings across the site and collected 42 soil samples for analysis - installed 6 groundwater probes and collected groundwater samples - installed 10 soil vapor probes and collected 7 samples for analysis - elevation of property ranges from 12.62 to 14 ft at site A and from 7.47 to 10.07 ft at site B - depth to groundwater ranges from 8.4 to 10.1 ft at site A and from 3.1 to 5.1 ft at site B -----  
groundwater flows to the west  
----- stratigraphy of the site consists of fill ranging in thickness up to 8 ft (including fine to coarse sand and some silt with traces of brick, cinders, wood, glass and gravel; brown silty fine to medium sand with traces of cinders, bricks, glass and gravel). fill layer is underlain by sandy clay in some borings to variable depths ranging from 10 to 17 ft (including light brown, fine to medium sand, clay and silt; gray to brown clayey fine to medium sand). sand is located immediately beneath the peat and clay down to variable depths from 17 to 40 ft (brown to medium sand, some silt, gravel, trace coarse sand) - results of the GPR survey did not identify any anomalies at the site - found SVOC contamination in multiple shallow and deeper soil samples - found petroleum VOCs in shallow soil sample from 0-2 ft from boring SP-11 (listed below), but nothing in deeper soil sample at 6-8 ft - found TCE in shallow soil samples in borings SP-1 and SP-7, but nothing in deeper soil samples in same borings -----  
found VOC contamination in groundwater sample GP-6 (listed below) - found VOC compounds (max 86 ug/m3) in soil-vapor samples - found PCE in soil-vapor sample S-11(SV-8) (listed below) -----  
3) abstract of Remedial Action Work Plan dated July 2012: - establish Track 4 soil cleanup objectives - recording of a Declaration of Covenants and Restrictions that includes a listing of Engineering Controls and a requirement that management of these controls must be in compliance with an approved Site Management Plan (SMP); and Institutional Controls including prohibition of the following: 1) vegetable gardening and farming; 2) use of groundwater without treatment rendering it safe for the intended use; 3) disturbance of residual contaminated material unless it is conducted in accordance with the SMP; and 4) higher level of land usage without OER-approval - a 30-mil low permeability geomembrane liner will be installed underneath the floor of the building 4) abstract of Addendum to RAWP dated 11/16/12: - addendum included sampling plan and sampling results for additional investigation - soil boring SP-13 installed on 246 N 8th Street (where print spray business was) - collected two soil samples from SP-13: one at 0-2 ft and another at 8-10 ft - found VOC/SVOC contamination in soil samples - collected five soil-vapor samples - found minor petroleum VOC contamination in

DEC Memo: "DEC Piper to investigate surce of cont. 2/5/08- DEC Piper recieved addendum to RAP where a basement will now be constructed rather than slab on grade. RAP was changed as they will not be excavating entire site. DECPiper reviewed analytical ans spoke with Jane O'Connell regarding metals. NYC OER will handle metals and DEC will handle petroleum cont in back of property. 7/16/12- DECPiper met with OER and Dave Yudelson. Excavation in front of property will go as planned with endpoints being collected. Yudelson feels cont in rear is from offsite. 981 ppm of Napthalene is highest hit. DEC Piper spoke with DEC Austin regarding rear of property. He feels to determinine if it is from an onsite source, further delineation is required. 7/17/12- DEC piper emailed Yudelson and he will submit a work plan with at least 3-4 geoprobe points and collect soil and groundwater. 7/3/2013- Excavation activities at the 169 N 10th Street are complete. As per DEC and OER recommendation, PWGC collected additional endpoint samples in the vicinity of previous sample locations SW-006 (mercury) and SW-005 (arsenic) at depths of 11 and 12 feet below grade. The arsenic results at SW-005 were 250, 3.3 and 2.6 mg/kg at 10 , 11 and 12 respectively. The mercury results at SW-006 were 66, 0.04J and 0.12 mg/kg at 10 , 11 and 12 respectively. metals concentrations dropped significantly below 10 feet. Excavation in these areas were brought down to 12 feet below grade for construction purposes. The developer is in the process of installing the foundation and vapor barrier as detailed in the RAWP and no additional excavation is planned at the site. Based on work to date, this spill is closed and no further action is granted. "

DEC Memo: "Hydraulic Hammer spilled less than one gallon to the adjacent property.Clean up pending on property owner's consent. 10/23/2013 : Mahat A complaint was received from Mr. Boyes ( Property owner ) about the spill on his property. He mentioned Jeremiah ( DEP ) on the site to adress the complaint on 8/19/13. DEC Sharif also received a call from Mr. Boyes on the event of the spill. As of today, spill has not cleaned as per Mr. Boyes. 10/24/2013: Mahat A consultation session was conducted with Vought DEC. He suggested asking Mr. Boyes to take some picture of the impacted area and property. 10/25/2013: Mahat An email was received from Mr. Boyes with attachment of damaged property. All the pictures were taken at the time of the event. As a conversation over phone with Mr. Boyes, he mentioned RP performed a cleanup. DEC requires pictures of the current situation of the property (after the cleanup). This would help DEC to provide further guidance to both parties. A phone call was made to the responsible party. He mentioned that initial clean up was performed and intends to remove the boulders and rocks once the foundation work is performed on adjacent property. He used Zep instant spill absorbent to clean the ground in the vicinity of the spill and Simple Green Stone Cleaner on the rock. Received an email from Mr. Vaadia including the picture of the boulders and rocks (after an initial clean up from responsible party). 10/29/13: Mahat 10:25am : Left a message to Mr. Vaadia for a call back. 2:20pm: Mr. Vaadia replied back the call and asked DEC to provide the written letter from RP to excavate the stained boulders and rocks. Also, received an email from Mr. Kenney stating there is legal issue going between two property owners. He mentioned he performed the initial clean up and rest will be handled between two property owner directly. 3/17/14: Mahat T/C : A voice message was left to Mr. Kenny ( Notifier @ 203.572.3752 ) to call back the Department with more information. A call was received from Mr. Knnny mentioning that the dispute between two property owner is going in a civil matter. There is no contmaniantion or impacts that is impacting property of State. Hence, no further investigation is required by the Department. "

Remarks: "Hydraulic hose leaked oil to boulders on neighbors property. Neighbor was not happy about this. Spill was less than a gallon. Hazmat is on scene, possibly from DEP."

DEC Memo: "7/28/2015 - Feng - Duty Desk. Talked to Kim Somers of EBC (631-504-6000). The site is being developed under the OER BCP program. OER has approved the RAWP already. They have installed borings/wells and found soil and groundwater contamination. Soil consist of historical fill and 1,000 ppb benzene, 1,600 ppb toluene at 1-2 feet. Groundwater was found to have 420 ug/L MTBE and SVOCs. DTW is at 5-7 feet. They probably start the excavation in 1 month pending the Notice to Proceed letter from OER and the DOB's permit. The investigation was done in 2/2015 and EBC reported it to OER and reported to DEC now. The RAWP calls for excavation of 10 feet in the north portion, 3 feet in the south portion and no excavation in the 25 feet of midsection. The RAWP calls for vapor barrier also. They are building a 4-story mixed use building which expand the existing building. Partial cellar to 10 feet for the 25 feet of the new building. Contact: EBC, Kim Somers, KSomers@EBCIncNY.com NYCOER, Shaminder Chawla, ShaminderC@dep.nyc.gov Horase Zhang, 212-788-8484 Discussed with the runner K. Patel and spill is assigned to K. Patel. 07/28/15-Hiralkumar Patel. alternate address: 202-226 N 10th Street no PBS or other spill records found. Shirley Dorto / Joseph A. Dorto \*\*property owner\*\* 39 Linden Street Malverne, NY 11565 Kimberly Somers Environmental Business Consultants Ph. (631) 504-6000 Fax (631) 924-2870 email: ksomers@ebcincny.com 07/29/15-Hiralkumar Patel. received reports from Kim. abstract of Phase I: - according to the sanborn maps, the site appears to have been originally developed sometime between 1887 and 1905 with two, one-story structures identified as sheds with an office, and an attached two-story structure in the southern rear portion of the lot - site appears to have been redeveloped in 1970 with the currently existing, one-story industrial warehouse building - the building is slab-on-grade - site was identified as a private garage (1951, 1965), an auto repair use (1978) and a warehouse (2007) - no ASTs or evidence of USTs were observed - site was assigned an E-designation hazmat ----- abstract of RIR: - proposed future use of the site will consist of the redevelopment of the existing structure in two, 4-story mixed use (commercial and residential) buildings with a mezzanine level and partial cellars - the cellar level will require excavation to a depth of approx. 11 ft bg across the first 36 ft of the site from N 10th St - the first floor sunken level in the rear 50 ft portion of the building will require excavation of at least 3 ft

status of monitoring wells. informed her that the department requires re-gauging of existing wells to confirm depth of groundwater and product thickness. 11:11 AM:- spoke with Mr. Finnican. he leased this property. inquired him about reason for not reporting spill in July 2014 when contamination was detected first time. he mentioned that EBC was handling this case from beginning and NYC OER was aware of the findings. asked him to provide contact information for property owners. Thomas Finnican \*\*leasee\*\* 202 North 10th LLC. 144 North 7th Street, Suite # 408 Brooklyn, NY 11249 Ph. (646) 688-5144 email: tfinnican@patoma.com 11:33 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised remedial investigation report including correct/missing information and results of re-gauging of existing wells to confirm depth of groundwater and product thickness. asked Mr. Finnican to submit contact information for property owners. email copied to OER Chawla and Charles Sosik. 11:48 AM:- sent email to Kim and Mr. Finnican and asked them to submit signed copy of RAWP. email copied to OER Chawla and Charles. 08/06/15-Hiralkumar Patel. 8:57 AM:- sent email to OER Chawla requesting call back to discuss spill notification issue. 08/07/15-Hiralkumar Patel. received message from Hanna Moore (at 5:36 PM on 08/06/15) from OER. she mentioned that OER was informed about contamination at the site in Mar. 2015 and since then they have asked property owner/operator to report spill. 08/19/15-Hiralkumar Patel. 9:05 AM:- sent email to Kim and Mr. Finnican. asked Kim to submit revised report and signed copy of RAWP along with results of re-gauging of existing monitoring wells. asked Mr. Finnican to submit property owners' contact information. email copied to OER Chawla and Charles. 09/16/15-Hiralkumar Patel. 10:49 AM:- spoke with Kim and inquired her about revised RAR and signed RAWP. she mentioned that she has sent link to those documents on 08/28/15, but I have not received it. asked her to resend it. also asked her about product thickness in impacted the well. during regauging, they found 0.03 ft of product. Kim mentioned that they have received Notice to Proceed from NYC OER. 10:56 AM:- spoke with Mr. Finnican and asked him to provide property owner's contact info. 10:56 AM:- received email from Kim including copy of OER's Notice to Proceed letter. searched online and found number for property owner. 11:14 AM:- spoke with Ms. Dorto (516-887-1006) and informed her about open spill case at the site. she mentioned that the site has been leased out and she asked to contact leasee. 11:24 AM:- received email from Kim including GW elevation table and map. as per the map, groundwater flows to the north and well MW2 is the downgradient well. there is typo in GW elevation table. as per depth to water and depth to product data, 7.85 ft of product noted in well MW-2. 11:32 AM:- spoke with Kim and informed her about typo in elevation table. she will submit revised one. also asked her to submit RIR and RAWP via mail. 11:51 AM:- received email from Mr. Finnican including Mr. Dorto's phone number. Shirley Dorto / Joseph A. Dorto \*\*property owners\*\* 39 Linden Street Malverne, NY 11565 Ph. (516) 887-1006 (516) 643-0133 received revised RIR and signed copy of RAWP. 12:11 PM:- received email from Kim including revised GW elevation table and map. after using correct information from field notes, groundwater flow found towards the northeast. 11/20/15-Hiralkumar Patel. 11:02 AM:- spoke with Kim inquiring updates. she was out of office and will call back next week after reviewing file. 12/08/15-Hiralkumar Patel. 1:49 PM:- sent email to OER Hannah inquiring update. email copied to OER Shaminder. 12/10/15-Hiralkumar Patel. 2:53 PM:- spoke with Kim. she mentioned that the developer has received notice to proceed from NYC

OER, but project has not started yet. 2:56 PM:- tried Mr. Finnican's phone number multiple times, but no response. 2:58 PM:- spoke with OER Hanna. she has not heard from property developer yet. she checked NYC DOB record and noted that the developer has not received required DOB permit yet. 03/31/16-Hiralkumar Patel. 8:58 AM:- spoke with Kim and inquired her about current status. she mentioned that site redevelopment is on hold. asked her to re-gauge existing wells. 04/01/16-Hiralkumar Patel. 2:54 PM:- received email from Kim. she mentioned that they are going to the site next week to re-gauge the monitoring well. she inquired if product sample needs to be collected for fingerprint analysis, if found in monitoring well. 3:42 PM:- sent email to Kim and asked her to collect product sample for fingerprint analysis, if found. 04/26/16-Hiralkumar Patel. 9:21 AM:- received report from EBC. abstract: - three monitoring wells (MW-1 through MW-3) were gauged on 04/04/16 - found approx. 1-inch product in well MW-2 - depth to groundwater ranges in depth from 5.85 to 7.94 ft bg - depth to groundwater in MW-2 could not be determined due to thickness of product present - product sample from MW-2 was collected for fingerprint analysis - lab findings for the petroleum ID on the oil sample from MW-2 was inconclusive, with majority of mass listed as unidentified. the chromatogram in general, however was noted to resemble that of motor oil ----- 12:05 PM:- spoke with OER Hannah inquiring about current status of project in OER file. she will talk to project manager (Horace Zhang) and will call back. 04/28/16-Hiralkumar Patel. 9:31 AM:- spoke with Kim. inquired her about current status of the site. she mentioned that the developer is revising redevelopment plans due to revised floodplain maps. 12:58 PM:- spoke with Mr. Finnican. he mentioned that they have not received required permit from NYCDOB yet. due to revised floodplain maps, now they will not create a cellar and on-site building will not be demolished. a new footings will be installed to extend existing one-story building into four-story building. as redevelopment plan changed and there will be no basement, need a revised RAWP. 2:38 PM:- sent letter to Mr./Ms. Dorto and Mr. Finnican requiring implementation of interim remedial measures (weekly well gauging/product removal) and determination of site-specific groundwater flow direction (via installation of additional well). also asked them to collect endpoint samples, if soil excavation occurs. asked them to submit report, including plans for remediation of all contaminated media and vapor mitigation details, by the end of 07/01/16. letter emailed to Mr. Finnican, OER Shaminder and Kim. 05/26/16-Hiralkumar Patel. received email from OER Horace Zhang (at 5:21 PM on 05/25/16) including summary of meeting between OER, property owner and property owner's consultant. he mentioned that additional investigation scheduled for Friday 5/27 to - install 1 additional groundwater well (MW4) to determine flow direction - convert MW2 to a 2 inch well for increased product recovery - collect soil samples to delineate the extent of contamination in 10 increments outward from MW2 he mentioned that because the development plans don't require site-wide excavation, owner is also exploring the possibility of conducting test pits to delineate the contamination/potentially identify source. construction/remediation is expected to begin in 2 to 3 months. the partial cellar is being eliminated to comply with DOB flood zone requirements. new plans with finalized excavation depths will be submitted when the foundation design is completed. 11:40 AM:- received email from Kim. she mentioned that the following steps will be implemented at the site to address the

free-phase petroleum identified in monitoring well MW2: 1) installation of a permanent groundwater monitoring well in the vicinity of MW2 2) replacement of existing monitoring well MW2 with a 2-inch diameter well to improve product recovery efforts 3) gauging all monitoring wells on-site and implementing product recovery of any free-phase product present 4) installation of test borings around MW2 at 10ft intervals to delineate the extent of the contamination. soils from each test boring will be screened with a PID and inspected for physical evidence of petroleum contamination. test borings will extend from the location of MW2 in 10-ft intervals until field conditions/PID readings do not indicate evidence of petroleum contamination 5) soil samples will be collected from the driest deepest depth of the test borings where visible contamination is not present to confirm the horizontal extent of the petroleum-impacted soils. 6) soils from the well installations will be screened continuously with a PID. soils samples from the deepest driest interval and the interval with the highest PID reading will be retained for laboratory analysis of VOCs and SVOCs (CP-51) Kim mentioned that the above work is scheduled to commence at the site tomorrow, Friday 5/27. well gauging and product recovery efforts will continue on a weekly basis. documentation of the weekly gauging/product removal will be submitted to NYSDEC and OER for review. Kim submitted a site map with proposed well and test pit locations. 05/27/16-Hiralkumar Patel. 12:30 PM:- visited site and met Tom from EBC. he drilled couple of borings, including proposed well MW4, around existing well MW2. well MW4 is installed west of well MW2, where some oil staining noted. Trans Boro Fuel Oil is located to the west of the subject site. Trans Boro Fuel Oil 481 Driggs Ave (alternate address: 198-200 N 10th St) Brooklyn, NY PH. (718) 389-1466 no PBS or spill record found for 481 Driggs Ave. 06/02/16-Hiralkumar Patel. received email from Kim (at 10:04 AM on 06/01/16) including summary of observations during well/borings installation on 05/27/16. stained soils/odors were detected in four test borings west of MW2 at approximately 8-10 ft bg and extending to the western site boundary. PID readings were highest in the boring where MW4 was installed, approximately 10 ft west of MW2, 40 ppm at 8-10 ft bg. borings installed 10 ft north and south of MW2 contained minor staining at the 8-10 ft interval and PID readings were low (0.0-1.8 ppm). test boring to the east of MW2 did not have any visual or olfactory evidence of petroleum-impacted soils and PID readings at the 8-10 ft interval were 0.0 ppm. total of 12 soil samples were retained for laboratory analysis of VOC and SVOCs. the four monitoring wells at the site were gauged and sampled on May 31, 2016. a less than 1 layer of thick free-phase petroleum product was detected in MW2 and MW4. four groundwater samples were retained for laboratory analysis of VOC and SVOCs. groundwater flow direction was reassessed and appears to flow towards the northeast. 9:44 AM:- spoke with a person (who did not provide his name) at Trans Boro Fuel. he mentioned that they only park fuel oil truck at the site and don't have any storage tanks or repair shop at 481 Driggs Ave. 06/10/16-Hiralkumar Patel. 8:53 AM:- received email from Kim including results of weekly product removal conducted on 05/27/16 and 06/08/16. 0.03 ft of product found in well MW2 on 05/27/16. on 06/08/16, depth of product in MW2 could not be determined because the probe was coated with product. total of 24 oz of product/water mix was removed from MW2 on 06/08/16. 06/17/16-Hiralkumar Patel. 1:24 PM:- received email from Kim including results of weekly well gauging

S118141503

conducted on 06/16/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe was coated with product. total of 28 oz of product/water mix was removed from MW-2. 06/28/16-Hiralkumar Patel. received email from Kim (at 4:32 PM on 06/27/16) including results of weekly well gauging conducted on 06/23/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. depth of product in MW2 could not be determined because the probe was coated with product. total of 1/2 gal of product/water mix was removed from MW-2. faint reading indicating product noted in well MW-4. 06/30/16-Hiralkumar Patel. 8:12 AM:- received email from Kim including sampling report for delineation work conducted on 05/27/16. abstract: - installed total of eight soil borings (SBD1 through SBD8) within the vicinity of MW2 to horizontally delineate extent of petroleum-impacted soils - soil borings were installed to a depth of 10 ft bg - visually contaminated soil (grey/black stained) and PID readings were identified in three soil borings (SBD4, SBD6 and SBD7), all of which are located west of MW2 ----- - as per site map, boring SBD2 was installed to replace well MW2 - total of 12 soil samples were collected for analysis: two each from SBD1, SBD3, SBD4, SBD6 and SBD7; and one each from SBD5 and SBD8 - installed a new 2-inch well MW4 west of existing well MW2 - existing 1-inch well MW2 was replaced with a 2-inch well - wells were installed with 10 ft of screen - depth to groundwater is approx. 7 ft bg - direction of groundwater flow appears to flow towards the east/northeast ----- - four groundwater samples were collected - free-phase product is present in wells MW2 and MW4 - petroleum-impacted soils appear to be concentrated in the area of MW2, extending west towards the property line at the 6-10 ft bg interval - found sandy silt with clay with ash in soil borings - less than 10 ppm recorded on PID in soil borings, excepts SBD4 (40 ppm at 8 ft bg) and SBD7 (29.6 ppm at 8 ft bg) - no contamination noted in groundwater samples - found VOC contamination in deeper soil samples from SBD4, SBD6 and SBD7 - highest contamination noted in boring SBD6 which is along the western boundary of the site soil analyticals:

recommendations from contractor: - continuation of product removal effort on a weekly basis until site redevelopment begins - excavation to a depth of groundwater in the area of MW2 and MW4, without compromising integrity of existing structure or the adjacent structure, during site excavation activities for the proposed new building footings - collection and analysis of endpoint samples the report does not include any details about vapor mitigation efforts. 07/01/16-Hiralkumar Patel. 1:33 PM:- received email from Kim including results of weekly well gauging conducted on 06/30/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well, indicating no product. but when the probe was removed, there was trace amount of product on probe for both MW-2 and MW-4. 07/05/16-Hiralkumar Patel. reviewed weekly well gauging data and soil/gw delineation results. based on well gauging reports, groundwater found at around 8 ft bg in well MW-1; and between 5 and 6

ft bg in wells MW-2, MW-3 and MW-4. based on these, heaviest soil contamination noted in soil boring SBD6 was noted below water table and no contamination noted in groundwater sample from well MW-4, which is less than 10 ft away from borings SBD6. 10:42 AM:- sent email to Kim and asked her to submit a revised RAWP as redevelopment plan has changed. email copied to Mr. Finnican. 10:45 AM:- received email from Kim. she mentioned that RAWP will be revised once the finalized plans are received from the developer. 07/11/16-Hiralkumar Patel. received email from Kim (at 1:53 PM on 07/08/16) including results of weekly well gauging conducted on 07/07/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well, indicating no product. but when the probe was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product. 07/18/16-Hiralkumar Patel. 9:53 AM:- received email from Kim including results of weekly well gauging conducted on 07/13/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well, indicating no product. but when the probe was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product. 07/22/16-Hiralkumar Patel. 9:18 AM:- received email from Kim including results of weekly well gauging conducted on 07/21/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. no solid tone was detected for either well, indicating no product. but when the probe was removed, there was trace amount of product on probe for MW-2. MW-4 had no trace product. 08/05/16-Hiralkumar Patel. received email from Thomas Gallo (at 4:15 PM on 08/04/16) from EBC including results of weekly well gauging conducted on 08/03/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered in MW-2. product coated interface meter probe preventing depth to water reading in MW-2. trace product noted in MW-4. 08/31/16-Hiralkumar Patel. received email from Thomas Gallo (at 8:12 PM on 08/14/16) including results of weekly well gauging conducted on 08/11/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered below groundwater interface and in bottom 3 ft (12-15 ft bg) in MW-2. trace product noted in MW-4. received email from Thomas Gallo (at 8:06 PM on 08/21/16) from EBC including results of weekly well gauging conducted on 08/19/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered in MW-2. trace product noted in MW-4. 09/01/16-Hiralkumar Patel. 9:31 AM:- received email from EBC including results of weekly well gauging conducted on 08/26/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product encountered in MW-2. trace product noted in MW-4. 09/12/16-Hiralkumar Patel. received email from EBC (at 8:52 PM on 09/11/16) including results of weekly well gauging conducted on 09/02/16 and 09/09/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product coated probe at MW-2 and trace product noted in MW-4 during both events. 09/23/16-Hiralkumar Patel. received email from EBC (at 5:40 PM on 09/22/16) including results of weekly well gauging conducted on 09/15/16 and 09/22/16. wells MW-1, MW-2, MW-3 and MW-4 were gauged. thick product coated probe at MW-2 and some light staining on tubing from well MW-4 during both monitoring events. \*\*delineation report dated June 2016 does not include details on vapor mitigation efforts.\*\* \*\*OER has issued Notice to Proceed.\*\* \*\*private garage and auto repair shop in past.\*\* \*\*revised RAWP needed as redevelopment plan changed.\*\* \*\*site map with sample analyticals on hard drive.\*\* DEC requires: 1) interim remedial measures, 2) remediation of contaminated media"

Contact Name: JASON HAYES  
Contact Phone: Not reported  
DEC Memo: "5/9/2014 - Desk Duty. Called Jason Hayes of Langan Engineering (917-859-4908) and left a message for call back. 5/13/14 JD Phase II investigation Report and RAP submitted fom NYC OER were uploaded to DECDOCS. DEC project manager (FENG) was e-mailed for notification purposes. 5/23/14-Vought-Sent email to NYCOER Chawla with cc to RHWRE, RSE, DEC Cozzy, OER Walsh and OER Chu that Shaminder,As we noted during our phone conversation this morning, I spoke with Jane O'Connell and as the PCE/TCE issue is being managed by OER as per the MOA, the Department will defer to NYCOER whether NYCDOH review of the active SSDS is warranted. As the Department has no further concerns with respect to petroleum on the site, I will have June prepare and transmit the Spill Closure Letter.Thanks for your patience as always. Vought also spoke with RHWRE and she noted that both she and DEC Cozzy did indeed review the data as well as the remedy with OER Chawla. RHWRE also mentioned that Site Management Plan for the active SSDS would be reviewed by OER as part of the Final Engineering Report submitted to them. 5/23/2014 - Reviewed several emails attaching soil and groundwater investigation data from Langan Greg Wyka. The soil sampling data included waste characterization test pit soil sampling and the endpoint sampling from over-excavation in the Tank 1 and Tank 2 area. Except in the former Tank 1 and Tank 2 area, EPB01 (1.5 BBHD) shows 140 mg/kg and EPB-03 (1.5 BBHD) shows 160 mg/kg 1,2,4-Trimethylbenzene, the rest of the soil sampling show no petroleum impacts. The groundwater sample from MW-05 show 12 ug/L 1,2,4-Trimethylbenzene and the rest of the groundwater sampling shows no petroleum impacts. The soil vapor sampling shows no petroleum impacts. As for the chlorinated solvent contamination, the groundwater in MW04 shows maximum 120 ug/L PCE and 48 ug/L TCE. The soil vapor sample in SVE03 shows 1060 ug/m3 PCE and 315 ug/m3 TCE which suggested MITIGATE level according to NYSDOH Soil Vapor/Indoor Air Matrix 2. Discussed with J. Vought and the spill is closed based on: 1) All the tanks have been removed. 2) The soil excavation for the site development has been advanced to 18 feet. The test pit waste characterization sampling show no petroleum impacts. 3) The over-excavation in the foremr Tank 1 and Tankk 2 area has show residual 1,2,4-Trimethylbenzene. Groundwater in this area show minimum impacts of 1,2,4-Trimethylbenzene suggested the residual soil has not continuously impacting groundwater. 4) The vapor barrier to be installed for the entire building footprint and the active SSDS to be installed for the area other than the parking area shall provide mitigation of impacts due to residual petroleum soil impacts. 5) As per the email from DEC J. Vought to OER Chawla dated 5/23/2014 the PCE/TCE issue is being managed by NYCOER as per the MOA, the Department will defer to NYCOER whether NYCDOH review of the active SSDS is warranted. 6)Inclusion of remaining soil contamination language in the spill closure letter in case site is redeveloped. DEC has no futher concern regarding the petroleum impact. Spill is closed. Spill closure letter to the 421 Kent Development, LLC and cc NYCOER and Langan."

Remarks: "found contamination during excavation/investigation underway/this site has past history"

DEC Memo: "05/29/07-Vought-Off hours responder. Vought called Subin and number is not connected to DEP. Vought called Judy Greenfield and left message to return call with confirmation that drum is on public property so that it may be added to Drum Run. 7/23/2007 Sangesland spoke to consultant to homeowner (did not get name). She says the problem was a 5 gal bucket of paint left in front of the house. Sangesland told her to look up NYC Sanitation website and find the location of the Sanitation Dept Household Chemical Drop Off sight. Then mail in a copy of the receipt to the DEC to close out this case. 07/30/08-HRAHMED-As per DEC Vought and Sangesland this case is closed. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL 11/1/99 On site. All tanks out. Station covered with fresh concrete already. Two 55 gallon drums on side of station need to be disposed. All tanks off site. No stockpile of soil. Spill 9909344 reported by anonymous citizen. 11/2/99 Spoke to Butch (516) 831-2982 - beeper? from ITAR Tanks. Dr. Munroe was on site to collect samples from the excavation. NO soil was removed. Concrete slab was removed. PBS needs to be updated - tanks listed as temporarily-out-of-service. Site visit 10/5/05 - Site abandoned. No drums present."  
Remarks: "underground storage tanks were being removed and contaminated soil was discovered - site assessment will be done and the owner will decide what he wants to do for clean up"

DEC Memo: "209651. see eDocs 3/11/08: Spill submitted for closure by Con Ed. Sample was collected from material in vault and was ID'd as similar to dielectric fluid , with a PCB count of 211 ppm. Also, a crack was found in the floor of the structure. Con Ed sealed the crack in the floor without ascertaining if any oil leaked onto underlying soil. Request for closure denied, with following comment: Crack in floor must be broken out and soil beneath crack tested for PCBs to ensure that no oil leaked to soil. (JHO) 5/23/08: Con Ed crew broke out crack in floor and sampled soil beneath. Results <1 ppm PCB. Close. (JHO)"

DEC Memo: "Nov 7, 2005 A Contaminated Soil Letter was sent to: Selim Akyuz P.E.  
Kiska Construction Corp 181 North 11th- St, Suite 302 Brooklyn, NY  
11211 12/12/05-Vought-Reviewed Remedial Action Plan (HydroTech  
631-462-5866) dated 11/8/05 and received on 11/18/05. Site labelled  
by DEP as E designated site (#05DEPTECH063K). The RAP documents the  
proposed screening segregation and disposal of contaminated soil from  
the site during to future site development. NO VOCs on site and SVOCs  
appear related to urban fill material . Soil will be segregated on  
PID basis. Endpoint samples will be collected, as per DER-10 samples  
will be obtained for every 30 linear feet of sidewall and every 950  
square feet of bottom . DEC requires: 1)submission of detailed soil  
description of endpoint samples 2)submission of endpoint analyticals  
to the Department 3)installation of vapor barrier. Vought sent letter  
approving of RAP pending inclusion of above requirements.  
3/15/06-Vought-Spoke with Rachel (Hydrotech) and excavation was  
performed and elevated levels PAH's. Report will be submitted to DEC.  
05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per  
DEC Austin. 5/19/06- DEC Piper reviewed vapro barrier specification  
and they are acceptable providing they follow the manufacturers

Remarks: specs. DEC Piper reviewed report. As per report, approx 43 tons of soil were removed,. Enpoints revealed no VOC's above RSCO's and low levels of SVOC related to urban fill. A vapor barrier was placed and the area was backfilled. Piper looked at historical sanborns, as per maps , there were AST in vicinity of property though no UST and underground piping. This area has isolated xontamination through historic use. This spill is closed,. "

DEC Memo: "see also two former closed spills #0801333 & #060249. OER received a community complaint and inspected the site yesterday. There were strong odors present at the site from both an impacted stock pile on the west side of the site as well as creosol and decomposing organics smell on the east side. Doug Harm (consultant) and Tucker (GC) we required immediate actions to be taken to take care of the problem. 5/29/14 - Austin - Reassigned from Rahman to Mahat - end 9/25/14: Mahat T/C : A phone call was received from the consultant of the potential buyer inquiring about the spill status. OER Voluntary clean up case number : 13CVCP086K DEC is waiting for a closure report from consultant. 10/7/14: Mahat DEC Mahat received a tank closure report from the contractor and it is uploaded on D2 for reference. 12/29/14: Mahat report review : DEC Mahat reviewed the UST. End point samples were below CP 51 guidnace value. All contaminated soil were removed from the site. No further investigation for remediation and deliniation is warrented by the Department. Hence, the spill case will be closed on the database and OER will continue with their program. "  
Remarks: "possible historic spill - U/G tank also found in concrete - cleanup pending"

DEC Memo: "8/1/16-Zhune spoke to Nicole Rice from Langan. Nicole said this site is in the Brownfield clean up program. Back in 2009 two tanks were removed and the concrete vault was left in place. Today during excavation the concrete vault was encountered. Piping in 2009 was not removed. While removing the vault product was encountered in the piping, Approximately 1 gallon of oil was released. they tried to clean as much as possible the spill. Process of remediating the site. There is an open spill # 0111802 that will be remediated under the Brownfield clean up program through the BCP site#C224201.  
8/4/16-Zhune PERSONAL NOTE; Unknown person edited my notes above with out my knowledge. However I am agree with the edits. "

**Site Description:**

Location: The site is located in the Williamsburg section of Brooklyn. The site is bounded by Havemeyer Street to the northwest, North 6th Street to the southwest, Macri Triangle park to the southeast, and North 8th Street to the northeast. Site Features: The site is completely covered with buildings in the northwest section; and covered with asphalt, concrete, and open park space in the southeast section. The site is bisected by an elevated portion of I-278 (the Brooklyn-Queens Expressway (BQE)) adjacent to the park. Current Zoning and Land Use(s): The site is zoned for residential, manufacturing, and commercial uses. The residential area is in the northwest section of the site. The manufacturing building along Meeker Avenue is unoccupied. Past Use of the Site: According to Sanborn maps, the former Ansbacher Color and Dye Factory (Ansbacher) occupied multiple buildings along North 6th Street, North 7th Street, and Metropolitan Avenue from ~1887 to ~1945. The assumed use of the facility was to manufacture paints and/or pigments for commercial and industrial use. In the early 1950's, the buildings in the southeastern section of the site were torn down to make room for the construction of the BQE. It is believed that during this construction, waste material and debris from the former Ansbacher plant may have been used as fill material in the project area. A Phase II - type investigation was conducted by

Env Problem:

the New York State Department of Transportation (NYSDOT) in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed by the New York State Department of Environmental Conservation (NYSDEC) during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. In 2015, the NYSDEC initiated an investigation on the perimeter of the site to identify the origin of chlorinated solvents found in groundwater beneath the sidewalk as part of routine sampling. Site Geology and Hydrogeology: The site is underlain by fine to medium sands; with limited quantities of coarse sand, gravel, and silt throughout the site at varying intervals. Groundwater is approximately 9.5 - 12.5' below grade. Flow direction in shallow groundwater is toward the west-southwest, while deeper groundwater appears to flow towards the east. (This may be due to the presence of the "L" train subway tunnel underneath North 7th Street.) Nature and Extent of Contamination:- Soil Sampling was completed in multiple stages from 1988 to 1999. The primary contaminants of concern in soil at this site are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 7,500 ppm, well above the cleanup objective for commercial use (16 ppm). This soil failed for EP Toxicity (48 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Lead has been found at concentrations up to 10,600 ppm, well above the cleanup objective for commercial use (1,000 ppm). This soil failed for EP Toxicity (20.3 mg/l, 5.0 mg/l criteria), indicating the soil is hazardous. Mercury was also found at concentrations up to 294 ppm, well above the cleanup objective for commercial use (2.8 ppm). These concentrations were all found in the vicinity of the "arsenate of lead" building in the southeast area of the site, which is now located in the footprint of the BQE. Groundwater Sampling has been completed in multiple stages from 1988 to 2015. The primary contaminants of concern in groundwater are arsenic, lead, and mercury. Arsenic has been found at concentrations up to 15,500 ppb, well above the Class GA standard of 25 ppb. Lead has been found at concentrations up to 431 ppb, above the Class GA standard of 25 ppb. Mercury has been found at concentrations up to 75 ppb, well above the Class GA standard of 0.7 ppb. These concentrations were all found in the vicinity of the "arsenate of lead" building in the southeast area of the site, which is now located in the footprint of the BQE. In 2015, groundwater in the northwest portion of the site was also found to contain tetrachloroethene (PCE) up to 1,900 ppb, trichloroethene (TCE) up to 120 ppb, and cis-1,2-dichloroethene (DCE) up to 320 ppb. PCE, TCE, and DCE all have a Class GA standard of 5 ppb. Significant Threat: The site does not constitute a significant threat to human health or the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

**BQE/ANSBACHER COLOR & DYE FACTORY (Continued)**

**S106780917**

Health Problem: Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

Record Updated Date: 02/16/2016  
Update By: JBSWARTO  
Site Description:

Location: The Site is located in an urban area in the Williamsburg section of the City of New York and Borough of Brooklyn (Kings County). The site is located on the corner of North 10th Street and Roebling Street. Site Features: The property is developed with two one-story buildings. One is currently occupied by Brooklyn Moto Club and Brooklyn Moto Service LLC, which rents space in the building for motorcycle repair. There are two smaller one-story structures. Parking areas surround the structures. The entire site is paved with several areas of overgrown vegetation. Current Zoning and Land Use: The site is currently zoned M1-2 (light manufacturing) with an R6A (residential) overlay and is currently occupied by a motorcycle repair operation and storage business. The site has a New York City designation for hazardous materials as a result of recent rezoning from the previous MX8 zoning (heavy industrial use). Past Use of the Site: The Site was developed with a varnish research works in 1942. In 1965, there were two chemical warehouses on site. Site Geology and Hydrogeology: The elevation of the Site ranges is approximately 10-14 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the east. The geologic setting of Long Island consists of crystalline bedrock overlain by layers of unconsolidated deposits. The bedrock is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and/or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Soil at the Site is described as historic fill materials to a depth as great as 4 feet below the surface followed by brown sand, red clay, brown clay black gravel, black/brown silt. The depth to groundwater beneath the Site is approximately 7 feet below grade and flows to the northeast. Env Problem: Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available. Health Problem: Information submitted with the BCP application regarding the

DEC Memo: "charles sosik. - x 112 phase II bering done. Went back to gauge well and found what appears to be fuel oil . They will be returning monday to perform addition testing and work. 5/11/16- DEC Piper received RAWP 5/25/16- DEC piper reviewed RAWP. Plan is not acceptable as it does not address soil contamination. STIP generated and sent to : N7 Owner LLC C/O Adam America Real Estate 850 3rd Avenue, Suite 13D New York, NY 10022 Attn: Omri Sachs 6/16/16-Vought-DEC Piper out of office and sent Vought email that Jeff, If you can check my hard mail box and find the signed stip for this site, you can let Kim know that she may continue OER 's RAWP and install the requested recovery wells that I discussed with her. I will contact her on Monday to discuss additional work. Thank you. Vought sent email to EBC Somers with cc to DEC Piper and OER Zhang that Kim, Ryan is out of the office this week. We did indeed receive the signed Stipulation Agreement and as per Ryan s email below, the Department approves the implementation of the RAWP including the installation of the recovery wells. Ryan noted below he will contact you on Monday when he returns to the office. Thanks. Vought received reply from EBC Somers with cc to DEC Piper and OER Zhang that Thank you Jeffrey. I will inform the developers that they can continue their excavation per the RAWP as they complete

Contact Name: SARAH LOPAS  
Contact Phone: (646) 459-3525  
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ROMMEL 12/9/03 MT //TRANFERRED FROM TIPPLE TO ROMMEL 6/8/05 - Site temporarily assigned to TLGibbons in Central office, Albany 9/26/05 - Called AKRF, who called in spill, and found out that Marcus Simons (646-388-9527) is assigned to project. 9/27/05 - Spoke with Mr. Simons. The site was originally listed as being located @ South 8th St. and 10th Ave. Mr. Simons was quite sure that the actual address is South 8th St. and Kent Ave. The history of the property is described as a former winery. In 2002, AKRF conducted a Phase 2 investigation and identified petrolium USTs and plans to remove tanks before end of year. 2/10/06 - Spoke with Mr. Simons. Tanks have not been removed and he does not think it will happen before Spring 2006. Recommend sending spill back to regional office for follow up. 11/19/07: Transferred to Sun/Sellberg as per Sun. (JS/MS) 3/31/08: Establish contract with AKRF. 420-430 Kent Avenue. Rector Hylan identified as RP. Letter send 3/31/08. (JS/MM) 5/12/08: Report not received. Former winery may have already been demolished; propped luxury buildings may have been already built. 2nd TCR/SIR letters sent to Rector Hylan and Schaefer Landing Sales Office.(JS/MM) 5/20/08: Address changed to 420 Kent Avenue based on new information obtained from P. Neiman of Rector Hylan and AKRF. (JS/MM) 5/19/08: As per the telephone conversation with Mr. Neiman and the fax sent to the Department, AKRF stated that if construction were to occur at the site, then remediation would be necessary. Mr. Neiman argued that since there was no construction, there was no need for remediation. (JS/MM) 5/20/08: Received AKRF's report. Found minor heavy metals and PCB contaminated soil; confined mostly to 0-4 bgs for soil. VOC/SVOC contamination is in the 10,000's ppb range for soil. VOC contamination is in the 1,000's ppb range for groundwater. SVOC contamination is in the 100's ppb range for groundwater. A Stipulation Agreement is necessary due to the high levels of contamination. (JS/MM) 5/27/08: Subsurface investigation letter + stipulation agreement pending approval from JS. (JS/MM) 6/18/08: Received fax retaining John Schretzmayer from Associates Environmental Services (JS/MM) 08/05/08: Transferred to Kolleeny/Mandac. - JK 08/19/08: Email from Associated Env, should be receiving report via email. (JK/MM) 09/23/08: Received SIR (JK/MM) 10/16/08: SSI needed; follow AES recommendation to pull USTs and additional SB/GW around B-5 and B-6; Stip Agreement sent, has not been received. (JK/MM) 01/05/09: Work plan due 11/14/08, still not rec'd. (JK/KG) 01/06/09: Spoke to John Schretzmayer (AES) about work plan. He said he submitted it to M. Mandec. He will email me a copy today and send a hard copy in the mail. (JK/KG) 01/29/09: Still have not rec'd work plan. Sent the following email to Schretzmayer: Mr. John Schretzmayer, Per our conversation on January 6, I requested the work plan for the above referenced site be resubmitted to my attention. To date, I have not received it. Please send me a pdf and hard copy in the mail. Please let me know if you have any questions. (JK/KG) 02/05/09: Rec'd email on 02/04/09 stating, ok, will do referring to submitting work plan. No documents received. (JK/KG)

**PARKING LOT -MTBE (Continued)**

**S106001848**

02/27/09: Tried to call Pincus Neiman (212-344-8357) to inform him that the work plan has not been submitted. Called two times but there was no answer. Called and left message for John Schretzmayer. (JK/KG)  
03/03/09: Failure to comply letter sent to P. Neiman. Work plan due  
04/03/09: Work plan should detail additional soil and groundwater sampling and removal of underground storage tanks. (JK/KG) 04/06/09: On 4/3/09 rec'd fax and pdf of Remediation Work Plan dated 3/30/09; under review. (JK/KG) 04/22/09: Scope of work proposed in work plan includes removal of USTs in the southern lot, collection of soil and groundwater samples, excavation and removal of soil in the vicinity of borings B-5 and B-6, and submission of an investigation summary report. The work plan was approved with some modifications. If groundwater is encountered within the areas of excavation, samples should be collected. Any monitoring wells destroyed by excavation activities should be replaced. A full round of groundwater samples should be collected once excavation is complete and replacement wells have been installed. All monitoring wells should be surveyed to determine the local groundwater flow direction. The approval letter also stated that PBS records do not indicate the presence of any registered tanks at the site, although AES has indicated there may be several tanks in the northern and southern portions of the lot. All tanks discovered should be properly closed and registered with the department. A tank closure assessment report should be prepared and submitted. Any tanks taken out of service prior to 1987 do not need to be registered with NYSDEC. The tank closure assessment report and investigation summary report are due July 17, 2009. (JK/KG) 07/29/09: Summary report is past due. Left a message for John Schretzmayer to call with an update. (JK/KG) 07/30/09: Christine from Associated Env. called and said site work will begin next week and the report will be submitted by the end of August. (JK/KG) 09/15/09: Spoke to Christine at AES. She said they are still at the site and the work should be completed in the next couple of days. Follow-up with AES for TCR and investigation summary report. (JK/KG) 11/03/2009: This spill case was transferred to A. Doronova. - AD 12/16/2009: Called and left a message to J. Schretzmayer regarding submission of the report. AD 03/02/2010: received an e-mail from C. Mazzarella saying: Ainura As discussed, attached please find pdf version of October 2009 UST Report. Please let us know if you were able to locate the original hard copy previously mailed to Kathleen Green. If not, we will send a duplicate. Thank you Christine Mazzarella Associated Environmental Services, Ltd. 25 Central Avenue Hauppauge, New York 11788 631 234 4280 tel 631 234 4297 fax christinem@assocenvsvcs.com DL the report to eDocs. Will review. AD 03/03/2010: Reviewed the report. It states that in August, 2009 two 2,000-gallon fuel oil USTs were removed off-site followed by end-point soil sampling. Eight samples were collected. Elevated levels of VOCs and SVOCs were found in these samples. In September, 2009 five 4,000-gallon diesel USTs were removed from the site, followed by collection of end-point samples. Eight samples were collected for lab. analysis. Analytical results indicated no VOCs and some elevated levels of SVOCs in these samples. A total of 197.2 tons of contaminated soil were removed from this area of excavation off-site. Based on field observations and analytical data, AES recommends further subsurface delineation of soil and GW contamination in the area of former fuel oil USTs field. Later spoke with John Schretzmayer of AES regarding a work plan for supplemental investigation. Requested to submit such work plan for review and approval. AD 06/22/2010: Called and left a message to J.

Schretzmayer of AES regarding the work plan submission. AD 06/24/2011: Spoke with J. Schretzmayer of AES regarding a work plan submission. He will review his files and get back to us shortly. AD 10/04/2011: Did not receive any response from Mr. Schretzmayer of AES. AD 12/28/2011: Called and spoke with Greg of AES. He told me that Mr. Schretzmayer is aware of the situation with site, and that he will call me back. AD 02/2012: Did not receive any response from AES. AD 03/21/2012: Called and spoke with Greg of AES regarding work plan submission. Asked him about site owner info update. He promised to follow up on this matter. AD 06/22/2012: Called and spoke with Greg regarding the still unsubmitted work plan. Requested that Mr. Schretzmayer contact me on Tuesday, June 26, 2012. To issue a letter. AD 07/10/2012: Issued and sent a letter to Pincus Neiman of Rector Hylan Corp. by certified mail # 7006 0100 0006 2620 0527. Required to submit the investigation work plan by August 7, 2012. AD 08/01/2012: The letter was returned by USPS as unable to forward. AD 08/08/2012: Called to Mr. Neiman to the following number: 1-212-344-8357. Left message to his receptionist. AD 08/13/2012: Received a message from Mr. Neiman with his contact phone: (718)-388-7748. Called and spoke with Mr. Neiman. Told him that the letter sent to his address at 19, Rector Street, New York came back as undeliverable. Asked for his new address. It is: 135 Hooper Street, Brooklyn, NY 11211 Explained to him that I had contacted AES several times regarding submission of the work plan for the site, but it was never submitted. Issued a new certified letter # 7006 0100 0006 2620 0534. Work plan submission is due September 3, 2012. Changed site priority to P1. AD 08/27/2012: Received a call from John of Associated Env. He asked for a time extension to submit a work plan till September 10, 2012. Granted this request. WP is due September 10, 2012. AD 10/22/2012: Sent an e-mail to J. Schretzmayer of AES with a requirement to submit the work plan by 10/26/2012. AD 11/05/2012: Received the following e-mail from Mr. Schretzmayer: Based on the hurricane, I will get you the information this week as soon as my computers are up. Thank You, John Schretzmayer Associated Environmental Services, Ltd 25 Central Ave Hauppauge, NY 11788 631.234.4280 631.234.4297 fax AD 11/29/2012: Did not receive the work plan. Sent an e-mail to Mr. Schretzmayer with a final deadline for work plan submission - December 6, 2012. Called and spoke with Mr. Neiman regarding the work plan. Informed him that the work plan was not submitted yet by his consultant. Told him about final deadline for work plan submission. AD 12/07/2012: Received an e-mail from J. Schretzmayer with an attached work plan. His e-mail said: Please call me tomorrow regarding this work plan. The work plan was submitted some time ago and I have notes that we spoke and it was ok to proceed. I will forward the subsequent work that was completed based on the work plan that you approved. I looked at the work plan. Its dated December 1, 2009. This work plan was not received by DEC before. Will review the work plan. AD 12/20/2012: Called and spoke with J. Schretzmayer. Notified him that this work plan was not received by DEC previously. Reviewed the work plan. It proposes to install eight monitoring wells in the former fuel oil USTs field and to remediate the residual soil and groundwater contamination using in-situ chemical oxidation via injection points. The number and locations of the proposed wells are questionable. Simultaneous implementation of the both investigation and remediation stages is also questionable. Discussed the work plan with J. Kolleeny of DEC. The work plan should be revised. AD 12/27/2012: called several times to AES to discuss the work plan with J. Schretzmayer but

unsuccessfully. Could not leave a message to to phone settings. AD 01/02/2013: Called to J. Schretzmayer. Called and left a message. AD 03/12/2013: Called and left a message to Mr. Schretzmayer regarding report submission. AD 06/03/2013: Called to inquire regarding the unsubmitted report. Mr. Schretzmayer told me that he sent the report on my e-mail, which I did not receive. Requested to submit the report via regular mail. AD 06/06/2013: Received the following e-mail from J. Schretzmayer: A hard copy and a digitized copy f the documents you requested will be sent to your office for review next week. Please call when you are in receipt of the documents. Thank You, John Schretzmayer Associated Environmental Services, Ltd 25 Central Ave Hauppauge, NY 11788 NYC/NYS/NJ/Port Authority of NY/NJ MBE Certified AD 06/21/2013: Did not receive the report. AD 06/26/2013: Did not receive the report. Sent an e-mail to Mr. Schretzmayer. AD 07/11/2013: Received the following e-mail from AES: Sorry I was out during the holiday, I got your message, the report will be sent out. the tracking # 899674302419, please call to discuss upon receipt. Thank You, John Schretzmayer Associated Environmental Services, Ltd 07/18/2013: Received the following e-mail from AES: Please find attached. Thank You, John Schretzmayer Associated Environmental Services, Ltd 25 Central Ave Hauppauge, NY 11788 NYC/NYS/NJ/Port Authority of NY/NJ MBE Certified 631.234.4280 631.234.4297 fax DL the report to eDocs. Will review. AD 08/14/2013: Reviewed the IRM 2010 report. It states that the depth to groundwater at the site was determined to be approximately four (4) - eight (8) feet below ground surface. Representative groundwater samples were collected from 8 site wells on March 11, 2010. The groundwater samples collected were submitted for analysis via EPA Method 8260 VOCs STARS and EPAS Method 8270 SVOC STARS. The analytical results for the groundwater samples from MW-2, MW-3, MW-5 and MW-8 indicated that there were VOCs detected at concentrations, which exceeded the respective NYSDEC Groundwater Standards. GW data (in ppb of TVOCs): MW-1 - ND; MW-2 - 47; MW-3 - 4,115; MW-4 - ND; MW-5 - 15.4; MW-6 - NS; MW-7 - ND; MW-8 - 1,919. Remedial Injections: RegenOx"l was injected in (13) thirteen points located in the southern portion within the onsite building and just outside the building. A total of 780 pounds Part A, and 780 pounds Part B of RegenOx and 2,600 gallons of water was injected in the vicinity of the impacted MW locations. Locations of the injections borings were based on the GW results collected on March 11, 2010. The injection borings were installed by direct push methods. The injection rate and pressure was continuously monitored. The fluids were pumped at a slow pace and with pressure just sufficient to overcome the subsurface pressure at the point of injection. Recommendations: AES recommends in the report that GW samples should be collected approximately three (3) months following the injection to determine the effectiveness of the injections and determine if additional injections are necessary. Spoke with J. Schretzmayer of AES regarding further actions at the site. Required to perform GW sampling as most recent data are from March 2010. He asked for a letter or an e-mail for their client. Will issue a correspondence. AD 08/16/2013: Issued and e-mail to the site owner with a request to perform GW sampling and to submit GW monitoring report by October 1, 2013. AD 10/02/2013: Did not receive any report. AD 10/09/2013: Called and spoke with J. Schretzmayer of AES regarding GW sampling report. he told that due to religious holidays the site owner was unavailable and they could not get access to the site. He spoke with the client and they are planning to visit the site next

week. later in the day I received the following e-mail from J. Schretzmayer: I spoke with Mr. Pincus this evening. I m currently arranging access to the property for next week. A round of sampling will be conducted during the site visit as discussed previously. I will submit the report once I receive back the laboratory results. Thank You, John Schretzmayer Associated Environmental Services, Ltd 25 Central Ave Hauppauge, NY 11788 NYC/NYS/NJ/Port Authority of NY/NJ MBE Certified 631.234.4280 631.234.4297 fax AD 10/25/2013: Received the following e-mail from J. Schretzmayer: Could you please call me in the office regarding the above referenced spill. We went out there this morning to collect the GW samples Thank You, John Schretzmayer Associated Environmental Services, Ltd 25 Central Ave Hauppauge, NY 11788 NYC/NYS/NJ/Port Authority of NY/NJ MBE Certified 631.234.4280 631.234.4297 fax Called and spoke with Mr. Schetzmayr. He informed me that AES visited the site and find out that some wells were destroyed. Told him to replace the destroyed well. Before proceeding with the well replacement, a site plan with proposed well location should be submitted to DEC. AD 12/2013: Called and left a message to AES. AD 12/18/2013: Did not received the requested site plan. Called and spoke with Mr. Schetzmayr. He will submit the site plan with the proposed well location. AD 12/22/2015: Called and left a message to Mr. Schretzmayer. AD 02/2016: Called and tried to leave a message to Mt. Neiman. His message box is not set up. AD 08/02/2016: I was told that this site is now under BCP Program #C224201 and is managed by Mr. Hoque in Albany. Some free product in an old piping was discovered yesterday on the site during the site re-development. The new spill case No. 1604407 was assigned to Mr. Hoque as well. AD "SOIL BORINGS INDICATED SOIL CONTAMINATION AS WELL AS GROUND WATER. AREA WAS ONCE A FUELING FACILITY. REMEDIATION TO FOLLOW IN NEAR FUTURE."

Acres: 1.835  
HW Code: C224201  
SWIS: 2401  
Town: New York City  
Record Added Date: 12/02/2014  
Record Updated Date: 06/06/2016  
Update By: MJKOMORO  
Site Description:

Location: The 420 Kent Avenue site is located in an urban area in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of South 8th Street to the north, Kent Avenue to the east, what would be an extension of South 9th Street followed by Schaeffer Landing (a new residential development) to the south, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 79,800 square feet (1.83 acres) and is occupied by three vacant buildings and an associated parking area. A vacant two-story approximate 31,800 square ft building occupies the northern portion of the property. The southeastern portion of the property is occupied by an approximately 22,732 square-foot two- to three-story vacant building. The southwestern portion of the property is occupied by an approximately 13,200-square foot one-story vacant warehouse. Current Zoning and Land Use: The site is located in R7-3 residential district with a C2-4 commercial overlay along Kent Avenue. The site is currently not occupied. Past Use of the Site: Past land uses include a meter company with an associated iron foundry and a portion of a ferry company (circa 1887); iron and steel corporation, a pipe and iron company, two factories and manufacturing facilities and vacant land (circa 1918); Schaefer Brewing Company from at least 1935 to at least 1965; warehouses and the Center for Special Education from at least 1979 to at least 1986; and, more recently, a packaged foods warehouse and distributor, a dry-goods and electronics warehouse and trucking company, a lighting fixture warehouse and distributor, a film studio and a partially occupied school for disabled children. Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by brown to black medium-grained gravelly sand with varying amounts of wood chips, glass, brick, ash, concrete, and asphalt extending to depths of up to 15 feet below grade surface (bgs). Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 100 feet below the surface. Groundwater is between 12 to 15 bgs. The groundwater elevation is highest in the southeastern part of the site and appeared to flow to the west-northwest toward the East River. Soil and groundwater samples were analyzed for volatile organic compounds(VOCs), semi-volatile organic compounds(SVOCs), metals, and

PCB/pesticides. Soil: A total of thirty-one soil borings were installed to depths ranging from 4 feet to 30 feet bgs. A total of 67 grab soil samples were collected. Several volatile organic compounds (VOCs) were detected at concentrations exceeding NYSDEC Part 375 unrestricted use soil cleanup objectives(UUSCOs) and/or restricted residential use soil cleanup objectives(RRUSCOs) in four soil borings. The petroleum-related compound benzene was detected in soil at a maximum concentration of 12 parts per million(ppm), which exceeds the RRUSCO of 4.8 ppm. No PCE and TCE were detected in soil samples. Semi-volatile organic compounds (SVOCs) primarily polycyclic aromatic hydrocarbons (PAHs) were detected at concentrations exceeding Part 375 UUSCOs and/ or RRUSCOs in three locations. The maximum concentration of benzo(b)fluoranthene, a representative PAH at the site, was 110 ppm in a sample at 3-4 feet bgs. Several metals were detected above the concentrations of both the UUSCOs and the RRUSCOs. Lead was detected in SB-02 at a maximum concentration of 700 ppm, which exceeds the RRUSCO of 400 ppm within the top 3 to 4 feet of depth bgs. Mercury was detected up to 3.2 ppm in SB-01 at 9 to 10 feet bgs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Six monitoring well were installed during the RI and eight groundwater samples, six from the new wells, one from an existing well and one duplicate samples were collected. Tetrachloroethene (PCE) was detected in two wells on the eastern side of the site with a high of 9 parts per billion(ppb) which is above the NYSDEC TOGS 1.1.1 Class GA Ambient Water Quality Standards, or Guidance Values (AWQSGV) of 5 ppb. Naphthalene was detected from 14 ppb to 450 ppb (AWQSGV of 10 ppb). Benzene was detected above the AWQSGV of 1 ppb ranging from 6.1 ppb to a maximum of 2,900 ppb in MW02. Both dissolved and total metals were found in groundwater and exceeds their Class GA AWQSGVs. The dissolved metals detected were not contaminants of concern. Off-site impacts from groundwater are not expected. Soil Vapor, Sub-slab vapor and Ambient Air: One ambient air, five soil vapor samples and eight sub-slab samples were collected during the RI. Eight sub-slab soil vapor points were installed just below the building slabs to a depth of 1 foot bgs, while 5 soil vapor points were installed in the parking lot area to a depth of 5 feet bgs. Multiple VOCs, including petroleum related compounds were detected. The VOC compound benzene was detected in soil vapor samples ranged from a concentration of 6.26 ug/m<sup>3</sup> to a maximum concentration of 212,000 ug/m<sup>3</sup>, which was located closer to the former underground storage tank(UST). PCE was detected in one soil vapor sample at concentration 1.91 g/m<sup>3</sup>. No TCE was detected in soil vapor samples. No chlorinated volatile organic compounds(CVOCs) or benzene were detected in the sub-slab samples. Benzene was detected in the ambient air sample at 2.83 g/m<sup>3</sup>. No CVOCs were detected in the ambient air sample. Off-site impacts from soil vapor are not expected since the levels detected decrease substantially as the distance from the UST area in the middle of the site increases.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building or pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the

S117234304

subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

Program: BCP  
Site Code: 502497  
Acres: 1.056  
HW Code: C224200  
SWIS: 2401  
Town: New York City  
Record Added Date: 12/02/2014  
Record Updated Date: 06/06/2016  
Update By: MJKOMORO  
Site Description:

Location: The 416 Kent Avenue site is located in an urban area along the East River in Brooklyn, Kings County. The site is on the southern portion of the city block bordered by what would be an extension of Broadway followed by Block 2467 to the north, Kent Avenue to the east, what would be an extension of South 8th Street to the south followed by Block 2134, and the East River to the west. Site Features: The irregularly-shaped site encompasses an area of approximately 46,000square feet (1.056 acres) and is occupied by an asphalt-paved parking lot. There are no buildings on the site.Current Zoning and Land Use: The site is located in zoning districts R7-3 and C4-3. Zone C4-3 encompasses approximately 3,900 square feet of the property, and the remaining approximately 42,100 square feet is in zoning district R7-3 with a C2-4 commercial overlay. The property is currently used as an accessory parking and staging lot for the film studio businesses on the adjacent property to the south.Past Use of the Site: Past land uses associated with the site include a ferry terminal (1887), vacant land (1935 to 1965) and a trucking company (2001 to circa 2012).Site Geology and Hydrogeology: The subsurface strata at the site consists of historic urban fill characterized by dark gray and brown fine to coarse-grained sand with varying amounts of brick, concrete, gravel, organic clay, coal, and slag extending to depths ranging from 2 to 13 feet below ground surface (bgs)in the majority of the site and up to 24 feet bgs next to the East River. The fill layer is underlain by sand and silt layers with trace gravel and mica schist. Bedrock underlying the site is part of the Hartland Formation and depth to bedrock is approximately 75 to 100 feet bgs.Groundwater is between 6 and 15 feet bgs and is flowing to the west, toward the East River.

Env Problem: Nature and Extent of Contamination:Soil and groundwater samples were analyzed for volatile organic compounds(VOCs), semi-volatile organic compounds(SVOCs), metals, and PCB/pesticides.Soil: Twenty-five soil samples were collected from ten soil borings locations at depths ranging from 0 to 16 feet below ground surface (bgs). Semi-volatile organic compounds (SVOCs), primarily polyaromatic hydrocarbons (PAHs) were detected at concentrations exceeding 6NYCRR Part 375 unrestricted use soil cleanup objectives (UUSCOs) at 7 of 10 locations and above restricted residential soil cleanup objectives (RRSCO) at 4 of 10 locations. The maximum concentration of

benzo(b)fluoranthene, a representative PAH at the site, was 13 ppm in SB10 at 0-2 feet bgs. A range of metals were detected above both the UUSCO and the RRSCO. Lead was detected at a maximum concentration of 1,000 ppm, which exceeds the RRSCO of 400 ppm within the top 8 feet bgs. Also, a Toxicity Characterstics Leaching Procedure(TCLP) lead concentration of 13 ppm was detected in a sample at 8 - 10 feet bgs, exceeding the characterstic hazardous waste thresold concentration of 5 ppm. Mercury was detected up to 5.8 ppm at 18 to 20 feet bgs. Data does not indicate any off-site impacts in soil related to this site. Groundwater: Seven groundwater samples were collected at depth ranges from 15-22 feet bgs. VOCs, SVOCs, dissolved and total metals concentrations were detected above NYSDEC TOGS 1.1.1 Class GA Ambient Water Quality Standards or Guidance Value (AWQSGV). The dissolved metals detected were not contaminants of concern. Tetrachloroethylene (PCE) was detected in groundwater from 5 parts per billion (ppb) to 38 ppb in 6 of 7 wells. The groundwater standard is 5 ppb. The representative SVOC benzo(b)fluoranthene was detected at 0.84 ppb (AWQSGV of 0.002 ppb.) Off-site impacts from groundwater are not expected because CVOCs were not detected in soil and there was no specific concern related to solvents. Soil Vapor and Ambient Air: Nine soil vapor samples, including one duplicate sample and one ambient air sample were collected and analyzed for VOCs. Petroleum VOCs and/or chlorinated solvents were detected in all of the 9 samples locations. PCE was detected in 6 of 9 samples at a maximum concentration of 65.7 ug/m3. Trichloroethylene (TCE) was also detected at a maximum of 5.08ug/m3. Data does not indicate any off-site soil vapor impacts related to this site.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy. Sampling indicates that soil vapor intrusion is not a concern for off-site structures.

DEC Memo: "11/26/14-Zhune called Mimi Raygorodetsky from Langan Engineering 212-479-5441. Could not get her. Left a message. Mimi Raygorodetsky-Project Manager Langan Environmental 212-479-5441 917-952-9906 cell mray@langan.com 12/5/14- Mimi Raygorodetsky from Langan called and said they performed a subsurface investigation at this site. They advanced 2 to 3 soil borings and found soil odor. They collected soil samples and the analytical results indicated the presence of contamination. They monitored the well and found a sheen on top of the water. They collected one groundwater sample and the analytical results indicated no contamination. She also mentioned that five USTs were removed in 2009 and the soil endpoint confirmatory samples indicated no contamination. The site is entering the Brownfield program and it will be further investigated and further remediated through the program. They are going to star construction of three towers on July 2015. They will send the report once they have it. 12/5/14-Mimi sent the following email. The same

LLC (420 Kent Avenue LLC) owns both 418 and 420 Kent Ave. Each parcel is being filed separately for redevelopment. The recent spill report that I called in was for 418 Kent Avenue. 12/9/14-Mimi sent the following email. Applications are pending w/DEC for both sites. We anticipate DEC will evaluate eligibility on 12/12 and we should know shortly thereafter. The sites, however, won't formally enter the program until after a 30 day public notice period that will end sometime in January. 12/11/14-Hiralkumar Patel. 1:52 PM:- spoke with Mimi about Phase II report. she mentioned that Phase II report is not ready yet. asked her to submit sample results, scaled site map with boring/well locations and detailed boring/well logs. also asked her to submit property owner's information. reviewed remediation database. BCP application (# C224200) is under review. found sample result summary tables, site maps and boring/well logs submitted with BCP application. sample results show - minimal VOC impact to soil (maximum: 450 ppb Xylene at 7.5-9 ft depth, but nothing in deeper sample) - SVOC impact in shallow soil (due to backfill material) - high metals in soil and groundwater - chlorinated solvent in groundwater samples (max.: 38 ppb PCE) and soil-vapor samples (max.: 65.7 ug/m3 PCE) 02/09/15-Hiralkumar Patel. found BCP application (# C224200) approved. 1:22 PM:- spoke with MD Hoque, BCP project manager. he asked to assign case to himself. case transferred to DEC Hoque. Spill closed 4/1/16. Being addressed in BCP."

Remarks:

"Caller advised received results from phase 2 and shows diesel in the soil. Clean up is pending."

DEC Memo: "3/19/08 - Steve Sangesland. New spill number for a new incident at a long term cleanup site. 3/19/08 - Raphael Ketani. Allegedly, a construction crew hit oil and it was bubbling up from the ground. I called Tony Kloss of Impact Environmental Remediation (908) 534-8820 and asked him why he had oil coming out of the ground. I asked him whether the crew hit another fuel tank (see the associated spill case #0712424 with 10 tanks), or whether the crew hit a pipe. Mr. Kloss said that it was nothing like that. He said that he talked to his crew and the consultants on site about this. He added that a coffer dam was constructed on the site and a guzzler truck is collecting oil contaminated water from inside the dam, that's all. As the spill site is already being managed through the earlier case #0712424, and as a complete removal of all contaminated soils and all tanks is presently underway at the site, and as the contaminated water is being collected, I am referring this case to the earlier one and closing the spill case. "

Remarks: "CONSTRUCTION CREW STRUCK OIL AND BUBBLING UP FROM GROUND , NO FURTHER INFO"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD. Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is transferred to I. Islam. The site is under remediation by LiRo Engineers. - II 4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - II 5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding of responsible agency to handle the former MGP site remediation.- II. 5/31/03- Joe Moloughney of Central Office confirmed via email that this site would be remediated under the KeySpan Consent Order for MGP sites. This site has been assigned with # 224055 as the MGP site. Therefore, the spill is closed.- II"

Remarks: "also ground water affected - reprts says that site is contaminated with petro and heavy metals. Also see spill # 9401167."

Site Description:

Location: The Williamsburg Works Manufactured Gas Plant (MGP) site is located in a commercial/industrial area in the Williamsburg section of Brooklyn, New York. The site is approximately six acres in size and is composed of three parcels of land located on the east bank of the East River between North 11th and North 12th Streets on the west and east sides of Kent Avenue. Site features: Site features include a vacant asphalt paved lot and the foundation slab for the recently demolished document storage warehouse on the west side of Kent Avenue and a two-story commercial building on the east side of Kent Avenue. Current zoning and land use: The land uses in the area surrounding the MGP site are currently a mix of industrial, residential, and parkland uses. The privately-owned document storage warehouse was in active use until it was destroyed in a fire on January 31, 2015 and subsequently demolished. The vacant lot at 50 Kent Ave. is owned by the NYC Department of Parks and Recreation and used as an outdoor music venue, flea market and skate park. The two-story commercial building on the east side of Kent Avenue is privately owned and in active use. The nearest residential property is located approximately 1 block to the south. Past use of the site: A manufactured gas plant operated on the site from circa 1850 until approximately 1930. Following the decommissioning of the MGP, the lot was occupied by a NYC Department of Sanitation Garage that was demolished around 2000. Site Geology and Hydrogeology: The site is underlain by: urban fill and varied glacial sediments consisting of outwash sand and gravel, till, and lenticular clay more than 100 feet in thickness. The groundwater table is approximately 5 feet below ground surface. Groundwater flows to the west, toward the East River.

Env Problem:

The Remedial Investigation of the site has not been fully completed, since large portions of the site are occupied by buildings. However, the work that has been completed has identified significant coal tar contamination in the subsurface. Soils beneath the vacant lot at 50

Kent Avenue are heavily impacted. Design work is currently under way for an excavation IRM on this parcel during the 2015 field season, and tar collection wells have been completed around the perimeter of this property. Tar removal from these wells is taking place on a continuing basis. Tar contamination has moved off site to the north but does not appear to have reached the shoreline in that area. A large portion of the former plant footprint lies beneath a document storage warehouse. Test borings around the perimeter of this building confirm the presence of MGP tars in the area, and off site migration of this tar has taken place, leading to contamination of sediments beneath adjacent areas of the East River.

Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Site Description: The Kent Avenue Generating Station Site is located in Brooklyn, NY. It is along the waterfront (Wallabout Channel, trib to East River) on the west side of Kent Avenue, south of the intersection with Division Avenue. The site is the location of the former Kent Avenue Generating Station, which has since been demolished. Excepting activities related to building demolition and property rehabilitation, with respect to current use the site is considered inactive. The uses of the surrounding parcels are varied: across Kent Avenue is a NYC Park (Roberto Clemente Ballfield); immediately to the south is the Brooklyn Navy Yard 13 Acre Parcel Site (NYSDEC Site No. 224019A); immediately to the north across Division Avenue are commercial uses; properties to the northeast and to the southeast appear to have residential uses. Prior uses that appear to have led to site contamination include discharges during the period of operation of the power plant and on-site re-use of prior demolished structures as fill material. A number of environmental investigations of the property have occurred including a Phase II (2000) and other investigations focused on particular issues or areas of the site from 2006 to present. Reclassified to N. See V00732 - Kent Avenue Station Site. Work to be done under VCA Amendment.

Env Problem: The primary contaminants of concern at the site known at the time include PCBs, asbestos, various metals, petroleum constituents and PAHs. Investigations indicate SCG exceedances of PCB and petroleum compounds in sediments/ sludge contained in a large concrete structure (known as "the ash pit"); asbestos, metals and PAHs in subsurface soils/fill; and an area of groundwater petroleum contamination in the southwest corner of the property. The significance of the contamination needs to be determined.

Site Description: Location: The site is located in a mixed-use area along the Brooklyn waterfront. It is bounded by Kent Avenue to the east, Wallabout Channel to the west, Division Avenue to the north, and the Brooklyn Navy Yard to the south. Site Features: The site is a currently vacant with no above grade structures. In the subsurface, a large concrete-lined pit is present in the northwest corner of the site and along the edge of the Wallabout Channel. A large concrete slab which is part of a former power plant foundation occupies the center of the site. The slab has been covered with clean fill. Current zoning/use. The site is zoned for industrial use, but is currently vacant. It is surrounded by commercial buildings and multiple occupancy residences. Past Use of the Site: The site was previously an electrical generating station and substation from 1906 until the late 1990s. The site was razed from 2007 to 2009. The main sources of contamination were the concrete-lined ash pit storage area and by-products of the electrical generating process which are scattered across the site. Site Geology and Hydrogeology: The site is underlain by a 5 to 10 foot layer of fill material. Under the fill are intermingled layers

of silt and sand down to roughly 100 feet below grade. Beneath the silt and sand is a clay confining unit. The water table lies roughly 8 feet below the ground surface. Based on the sites proximity to the Wallabout channel, groundwater levels are probably tidally influenced. The far western edge of the site is built out on piles over the bank of the Wallabout Channel.

Env Problem: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were SVOCs in soil, VOCs in groundwater and PCBs in the ash pit sediments. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan

Health Problem: The site is completely fenced, which restricts public access. Persons who dig below the ground surface may come into contact with contaminants in the subsurface soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

DEC Memo: "11/22/10 - Austin - This spill has been reassigned to Douglas MacNeal in DER-Albany, as part of a remediation project he is handling - end 11/24/10 - MacNeal - The Asbestos brought to the surface has been handled by a National Grid Contractor. I am awaiting a report from National Grid documenting the clean-up. Any additional asbestos material will be handled under the existing VCA (V00732) 3/31/2011 - MacNeal - The spill is closed. The date of closure is the date that correspondence was received from National Grid which contained air monitoring reports and a waste manifest which confirmed proper disposal of the asbestos which was released. Those items have been placed in edocs. "  
Remarks: "While taking bore samples has a release into the atmosphere. Location is a former ConEd site."

DEC Memo: "201150. see eDocs 12/13/06: Transferred from Breen to O'Connell. Spill submitted for closure by Con Ed. This site was a former Con Ed generating station, and previous investigations (circa 1999 through 2002) have found evidence of metals, SVOCs and VOCs in soil and groundwater, however the site is NOT in any remedial program. See also spill nos. 9910753, 9910993, 9911014 and 9911046. (JHO) 12/14/06: spoke with David Rubin, Con Ed Remediation project manager. Apparently the site is undergoing second Phase II for property transfer. Con Ed also plans on demolishing the former gen station building. They expect a summary report of investigation with recommendations for remediation from consultant during 1Q07. I told Dave to make sure DEC receives a copy, since we have a number of outstanding spills related to the site. (JHO) 1/9/08: This spill is closed, track under spill no. 9911014. (MA) "  
Remarks: "SPILL WAS ROUGLY 2 GALLONS OF OIL MIXED IN SOIL AT OLD CONED PLANT, NO LONGER IN USE. CON ED NUIMBER 201150:"

Updated By: kstang  
Site Description: The site did not qualify for addition to the Registry of Inactive Hazardous Disposal Sites. This site was listed in the Eckhardt subcommittee report as a disposal site. Investigation by the NYSDEC Regional offices indicate that this is an industrial operation to recycle, recover and refurbish drums and that no apparent disposal of hazardous or toxic waste have occurred here.  
Env Problem: None known. No apparent disposal of significant quantities of any hazardous waste.  
Health Problem: Not reported  
Dump: Not reported

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|                                         |                                        |

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### ***Federal Delisted NPL site list***

#### Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

#### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

|                                         |                                        |

### ***Federal CERCLIS NFRAP site list***

#### SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

|                                         |                                        |

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

|                                         |                                         |

### ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

|                                         |                                         |

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

|                                         |                                         |
|-----------------------------------------|-----------------------------------------|

### RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

|                                         |                                         |

## ***State- and tribal - equivalent CERCLIS***

### **SHWS: Inactive Hazardous Waste Disposal Sites in New York State**

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 11/14/2016  
Date Data Arrived at EDR: 11/16/2016  
Date Made Active in Reports: 01/04/2017  
Number of Days to Update: 49

Source: Department of Environmental Conservation  
Telephone: 518-402-9622  
Last EDR Contact: 11/16/2016  
Next Scheduled EDR Contact: 02/27/2017  
Data Release Frequency: Annually

### **VAPOR REOPENED: Vapor Intrusion Legacy Site List**

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 06/01/2016  
Date Data Arrived at EDR: 08/19/2016  
Date Made Active in Reports: 01/05/2017  
Number of Days to Update: 139

Data Release Frequency: Varies

## ***State and tribal landfill and/or solid waste disposal site lists***

### **SWF/LF: Facility Register**

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 10/04/2016  
Date Data Arrived at EDR: 10/06/2016  
Date Made Active in Reports: 01/04/2017

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

|                                         |                                                  |

### HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

### ***State and tribal institutional control / engineering control registries***

#### ENV RES DECL: Environmental Restrictive Declarations

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

#### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Data Release Frequency: Varies

#### **VCP: Voluntary Cleanup Agreements**

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Next Scheduled EDR Contact: 02/27/2017  
Data Release Frequency: Semi-Annually

#### **ERP: Environmental Restoration Program Listing**

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

#### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Telephone: 518-474-9034  
Last EDR Contact: 11/07/2016  
Next Scheduled EDR Contact: 02/20/2017  
Data Release Frequency: Varies

#### LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/18/2014

Next Scheduled EDR Contact: 02/27/2017  
Data Release Frequency: Varies

#### HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

### **Other Ascertainable Records**

#### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/12/2016

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009  
Date Data Arrived at EDR: 04/16/2009  
Date Made Active in Reports: 05/11/2009  
Number of Days to Update: 25

Source: EPA/Office of Prevention, Pesticides and Toxic Substances  
Telephone: 202-566-1667  
Last EDR Contact: 11/17/2016  
Next Scheduled EDR Contact: 03/06/2017  
Data Release Frequency: Quarterly

### FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009  
Date Data Arrived at EDR: 04/16/2009  
Date Made Active in Reports: 05/11/2009  
Number of Days to Update: 25

Data Release Frequency: Quarterly

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007  
Date Made Active in Reports: 04/10/2007  
Number of Days to Update: 40

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

|                                         |                                        |

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 06/30/2016

### E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Next Scheduled EDR Contact: 02/27/2017  
Data Release Frequency: Varies

### HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

Data Release Frequency: Annually

### SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013  
Date Data Arrived at EDR: 08/19/2013  
Date Made Active in Reports: 10/03/2013  
Number of Days to Update: 45

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### FEMA FLOOD ZONE

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
|---------------------------------------------|-------------------------|
| 3604970204F                                 | FEMA FIRM Flood data    |
| <u>Additional Panels in search area:</u>    | <u>FEMA Source Type</u> |

| 3604970202F                                 | FEMA FIRM Flood data    |
| 3604970203F                                 | FEMA FIRM Flood data    |

### NATIONAL WETLAND INVENTORY

| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u>            |
|------------------------------------|------------------------------------------------|
| BROOKLYN                           | YES - refer to the Overview Map and Detail Map |

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### *Site-Specific Hydrogeological Data\*:*

|                |            |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status:        | Not found  |

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|-------------------------------------------|
| Not Reported  |                         |                                           |

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

|         |                                            |
|---------|--------------------------------------------|
| Era:    | Paleozoic                                  |
| System: | Ordovician                                 |
| Series: | Ordovician                                 |
| Code:   | Oe (decoded above as Era, System & Series) |

#### **GEOLOGIC AGE IDENTIFICATION**

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information |          |          |                    |                |              |                           |                        |

| 1                      | 0 inches | 6 inches | variable           | Not reported   | Not reported | Max: 0.00<br>Min: 0.00    | Max: 0.00<br>Min: 0.00 |

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

### WELL SEARCH DISTANCE INFORMATION

| <u>DATABASE</u>  | <u>SEARCH DISTANCE (miles)</u> |

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

## Application for Records Under FOIL

### FOIL Request Form

Please complete the form below. If responsive records are located, you will be notified and informed of the required payment. Advance payment is required in check or money order payable to the NYC DEP at a cost of \$.25 per page, or actual cost of reproduction before documents will be released. Before you submit the request, please save a copy of your completed request for your records.

### Please read this before submitting a FOIL Request

- [DEP FOIL Frequently Requested Records](#)

Check one: Under Article 6 of the New York State Public Officers Law ("FOIL"), I hereby apply to:

- ☐ Inspect copies; or
- ☒ Receive copies of the following records.

Check one: Is this FOIL request the subject of ongoing litigation against New York City?

- ☐ Yes
- ☒ No

Specify/Describe the records you are requesting in detail. Include any relevant location, address, permit #, complaint #, court index #, incident date, etc. If applicable, please submit separate requests for multiple locations, account #'s or incidents.

Phase I Environmental Site Assessment

Records pertaining to: underground storage tanks (USTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage of hazardous materials, and/or hazardous materials activities.

Location: (If possible, list full street address, including borough)

Re: FOIL Request  
102-110 North First Street, Brooklyn, NY 11249

Dear Sir or Madam:

Pursuant to the Freedom of Information Law, we are requesting information regarding underground/aboveground storage tanks (USTs/ASTs), spill records, remediation sites, dump sites, soil and groundwater remediation, storage/treatment/disposal of hazardous materials or hazardous materials activities for the above referenced site. Your response can either be faxed to (212) 726-0942 or mailed to the address identified above as soon as possible. Please notify me if there are any costs associated with processing this request. If you have any questions, please call me at (646) 388-9576.

Thank you in advance for your assistance and cooperation.

Sincerely,

FOIL # 17-01-130

Dear Ms. Bosco:

This will acknowledge receipt of your request for records under the Freedom of Information Law, received by this office on January 10, 2017.

Your request has been forwarded to the appropriate Department program area(s) to identify documents that are responsive to your request and which may be made available pursuant to all applicable provisions of the Freedom of Information Law.

A determination as to whether your request is granted or denied will be reached in approximately 20 business days or we will notify you in writing if the responsible program area(s) should require additional time to locate, assemble, and review documents that may be responsive to your request.

Please note that, pursuant to Article 6 of the Public Officers Law, a charge may be applied to your request, including the actual cost of the medium used to respond to your Freedom of Information Law request and/or other related costs. When responsive records have been identified, you will be informed of any cost and how payment should be made.

Sincerely,

A handwritten signature in blue ink, appearing to read "Rosemarie Hewig".

Cell phone: 914-874-3358

Person completing questionnaire: William M. Kluczkowski, Vice President, DDG

Relationship to the site: Ground Lessee

Length of time associated with the site: 1 Year

- 1) When were the current buildings constructed? Do you have surveyed drawings? Blueprints? Geotechnical subsurface studies?

N/A

- 2) Have there been any renovation or additions since initial construction?

N/A

- 3) Is there any historic fill on-site? (Construction and demolition debris? Ash? Dredge spoils?)

N/A

- 4) Have there been any asbestos or lead assessment or abatement activities at the property? If there is asbestos on-site do you have an operations and maintenance plan?

N/A

- 5) Please describe land use at the property prior to construction of the current buildings.

N/A

- 6) Please describe activities at the site since construction of the current buildings, including previous tenants. Commercial activities such as dry cleaning and auto repair are of particular interest to this study.

N/A

7) Do you know of specific chemicals that are present or once were present at the property?

N/A

8) Do you know of any environmental cleanups that have taken place at the property?

N/A

9) Do municipal water and sewers service the site, or does it rely on private wells and/or a septic system?

N/A

10) Are you aware of any wells, public or private, on or near the subject property?

N/A

11) Please indicate the nature and frequency of trash removal from the subject property.

N/A

12) Are you aware of the current or former use, storage or production of any hazardous materials (petroleum products, solvents, paints, pesticides, etc) in any part of the subject site?

N/A

13) Are any environmental permits or licenses held currently, or in the past, relating to the property?

N/A

14) Are there any registrations held for underground or above ground storage tanks at the property (NYSDEC, NYCDOB, FDNY)?

N/A

15) Have any previous environmental reports, audits or investigations been performed at the site? If available, please provide copies, preferably prior to the site visit.

N/A

16) Does the site or any part of the site operate under a community right-to-know plan, safety plan, preparedness and prevention plan, spill prevention, countermeasure or control plan?

N/A

17) Does the property have any activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

N/A

18) Are you aware of any reports regarding hydrogeologic or geotechnical conditions on the property or surrounding area?

N/A

19) Please provide copies of any notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating environmental liens encumbering the property.

N/A

20) Please provide copies of any hazardous waste generator notices or reports.

N/A

21) Please advise of:

- a. any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property,
- b. any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property;  
and
- c. any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

22) Have any environmental liens been filed or recorded against the property under federal, tribal, state or local law?

N/A

23) Are you aware of value reduction on the property due to environmental issues?

N/A

24) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

The purchase price of the property assumes no major environmental issues present at the property.

25) Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

N/A

26) Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

N/A

Environmental Site Assessment – Site Questionnaire

Person completing questionnaire:

ROBERT LOEFFLER

Relationship to the site:

OWNER

Length of time associated with the site:

30+ YEARS

- 1) When were the current buildings constructed? Do you have surveyed drawings? Blueprints? Geotechnical subsurface studies? 1980's

NO, NO, NO

- 2) Have there been any renovation or additions since initial construction? NO

- 3) Is there any historic fill on-site? (Construction and demolition debris? Ash? Dredge spoils?) NO

- 4) Have there been any asbestos or lead assessment or abatement activities at the property? If there is asbestos on-site do you have an operations and maintenance plan? NONE

- 5) Please describe land use at the property prior to construction of the current buildings. ?

- 6) Please describe activities at the site since construction of the current buildings, including previous tenants. Commercial activities such as dry cleaning and auto repair are of particular interest to this study. NO

Purely commercial: storage for art (paintings)  
cabinet maker?  
eye glasses warehouse

- 7) Do you know of specific chemicals that are present or once were present at the property?

NO

- 8) Do you know of any environmental cleanups that have taken place at the property?

NO

- 9) Do municipal water and sewers service the site, or does it rely on private wells and/or a septic system?

Municipal water

- 10) Are you aware of any wells, public or private, on or near the subject property?

NO

- 11) Please indicate the nature and frequency of trash removal from the subject property.

?

- 12) Are you aware of the current or former use, storage or production of any hazardous materials (petroleum products, solvents, paints, pesticides, etc) in any part of the subject site?

None

- 13) Are any environmental permits or licenses held currently, or in the past, relating to the property?

None

- 14) Are there any registrations held for underground or above ground storage tanks at the property (NYSDEC, NYCDOB, FDNY)?

None

- 15) Have any previous environmental reports, audits or investigations been performed at the site? If available, please provide copies, preferably prior to the site visit.

None

- 16) Does the site or any part of the site operate under a community right-to-know plan, safety plan, preparedness and prevention plan, spill prevention, countermeasure or control plan?

NO

- 17) Does the property have any activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

No, none

- 18) Are you aware of any reports regarding hydrogeologic or geotechnical conditions on the property or surrounding area?

No

- 19) Please provide copies of any notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating environmental liens encumbering the property.

Have none

- 20) Please provide copies of any hazardous waste generator notices or reports.

none

- 21) Please advise of:

a. any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on or from the property, NO

b. any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property; NO and

c. any notices from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products. NO

- 22) Have any environmental liens been filed or recorded against the property under federal, tribal, state or local law?

NO

23) Are you aware of value reduction on the property due to environmental issues? NO

24) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Fair Market

25) Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? No

26) Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property? None

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 528 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

| <u>Year</u> | <u>Source</u>                  | <u>TP</u> | <u>Adjoining</u> | <u>Text Abstract</u> | <u>Source Image</u> |
