PHASE I ENVIRONMENTAL SITE ASSESSMENT

for

**794 Bedford Avenue
Brooklyn, NY 11205
(Block: 1886, Lot: 71)**

October 6, 2021

**PHASE I
ENVIRONMENTAL SITE ASSESSMENT
ASTM E 1527-13**

SITE ADDRESS: 794 Bedford Avenue
Brooklyn, NY 11205
Block: 1886, Lot: 71
(Residential)

PREPARED FOR: Mr. Joel Landue
794 Bedford Avenue
Brooklyn, NY 11205

PREPARED BY: RSK Environmental Group, LLC
132-02 89th Avenue, Ste. 222
Richmond Hill, NY 11418
Tel: (718) 438-2200

DATE: October 6, 2021

SCOPE OF THIS PHASE I ENVIRONMENTAL SURVEY

To thoroughly inspect all accessible areas and facilities in and around the property located at **794 Bedford Avenue, Brooklyn, NY 11205** and to assess the environmental status of the subject property. The tasks were conducted via a visual inspection of the site and review of available historical records documenting usage of the property along with persons knowledgeable about the subject property.

The main objective of this Environmental Site Assessment (ESA) was to identify *Recognized Environmental Conditions (RECs)* in connection with the subject property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of release into the environment. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13.

This survey assessed any ongoing or former operations, whether current or former operators/lessees used or stored chemicals on the premises, if any waste materials arising from operations have been dumped on the premises or if any landfill operations have taken place. Visual inspection of the immediate vicinity around the premises were also conducted, wherever possible or reasonable, in order to determine whether any sites adjoining the premises are used for heavy manufacturing or the generation, storage, shipping or disposal of hazardous waste, chemical materials or fuel supplies; if there are any underground or suspended transformer, capacitors, etc. containing polychlorinated biphenyls (PCBs) on the subject property or if there are any underground storage tanks (USTs).

As part of this environmental survey, inquiry was made with the U.S. Environmental Protection Agency (EPA) and appropriate State and Local Agencies to ascertain the location of any potential, alleged or known hazardous waste sites within a one-half mile radius of subject property. The CERCLIS (Comprehensive Emergency Response, Compensation and Liability Information System) is the U.S. EPA's compilation of such alleged, potential or known hazardous waste sites brought to the attention of the U.S. EPA Office of Emergency and Remedial Response, which has been, will be or are currently under investigation for suspected or known environmentally hazardous activities. The National Priorities List (NPL) is the U.S. EPA's listing of known contaminated sites, which have been targeted for cleanup due to the immediate threat posed to human health, and/or the environmental integrity of that property as well as its marketability.

If appropriate inquiry was also made with the US Environmental Protection Agency and appropriate State and Local agencies regarding their acknowledgment that the presence and/or disposal of hazardous or toxic chemicals, if any, are within their guidelines and compliance.

Recommendations, wherever appropriate, have been given as to the action, if any, which should be taken to confirm with the most current guidelines and rules for compliance as set forth by these agencies.

The Phase I Environmental Survey is limited in budget and scope. No sampling, testing or laboratory analysis is conducted unless so noted and the assessment is based on the professional opinion of the Environmental Consultant. The Phase I Environmental Survey is not and should not be considered a warranty or guarantee about the presence or absence of environmental contaminants which might affect the subject property.

The owner is responsible for investigating environmental liens on the subject property. This report was prepared in accordance with ASTM E 1527-13 protocols for Phase I Environmental Site Assessments.

EXECUTIVE SUMMARY

SITE DESCRIPTION

- The subject property discussed in this report is known as:
 - **794 Bedford Avenue, Brooklyn, NY 11205** also identified as (Block: 1886, Lot: 71).
- The Primary zoning for the subject property is in district M1-2/R6A which is mapped for residential property in a manufacturing district in Flushing/Bedford, NY.
- The subject property is a rectangular-shaped parcel with a lot area of approximately 1,800-sq-ft in size which is currently vacant. According to Sanborn maps, the first structure on the subject lot was constructed circa 1887.
- The subject lot is located west of Bedford Avenue, south of Flushing Avenue, and east of Skillman Street in Brooklyn, Kings County, NY.
- RSK performed a site reconnaissance on August 30, 2021; during our site reconnaissance, access was gained throughout the entire building, including the cellar, roof, and backyard, from west of Bedford Avenue.

SURROUNDING LAND USE

DIRECTION	ADJOINING USE(S)	VICINITY USE(S)
North	Residential and commercial properties <ul style="list-style-type: none"> • Along Flushing Avenue 	Mixed-Use
South	Residential and commercial properties <ul style="list-style-type: none"> • Along Park Avenue 	Mixed-Use
East	Residential and commercial properties <ul style="list-style-type: none"> • Along Bedford Avenue 	Mixed-Use
West	Residential and commercial properties <ul style="list-style-type: none"> • Along Skillman Street 	Mixed-Use

- Surrounding properties are used for commercial and residential purposes (two- and three - family dwellings).

SITE ACTIVITIES & DESCRIPTION

- The subject property was identified as developed with a rectangular structure sharing a wall with the structure on the adjacent lot. The structure consisted of a four-story building with a cellar. The first floor was observed with two apartment units while the second through fourth floors were each observed with one apartment unit. Access to roof was obtained from the fourth floor while access to backyard was obtained from the second floor through a fire escape ladder. A pyramid skylight was identified on the ceiling of the building.
- The basement was observed with electrical boxes, water heater tanks, cut-up rusty pipes, and piles of other discarded items. A ceiling opening at the rear of the basement was observed leading to the backyard.
- As of August 30, 2021, no hazardous waste containers were found on the subject property. However, standard waste left from previous tenants was found in all units. The basement was also observed with piles of discarded materials.

MUNICIPAL & PUBLIC RECORDS REVIEW

A review of available public records for the subject property are as follows:

- According to a Radius search conducted by EDR on May 19, 2021, the subject property was identified in the following databases:
 - The subject property is an E-designated (Hazmat), effective May 9, 2001, with E-102 code and description – Underground gasoline storage tanks testing protocol. CEQR Number 00DCP015K is part of the Flushing/Bedford Rezoning in the Brooklyn borough of New York City.

- According to a Radius search conducted by EDR on 02/05/2021, the following was identified for the surrounding properties:
 - Following sites were identified in the E-DESIGNATION database within 0.25 mile radius from the subject property at a higher elevation. The following sites were effective as E-designation sites on May 9, 2001, with E-102 code and description – Underground Gasoline Storage Tanks* Testing Protocol; and as part of the Flushing/Bedford Rezoning in the Brooklyn borough of New York City (CEQR #00DCP015K).
 - Lot 72, Tax block 1886, 796 Bedford Avenue
 - Lot 12, Tax block 1715, 769 Bedford Avenue
 - Lot 13, Tax block 1715, 767 Bedford Avenue
 - Lot 14, Tax block 1715, 765 Bedford Avenue
 - Lot 15, Tax block 1715, 763 Bedford Avenue
 - Lot 16, Tax block 1715, 761 Bedford Avenue
 - Lot 17, Tax block 1715, 759 Bedford Avenue
 - Lot 18, Tax block 1715, 757 Bedford Avenue
 - Lot 19, Tax block 1715, 753 Bedford Avenue
 - Lot 31, Tax block 1900, 814 Bedford Avenue
 - Lot 24, Tax block 1715, 745 Bedford Avenue
 - Lot 70, Tax block 1734, 793 Bedford Avenue
 - Lot 24, Tax block 1900, 71 Skillman Street
 - Lot 7, Tax block 1734, 506 Park Avenue
 - Lot 7505, Tax block 1734, 805 Bedford Avenue
 - Additionally, the following sites were effective as E-designation sites on May 10, 2017, with E-395 code and descriptions – Air Quality HVAC fuel limited to natural gas, Exhaust stack location limitations, and Hazardous Materials* Phase I and Phase II Testing Protocol; and as part of the Flushing/Bedford Rezoning in the Brooklyn borough of New York City (CEQR #16DCP121K).
 - Lot 15, Tax block 1885, Franklin Avenue
 - East Coast Industrial Uniform Corp, 39 Skillman St, EPA ID - NYD044358067. The site was identified in the RCRA NonGen/NLR database, located 130-ft. northwest of the subject property at a lower elevation. The site handled D000 (Not defined) and K030 (column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene) wastes. The site was historically utilized as a large quantity generator from 1982-1999, a small quantity generator from 1999-2006, and a conditionally exempt small quantity generator from 2006-2007. No NAICS code was found for the site. Violations and evaluations were identified for the site. EPA violations with Generators-General description were determined in 1986, 1988, and 1998. Evaluation with the description “Compliance

- evaluation inspection on-site” was listed for each violation. The site was also identified in the MANIFEST database. EPA ID NYC7035726 was generated on May 15, 2003 for handling one (1) 195-lb DF – Fiberboard or plastic drums (glass) – for F002 (Halogenated solvent + still bottoms from recovery of solvents) waste.
- Con Edison, 49 Skillman St, EPA ID - NYP004746285. The site was identified in the RCRA NonGen/NLR database, located 154-ft. southwest of the subject property at a higher elevation. The site was historically utilized as a small quantity generator up until 2015. No NAICS code was found for the site, and no violations or evaluations were identified. The site was also cross-referenced in the FINDS and ECHO databases.
 - Former East Coast Industrial Uniforms Site, 39 Skillman Street, Site ID – 838, PBS ID – 2-055468. The site was identified in the AST database with an unregulated/closed status, located 130-ft. northeast of the subject property at a lower elevation. Tank 002 (ID – 234814) A 2,000-gallon #2 fuel oil steel/carbon steel/iron for on-site consumption was closed-removed on May 25, 2012. The site was not cross-referenced in the NY Spills database.
 - East Coast Industrial Uniform Corp., 48 Skillman Street, Site ID – 25803, PBS ID – 2-603909. The site was identified in the AST and UST databases with an unregulated/closed status, located 232-ft. southwest of the subject property at a higher elevation. Tank 001 (ID – 55977) A 2,000-gallon gasoline steel/carbon steel/iron AST was closed-in place on December 1, 1998. The site was not cross-referenced in the NY Spills database.
 - East Coast Industrial Uniform Corp, 39 Skillman Street, Site ID – 838, PBS ID – 2-055468. The site was identified in the UST database with an unregulated/closed status, located 130-ft. northeast of the subject property at a lower elevation. Tank 001 (ID – 1781) A 3,000-gal #2 fuel oil steel/carbon steel/iron UST for on-site consumption was closed-removed on July 19, 2012. The site was also cross-referenced in the NY Spills database. DEC Spill # 1108026, Site ID – 455738. An unknown quantity of #2 fuel oil was encountered on the site on September 22, 2011, affecting the soil and groundwater beneath the site due to equipment failure. According to DEC Memo, one UST was found not properly abandoned. Soil and groundwater samples from borings around the tank revealed soil contamination and a grey sheen 20’ down in the groundwater interface. The spill was closed on December 19, 2013.
 - Nassau Gas, Skillman Ave. The site was identified in the EDR MGP database, located 110-ft. west of the subject property at a higher elevation.
 - Skillman Station, Skillman St. Flushing and Bedford Aves, and Park. The site was identified in the EDR MGP database, located 110-ft. northwest of the subject property at a lower elevation.
 - Willie Transm & Auto Repairs, 810 Bedford Ave. The site was identified in the EDR HIST AUTO database, located 185-ft. south of the subject property at a higher elevation. The site was operable as an automotive transmission repair shop (Willie Transm & Auto Repairs) from 1996-1997.
 - Amerada Hess Corporation, 801 Bedford Ave. The site was identified in the EDR HIST AUTO database, located 431-ft. southwest of the subject property at a higher elevation. The site was operable as a gasoline service station (Merit Oil

- Corporation) in 2000, (Amerada Hess Corporation) from 2001-2005, and (Hess Corporation) from 2006-2014.
- Blue Ocean Laundromat, 493 Part Ave. The site was identified in the EDR Hist Cleaner database, located 192-ft. south of the subject property at a higher elevation. The site was operable as a laundry and drycleaner agent (Blue Ocean Laundromat Inc) from 2010-2014.
 - Con Edison – Manhole 823, EPA ID – NYP004311437. The site was identified in the RCRA LQG database, located 29-ft. north of the subject property at a lower elevation. According to EPA Waste report, the site generated 2.49 tons of D008 (Lead) waste in 2013. The waste was shipped to an offsite facility: Clean Earth of North Jersey (Offsite Facility ID: NJD991291105) for H110 management method – stabilization prior to land disposal at another site (encapsulation/ stabilization/ fixation). The site was operable circa 2013-2014. According to the EPA FRS Detail Report, NAICS code 221122 was identified for Electric power distribution. No violations or evaluations were identified for the site. The site was cross-referenced in the FINDS, ECHO, and NY MANIFEST databases. EPA ID NYP004311437 was generated on May 13, 2013 for handling one (1) 600-gallons TT – cargo tank, tank trucks – for D008 (Lead) waste.
 - Con Edison – Manhole 806, EPA ID - NYP004286118. The site was identified in the RCRA LQG database, located 270-ft. southeast of the subject property at a higher elevation. According to EPA Waste report, the site generated 1.245 tons of D008 (Lead) waste in 2013. The waste was shipped to an offsite facility: Clean Earth of North Jersey (Offsite Facility ID: NJD991291105) for H110 management method – stabilization prior to land disposal at another site (encapsulation/ stabilization/ fixation). The site was operable circa 2013-2014. According to the EPA FRS Detail Report, NAICS code 221122 was identified for Electric power distribution. No violations or evaluations were identified for the site.
- According to an Environmental Liens and AUL search conducted by EDR on August 30, 2021, a Deed ID 2020031200878002 was found for the subject property dated February 27, 2020 stating that the subject property is owned by Joel Landau, and it was formerly owned by Joel Iliovits et al. Customer registration form for water and sewer billing was generated for the subject property. A property transfer report RP-5217NYC was also generated. Affidavit of Compliance with smoke detector requirements was found for the subject property. No environmental liens or other AULs were documented by EDR.
 - According to a Building Permit Report search conducted by EDR on August 27, 2001, the following was identified for the subject property.
 - Alteration permit type NL (302076928) #01 was filed by The West Wing on June 6, 2006 with the description, “Underpinning of right (north) exterior wall for adjacent construction. No change in use, occupancy or egress” The application was issued.
 - Electrical permit type (B161892) was filed by Heller Electric Co. Inc. on January 23, 1997. Current status is completed.
 - Plumbing permit type PL (300407352) #01 was filed by Aleph Beth Plumbing & Heating on June 26, 1996. The permit was issued with \$0.00 valuation.

- Alteration permit type AL (300407352) #01 was filed by Cesar Rosario on February 28, 1996 with the description “Replace and repair existing damaged ceilings, floors, partitions, and exterior walls with new. Provide shoring for the rear exterior wall.” The permit was issued with \$0.00 valuation.
- Electrical permit (B046676) was filed by A.R.P. Elec'l Cont'g Inc. on December 1, 1988. The permit was issued with \$0.00 valuation.
- Certificate of Occupancy (CO) #300407352 dated September 11, 1997 was available for review, on the NYC Department of Buildings database, pertaining to the subject property. The description listed the property as a residential building with a basement, first, second, and third floors, each floor with a live load of 40 lbs. per sq. ft.
- A FOIL request was submitted to the NYS Department of Conservation on August 27, 2021, requesting any documentation pertaining to Spills, Releases, Violations, ASTs/USTs, deeds, permits, building/structural plans that relate to the subject property. The results are pending during the preparation of the report, and will be updated accordingly.

SITE HISTORY

Certified Sanborn® Map Report and Aerial Photographs

In reviewing the history of the subject property, a Sanborn Map Search and Aerial Photograph Search was conducted for **794 Bedford Avenue, Brooklyn, NY 11205**. The Sanborn Maps available for the subject property were from 1887 to 2007.

SANBORN (FIRE INSURANCE) MAPS SUMMARY		
YEAR	OBSERVATIONS for 794 Bedford Avenue	OBSERVATIONS for surrounding properties
1887	<i>The subject property was identified as developed with a three-story residential brick building with store front in the front half of the lot.</i>	<i>Surrounding properties were identified as developed with multi-story dwellings and stores. Two gasometers (Nassau Gas LTD Co and People's Gas Light) and a Gutter Percher and Rubber Manufacturing Co were identified to the northwest of the subject property. 6", 8", and 20" water pipes exist around the block.</i>
1904	<i>The subject property was identified as a three-story store with a basement.</i>	<i>Surrounding properties were identified in the similar configuration as the 1887 map. Nassau Gas LTD Co and People's Gas Light were now called Brooklyn Union Gas Co. 50-gal underground gasoline tank and an automobile repair shop were identified adjacent to the subject property to the north (790-792 Bedford Ave). Metal works and Andrews Coal Co were identified to the east of the subject property (777 and 781 Bedford Ave).</i>
1918	<i>The three-story store was now a residential building.</i>	<i>Surrounding properties were identified in the similar configuration as the 1904 map. Automobile repair shop to the north was now an auto wrecking yard. Andrews Coal Co to the east and the 50-gal underground gasoline tank to the north were no longer observed. Metal works expanded south (to 782 & 783 Bedford Ave). An auto top manufacturing was identified to the east of the subject property (769 Bedford Ave).</i>
1921	<i>The map was illegible to determine any major changes, if occurred, on the subject property.</i>	<i>The map was illegible to determine any major changes, if occurred, on the surrounding properties.</i>
1935	<i>The subject property was identified in the similar configuration as the 1918 map, with a one-story brick building identified on the rear (west) of the lot.</i>	<i>Surrounding properties were identified in the similar configuration as the 1918 map. Gutter Percher and Rubber Manufacturing Co to the northwest and Metal works to the east were no longer observed. An upholstery (M. Greenberg) was identified to the northwest of the subject property. Gasoline tanks and an auto painting store were observed south of the subject property.</i>
1947	<i>The subject property was identified in the similar configuration as the 1935 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1935 map. Gasoline tanks and auto service were observed southeast of the subject property.</i>
1950	<i>The subject property was identified in the similar configuration as the 1947 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1947 map. The location of the gasoline tanks south of the subject property was observed as a filling station. Auto repair shops were identified south and northeast of the subject property.</i>
1965	<i>The three-story residential building was identified as a machine shop, with wall opening leading to the three-story residential building (to the south) at 796 Bedford Ave.</i>	<i>Surrounding properties were identified in the similar configuration as the 1950 map. The filling station south of the subject property was not in operation.</i>
1977-1979	<i>The subject property was identified in the similar configuration as the 1965 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1965 map. Plastic products manufacturing was identified east of the subject property along Bedford Ave. East Coast Industrial Uniform Corp was identified west of the subject property along Skillman</i>

		<i>St. The filling station to the southeast was no longer observed.</i>
1980-1989	<i>The subject property was identified in the similar configuration as the 1979 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1979 map. The auto repair shop to the south was back in service.</i>
1991-1992	<i>The subject property was identified in the similar configuration as the 1989 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1989 map. The auto repair shop was now a machine shop.</i>
1993	<i>The three-story building was identified as vacant.</i>	<i>Surrounding properties were identified in the similar configuration as the 1992 map.</i>
1995-1996	<i>The subject property was identified in the similar configuration as the 1993 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1993 map. The Plastic products manufacturing was no longer observed.</i>
2001-2002	<i>The building was now a residential building.</i>	<i>Surrounding properties were identified in the similar configuration as the 1996 map.</i>
2004-2007	<i>The wall opening leading to the residential building (to the south) at 796 Franklin no longer existed.</i>	<i>Surrounding properties were identified in the similar configuration as the 2002 map. The filling station to the south no longer existed.</i>

** Any data gaps identified herein, as defined by ASTM Practice E 1527-13 are not considered to have significantly affected the ability to identify Recognized Environmental Conditions (RECs) in connection with the subject property and do not alter the conclusions of this report.

Aerial Photographs Findings:

AERIAL PHOTOGRAPHS SUMMARY		
YEAR	OBSERVATIONS for 794 Bedford Avenue	OBSERVATIONS for surrounding properties
1924	<i>The photograph was too dark to determine the configuration of the lot.</i>	<i>Surrounding properties were identified as parceled lots developed with various multi-storied structures.</i>
1951-1954	<i>The subject property was identified as developed with two detached rectangular structures in the front and rear of the lot.</i>	<i>Surrounding properties were identified as heavily developed with various multistoried structures.</i>
1976	<i>The map was illegible to identify any major changes that may have occurred on the subject property.</i>	<i>The map was illegible to identify any major changes that may have occurred on the subject property.</i>
1980-2017	<i>The subject property was identified in similar configuration as the 1954 photograph.</i>	<i>Surrounding properties were identified in similar configuration as the 1954 photograph.</i>

A review of the available historical aerial photographs indicated that the subject property was developed prior to 1951.

Review of Previous Environmental Reports:

- No previous environmental reports were available for RSK’s review for the subject property.

FUEL OIL AND GASOLINE STORAGE TANK

- At the time of inspection, RSK did not identify any visual signs of vent/fill lines on the subject property. However, due to the presence of a historic residential structure during 1887-1979, existence of any buried tank/anomaly is highly likely. *This is considered a BER at this time.*
- According to a Sanborn map search conducted through EDR, a 550-gallon previously used gasoline UST was depicted in the 1904 Sanborn map for the north adjoining property (792 Bedford Avenue).
- According to a Radius search conducted through EDR, the nearest underground and aboveground storage tank site is Phillips 76 Station, 3170 Atlantic Ave, Site ID – 21733, PBS ID – 2-509035. The site was identified in the AST and UST databases with an active status, located approximately 200-ft. north of the subject property at a higher elevation. Following are the AST records:
 - Tank 005 (ID- 59176) A 220-gallon lube oil steel/carbon steel/iron tank was closed-removed on April 1, 1990.
 - Tank 006 (ID- 222021) A 275-gallon lube oil steel/carbon steel/iron tank was closed-removed on March 2, 2020.

- Tank 007 (ID- 222022) A 275-gallon lube oil steel/carbon steel/iron tank was closed-removed on March 2, 2020.
- Tank 008 (ID- 222023) A 275-gallon waste oil/used oil, painted/asphalt covered steel tank in concrete is currently in service for on-site consumption. Aboveground diking was used as secondary containment. The tank was installed on December 30, 2007 and last modified on April 14, 2017.

Following are the UST records:

- Tank 001 (ID – 39548) A 4,000-gallon gasoline/ethanol double-walled fiberglass UST is currently in service, installed on April 1, 1990. Tank tightness test done on 11/20/2018 (Method 39) and was last modified on December 7, 2020.
 - Tank 002 (ID – 39549) A 4,000-gallon gasoline/ethanol double-walled fiberglass UST is currently in service, installed on April 1, 1990. Tank tightness test done on 11/20/2018 (Method 39) and was last modified December 7, 2020.
 - Tank 003 (ID – 39550) A 4,000-gallon gasoline/ethanol double-walled fiberglass UST is currently in service, installed on April 1, 1990. Tank tightness test done on 11/20/2018 (Method 39) and was last modified December 7, 2020.
 - Tank 004 (ID – 395551) A 4,000-gallon gasoline/ethanol double-walled fiberglass UST is currently in service, installed on April 1, 1990. Tank tightness test done on 11/20/2018 (Method 34) and was last modified December 7, 2020.
- A FOIL request was submitted to the New York City Fire Department (FDNY) on August 27, 2021 requesting that a fuel/gasoline tank search be conducted for the subject property. The results are pending at the time of preparation of this report and will updated accordingly.

SPILLS IDENTIFIED ON SITE

- According to a Radius search conducted through EDR; no on-site spills were recorded for the subject property.

SPILLS IDENTIFIED ON SURROUNDING PROPERTIES

- According to a Radius search conducted through EDR, seventy-one (71) NY Spills/LTANKS sites were recorded within a 1-mile radius to the subject property. The following list of NY Spills/LTANKS are within a quarter mile of the subject property and at a higher elevation.
 - Coned Vehicle, 40 Skillman Street, DEC Spill #0804901, Site ID – 401892. The site was identified in the NY Spills database, located 229-ft. west of the subject property at a higher elevation. 8-gallon hydraulic oil spill was encountered on the site on July 29, 2008, affecting the soil beneath the site due to equipment failure.

- According to the DEC Memo, the spill was on concrete and was cleaned up. The spill was closed on August 27, 2008.
- Blown Unit IN VS 3803, Bedford Avenue & Park Ave, DEC Spill #0603909, Site ID – 366759. The site was identified in the NY Spills database, located 259-ft. southeast of the subject property at a higher elevation. 100-gallon of dielectric fluid spill was encountered on site on July 9, 2006, affecting the soil beneath the site due to equipment failure. According to the DEC Memo, “spill [was] contained in vault #VS 3803.” The spill was closed on August 15, 2006.
 - Construction Site, Bedford Ave at Park Ave, DEC Spill #0607491, Site ID – 371224. The site was identified in the NY Spills database, located 264-ft. southeast of the subject property at a higher elevation. An unknown quantity of unknown petroleum was encountered on site on September 30, 2006, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “spill was approximately 2 gallons of waste oil that affected 2 square feet of sidewalk and spill occurred during heavy rains preventing infiltration of petroleum into soil and tree. Inspection of construction site through fence showed no large spill and no large source of product (most likely 5 gallons or less).” Sand was placed on the sidewalk and spill was closed due to no significant impact to subsurface and the small amount of spill. The spill was closed on October 2, 2006.
 - Manhole 821, Bedford Ave at Park Ave, DEC Spill # 9913428, Site ID – 298441. The site was identified in the NY Spills database, located 300-ft. south of the subject property at a higher elevation. 1-gallon of unknown petroleum was encountered on site on February 28, 2000, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “Spill in manhole on top of 50 gallons of water not recovered.” The spill was closed on February 28, 2002.
 - MH 805, Park Ave/Skillman Ave, DEC Spill #0104084, Site ID – 321840. The site was identified in the NY Spills database, located 304-ft. southwest of the subject property at a higher elevation. 1-gallon of unknown material was encountered on site on July 17, 2001, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “approximately 1 qt unknown oil on mud, no water. Cleanup completed, structure double washed with Bio Gen 760 and slix. No sump found, there was an in operable drain, no signs of oil. Cemented drain, removed 3 drums of solid waste.” The spill was closed on August 27, 2001.

The following list of NY Spills/LTANKS are within a quarter mile of the subject property and at a lower elevation.

- East Coast Industrial Uniform Corp., 39 Skillman St, DEC Spill #9800638, Site ID – 317263. The site was identified in the NY Spills database, located 130-ft. northwest of the subject property at a lower elevation. An unknown quantity of #2 fuel oil and gasoline was encountered on site on April 13, 1998, affecting the groundwater beneath the site due to tank test failure. According to the DEC Memo, “Protest the company who did the test has records that tank was tested again on the same day which the tank passed. Also stated there was no spill.” The spill was closed on May 16, 2006.
- Skillman St Between Park and Flushing Aves, DEC Spill #9912012, Site ID – 223057. The site was identified in the NY Spills database, located 194-ft. northwest of the subject property at a lower elevation. 55-gallon of unknown material was

encountered on site on January 18, 2000, affecting the soil beneath the site for deliberate reason.

VAPOR ENCROACHMENT CONDITIONS (VEC)

- All readily ascertainable information including all applicable Federal, State, Tribal and local database information, historical usage information, soil and groundwater sources and information from the site reconnaissance were reviewed to determine if there is a possibility of a VEC regarding the subject property. Based on the document research done, several spill sites are located upgradient and cross gradient at a higher elevation to the subject property. These spills may be impacting upon the vapor quality beneath the subject property.

PCB's

Transformer

- A buried transformer was identified approximately 250-ft. north of the subject property along Bedford Avenue. No pole-mounted transformers were identified near the subject property.

WASTE CONTAINERS

During our site reconnaissance on August 30, 2021, no waste containers were identified on the subject property. However, standard waste left from previous tenants was found in all units. The basement was also observed with piles of discarded materials.

The waste identified should be removed from the subject property and disposed of legally. These issues are considered a De Minimis at this time.

ENVIRONMENTAL DATA RESEARCH

- An Environmental Data Research Summary was performed for *794 Bedford Avenue, Brooklyn, NY 11205*:

CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

- **ASBESTOS CONTAINING MATERIALS (ACM)**
 - Structures that were built prior to 1980 are more likely to contain asbestos. The structure was constructed circa 1887.

During our site reconnaissance, RSK did not identify visual signs of asbestos. However, a pyramid skylight was identified on the ceiling of the building; asbestos is often found in skylight caulking and flashing. Additionally, based on the age of the building, RSK recommends that the building on the subject property undergo an asbestos inspection by a certified Asbestos Inspector to confirm the presence of asbestos containing materials within the buildings, prior to any re-development, and/or alterations on the subject property.
- **LEAD BASED PAINT (LBP)**
 - Structures that were built prior to 1978 are more likely to contain LBP than structures that were built after 1978. The structure was constructed circa 1887.
 - During our site reconnaissance, RSK did not identify visual signs of chipped and/or flaking paint on the walls, ceilings, and exterior and interior window frames of the building. However, based on the age of the building, RSK recommends a Lead-based paint inspection by a certified Inspector to confirm the presence of lead-based paint within the buildings, prior to any re-development, and/or alterations on the subject property.
- **LEAD IN DRINKING WATER**
 - The subject property is connected to the municipal potable water supply as provided by the New York City Environmental Protection. According to the New York City Drinking Water Supply and Quality Report for 2020 the drinking water supplied to the subject property is compliant with state and federal standards, including those for lead and copper.
- **MOLD**
 - During our site reconnaissance, limited visual inspection for the noticeable presence of mold was performed. RSK observed visual signs of black mold on the wall. Few areas with water staining on the structure ceiling and wall were also observed. RSK recommends a mold inspection for the property to avoid further growth or mold or water staining damage. RSK further recommends that the water staining/damage area(s) should be repaired.
- **RADON**
 - Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into buildings through cracks and openings in their foundations. The U.S. Environmental Protection Agency's Map (USEPA) has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in the state of New York. Radon concentration can vary

- widely within a tier location, depending upon the geology and amount of uranium in the soil. Homes in low or moderate radon potential areas can have elevated radon concentrations. The USEPA recommend that you take action to mitigate your home if your test results indicate radon levels of 4 pCi/L of radon or higher.
- Due to the subject property inhabiting a Radon Zone 3 (Counties with predicted average indoor radon screening levels less than 2 pCi/L), a radon test is not warranted.
- **WETLANDS**
 - RSK reviewed available information regarding wetlands on the subject property, including National Wetlands Inventory online GIS mapping. RSK made general site observations for readily observable potential wetland characteristics. RSK identified the nearest body of water as the Wallabout Bay located approximately 0.7-mile northwest of the subject property. RSK identified the nearest Freshwater Forested/Shrub wetland as the Highland Park located approximately 3.7-miles east of the subject property.

FINDINGS AS DEFINED BY ASTM E1527-13

A **Recognized Environmental Condition (REC)** refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property, due to release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.

- This assessment **has revealed** evidence of two (2) RECs in conjunction with the subject property.
 - The site was inhabited with a residential structure during the 1880s-1980s. Presence of a buried tank/anomaly is highly likely which may pose as a threat to impact the subsurface.
 - Based on the proximity of historic buried tanks, spill sites and the MGP site, a vapor encroachment condition exists for the subject property.

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g. property use restrictions, AULs, institutional controls, or engineering controls).

- This assessment **has not revealed** evidence of CREC in conjunction with the subject property.

Historical Recognized Environmental Conditions (HRECs) are defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

- This assessment **has not revealed** evidence of HREC in connection with the subject property.

De Minimis Conditions: Findings which would otherwise be characterized as Recognized Environmental Conditions, but which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies are classified as *de minimis* in accordance with the agreed scope of work. De Minimis Conditions are not considered RECs.

- This assessment **has revealed** evidence of de minimis environmental condition in connection with the subject property.
 - The household waste identified onsite should be containerized into proper DOT/UL approved containment or disposed of legally.

Business Environmental Risk (BER) is defined by ASTM as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental

issues required to be investigated in ASTM Standard Practice E1527-13. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations."

- This assessment **has revealed** evidence of three (3) BERs in connection with the subject property.
 - Mold is suspected at this time for the interior walls. RSK recommends a mold inspection for the property to avoid further growth or mold or water staining damage.
 - The building inhabiting the subject properties was constructed circa 1887. Field inspection did not identify visual signs of chipped and/or flaking paint on the exterior of the building. However, based on the age of the building, RSK recommends a Lead-based paint inspection by a certified Inspector to confirm the presence of lead-based paint within the buildings, prior to any re-development, and/or alterations on the subject property.
 - The building inhabiting the subject properties was constructed circa 1888. Field inspection did not identify visual signs of asbestos. However, a pyramid skylight was identified on the ceiling of the building; asbestos is often found in skylight caulking and flashing. Additionally, based on the age of the building, RSK recommends that the building on the subject property undergo an asbestos inspection by a certified Asbestos Inspector to confirm the presence of asbestos containing materials within the buildings, prior to any re-development, and/or alterations on the subject property.

CONCLUSIONS AND RECOMMENDATIONS

RSK has completed this Phase-I ESA in conformance with the scope and limitations as specified in the ASTM Practice E 1527-13 for the subject property located at **794 Bedford Avenue, Brooklyn, NY 11205**. RSK has considered the nature and extent of onsite sources of potential subsurface contamination by evaluating the current and available historical usage of the subject property, the construction type and history, the physical setting, and the potential sources of subsurface vapor mitigation through the review of available data as was summarized in this Phase-I ESA.

Recognized Environmental Conditions (RECs) Recommendations:

Based on the REC identified for the subject property, RSK recommends the following:

- A geophysical survey should be conducted to determine the presence of any buried tanks or anomalies. In case a tank is encountered, it is recommended that the tank is closed properly in accordance with Federal, State and Local regulatory requirements.
- A vapor intrusion assessment should be conducted for the subject property.

Based on the site inspections performed, RSK recommends that the BER's identified should be done in accordance with the industrial standards and practice.

Non-scope ASTM Recommendations

- The subject property was identified as an NY E-Designation Hazmat site. RSK recommends, prior to any re-development or modification to the site, a review must be filed with the New York City Office of Environmental Remediation (NYCOER).
- The household waste identified onsite should be containerized into proper DOT/UL approved containment or disposed of legally.

INTRODUCTION

GENERAL

The general purpose of this Phase-I Environmental Site Assessment (ESA) is to determine whether or not the property is subject to certain Recognized Environmental Conditions (*RECs*) that may affect property use or increase the risk of liability exposure associated with the property. Recognized Environmental Conditions include the presence or possible presence of hazardous substances or petroleum related products that indicate an existing release, past release, or a significant threat of a release into structures on the property, into the ground, groundwater or surface water. Recognized Environmental Conditions can include past uses, disposal practices, spills, off-site contamination, and regulatory compliance.

This Environmental Site Assessments report includes a description of the subject property and surrounding areas, review of records and contains information gathered during site reconnaissance and interviews. RSK Environmental Group (RSK) Phase-I Environmental Site Assessments are prepared by environmental professionals and supervised by Professional Engineers.

LIMITING CONDITIONS & METHODOLOGY UTILIZED

The limiting conditions and methodology used in preparing this Phase-I Environmental Site Assessments report are those contained in ASTM Standard E 1527-13. This practice does not address requirements of any state or local laws or any federal laws other than the appropriate inquiry provisions of *CERCLA's "Innocent Landowner Defense"*. Users are cautioned that federal, state and local laws may impose environmental assessments obligations that are beyond the scope of this practice. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the property that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

The report is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of any toxic substances, (which can be made only with testing), and contains no formal plans or recommendations to rectify or remediate the presence of any toxic substances, (which may be subject to regulatory approval). No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with the property. Performance of this practice under ASTM Standards is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the property.

Except for acts and omissions by RSK, or its employees which are shown to be grossly negligent and which represent intentional misconduct, the client has agreed, to the maximum extent permitted by law, to hold harmless and indemnify RSK from and against any and all claims and liabilities arising in respect to the Environmental Site Assessment performed by RSK on behalf of the client. All liability on the part of RSK shall be limited solely to the cost of this report. RSK shall have no liability for any other damages, whether consequential, compensatory, punitive, or special arising out of, incidental to, or as a result of this report. RSK assumes no liability for the use of this report by any person of entity other than the client for whom the report was prepared.

SITE INFORMATION

Survey of the Subject Property

A Phase-I Environmental Site Assessment survey was conducted on the property located at **794 Bedford Avenue, Brooklyn, NY 11205**, beginning with a visual inspection by an Environmental Professional to determine if hazardous or potentially toxic materials or substances might be present. RSK performed a site reconnaissance on August 30, 2021; the weather was overcast and 78°F. During our site reconnaissance, access was gained throughout the vacant lot from west of Bedford Avenue. A Phase-I Environmental Site Assessment does not involve any sampling, testing or laboratory analysis of on-site soil or groundwater, unless so noted and cannot confirm the nature of subsurface soil or groundwater quality on the subject property.

Location and Legal Description of the Subject Property

The subject property is a rectangular-shaped parcel with a lot area of approximately 1,800-sq-ft in size which is currently vacant. According to Sanborn maps, the first structure on the subject lot was constructed circa 1887. The subject lot is located west of Bedford Avenue, south of Flushing Avenue, and east of Skillman Street in Brooklyn, Kings County, NY. The Primary zoning for the subject property is in district M1-2/R6A which is mapped for residential property in a manufacturing district in Flushing/Bedford, NY.

Current Uses of the Subject Property

The subject property was identified as developed with a rectangular structure sharing a wall with the structure on the adjacent lot. The structure consisted of a four-story building with a cellar. The first floor was observed with two apartment units while the second through fourth floors were each observed with one apartment unit. Access to roof was obtained from the fourth floor while access to backyard was obtained from the second floor through a fire escape ladder. A pyramid skylight was identified on the ceiling of the building. The basement was observed with electrical boxes, water heater tanks, cut-up rusty pipes, and piles of other discarded items. A ceiling opening at the rear of the basement was observed leading to the backyard.

Current Uses of the Surrounding Properties

- The current uses of the surrounding properties were mixed-use commercial and residential purposes and manufacturing within a one-mile radius.

DIRECTION	ADJOINING USE(S)	VICINITY USE(S)
North	Residential and commercial properties <ul style="list-style-type: none"> • Along Flushing Avenue 	Mixed-Use
South	Residential and commercial properties <ul style="list-style-type: none"> • Along Park Avenue 	Mixed-Use
East	Residential and commercial properties <ul style="list-style-type: none"> • Along Bedford Avenue 	Mixed-Use
West	Residential and commercial properties <ul style="list-style-type: none"> • Along Skillman Street 	Mixed-Use

SITE PHYSICAL SETTING

Topography

The subject property and vicinity characteristics listed below were analyzed utilizing a current USGS 7.5 Minute Topographic Map. This information is useful in determining the grade and topography of the subject property. The subject property is located at an elevation of approximately 24-feet above mean sea level (msl). The topography of the subject property consisted of some slight sloping. The slopes on the subject property range from 0 to 8 percent. The general topographic gradient is generally north-northeast. The subject property has been graded as for residential usage in a manufacturing district in Flushing/Bedford, NY

Geology and Soils

No bedrock outcroppings were observed at the subject property. Near-surface geology in heavily developed areas such as the subject property and vicinity is considered "urban land-till substratum" and is characterized by a non-homogeneous distribution of cemented material till 15-inches of depth, followed by gravelly sand from 15-inches to 72-inches. Excavation and backfilling for building foundations, utility conduits, subway systems and other construction results in a varied subsurface profile. In this setting, estimation of local subsurface parameters such as permeability, moisture content, and organic fraction is not feasible without site-specific testing data.

Hydrogeology and Hydrology

Local groundwater gradient is expected to follow with surface topography; therefore, groundwater flow near the subject property is expected to flow to the north-northeast, towards Newtown Creek. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. No monitoring wells were observed on the subject property.

USER PROVIDED INFORMATION

Interview with Key Site Manager

No one representing the site was available for a brief interview.

Environmental Pre-Survey Questionnaire

Pursuant to ASTM E 1527-13, RSK requested the following site information from the User of this report and from the owner of the property, (see the Transaction Screen Questionnaire attached as Appendix J).

Title Records

Title record information associated with the subject property has not been provided to RSK by the owner/tenant/occupant/user. Land title records provide information on previous ownership of any property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

Environmental Liens

The owner/key site personnel of the property have no special knowledge of Environmental Liens or Activity/Use Limitations on the site. An environmental lien search conducted by EDR as part of this assessment did not find any environmental liens and/or other activity and use limitations (AULs).

Specialized Knowledge

The owner/key site personnel of the property have no specialized knowledge concerning Recognized Environmental Conditions (RECs), Controlled Recognized Environmental Conditions (CRECs), or Historical Recognized Environmental Conditions (HRECs). RSK was not provided with or made aware of previous environmental assessments or other documentation that is material to RECs, CRECs or HRECs in connection with the subject property.

Commonly Known or Reasonably Ascertainable Information

The owner/key site personnel have no commonly known or reasonably ascertainable information within the local community about the subject property that is material to RECs, CRECs or HRECs in connection with the subject property.

Reason for Performing Phase I ESA Report

As part of a real estate transaction, this Phase I Environmental Site Assessment (ESA) was requested in order to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E 1527-13) in connection with the subject property. This ESA was also performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E 1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35) (B).

Prior Environmental Reports

- No previous environmental reports were available for review during the preparation of this Phase I.

ENVIRONMENTAL SITE ASSESSMENT

A visual inspection of the subject property and surrounding areas took place on August 30, 2021; the weather was overcast and 78°F. During our site reconnaissance, access was gained throughout the entire building, including the cellar, roof, and backyard, from west of Bedford Avenue.

Improvements

The subject property is a rectangular-shaped parcel with a lot area of approximately 1,800-sq-ft in size which is currently developed with a rectangular structure sharing a wall with the structure on the adjacent lot (to the south). According to Sanborn maps, the first structure on the subject lot was constructed circa 1887. The structure consisted of a four-story building with a cellar, surrounded by chain-link fence on the northern and western borders. The first floor was observed with two apartment units while the second through fourth floors were each observed with one apartment unit. Access to roof was obtained from the fourth floor while access to backyard was obtained from the second floor through a fire escape ladder. A pyramid skylight was identified on the ceiling of the building. The basement was observed with electrical boxes, water heater tanks, cut-up rusty pipes, and piles of other discarded items. A ceiling opening at the rear of the basement was observed leading to the backyard.

Streets

The subject lot is located west of Bedford Avenue, south of Flushing Avenue, and east of Skillman Street in Brooklyn, Kings County, NY.

Potable Water Supply

The potable water in the neighborhood supply is provided by the municipal water system within the vicinity.

Sewage Disposal

The sewage disposal in the neighborhood is provided by the municipal sewer system.

Heating and Cooling System

The heating system for the building is provided by radiators. The cooling system is provided by portable window units.

Electrical Supply

The electricity service provider is Con Edison.

RECORDS REVIEW

Standard Environmental Record Sources

Information from standard Federal and State environmental record sources was provided through Environmental Data Resources, Inc. (EDR). Data from governmental agencies lists are updated and integrated into one database, which is updated accordingly as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address uncertainties. The demographic and geographic information available, provides assistance in identifying and managing potential environmental risk. The accuracy of the geological locations ranges between 1/8-mile to 1-mile radius to the subject property.

In some cases, location information supplied by the regulatory agencies are insufficient to allow the database companies to map facility locations. These facilities are listed under the unmappable section within the EDR report. A review of the unmappable facilities indicated that none of these facilities are within the ASTM minimum search distance from the subject property. Pertinent regulatory files/records associated with the subject property and/or any adjoining site(s) may be requested for review in the event the listing is associated with a facility at which a suspected or confirmed release has occurred that has not yet been closed to the satisfaction of the regulatory agency and/or if the facility represents a REC in connection with the subject property.

Regulatory information from the following database sources regarding possible recognized environmental conditions, within the ASTM minimum search distance from the subject property, were reviewed. Specific facilities are discussed below if determined likely that a potential recognized environmental condition has resulted at the subject property from the listed facilities. Specific properties identified within the database report are further discussed below.

TARGET PROPERTY LISTINGS

E DESIGNATION: E DESIGNATION SITE LISTING. The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

A review of the E DESIGNATION list, as provided by EDR, and dated August 27, 2021 has revealed that subject property was identified in the database.

- The subject property is an E-designated (Hazmat), effective May 9, 2001, with E-102 code and description – Underground gasoline storage tanks testing protocol. CEQR Number 00DCP015K is part of the Flushing/Bedford Rezoning in the Brooklyn borough of New York City.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP List

SEMS-ARCHIVE: Superfund Enterprise Management System Archive (SEMS-Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as CERCLIS-NFRAP, renamed to SEMS ARCHIVE by EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 1 mile of the target property.

Federal RCRA CORRACTS List

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 22 RCRA-LQG sites within approximately 0.25 miles of the target property.

- Con Edison – Manhole 823, EPA ID – NYP004311437. The site was identified in the RCRA LQG database, located 29-ft. north of the subject property at a lower elevation. According to EPA Waste report, the site generated 2.49 tons of D008 (Lead) waste in 2013. The waste was shipped to an offsite facility: Clean Earth of North Jersey (Offsite Facility ID: NJD991291105) for H110 management method – stabilization prior to land disposal at another site (encapsulation/ stabilization/ fixation). The site was operable circa 2013-2014. According to the EPA FRS Detail Report, NAICS code 221122 was identified for Electric power distribution. No

violations or evaluations were identified for the site. The site was cross-referenced in the FINDS, ECHO, and NY MANIFEST databases. EPA ID NYP004311437 was generated on May 13, 2013 for handling one (1) 600-gallons TT – cargo tank, tank trucks – for D008 (Lead) waste.

- o Con Edison – Manhole 806, EPA ID - NYP004286118. The site was identified in the RCRA LQG database, located 270-ft. southeast of the subject property at a higher elevation. According to EPA Waste report, the site generated 1.245 tons of D008 (Lead) waste in 2013. The waste was shipped to an offsite facility: Clean Earth of North Jersey (Offsite Facility ID: NJD991291105) for H110 management method – stabilization prior to land disposal at another site (encapsulation/stabilization/ fixation). The site was operable circa 2013-2014. According to the EPA FRS Detail Report, NAICS code 221122 was identified for Electric power distribution. No violations or evaluations were identified for the site.

RCRA-SQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 8 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states’ equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation’s Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from April 1, 1986 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 40 NY LTANKS sites within approximately 0.5 mile of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation’s Petroleum Bulk Storage (PBS) Database.

A review of the NY UST list, as provided by EDR, has revealed that there are 30 NY UST sites within approximately 0.25 miles of the target property.

- According to a Radius search conducted through EDR, the nearest underground storage tank is East Coast Industrial Uniform Corp, 39 Skillman Street, Site ID – 838, PBS ID – 2-055468. The site was identified in the UST database with an unregulated/closed status, located 130-ft. northeast of the subject property at a lower elevation. Tank 001 (ID – 1781) A 3,000-gal #2 fuel oil steel/carbon steel/iron UST for on-site consumption was closed-removed on July 19, 2012. The site was also cross-referenced in the NY Spills database. DEC Spill # 1108026, Site ID – 455738. An unknown quantity of #2 fuel oil was encountered on the site on September 22, 2011, affecting the soil and groundwater beneath the site due to equipment failure. According to DEC Memo, one UST was found not properly abandoned. Soil and groundwater samples from borings around the tank revealed soil contamination and a grey sheen 20’ down in the groundwater interface. The spill was closed on December 19, 2013.
- Bedford Developers, LLC, 773-787 Bedford Avenue, Site ID – 364785, PBS ID – 2-610225. The site was identified in the UST database with an unregulated/closed status, located 150-ft. east of the subject property at a lower elevation. The site was not cross-referenced on the NY Spills database. Following are the UST records:
 - Tank 001 (ID – 212069) A 10,000-gallon #2 fuel oil steel/carbon steel/iron UST for on-site consumption was closed-removed on May 26, 2006.
 - Tank 002 (ID – 212070) A 5,000-gallon #2 fuel oil steel/carbon steel/iron UST for on-site consumption was closed-removed on May 26, 2006.
- 808-810 Bedford Ave, Site ID – 419919, PBS ID – 2-611179. The site was identified in the UST database with an unregulated/closed status, located 168-ft. south of the subject property at a higher elevation. The site was not cross-referenced on the NY Spills database. Following are the UST records:
 - Tank 001 (ID – 230905) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
 - Tank 002 (ID – 230906) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
 - Tank 003 (ID – 230907) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.

- Tank 004 (ID – 230908) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
- Tank 005 (ID – 230909) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
- Tank 006 (ID – 230910) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
- Tank 007 (ID – 230911) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
- Tank 008 (ID – 230912) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
- Tank 009 (ID – 230913) A 550-gallon gasoline steel/carbon steel/iron UST was closed-removed on August 6, 2004.
- East Coast Industrial Uniform Corp., 48 Skillman Street, Site ID – 191, PBS ID – 2-032166. The site was identified in the UST database with an unregulated/closed status, located 232-ft. west of the subject property at a higher elevation. The site was not cross-referenced on the NY Spills database. Following are the UST records:
 - Tank 001 (ID – 863) A 551-gallon gasoline steel/carbon steel/iron UST was closed in place on February 1, 2003.
 - Tank 002 (ID – 864) A 551-gallon gasoline steel/carbon steel/iron UST was closed in place on February 1, 2003.
 - Tank 003 (ID – 865) A 2,000-gallon gasoline steel/carbon steel/iron UST was closed in place on March 18, 1999.

NY CBS UST – Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

NY CBS – Chemical Bulk Storage Site Listing. These facilities store regulated hazardous Substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

A review of the CBS list, as provided by EDR, and dated May 20, 2021 has revealed that there is 1 CBS site within approximately 0.25 mile of the target property.

NY AST: The Aboveground Storage Tank database contains registered ASTs. The data came from the Department of Environmental Conservation’s Petroleum Bulk Storage (PBS) Database.

A review of the NY AST list, as provided by EDR, has revealed that there are 22 NY AST sites within approximately 0.25 mile of the target property.

- According to a Radius search conducted through EDR, the nearest aboveground storage tank is Former East Coast Industrial Uniforms Site, 39 Skillman Street, Site

ID – 838, PBS ID – 2-055468. The site was identified in the AST database with an unregulated/closed status, located 130-ft. northeast of the subject property at a lower elevation. The site was not cross-referenced in the NY Spills database. Following are the AST records:

- Tank 002 (ID – 234814) A 2,000-gallon #2 fuel oil steel/carbon steel/iron for on-site consumption was closed-removed on May 25, 2012.
- East Coast Industrial Uniform Corp., 48 Skillman Street, Site ID – 25803, PBS ID – 2-603909. The site was identified in the AST and UST databases with an unregulated/closed status, located 232-ft. southwest of the subject property at a higher elevation. Tank 001 (ID – 55977) A 2,000-gallon gasoline steel/carbon steel/iron AST was closed-in place on December 1, 1998. The site was not cross-referenced in the NY Spills database.

NY CBS AST: Chemical Bulk Storage Database. Facilities that store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 1 CBS AST sites within approximately 0.25 mile of the target property.

NY TANKS: Storage Tank Facility Listing. This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the NY TANKS list, as provided by EDR, has revealed that there is 1 TANKS sites within approximately 0.25 mile of the target property.

Federal institutional controls/engineering control registries

NY ENG CONTROLS: Registry of Engineering Controls. Environmental Remediation sites that have engineering controls in place.

A review of the ENG CONTROLS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 3 NY ENG CONTROLS sites within approximately 0.5 mile of the target property.

INST CONTROLS: Registry of Institutional Controls. Environmental Remediation sites that have institutional controls in place.

A review of the INST CONTROLS list, as provided by EDR, and dated May 20, 2021 has revealed that there are 3 NY INST CONTROLS sites within approximately 0.5 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites

using private rather than public funds and to reduce the development pressures on "greenfield" sites.

A review of NY VCP list, as provided by EDR, has revealed that there are 32 NY VCP sites within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

NY BROWNFIELDSD: Brownfields Site List. A Brownfield is any real property where re-development or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant or contaminant.

A review of the NY BROWNFIELDSD list, as provided by EDR, and dated May 20, 2021 has revealed that there are 15 NY BROWNFIELDSD sites within approximately 0.5 miles of the target property.

Local Brownfield Lists

US BROWNFIELDSD: A Listing of Brownfields Sites. Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties take development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfield’s properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDSD list, as provided by EDR, and dated 06/10/2021 has revealed that there is 1 US BROWNFIELDSD site within approximately 0.5 mile of the target property.

Local Lists of Landfill / Solid Waste Disposal Sites

NY SWRCY: Registered Recycling Facility List from the Department of Environmental Conservation.

A review of the NY SWRCY list, as provided by EDR, and dated 03/31/2021 has revealed that there is 1 NY SWRCY site within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/10/2021 has revealed that there are 31 NY Spills sites within approximately 0.125 mile of the target property. The following list of NY Spills are within a quarter mile of the subject property and at a higher elevation.

- Coned Vehicle, 40 Skillman Street, DEC Spill #0804901, Site ID – 401892. The site was identified in the NY Spills database, located 229-ft. west of the subject property at a higher elevation. 8-gallon hydraulic oil spill was encountered on the site on July 29, 2008, affecting the soil beneath the site due to equipment failure. According to the DEC Memo, the spill was on concrete and was cleaned up. The spill was closed on August 27, 2008.
- Blown Unit IN VS 3803, Bedford Avenue & Park Ave, DEC Spill #0603909, Site ID – 366759. The site was identified in the NY Spills database, located 259-ft. southeast of the subject property at a higher elevation. 100-gallon of dielectric fluid spill was encountered on site on July 9, 2006, affecting the soil beneath the site due to equipment failure. According to the DEC Memo, “spill [was] contained in vault #VS 3803.” The spill was closed on August 15, 2006.
- Construction Site, Bedford Ave at Park Ave, DEC Spill #0607491, Site ID – 371224. The site was identified in the NY Spills database, located 264-ft. southeast of the subject property at a higher elevation. An unknown quantity of unknown petroleum was encountered on site on September 30, 2006, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “spill was approximately 2 gallons of waste oil that affected 2 square feet of sidewalk and spill occurred during heavy rains preventing infiltration of petroleum into soil and tree. Inspection of construction site through fence showed no large spill and no large source of product (most likely 5 gallons or less).” Sand was placed on the sidewalk and spill was closed due to no significant impact to subsurface and the small amount of spill. The spill was closed on October 2, 2006.
- Manhole 821, Bedford Ave at Park Ave, DEC Spill # 9913428, Site ID – 298441. The site was identified in the NY Spills database, located 300-ft. south of the subject property at a higher elevation. 1-gallon of unknown petroleum was encountered on site on February 28, 2000, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “Spill in manhole on top of 50 gallons of water not recovered.” The spill was closed on February 28, 2002.
- MH 805, Park Ave/Skillman Ave, DEC Spill #0104084, Site ID – 321840. The site was identified in the NY Spills database, located 304-ft. southwest of the subject property at a higher elevation. 1-gallon of unknown material was encountered on site on July 17, 2001, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “approximately 1 qt unknown oil on mud, no water. Cleanup completed, structure double washed with Bio Gen 760 and slix. No sump found, there was an in operable drain, no signs of oil. Cemented drain, removed 3 drums of solid waste.” The spill was closed on August 27, 2001.

The following list of NY Spills are within a quarter mile of the subject property and at a lower elevation.

- East Coast Industrial Uniform Corp., 39 Skillman St, DEC Spill #9800638, Site ID – 317263. The site was identified in the NY Spills database, located 130-ft. northwest of

- the subject property at a lower elevation. An unknown quantity of #2 fuel oil and gasoline was encountered on site on April 13, 1998, affecting the groundwater beneath the site due to tank test failure. According to the DEC Memo, “Protest the company who did the test has records that tank was tested again on the same day which the tank passed. Also stated there was no spill.” The spill was closed on May 16, 2006.
- Skillman St Between Park and Flushing Aves, DEC Spill #9912012, Site ID – 223057. The site was identified in the NY Spills database, located 194-ft. northwest of the subject property at a lower elevation. 55-gallon of unknown material was encountered on site on January 18, 2000, affecting the soil beneath the site for deliberate reason. According to the DEC Memo, “55-gal drum of unknown liquid [was] abandoned in street.” The spill was closed on March 16, 2000.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 88 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

- East Coast Industrial Uniform Corp, 39 Skillman St, EPA ID - NYD044358067. The site was identified in the RCRA NonGen/NLR database, located 130-ft. northwest of the subject property at a lower elevation. The site handled D000 (Not defined) and K030 (column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene) wastes. The site was historically utilized as a large quantity generator from 1982-1999, a small quantity generator from 1999-2006, and a conditionally exempt small quantity generator from 2006-2007. No NAICS code was found for the site. Violations and evaluations were identified for the site. EPA violations with Generators-General description were determined in 1986, 1988, and 1998. Evaluation with the description “Compliance evaluation inspection on-site” was listed for each violation. The site was also identified in the MANIFEST database. EPA ID NYC7035726 was generated on May 15, 2003 for handling one (1) 195-lb DF – Fiberboard or plastic drums (glass) – for F002 (Halogenated solvent + still bottoms from recovery of solvents) waste.
- Con Edison, 49 Skillman St, EPA ID - NYP004746285. The site was identified in the RCRA NonGen/NLR database, located 154-ft. southwest of the subject property at a higher elevation. The site was historically utilized as a small quantity generator up until 2015. No NAICS code was found for the site, and no violations or evaluations were identified. The site was also cross-referenced in the FINDS and ECHO databases.

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 05/04/2021 has revealed that there are 4 FUDS sites within approximately 1 mile of the target property.

NY DRYCLEANERS: A listing of all registered drycleaning facilities.

A review of the NY DRYCLEANERS list, as provided by EDR, and dated 06/03/2021 has revealed that there is 1 NY DRYCLEANERS site within approximately 0.25 miles of the target property.

- East Coast Industrial Corp/Unifm, 39 Skillman Street, Facility ID - 2-6101-00251. The site was identified in the DRYCLEANERS database, located 130-ft. northwest of the subject property at a lower elevation. The facility was registered on April 20, 1999 and was last inspected on December 7, 2012.

E DESIGNATION: E DESIGNATION SITE LISTING. The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

A review of the E DESIGNATION list, as provided by EDR, and dated 02/05/2021 has revealed that there ARE 38 E DESIGNATION sites within approximately 0.125 miles of the target property.

- Following sites were identified in the E-DESIGNATION database within 0.25 mile radius from the subject property at a higher elevation. The following sites were effective as E-designation sites on May 9, 2001, with E-102 code and description – Underground Gasoline Storage Tanks* Testing Protocol; and as part of the Flushing/Bedford Rezoning in the Brooklyn borough of New York City (CEQR #00DCP015K).
 - Lot 72, Tax block 1886, 796 Bedford Avenue
 - Lot 12, Tax block 1715, 769 Bedford Avenue
 - Lot 13, Tax block 1715, 767 Bedford Avenue
 - Lot 14, Tax block 1715, 765 Bedford Avenue
 - Lot 15, Tax block 1715, 763 Bedford Avenue
 - Lot 16, Tax block 1715, 761 Bedford Avenue
 - Lot 17, Tax block 1715, 759 Bedford Avenue
 - Lot 18, Tax block 1715, 757 Bedford Avenue
 - Lot 19, Tax block 1715, 753 Bedford Avenue
 - Lot 31, Tax block 1900, 814 Bedford Avenue
 - Lot 24, Tax block 1715, 745 Bedford Avenue
 - Lot 70, Tax block 1734, 793 Bedford Avenue
 - Lot 24, Tax block 1900, 71 Skillman Street
 - Lot 7, Tax block 1734, 506 Park Avenue
 - Lot 7505, Tax block 1734, 805 Bedford Avenue

- Additionally, the following sites were effective as E-designation sites on May 10, 2017, with E-395 code and descriptions – Air Quality HVAC fuel limited to natural gas, Exhaust stack location limitations, and Hazardous Materials* Phase I and Phase II Testing Protocol; and as part of the Flushing/Bedford Rezoning in the Brooklyn borough of New York City (CEQR #16DCP121K).
 - Lot 15, Tax block 1885, Franklin Avenue

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) report or Site Investigation (SI) reports were prepared.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 01/01/2019 has revealed that there are 133 NY MANIFEST sites within approximately 0.25 mile of the target property.

PA Manifest: Hazardous waste manifest information.

A review of the PA Manifest list, as provided by EDR, and dated 06/30/2018 has revealed that there are 6 PA Manifest sites within approximately 0.25 miles of the target property.

NJ MANIFEST: Hazardous waste manifest information.

A review of the NJ MANIFEST list, as provided by EDR, and dated 12/31/2018 has revealed that there are 38 NJ MANIFEST sites within approximately 0.25 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants. The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

- Nassau Gas, Skillman Ave. The site was identified in the EDR MGP database, located 110-ft. west of the subject property at a higher elevation.
- Skillman Station, Skillman St. Flushing and Bedford Aves, and Park. The site was identified in the EDR MGP database, located 110-ft. northwest of the subject property at a lower elevation.

EDR Hist Auto: EDR Exclusive Historical Auto Stations. EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

- Willie Transm & Auto Repairs, 810 Bedford Ave. The site was identified in the EDR HIST AUTO database, located 185-ft. south of the subject property at a higher elevation. The site was operable as an automotive transmission repair shop (Willie Transm & Auto Repairs) from 1996-1997.
- Amerada Hess Corporation, 801 Bedford Ave. The site was identified in the EDR HIST AUTO database, located 431-ft. southwest of the subject property at a higher elevation. The site was operable as a gasoline service station (Merit Oil Corporation) in 2000, (Amerada Hess Corporation) from 2001-2005, and (Hess Corporation) from 2006-2014.
- A FOIL request was submitted to the NYS Department of Conservation on August 27, 2021, requesting any documentation pertaining to Spills, Releases, Violations, ASTs/USTs, deeds, permits, building/structural plans that relate to the subject property. The results are pending during the preparation of the report, and will be updated accordingly.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents a unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government record searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

- Blue Ocean Laundromat, 493 Part Ave. The site was identified in the EDR Hist Cleaner database, located 192-ft. south of the subject property at a higher elevation. The site was operable as a laundry and drycleaner agent (Blue Ocean Laundromat Inc) from 2010-2014.

SEE RADIUS MAP SEARCH ATTACHED AS APPENDIX A.

**** Due to poor or inadequate address information 20 sites were unmapped.****

Historical Usage of the Subject Property and Surrounding Properties

In reviewing the history of the subject property, a Sanborn Map Search and Aerial Photograph Search was conducted for **794 Bedford Avenue, Brooklyn, NY 11205**. The Sanborn Map available for the subject property were from 1887 to 2007.

SANBORN (FIRE INSURANCE) MAPS SUMMARY		
YEAR	OBSERVATIONS for 794 Bedford Avenue	OBSERVATIONS for surrounding properties
1887	<i>The subject property was identified as developed with a three-story residential brick building with store front in the front half of the lot.</i>	<i>Surrounding properties were identified as developed with multi-story dwellings and stores. Two gasometers (Nassau Gas LTD Co and People's Gas Light) and a Gutter Percher and Rubber Manufacturing Co were identified to the northwest of the subject property. 6", 8", and 20" water pipes exist around the block.</i>
1904	<i>The subject property was identified as a three-story store with a basement.</i>	<i>Surrounding properties were identified in the similar configuration as the 1887 map. Nassau Gas LTD Co and People's Gas Light were now called Brooklyn Union Gas Co. 50-gal underground gasoline tank and an automobile repair shop were identified adjacent to the subject property to the north (790-792 Bedford Ave). Metal works and Andrews Coal Co were identified to the east of the subject property (777 and 781 Bedford Ave).</i>
1918	<i>The three-story store was now a residential building.</i>	<i>Surrounding properties were identified in the similar configuration as the 1904 map. Automobile repair shop to the north was now an auto wrecking yard. Andrews Coal Co to the east and the 50-gal underground gasoline tank to the north were no longer observed. Metal works expanded south (to 782 & 783 Bedford Ave). An auto top manufacturing was identified to the east of the subject property (769 Bedford Ave).</i>
1921	<i>The map was illegible to determine any major changes, if occurred, on the subject property.</i>	<i>The map was illegible to determine any major changes, if occurred, on the surrounding properties.</i>
1935	<i>The subject property was identified in the similar configuration as the 1918 map, with a one-story brick building identified on the rear (west) of the lot.</i>	<i>Surrounding properties were identified in the similar configuration as the 1918 map. Gutter Percher and Rubber Manufacturing Co to the northwest and Metal works to the east were no longer observed. An upholstery (M. Greenberg) was identified to the northwest of the subject property. Gasoline tanks and an auto painting store were observed south of the subject property.</i>
1947	<i>The subject property was identified in the similar configuration as the 1935 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1935 map. Gasoline tanks and auto service were observed southeast of the subject property.</i>
1950	<i>The subject property was identified in the similar configuration as the 1947 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1947 map. The location of the gasoline tanks south of the subject property was observed as a filling station. Auto repair shops were identified south and northeast of the subject property.</i>
1965	<i>The three-story residential building was identified as a machine shop, with wall opening leading to the three-story residential building (to the south) at 796 Bedford Ave.</i>	<i>Surrounding properties were identified in the similar configuration as the 1950 map. The filling station south of the subject property was not in operation.</i>
1977-1979	<i>The subject property was identified in the similar configuration as the 1965 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1965 map. Plastic products manufacturing was identified east of the subject property along Bedford Ave. East Coast Industrial Uniform Corp was identified west of the subject property along Skillman St. The filling station to the southeast was no longer observed.</i>

1980-1989	<i>The subject property was identified in the similar configuration as the 1979 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1979 map. The auto repair shop to the south was back in service.</i>
1991-1992	<i>The subject property was identified in the similar configuration as the 1989 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1989 map. The auto repair shop was now a machine shop.</i>
1993	<i>The three-story building was identified as vacant.</i>	<i>Surrounding properties were identified in the similar configuration as the 1992 map.</i>
1995-1996	<i>The subject property was identified in the similar configuration as the 1993 map.</i>	<i>Surrounding properties were identified in the similar configuration as the 1993 map. The Plastic products manufacturing was no longer observed.</i>
2001-2002	<i>The building was now a residential building.</i>	<i>Surrounding properties were identified in the similar configuration as the 1996 map.</i>
2004-2007	<i>The wall opening leading to the residential building (to the south) at 796 Franklin no longer existed.</i>	<i>Surrounding properties were identified in the similar configuration as the 2002 map. The filling station to the south no longer existed.</i>

** Any data gaps identified herein, as defined by ASTM Practice E 1527-13 are not considered to have significantly affected the ability to identify Recognized Environmental Conditions (RECs) in connection with the subject property and do not alter the conclusions of this report.

SEE SANBORN (FIRE INSURANCE) MAP SEARCH ATTACHED AS APPENDIX B.

Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by researching available historical aerial photographs from www.historicaerials.com and other available resources. Aerial photographs depicting the subject property were reviewed and are summarized in the following table.

AERIAL PHOTOGRAPHS SUMMARY		
YEAR	OBSERVATIONS for 794 Bedford Avenue	OBSERVATIONS for surrounding properties
1924	<i>The photograph was too dark to determine the configuration of the lot.</i>	<i>Surrounding properties were identified as parceled lots developed with various multi-storied structures.</i>
1951-1954	<i>The subject property was identified as developed with two detached rectangular structures in the front and rear of the lot.</i>	<i>Surrounding properties were identified as heavily developed with various multistoried structures.</i>
1976	<i>The map was illegible to identify any major changes that may have occurred on the subject property.</i>	<i>The map was illegible to identify any major changes that may have occurred on the subject property.</i>
1980-2017	<i>The subject property was identified in similar configuration as the 1954 photograph.</i>	<i>Surrounding properties were identified in similar configuration as the 1954 photograph.</i>

A review of the available historical aerial photographs indicated that the subject property was developed prior to 1951.

SEE CITY AERIAL PHOTOGRAPH SEARCH ATTACHED AS APPENDIX C.

City Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by EDR. Historical street directories for the subject property known as **794 Bedford Avenue, Brooklyn, NY 11205** were reviewed and are summarized in the following tables.

YEAR	USES/OCCUPANT
	794 Bedford Avenue
<i>1934</i>	<i>BELOTT FRANK CLOTHES PRESSER H DO DETROLIA MICHL H PELOSI JOS TAILOR H</i>
<i>1945</i>	<i>SCARELLA MARGARET C</i>
<i>1949</i>	<i>ALBERTS PLATING WKS</i>
<i>1965</i>	<i>DRIVER TRAINING INST RAN LYNN RENT & SVCE CORP</i>
<i>1970</i>	<i>COMMERCIAL TRACTOR TRAILER TRAINING SVCE DRIVER TRAINING INST RAN LYNN RENTL & SVCE CORP TRACTOR TRAILER TRAINING SVCES</i>
<i>1973</i>	<i>COMMERCIAL TRACTOR TRAILER TRAINING SVRES GRVEN H RAN LYNN RENTL & SCVE CORP TRACTOR TRAILER TRAINING SVCES</i>
<i>2000</i>	<i>GENARO L AMBROSIO LEONIDES ZAPATA RAJA AHMED</i>
<i>2004</i>	<i>ANN CALIXTO GENARO AMBROSIO LEONIDAS ZAPATA OSCAR LOPEZ RAJA AHMED</i>
<i>2005</i>	<i>H AMBROSIO GENARO L 7 O</i>
<i>2009</i>	<i>GENARO AMBROSIO LIZBETH COLIN MARIA AQUINO</i>
<i>2014</i>	<i>DOMINGO SOTO GENARO AMBROSIO LEONIDAS ZAPATA REFUGIO MORALES</i>
<i>2017</i>	<i>LEONIDAS ZAPATA LILLIAN STAPLETON MAGNOLIA MOENA-VIDAL REFUGIO MORALES</i>

A review of the available City Directory information indicated that the subject property was utilized mainly for commercial occupancy.

SEE CITY DIRECTORY SEARCH ATTACHED AS APPENDIX D.

Presence of PCBs in Transformers and Other Electrical Equipment

An inspection was conducted at the subject property and in the immediate vicinity for the presence of any underground, surface or suspended transformers and visible power supply sources. Oil-containing transformers are known to frequently contain PCBs (Polychlorinated biphenyls). PCBs are contained in older transformers and other electrical equipment and have the potential for serious health risks. The U.S. Environmental Protection Agency, Regulations 40 CFR Part 761, regulates the level of PCB content in such transformers and electrical equipment.

Transformer

A buried transformer was identified approximately 250-ft. north of the subject property along Bedford Avenue. No pole-mounted transformers were identified near the subject property.

Fuel Oil and Gasoline Storage Tanks

The New York State Department of Environmental Conservation regulates the storage and handling of petroleum storage facilities. Aboveground and Underground storage tanks storing petroleum can, if not properly installed and maintained, because serious environmental problems include contamination of a water supply. In an effort to prevent leaks and spills, the Petroleum Bulk Storage Law (Article 17, Title 10 of the Environmental Conservation Law) requires the DEC to develop and enforce a State Code for the storage and handling of petroleum. The resulting regulations are Parts 612, 613 and 614. Any facility with a stationary tank combined capacity exceeding 1,100 gallons must be registered with the New York State Department of Environmental Conservation.

- At the time of inspection, RSK did not identify any visual signs of vent/fill lines on the subject property. However, due to the presence of a historic residential structure from circa 1887, existence of any buried tank/anomaly is highly likely. *This is considered a BER at this time.*
- According to a Radius search conducted through EDR, the nearest underground storage tank is East Coast Industrial Uniform Corp, 39 Skillman Street, Site ID – 838, PBS ID – 2-055468. The site was identified in the UST database with an unregulated/closed status, located 130-ft. northeast of the subject property at a lower elevation. Tank 001 (ID – 1781) A 3,000-gal #2 fuel oil steel/carbon steel/iron UST for on-site consumption was closed-removed on July 19, 2012. The site was also cross-referenced in the NY Spills database.
- According to a Radius search conducted through EDR, the nearest aboveground storage tank is Former East Coast Industrial Uniforms Site, 39 Skillman Street, Site ID – 838, PBS ID – 2-055468. The site was identified in the AST database with an unregulated/closed status, located 130-ft. northeast of the subject property at a lower elevation. The site was not cross-referenced in the NY Spills database. Following are the AST records:
 - Tank 002 (ID – 234814) A 2,000-gallon #2 fuel oil steel/carbon steel/iron for on-site consumption was closed-removed on May 25, 2012.
- A FOIL request was submitted to the New York City Fire Department (FDNY) on August 27, 2021 requesting that a fuel/gasoline tank search be conducted for the subject property. The results are pending at the time of preparation of this report and will updated accordingly.

Spills identified on site

- According to a Radius search conducted through EDR, no on-site spills were recorded for the subject property.

Spills identified on surrounding properties

- According to a Radius search conducted through EDR, fifty (50) NY Spills/LTANKS sites were recorded within a 1-mile radius to the subject property. The following list of NY Spills/LTANKS are within a quarter mile of the subject property and at a higher elevation.
 - Coned Vehicle, 40 Skillman Street, DEC Spill #0804901, Site ID – 401892. The site was identified in the NY Spills database, located 229-ft. west of the subject property at a higher elevation. 8-gallon hydraulic oil spill was encountered on the site on July 29, 2008, affecting the soil beneath the site due to equipment failure. According to the DEC Memo, the spill was on concrete and was cleaned up. The spill was closed on August 27, 2008.
 - Blown Unit IN VS 3803, Bedford Avenue & Park Ave, DEC Spill #0603909, Site ID – 366759. The site was identified in the NY Spills database, located 259-ft. southeast of the subject property at a higher elevation. 100-gallon of dielectric fluid spill was encountered on site on July 9, 2006, affecting the soil beneath the site due to equipment failure. According to the DEC Memo, “spill [was] contained in vault #VS 3803.” The spill was closed on August 15, 2006.
 - Construction Site, Bedford Ave at Park Ave, DEC Spill #0607491, Site ID – 371224. The site was identified in the NY Spills database, located 264-ft. southeast of the subject property at a higher elevation. An unknown quantity of unknown petroleum was encountered on site on September 30, 2006, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “spill was approximately 2 gallons of waste oil that affected 2 square feet of sidewalk and spill occurred during heavy rains preventing infiltration of petroleum into soil and tree. Inspection of construction site through fence showed no large spill and no large source of product (most likely 5 gallons or less).” Sand was placed on the sidewalk and spill was closed due to no significant impact to subsurface and the small amount of spill. The spill was closed on October 2, 2006.
 - Manhole 821, Bedford Ave at Park Ave, DEC Spill # 9913428, Site ID – 298441. The site was identified in the NY Spills database, located 300-ft. south of the subject property at a higher elevation. 1-gallon of unknown petroleum was encountered on site on February 28, 2000, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “Spill in manhole on top of 50 gallons of water not recovered.” The spill was closed on February 28, 2002.
 - MH 805, Park Ave/Skillman Ave, DEC Spill #0104084, Site ID – 321840. The site was identified in the NY Spills database, located 304-ft. southwest of the subject property at a higher elevation. 1-gallon of unknown material was encountered on site on July 17, 2001, affecting the soil beneath the site due to unknown cause. According to DEC Memo, “approximately 1 qt unknown oil on mud, no water. Cleanup completed, structure double washed with Bio Gen 760 and slix. No sump found, there was an in operable drain, no signs of oil. Cemented drain, removed 3 drums of solid waste.” The spill was closed on August 27, 2001.

The following list of NY Spills/LTANKS are within a quarter mile of the subject property and at a lower elevation.

- East Coast Industrial Uniform Corp., 39 Skillman St, DEC Spill #9800638, Site ID – 317263. The site was identified in the NY Spills database, located 130-ft. northwest of the subject property at a lower elevation. An unknown quantity of #2 fuel oil and gasoline was encountered on site on April 13, 1998, affecting the groundwater beneath the site due to tank test failure. According to the DEC Memo, “Protest the company who did the test has records that tank was tested again on the same day which the tank passed. Also stated there was no spill.” The spill was closed on May 16, 2006.
- Skillman St Between Park and Flushing Aves, DEC Spill #9912012, Site ID – 223057. The site was identified in the NY Spills database, located 194-ft. northwest of the subject property at a lower elevation. 55-gallon of unknown material was encountered on site on January 18, 2000, affecting the soil beneath the site for deliberate reason.

On-site historic use concerns

Based on the review of historical Sanborn Maps and City Directory, the subject property was inhabited as a two-story dwelling from circa 1887. The subject property had a basement circa 1904. No records of previous environmental investigation were in possession by the owner, or made available for RSK’s review.

Waste containers

During our site reconnaissance on August 30, 2021, no waste containers were identified on the subject property. However, standard waste left from previous tenants was found in all units. The basement was also observed with piles of discarded materials. *The waste generated onsite should be removed from the subject property and disposed of legally. These issues are considered a De Minimis at the time.*

VAPOR ENCROACHMENT CONDITIONS (VEC)

All readily ascertainable information including all applicable Federal, State, Tribal and local database information, historical usage information, soil and groundwater sources and information from the site reconnaissance were reviewed to determine if there is a possibility of a VEC regarding the subject property. Based on the document research done, several spill sites are located upgradient and cross gradient at a higher elevation to the subject property. These spills may be impacting upon the vapor quality beneath the subject property.

FINDINGS AS DEFINED BY ASTM E1527-13

A **Recognized Environmental Condition (REC)** refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property, due to release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.

- This assessment **has revealed** evidence of two (2) RECs in conjunction with the subject property.
 - The site was inhabited with a residential structure during the 1880s-1980s. Presence of a buried tank/anomaly is highly likely which may pose as a threat to impact the subsurface.
 - Based on the proximity of historic buried tanks, spill sites and the MGP site, a vapor encroachment condition exists for the subject property.

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g. property use restrictions, AULs, institutional controls, or engineering controls).

- This assessment **has not revealed** evidence of CREC in conjunction with the subject property.

Historical Recognized Environmental Conditions (HRECs) are defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

- This assessment **has not revealed** evidence of HREC in connection with the subject property.

De Minimis Conditions: Findings which would otherwise be characterized as Recognized Environmental Conditions, but which generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies are classified as *de minimis* in accordance with the agreed scope of work. De Minimis Conditions are not considered RECs.

- This assessment **has revealed** evidence of de minimis environmental condition in connection with the subject property.
 - The household waste identified onsite should be containerized into proper DOT/UL approved containment or disposed of legally.

Business Environmental Risk (BER) is defined by ASTM as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental

issues required to be investigated in ASTM Standard Practice E1527-13. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations."

- This assessment **has revealed** evidence of three (3) BERs in connection with the subject property.
 - Mold is suspected at this time for the interior walls. RSK recommends a mold inspection for the property to avoid further growth or mold or water staining damage.
 - The building inhabiting the subject properties was constructed circa 1887. Field inspection did not identify visual signs of chipped and/or flaking paint on the exterior of the building. However, based on the age of the building, RSK recommends a Lead-based paint inspection by a certified Inspector to confirm the presence of lead-based paint within the buildings, prior to any re-development, and/or alterations on the subject property.
 - The building inhabiting the subject properties was constructed circa 1888. Field inspection did not identify visual signs of asbestos. However, a pyramid skylight was identified on the ceiling of the building; asbestos is often found in skylight caulking and flashing. Additionally, based on the age of the building, RSK recommends that the building on the subject property undergo an asbestos inspection by a certified Asbestos Inspector to confirm the presence of asbestos containing materials within the buildings, prior to any re-development, and/or alterations on the subject property.

CONCLUSIONS AND RECOMMENDATIONS

RSK has completed this Phase-I ESA in conformance with the scope and limitations as specified in the ASTM Practice E 1527-13 for the subject property located at **794 Bedford Avenue, Brooklyn, NY 11205**. RSK has considered the nature and extent of onsite sources of potential subsurface contamination by evaluating the current and available historical usage of the subject property through the review of available data as was summarized in this Phase-I ESA.

Recognized Environmental Conditions (RECs) Recommendations:

Based on the REC identified for the subject property, RSK recommends the following:

- A geophysical survey should be conducted to determine the presence of any buried tanks or anomalies. In case a tank is encountered, it is recommended that the tank is closed properly in accordance with Federal, State and Local regulatory requirements.
- A vapor intrusion assessment should be conducted for the subject property.

Based on the site inspections performed, RSK recommends that the BER's identified should be done in accordance with the industrial standards and practice.

Non-scope ASTM Recommendations

- The subject property was identified as an NY E-Designation Hazmat site. RSK recommends, prior to any re-development or modification to the site, a review must be filed with the New York City Office of Environmental Remediation (NYCOER).
- The household waste identified onsite should be containerized into proper DOT/UL approved containment or disposed of legally.

CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13
FINDINGS AND RECOMMENDATIONS MADE BY AN RSK ENVIRONMENTAL CONSULTANT:

Asbestos Containing Materials (ACM)

Asbestos is the generic name for a group of naturally occurring hydrated mineral silicates that are characterized by fibers or bundles of fine single crystal fibers. The New York City Department of Environmental Protection defines asbestos containing materials as “any material which contains more than one percent asbestos by weight.” Asbestos materials were used for many years in a variety of ways in building construction due to its excellent acoustic insulating and thermal barrier property. The durability of asbestos fibers and their small size and fibrous shape make asbestos an unusual environmental contaminant. Water infiltration contact during routine maintenance and age are major factors breaking down asbestos containing materials and creating exposure problems. According to the Environmental Protection Agency and included in the publication #EPA 560/5-85-024 “Guidance for Controlling Asbestos Containing Materials (ACM) in Buildings” asbestos containing materials are found in three forms: (1) Sprayed or troweled on ceilings and walls and structural steel; (2) in insulation around hot and cold piping, ducts, boilers and tanks; and (3) in a non-friable state in products such as ceilings/ floor tiles, wallboards and outside materials such as shingles and roofing materials in general, ACM in the first two categories is of greatest concern, especially if it is friable, causing the materials to release fibers into the air.

Presumed Asbestos Containing Material (PACM)

Structures that were built prior to 1980 are more likely to contain asbestos. The building on the subject property was built circa 1887, and the lot was identified vacant circa 1979.

During our site reconnaissance, RSK did not identify visual signs of asbestos. However, a pyramid skylight was identified on the ceiling of the building; asbestos is often found in skylight caulking and flashing. Additionally, based on the age of the building, RSK recommends that the building on the subject property undergo an asbestos inspection by a certified Asbestos Inspector to confirm the presence of asbestos containing materials within the buildings, prior to any re-development, and/or alterations on the subject property.

Lead Based Paint (LBP)

Paint samples were **NOT** taken for lead content during our site reconnaissance. However, in older buildings it is likely that lead based paint was used within the multi-layered painted surfaces. (Lead base paint was banned in 1978). Lead paint can be hazardous if digested, especially by small children.

Structures that were built prior to 1978 are more likely to contain LBP than structures that were built after 1978. The first structure was constructed circa 1887, and the lot was identified vacant circa 1979. During our site reconnaissance, RSK did not identify visual signs of chipped and/or flaking paint on the walls, ceilings, and exterior and interior window frames of the building. However, based on the age of the building, RSK recommends a Lead-based paint inspection by a certified Inspector to confirm the presence of lead-based paint within the buildings, prior to any re-development, and/or alterations on the subject property.

Lead in Drinking Water

The subject property is connected to the municipal potable water supply as provided by the New York City Department of Environmental Protection. According to the New York City Drinking Water Supply and Quality Report for 2020 the drinking water supplied to the subject property is compliant with state and federal standards, including those for lead and copper.

Radon

Radon is a colorless, odorless, radioactive gas. Radon comes from the natural decay of uranium that is found in nearly all soils. Radon typically moves through the ground and into building through cracks and openings in the foundation. The U.S. Environmental Protection Agency's Map (USEPA) has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in the state of New York. The U.S. Environmental Protection Agency's Map (USEPA) has developed a "Map of Radon Zones" indicating the levels of radon concentrations from testing and aerial surveys conducted in all counties in the state of New York. The USEPA's Map of Radon Zones identified the Subject Property as a Radon Zone 3 (Counties with predicted average indoor radon screening levels less than 2 pCi/L). Radon concentration can vary widely within a tier location, depending upon the geology and amount of uranium in the soil. Homes in low or moderate radon potential areas can have elevated radon concentrations. The USEPA recommend that you take action to mitigate your home if your test results indicate radon levels of 4 pCi/L of radon or higher.

- Due to the subject property inhabiting a Radon Zone 3 (Counties with predicted average indoor radon screening levels less than 2 pCi/L), a radon test is not warranted at this time for the subject property.

Mold

Molds are a class of fungi and have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials and thrive in humid environments. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation and carpeting often play host to such growth.

During our site reconnaissance, limited visual inspection for the noticeable presence of mold was performed. RSK observed visual signs of black mold on the wall. Few areas with water staining on the structure ceiling and wall were also observed. RSK recommends a mold inspection for the property to avoid further growth or mold or water staining damage. RSK further recommends that the water staining/damage area(s) should be repaired.

Wetlands

RSK reviewed available information regarding wetlands on the subject property, including National Wetlands Inventory online GIS mapping. RSK made general site observations for readily observable potential wetland characteristics. RSK identified the nearest body of water as the Wallabout Bay located approximately 0.7-mile northwest of the subject property. RSK identified the nearest Freshwater Forested/Shrub wetland as the Highland Park located approximately 3.7-miles east of the subject property.

Local Regulatory Agency Records

Local municipal offices were consulted during the completion of this assessment included the submittal of an OPRA request to the New York City Fire Department. The information received would be reviewed in order to determine the possibility of documented adverse environmental conditions, violations or complaints associated with the subject property.

New York City Fire Department (Fuel Tank Search)

A FOIL request was submitted to the New York City Fire Department on August 27, 2021 in order to determine if any active or previously removed tanks existed on the subject property, or if there are currently any tanks which exist, and to determine if any violations or spills exist for the subject property. The request is pending at the time of preparation of this report.

New York State Department of Environmental Conservation – FOIL Request

A FOIL request was submitted to the New York State Department of Environmental Conservation on August 27, 2021 in order to request any records, such as deeds, violations, building permits, structural plans, ASTs/USTs, Releases, Spills, etc. pertaining to the subject property for our review. The request is pending at the time of preparation of this report.

RSK Environmental Group LLC has conducted this Phase I Environmental Survey as an aid in determining the presence of potentially toxic or hazardous chemicals or substances as of the date of inspection. Observations are made herein and conclusions drawn are not to be considered as a warranty or guarantee, and are based solely upon those areas directly visible and observable, without the removal or alterations of any item or structure and reflect conditions as on the day of inspection.

RSK Environmental Group LLC, their principals and employees are indemnified for any future changes or conditions of deterioration in or on the subject property. In as much as each has made not guarantees of the premises, expressed or implied in connection with this report, any liability, which each may have, shall be limited to the fee for the inspection of the property.

User Reliance

This Phase I Environmental Site Assessment (ESA) Report is for the benefit of Mr. Joel Landue, and affiliated entities, and this report may not be relied upon by any other person or entity without the written consent of RSK Environmental Group, LLC.

Only if written agreement has been executed granting the right to utilize this report, no third party which obtains all or portion of this report shall have any rights of recourse or recovery under any course of action against RSK Environmental Group, LLC, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with RSK's Standard Phase I Environmental Site Assessment Contract and this report is for the benefit of Mr. Joel Landue, and affiliated entities, and its successors and assigns. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of RSK Environmental Group, LLC.

Preliminary Budget:

Item	Quantity	Estimated Cost
Geophysical Survey	Entire	\$2,500.00
Vapor Intrusion Assessment	Entire	\$3,500.00 to \$5,000.00
E-Designation (Hazmat) Review	Entire	\$20,000.00 to \$25,000.00

PHOTO LOG

794 Bedford Avenue, Brooklyn, NY

PHOTO LOCATION: Depicts the subject property (facing west).

PHOTO LOCATION: Depicts the residential property north of the subject property along Bedford Avenue (facing northwest).

PHOTO LOCATION: Depicts the attached residential property south of the subject property (facing south).

PHOTO LOCATION: Depicts the residential property opposite of the subject property (facing east).

PHOTO LOCATION: Depicts the cellar entrance to the subject property.

PHOTO LOCATION: Depicts the stairs leading to the cellar at the subject property.

PHOTO LOCATION: Depicts miscellaneous items in the cellar.

PHOTO LOCATION: Depicts one of the two water heating tanks and the boiler in the cellar.

PHOTO LOCATION: Depicts the electrical meters for the residential units in the cellar.

PHOTO LOCATION: Depicts the main entrance of the building on the subject property.

PHOTO LOCATION: Depicts water damage on the wall in the entryway of the building on the subject property.

PHOTO LOCATION: Depicts a view of the first floor, with one of the first floor apartment units (rear unit) on the left and the stairs to the second floor.

PHOTO LOCATION: Depicts the kitchen in the rear apartment unit on the first floor.

PHOTO LOCATION: Depicts the bathroom in the rear apartment unit on the first floor.

PHOTO LOCATION: Depicts the deterioration on the ceiling of the bathroom.

PHOTO LOCATION: Depicts the bedroom in the rear apartment unit on the first floor, with damage on the ceiling.

PHOTO LOCATION: Depicts water staining damage with black mold on the interior window frame in the bedroom.

PHOTO LOCATION: Depicts the entrance to the apartment unit on the second floor.

PHOTO LOCATION: Depicts the kitchen in the second floor apartment unit.

PHOTO LOCATION: Depicts one of the rooms on the second floor.

PHOTO LOCATION: Depicts access to the backyard from one of the rooms on the second floor.

PHOTO LOCATION: Depicts paint cans in the bathroom on the second floor.

PHOTO LOCATION: Depicts the staircase leading to the third floor.

PHOTO LOCATION: Depicts the apartment unit on the third floor.

PHOTO LOCATION: Depicts water staining damage and deterioration on the ceiling of the third floor.

PHOTO LOCATION: Depicts water damage on the wall of the second floor.

PHOTO LOCATION: Depicts deterioration on the wall behind where a radiator was placed.

PHOTO LOCATION: Depicts water staining damage with black mold on the ceiling and wall of the bathroom on the third floor.

PHOTO LOCATION: Depicts structural damage on the wall below the staircase leading to the fourth floor.

PHOTO LOCATION: Depicts structural damage below the staircase leading to the fourth floor.

PHOTO LOCATION: Depicts pyramid skylight on the ceiling above the staircase to the fourth floor.

PHOTO LOCATION: Depicts the kitchen in the apartment unit on the fourth floor, with leftover food products.

PHOTO LOCATION: Depicts signs of mold below and behind where the refrigerator was located.

PHOTO LOCATION: Depicts deterioration on the wall of the fourth floor due to water damage.

PHOTO LOCATION: Depicts the roof of the building on the subject property.

PHOTO LOCATION: Depicts a view of the pyramid skylight from the roof.

PHOTO LOCATION: Depicts a view of the backyard from the second floor.

PHOTO LOCATION: Depicts the property behind (west of) the subject property over the chain-link fence enclosing the subject property around the backyard.

PHOTO LOCATION: Depicts rear wall of the building on the subject property, along with the adjacent properties (facing east).

APPENDICES

The following sources were utilized to determine the physical setting of the subject site, current and past usage of the site and are researched to evaluate and Recognized Environmental Conditions that might have an adverse effect on the subject property.

- APPENDIX A – EDR Radius Map
- APPENDIX B – Sanborn Fire Insurance Maps
- APPENDIX C – Aerial Photograph Search
- APPENDIX D – EDR City Directory Abstract
- APPENDIX E – EDR Topographic Maps
- APPENDIX F – EDR Building Permit Report
- APPENDIX G – EDR Environmental Liens and AUL Search
- APPENDIX H – EDR Property Tax Map Report
- APPENDIX I – Property Info
- APPENDIX J – Transaction Screen Questionnaire

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EPA ID:: NYD001374214

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 22 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 8 RCRA-VSQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 11 NY SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/10/2021 has revealed that there are 40 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 30 NY UST sites within approximately 0.25 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 32 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/10/2021 has revealed that there are 31 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 88 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 6 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto

EXECUTIVE SUMMARY

sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Region: 2
 DER Facility ID: 255752
 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This gasoline spill case has been reassigned from DEC (Sigona) to Rommel on January 7, 2004. Jones - March 2006 - Reporter's and Spill location phone numbers no longer in service. Recommend return to region 1. Next step: Establish contact with current occupant of the site or track down former owner. 5/16/2006 - Mike - Could not find a contact for current site occupant. Contacted Protest Enterprises who had the same old information the Spill Report states, However Protest the company who did the test has records that tank was tested again on the same day which the tank passed. Also stated there was no spill."

Remarks: "TESTED TANK, TANK FAILED"

DEC Memo: "09/23/2011-Zhune spoke to Kevin Brussee from Environmental Business Consultant 631-504-6000 He said. They are doing Phase II for potential purchaser. They found one UST not properly abandoned. Yesterday they did boribgs around the tank and found soil contaminated. They went 20' down and found a gray sheen in the groundwater interface. They collected soil and groundwater samples. 05/14/12-Zhune called to Kevin Brussee. He said the site has been accepted into the Brownfield program. He also said Mandy Yau is the project manager for this site. 05/14/12- Zhune spoke to Jane O'Connell she request to assign this spill to Mandy Yau. "
Remarks: "Caller advised during inspection of property found a leaking fuel tank unknown amount of oil spilled into soil. Clean up is pending."

Update By:

JHOCONNE

Site Description:

"Location: The Former East Coast Industrial Uniform Site is located in the City of New York, Borough of Brooklyn (Kings County) at 35, 43 and 49 (formerly 39) Skillman Street. It is currently identified as Section 7, Block 1886, Lots 10, 11 and 12 on the NYC tax map. Site Features: The site was vacant and was formerly developed with three attached buildings and a parking area. The site is now occupied by three new 6-story residential apartment buildings. Each building consists of 16 apartments with a mix of 3, 4 and 5 bedroom units to better serve the needs of the community. Each building features a full basement level with utility rooms, residential living space, and 8-9 parking spaces and outdoor recreation areas on the roof. Current Zoning/Uses: The site has historically been zoned for light industrial/commercial applications. In 2001, the area was rezoned as a Special Mixed Use district (MX4) which added an R-6A residential zoning to the area. The surrounding land use includes 3 new multi-family residential buildings to the east, four new multi-family residential buildings and a vacant commercial building to the west, older multi-family walk up style buildings to the south and a community/office building to the north. Past Use of the Site: The Site was developed prior to 1887 with a Brooklyn Union Gas Gasometer (gas holder) in the northern third of the property and multiple residential homes and stores on the southern portion. The holder was operated solely as a gas distribution holder; no gas production facilities were present. By 1935, the holder was removed and the northern section was vacant until approximately 1941 when it was a parking lot and then a furniture/framing company. From 1974 to 2008, East Coast Industrial Uniform, an industrial dry-cleaning operation, was operating on the site. There are several concrete lined trenches cut through the southeast end of the building which were likely used to contain wash water from numerous washing machines prior to discharge through the small aboveground oil water separator located in the southeast corner and finally to public sewer. An abandoned-in-place underground storage tank is located near the roll-up gate entrance to the building. The underground storage tank (UST) is believed to be the 3,000-gallon No. 2 fuel oil tank identified on the NYSDEC PBS database. The UST was subsequently removed as part of the IRM. Site Geology and Hydrogeology: Subsurface soils at the Site consist of brown sand with some gravel to approximately 15 feet below grade. Native fine brown sand with a trace amount of silt is present immediately below this layer. The water table is approximately 20 feet below grade and groundwater flows generally to the west-northwest. "

Env Problem:

"Nature and Extent of Contamination Prior to Remediation: Based on the results of the Remedial Investigation, known contaminants including volatile organic compounds (VOCs) consisting primarily of petroleum compounds and chlorinated solvents, semi-volatile organic compounds (SVOCs) and metals are presented in the subsurface. These contaminants are impacting soil, groundwater and soil vapor. Groundwater - Petroleum VOCs and chlorinated VOCs were reported in groundwater above TOGS standards. For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 290 ppb (standard is 5 ppb). Tetrachloroethene (PCE) was detected at a maximum concentration of 540 ppb (standard is 5 ppb). Trichloroethene (TCE) was detected at a maximum concentration of 53 ppb (standard is 5 ppb). Soil - Petroleum VOCs were detected in soil above their corresponding NYSDEC

FORMER EAST COAST INDUSTRIAL UNIFORM (Continued)

S116041497

Part 375.6 unrestricted soil cleanup objectives (UUSCOs). For example, 1,2,4-trimethylbenzene was detected at a maximum concentration of 16 ppm (UUSCO is 3.6 ppm). Naphthalene was detected at a maximum concentration of 18 ppm (UUSCO is 12 ppm). Soil Vapor Elevated concentrations of several chlorinated VOCs were detected on the site. For example, PCE was detected at a maximum concentration of 3,510 ug/m3 and TCE was detected at 687 ug/m3. Significant Threat: NYSDEC and NYSDOH determined that this site does not pose a significant threat to human health or the environment. Post Remediation: Remediation at the site has been completed. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil, groundwater, and sediment is being managed under a Site Management Plan."

Health Problem: "Measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination."

718-857-2100) and as per Singh owner is: Myer Stern 545 Broadway Suite 1C Brooklyn, NY 11206 Cell 718-599-5569 Fax 718-599-5632 Contaminated soil found on top of 8000-gallon #4 fuel oil UST which was removed. Contamination found at 6' below grade. Soil being stockpiled on plastic sheeting. Site will be overexcavated and samples sent for disposal analysis. Groundwater very deep at site. Site will be developed as six family residential site and is E designated. This site is lot 3 and lot 1 is E designated and NYCDEP requests lot 3 to be part of E designation review. NYCDEP contact is Tyrell Estes (718-595-4473 fax 718-595-4479). Previous Phase II investigation performed. Spill number on Lot #1 is 0601468. DEC requires STIPULATION AGREEMENT due to development issues of site: 1)endpoint samples 2)vapor barrier and possible sub-slab depressurization system 3)delineation 3)submission of PBS registration. Vought called Myer Stern and left message to return to DEC Piper. STIPULATION sent with above requirements with cc to DEP and Singh. 6/2/06- DEC Piper sent STIP. 6/15/06- DEC Piper left message for ted at Don Carlo Env. requesting callback. 8/21/06- DEC Piper received signed STIP agreement, w/ Myer Stern. 9/26/06- DEC Piper responded to site. Don Carlo and owner on site to witness excavation of contaminated soils. Soil was stockpiled. 5 Endpoints colled and waiting for 14-48 hr turnaround to determine if additional excavation is needed. 10/27/06- DEC Piper reviewed closure request. As per report and analytical, this spill is closed. See e-docs if warranted."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "10/02/06-Vought-Off hours responder. Vought called Hileman and spill entering basin for tree on sidewalk. Vought performed site visit with DEC Zhune and spill was approximately 2 gallons of waste oil that affected 2 square feet of sidewalk and spill occurred during heavy rains preventing infiltration of petroleum into soil and tree. Inspection of construction site through fence showed no large spill and no large source of product (most likely 5 gallons or less). Vought placed sand on sidewalk and called Hileman and construction company and informed them of situation: Shoshana Managment 131 Tehama Street Brooklyn, NY 718-851-6089 Spill closed by Vought due to no significant impact to subsurface and small amount of spill."

Remarks:

"UNKNOWN PETROLEUM LEAKING FROM BENEATH CONSTRUCTION BARRIER."

Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: "Location: The Skillman Street Holder Station is located in an urban area, at 7 Skillman Street, Brooklyn, NY. Site Features: The 7 Skillman Street parcel is completely covered by a two-story building. This building is used as a banquet/catering hall. Current Zoning/Use: The property is currently in active use as a banquet hall, and is zoned for mixed use, which includes residential, commercial, and light industrial uses. The surrounding parcels are currently used for a combination of commercial and residential purposes. The nearest residential building is approximately 150 feet to the southwest. Past Use of the Site: Two manufactured gas storage holders were constructed at the site between 1887 and 1904. These holders were operated solely as gas distribution holders, and no gas production facilities were present. At some point prior to 1935, gas storage operations ceased and the holders were demolished. The site remained under the ownership of the Brooklyn Union Gas Company until sometime prior to 1947. Upon being sold the property was used for automobile parking and storage. By 1950, the site was used as an automobile repair facility which remained until at least 1993. In 2003, the existing building was developed into a catering hall, which is presently in operation. Site Geology and Hydrogeology: The site is underlain by fill material, alluvial sands, glacial outwash and bedrock at depth. Groundwater is typically found at approximately 7 to 16 feet below ground surface (bgs), and flows generally to the west-northwest. "

Env Problem: "Based upon investigations conducted to date, the primary contaminants of concern are the volatile organic compounds (VOCs)

MAP FINDINGS

K - SKILLMAN ST. STATION (Continued)

S109321184

benzene, toluene, ethylbenzene and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and metals.

Soil- The subsurface soil exceedances for on-site VOCs (BTEX) were slightly above unrestricted soil cleanup objectives (USCOs), though no samples exceed the restricted residential SCOs. However sampling of soil beneath the site was limited due to the inability to access much of the property with a drill rig, and a source area of higher contaminant concentrations may be present beneath the buildings. Adjacent to the site, in a sample collected beneath Skillman Street at a depth of approximately 27 feet where evidence of coal tar was observed, the concentration of toluene was 160 ppm, ethylbenzene was 220 ppm, and xylenes were 840 ppm in subsurface soil. Styrene was also detected at this location at a concentration of 400 ppm. There were no detections of chlorinated solvents or total cyanide in soil above unrestricted SCOs either on or off-site. The PAH exceedances above unrestricted SCOs consisted of benzo(b)fluoranthene, benz(a)anthracene, benzo(a)pyrene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene. Adjacent to the site the concentration of naphthalene was 1000 ppm (at 27 feet below ground surface). The only inorganics to exceed unrestricted SCOs were lead and mercury, although neither exceeded the restricted residential SCOs in soil.

Groundwater - Samples collected from monitoring wells located both on-site (temporary sampling points) and off-site exceeded groundwater quality standards (GWQS) for benzene, toluene, ethylbenzene, xylenes (BTEX) compounds, naphthalene, chlorinated VOCs, cyanide, and metals. On-site, benzene ranged from 13 to 5,600 ppb (GWQS of 1 ppb), toluene at 20,000 ppb (GWQS of 5 ppb), ethylbenzene at 12,000 ppb (GWQS of 5 ppb), xylenes at 9,400 ppb (GWQS of 5 ppb), isopropyl benzene at 420 ppb (GWQS of 5 ppb), styrene at 82 ppb (GWQS of 5 ppb), cis-1,2-dichloroethene at 9.2 ppb (GWQS of 5 ppb), naphthalene at 5,600 ppb (GWQS of 10 ppb), total cyanide at 240 ppb (GWQS of 200 ppb), chromium at 380 ppb (GWQS of 50 ppb), and lead at 280 ppb (GWQS of 25 ppb). Elevated BTEX and naphthalene also indicate the possible presence of MGP-related contaminants in the subsurface beneath the building. Off-site, detections of benzene range from 100 ppb to 410 ppb; toluene from 79 ppb to 1,100 ppb; ethylbenzene from 32 ppb to 930 ppb; xylenes from 100 ppb to 3,900 ppb; tetrachloroethene (PCE) from 5.6 to 9,400 ppb; trichloroethene (TCE) from 140 to 1,900 ppb; vinyl chloride from 200 to 380 ppb; cis-1,2-dichloroethene from 600 ppb to 8,000 ppb; isopropyl benzene from 64 ppb to 420 ppb; styrene from 82 ppb to 1,800 ppb; and naphthalene from 62 ppb to 5,600 ppb. There were also eight inorganic compounds that exceeded the groundwater standards in both on-site and off-site wells. These compounds were copper, iron, magnesium, manganese, nickel, selenium, sodium, and thallium, all of which are not associated with the former MGP operations.

Soil Vapor - Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included benzene at 35 ug/m³; toluene at 96 ug/m³; ethylbenzene at 12 ug/m³; xylenes at 40 ug/m³; 1,2,4-trimethylbenzene at 12 ug/m³; and nonane at 8.4 ug/m³. The non-MGP constituents included PCE at 12,000 ug/m³, TCE at 1,200 ug/m³, and cis-1,2-dichloroethene at 1,500 ug/m³.

Indoor Air - The contaminants present in soil vapor at elevated levels were detected at much lower concentrations in indoor air. The highest concentration of the BTEX compounds was toluene at 6.3 ug/m³. PCE was detected at a concentration of 0.66 ug/m³; TCE at 0.21 ug/m³; and ethanol at 450 ug/m³. The ethanol concentrations in indoor air were

S109321184

approximately an order of magnitude larger than the soil vapor concentrations, indicating the source to be within the building. No indoor air guidance values were exceeded for any compound. The owners of the affected property have been notified where mitigation or monitoring of impacts to indoor air is required. In 2018, several monitoring wells were sampled for PFAS and 1,4-dioxane as part of the Department's Emerging Contaminants initiative. Perfluorooctanoic acid (PFOA) and perfluorooctanesulfanoic acid (PFOS) were reported at concentrations of up to 180 and 45 parts per trillion (ppt), respectively, exceeding the 10 ppt screening levels for groundwater for each. Individual PFAS exceeding the 100 ppt screening level included perfluorohexanoic acid (PFHxA) at a concentration of 208 ppt. Total PFAS, including PFOA and PFOS, were reported at concentrations of up to 817 ppt, which is above the 500 ppt screening level for total PFAS in groundwater. An Interim Site Management Plan (ISMP) is in place that governs soil disturbance and the required groundwater monitoring. "

Health Problem: "Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move in to the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Mitigation has been recommended to address the potential for people to inhale contaminants in indoor air of the onsite building due to soil vapor intrusion. Environmental sampling indicates that soil vapor intrusion is a concern for off-site buildings which are occupied. "

DEC Memo: "4/11/14: Mahat T/C : Soil contamination is found durig the Phase II investigation. The site was a former car repair shop and current catering hall. Mr. Charles will make the report about his finding and will submit to the Department for a review. 02/05/19 - COC for BCP site # C224193 issued 12/29/17 Track 1 unrestricted no site management required. Spill closed meeting standards. - RJW Point of Contact : Charles (EBC) 631.504.6000 EXT 112 email : csocik@ebcincny.com 8/19/14 : Mahat An email was sent out to Mr. Socik inquiring more information about the spill and over due report. 12/14/15: Mahat An email was sent out to Mr. Socik requesting Phase II report. BCP Application : C224193 (crossed referenced) PM : Steven Malsan 518.402.9622 Spill case will remain open until the result of recent boring is out. 8/31/16: Mahat e/c : DEC Mahat sent an email to DEC Steve Malsan to consolidate the spill case with BCP Application OR close the spill case on Spill Unit. As per email discussion, the spill case has been assigned to DEC BCP PM Malsan for further investigation on the case. Case will be transferred to the BCP PM later this week. 5/9/17: Malsan email from Kevin Waters to DEC Malsan states during underpinning operations in Grid Section A and B an underground storage tank (UST) was found onsite. The tank is approximately 13' north of the adjacent property to the south and 42' west of the Bedford Ave property line. The tank is encased in concrete. The concrete vault is roughly 20' long. The tank is filled to the top with either gasoline or a water and gas mixture. The top of concrete is 1-2' below grade and the tank is 5-6' deep. EBC and the onsite contractor investigated the areas around the tank. No other tank were tanks were found nearby this initial tank. follow up calls and emails: Brookside is scheduled to pump out the tank at noon on 5/10/17."
Remarks: "contamination based on lab results/site is former gas station"

construction of a 7-story mixed-use commercial-residential building, which will cover the entire site, is underway. Current Zoning and Land Use: The current use of the site is vacant, zoned mixed commercial (M1-2 / R6A zoning) use. Past Use of the Site: According to Sanborn maps the southern portion of the site was occupied by a carriage repository in 1904 while the northern portion was occupied by single family homes. By 1918 the southern portion became occupied by a 50-car garage with underground gasoline tanks. By 1947 auto sales and service was added to the front portion of the garage. In 1950 the rear portion of the site remained residential. Sometime between 1965 and 1977 the homes on the northern portion were removed and replaced with a 1-story building identified as used auto sales. The use of the site remained as auto sales and auto repair through 1993 when the buildings were shown as vacant. The gas tanks remained on all the maps from 1918 through 1996. Site Geology and Hydrogeology: The elevation of the site ranges from 19 to 21 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the north. Soil at the site is described as historic fill materials to a depth ranging from 4 to 6 feet below the surface followed by native silty-sand and gravel. The depth to groundwater beneath the Site is approximately 12 feet below grade and flows to the southwest toward dewatering wells at a subway station. "

Env Problem:

"Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were petroleum-related VOCs, including ethylbenzene, n-propylbenzene, xylene, and 1,3,5-Trimethylbenzene (1,3,5-TMB) which exceeded the unrestricted use soil cleanup objectives (UUSCOs). Metals (copper, lead, mercury, and zinc) were also detected in the soil exceeding UUSCOs. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Low level VOCs found in soil vapor were addressed by the extensive site excavation (source removal) and following a soil vapor intrusion evaluation, no further actions were necessary to address exposures related to soil vapor intrusion."

Health Problem:

"Remedial actions are complete and have eliminated the potential for contact with site-related contaminants."

Contact Name: Not reported
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 1/12/06: Reviewed the third triannual 2005 update report dated 1/9/06. Samples taken on 11/18/05. Max BTEX 680ppb (MW5), max MTBE 120 ppb (MW6). Plume located on northern corner of the property and no off-site delineation. Sent off-site delineation required letter. 1/26/05: 1/25/06 meeting with Quantum, NYSDEC, and ET. We will wait one more quarter to investigate the peak in concentration in MW-5 and MW-6. 6/5/06: Received first triannual update report. ORC socks installed in MW 5 and 6 on 2/24/06. Max BTEX 328 in MW5, max MTBE 85 in MW6. Depth to water 21-25 ft. Closure was requested. 8/28/06: Reviewed March - June 2006 update report. Wells sampled on 6/15/06. Large increase in BTEX concentration in MW5. Max BTEX 1180 in MW5, max MTBE 165 ppb in MW5. ORM socks will be replaced in August 2006. 9/27/06: Spill 06-01468 was opened on the property directly downgradient, 791 Bedford Avenue. Sent letter to Hess requesting additional delineation downgradient of the site due 11/29/06. 11/2/06: Spill 0601468 was consolidated with this spill. Residual BTEX contamination remains on 791 Bedford Avenue. 12/18/06: Emailed Hess to followup on status of off-site delineation. Received email from Hess: Hess requests that the DEC provide all available information including analytical results, sampling depths and locations, figures and reports related to the off-site contamination observed on the auto yard property. The information is necessary to evaluate potential off-site delineation. 1/17/07: Meeting on 1/16/07 with Hess, Delta, NYSDEC. A FOIA request was submitted for downgradient spill. 1/23/07: Received update report. Wells sampled on 10/2/06. Max BTEX 354 ppb (MW5), max MTBE 54 ppb (MW5). ORC socks in MW 5 and 6. Triannual sampling. 2/22/07: Received email from Aaron: We are still awaiting FOIA response from our January 12th request. 4/26/07: Received update report. Wells sampled on 2/23/07. Max BTEX 755 ppb (MW5). Max MTBE 45 ppb (MW5). Report states that downgradient site has cVOCs and metal impact which Hess could not be a source of. However, downgradient site has no soil VOC impact, while it does have low level VOC groundwater impact. 9/4/07: Reviewed site status report. General decreasing trend. Wells sampled on 6/26/07. Max BTEX 33 ppb (MW6). Max MTBE 7 ppb (MW6). NFA requested. 2/11/08: Reviewed August 2007 to November 2007 Site Status Report. Wells sampled on October 5, 2007. Max BTEX 520 ppb (MW5), max MTBE 17 ppb (MW5). Triannual groundwater monitoring and sampling will continue. 5/14/08

- Carlson: Meeting on 5/7/08 with Hess and Envirotrac. The Department requested the installation of two sidewalk wells. Wells sampled on 2/26/08. Low dissolved concentrations. 9/8/08 - Carlson: Reviewed update report. Low dissolved concentrations. Emailed Hess/Envirotrac - IP for delineation wells due on October 8th. 10/15/08 - Carlson: Received workplan for the installation of two downgradient wells on the north side of Park Avenue. Approved well locations by email. 10/22/08 - Carlson: Meeting with Hess/Envirotrac. The Department requested confirmatory soil borings be completed. RIR due by end of year. 11/6/08 - Carlson: Issued delineation workplan approval letter. 3/5/09 - Carlson: Received notification that well installation is scheduled for 3/9/09. 3/11/09 - Carlson: Received update report. Confirmatory soil boring data showed low level impact remains in SB1. 3/18/09 - Carlson: Meeting with HESS/Envirotrac. Access denied for off-site delineation. Quarterly gauging requested. 4/6/09 - Carlson: Emailed Ed Russo to get contact information for off-site owner. 4/8/09 - Carlson: Received email from John Schenkewitz with name of off-site owner. Hess does not feel comfortable installing wells in this location due to conflict with off-site owner. 7/3/09 - Carlson: Received June 2009 update report. Low dissolved concentrations. 8/19/09 - Carlson: Meeting held with Hess and Envirotrac. Install approved monitoring wells as borings with temporary piezometers only, due to access issues with off-site property owner. 10/21/09 - Carlson: Reviewed September 2009 Update Report. Low level dissolved concentrations remain. No update on off-site delineation. 10/30/09 - Carlson: DEC Tibbe contact off-site owner (Isaac Genud, 347-495-9584). Mr. Genud will provide access for sidewalk well installation. 12/3/09 - Carlson: Witnessed off-site well installation on Park Avenue. 1/7/10 - Carlson: Reviewed December 2009 update report. Low dissolved concentrations. Off-site well installation data to be reported in next quarterly report (March 2010). 1/27/2010 - Carlson: Meeting with Hess. 4/21/2010 - Carlson: Reviewed March 2010 update report. Off-site wells installed - clean. Spike in groundwater concentrations in MW5 and MW6. Confirmatory soil borings completed in 11/2008 showed residual soil impact in these areas. Issued letter requiring RAP in 30 days. 7/13/2010 - Carlson: Reviewed update report. RAP received - submitted separately. 8/3/2010 - Carlson: Reviewed delineation workplan/RAP. Two boring, one monitoring well, two AS wells proposed. Soil borings will be completed as monitoring wells if soil impact is encountered. STRE will be conducted. Issued approval letter. 3/3/11- Oblgado - I reviewed the 3Q10 report. Maximum benzene concentration is 157 ug/L. Max MTBE is 5.8 ug/L in MW6. Maximum BTEX is 206 ug/L in MW6. 4/11/11 - Oblgado - Hess submitted a closure petition. I reviewed and rejected the petition. They have not yet implemented the approved RAP. I emailed a letter to Ed Russo cc to John Engdahl requiring implementatino of the approved RAP. 8/17/11 - Oblgado - Email from Ed Russo. They will implement STRE event next week and submit a report in September. 9/7/2012 - 1Q2012, 6/29/2012, by EnviroTrac. The groundwater was sampled on 4/17/2012. DTW 20.66 to 25.59. Flows to north. NO LNAPL. The next sampling will be in 7/2012. Hess to evaluate historical soil, groundwater and STRE data to determine remedial efficiency. MW-9, 15.9J BTEX, 2.8 MTBE. MW-5, 0.40J BTEX, 200 MTBE. MW-6, 3.98J BTEX, MTBE ND. MW-10, 3.79J BTEX, 1.5 MTBE. 11/6/2012 - 2Q2012, 9/28/2012, by EnviroTrac. The groundwater was sampled on July 31, 2012. DTW 21.73 to 25.87. Flows to north. MW-5, 20.83 BTEX, 110 MTBE. MW-6, 149.7 BTEX, 0.76J MTBE. MW-4, 28.06J BTEX, MTBE ND. The next sampling

will be in October 2012. Hess to evaluate historical soil, groundwater and STRE data to determine remedial efficiency. 2/1/2013 - 3Q2012, 12/31/2012, by EnviroTrac. The groundwater was sampled on 10/9/2012. DTW 21.73 to 25.87 feet. NO LNAPL. Flows to north. MW-5, 28.25J BTEX, 34.5 MTBE. MW-6, 116.9 BTEX, 1.5 MTBE. The next sampling will be in 1/2013. Hess to conduct 6 STRE in area of concern beginning 1/2013. 9/24/2013 - 4Q2012, 3/29/2013, by EnviroTrac. The groundwater was sampled on 1/14/2013. On 1/3/2013, STRE on MW-5 and MW-6. DTW 22.11 to 26.22 feet. Flows to north. NO LNAPL. MW-5, 94.7 BTEX, 29.2 MTBE. MW-6, 36.5J BTEX, 0.68J MTBE. 1Q2013, 6/28/2013, by EnviroTrac. The groundwater was sampled on 4/16/2013. Based on the groundwater sampling data, MW-1, MW-2 and MW-3 will be removed from the sampling plan. MW-9, 255 BTEX, 26.2 MTBE. MW-5, 288.8 BTEX, 10.4 MTBE. MW-6, 56.3 BTEX, 1.2 MTBE. On 2/20 and 4/10/2013, STRE on MW-5 and MW-6. MW-5/AS-1, PID reading 1,046 ppm. MW-6/AS-2, PID reading 2,000 ppm. 3/14/2014 - Conference among OER Shaminder Singh and Shana Holberton, DEC J. Vought and J. Feng. The station will be rebuilt into a new station. Vapor barrier and SSDS will be installed for the new convenience store. 3/20/2014 - Discussed with J. Vought. Spill is closed based on: 1) Source removal, i.e. (36) 550-gallon previously abandoned gasoline USTs, (4) 4,000-gallon gasoline USTs, (2) 2,000-gallon gasoline USTs, (1) 1,000-gallon fuel oil UST, (1) 550-gallon waste water UST and all associated dispensers, piping and remote fills were removed in 8/1995. 2) A total of 1,400 tons of petroleum impacted soil was removed offsite for disposal during the USTs removal activities. 3) Subsurface investigation as 11 monitoring wells, two Air Sparge wells and 3 soil borings have been installed. The extent of soil and groundwater contamination has been delineated at this time. 4) The soil boring SB-1 was found to have remaining soil contamination at 24-25 feet where at the smear zone. Downgradient well MW-6 nearby show low and downward trend in BTEX concentration suggest that the soil contamination possibly no longer contribute to groundwater contamination. 5) No groundwater contamination has been found in the downgradient wells MW-7 and MW-8 since their installation. It suggest that the contamination plume is contained onsite. 6) The maximum BTEX 100.5J ug/L and 39.9 ug/L MTBE was detected in MW-5 on 1/6/2014. The groundwater has been demonstrated a significant reduction in contamination levels. Groundwater monitoring data showing downward trend which suggest attenuation is occurring. 7) The site will be re-developed as a new station, vapor barrier and SSDS will be installed for the new convenience store. No change use of the property has been aware of at this time. 8) The residual contamination notification language will be included into the Spill Closure Letter. 3/21/2014 - Spill closure letter to Hess and copied EnviroTrac and OER."

Remarks: "UPGRADE OF TANKS IN PROCESS - SOIL FOUND TO BE CONTAMINATED PROBABLY FROM OLD LEAKING TANK - WILL BE REMOVING ALL CONTAMINATED SOIL"

DEC Memo:

"2/17/2017 - Feng - Duty Desk. Spoke to Matt Butler of SpeedWay (732-738-2924, MButler1@SpeedWay.com). SpeedWay is selling the property and is removing the entire PBS system. Contaminated soil was found in the fillport area. At this time, the pipes and dispensers were removed and no contamination has been encountered. (4) tanks have been removed so far and the process still ongoing to remove the rest. No problem in these areas except the fillport. They will excavate the contaminated soil in the fillport area as much as possible and will collect endpoint samples. Not known the future use by the new owner, but probably would know when the closure report is submitted. No vapor complaints so far, not hear anything from their contractors. They liveloaded/stockpiled the soil generated. The stockpiled will be covered with plastic and will be disposed offsite very soon. Planned to finish the work, i.e. tanks system removal and over-excavation by next week. A Tanks Closure report will be submitted to DEC spill response and PBS. Informed Matt that the spill is transferred to K. Patel, the runner of the day. Discussed with K. Patel and J. Vought. spill to be assigned to K. Patel. 2/21/2017 - Feng - Sent SpeedWay CSL requiring the removal of the contamination and the submittal of development plan. Report due 3/2017. 02/23/17-Hiralkumar Patel. alternate address: 494-502 Park Ave, 793-803 Bedford Ave site has environmental restriction for 'hazmat'. PBS #: 2-297283. as per PBS record, the site has/had following tanks: - thirty-six (36) 550 gal other product USTs, closed-in place in Nov. 1979 - one (1) 550 gal other product UST, removed in Aug. 1995 - one (1) 1,000 gal #2 oil UST, removed in Aug. 1995 - four (4) 4,000 gal gasoline USTs, removed in Aug. 1995 - two (2) 2,000 gal gasoline USTs, removed in Aug. 1995 - five (5) 4,000 gal gasoline/ethanol USTs, in-service, installed in Sep. 1995 - one (1) 600 gal other product UST, in-service, installed in Sep. 1995 other spills #: 9010916, 9200519, 9506480, 0307159 spill #: 9010916 was reported on 01/14/1991 as gasoline tank failed a test due to leak at nipple connected to the tank. case closed. spill #: 9200519 was reported on 04/14/1992 as gasoline tank failed due to loose coupling. case closed. spill #: 9506480 was reported on 08/25/1995 due to findings of soil contamination during tank upgrade. total of forty-four (44) tanks (36 - 550 gal tanks, 4 - 4,000 gal tanks, 2 - 2,000 gal tanks, 1 - 1,000 gal tank and 1 - 550 gal tank) were removed. total of 1,400 tons of contaminated soil was removed and groundwater monitoring wells were installed for remediation. case closed. spill #: 0307159 was reported on 10/07/2003 as 50 gal gasoline spilled possibly due to overfill. case closed and merged with spill #: 9506480. Speedway LLC. **property owner** 105 Fieldcrest Ave., 5th Floor Suite 505 Edison, NJ 08837 Attn. Matthew Butler Ph. (732) 738-2924 (732) 306-2751 email: mbutler1@speedway.com 03/09/17-Hiralkumar Patel. received email from Joseph Rennie (at 5:06 PM on 03/08/17) from Envirotrac including link to tank closure report. abstract: - removed five (5) 4,000 gal double-walled fiberglass gasoline USTs and one (1) 600 gal double-walled fiberglass waste water UST - USTs appeared in good condition, with no visible holes observed - endpoint soil samples of the UST excavation were collected from the sidewalls of the excavation at approx. 12 ft bg - PID readings of sidewall samples collected ranged from 0 ppm at several sidewall sampling locations to 1,283 ppm at SW-5 - holes were chipped through a concrete slab to collect bottom samples ----- - bottom soil samples from underneath the former USTs were collected at approx. 15-16 ft bg - PID readings of bottom samples collected ranged from 0.1 to 5.6 ppm -

GAS STATION (Continued)

S120700581

removed all vent lines, product dispenser islands along with dispensers and associated product lines were removed - small area of impacted soil, with PID reading of 17.8 ppm, was observed beneath dispenser island #3 - endpoint soil samples were collected from beneath the five former dispensers - endpoint soil samples were collected from product line trenches beneath elbows, tees, and along product lines at approx. 15 ft increments - endpoint soil samples were collected from vent line trenches approx. 24 ft apart - total of 130.95 tons of pea gravel and soil were removed - only areas of soil impact that were observed were beneath dispenser island #3 and under the former remote fills along the north sidewall of the excavation and both areas were over-excavated to remove impacted soils - limited area of petroleum impacted soil remains in the area between the sample location SW-5 and the sidewalk - proposed future development plans for the property includes the construction of a six-story mixed use building with a basement that will cover the entire site. the property is anticipated to be used for commercial/retail and residential use - proposed deed restriction to limit use of the ground floor and any subsurface floors to commercial/retail use, with residential use only on the upper floors; and installation of a vapor barrier and vapor mitigations system - found contamination in endpoint sidewall sample SW-5 only soil analyticals (ppb):

-----SW-5 12 ft
Benzene-----180* Toluene-----1,380
Ethylbenzene-----4,330 Xylene-----31,400
1,2,4-Trimethylbenzene-----32,700 1,3,5-Trimethylbenzene-----11,000
Naphthalene-----4,580 * - higher MDL reviewed quarterly

report from EnviroTrac under spill #: 9506480. multiple on- and off-site monitoring wells were installed. the nearest well to endpoint sidewall sample SW-5 was MW-10, which was within 15 ft distance. based on groundwater flow direction, well MW-7 on north sidewalk of Park Ave was located in downgradient position from endpoint sidewall sample SW-5. based on quarterly monitoring data, no contamination was found in groundwater samples from MW-7 or MW-10. 1:25 PM:- left message for Matt. 03/10/17-Hiralkumar Patel. 9:12 AM:- sent email to Matt. asked him to provide details about site developer, detailed development plans including vapor mitigation methods and status on deed restriction. email copied to Joe. 03/15/17-Hiralkumar Patel. received message from Matt (at 10:25 AM on 03/14/17). 11:11 AM:- left message for Matt. 03/16/17-Hiralkumar Patel. 11:04 AM:- received call from Matt. he mentioned that currently they have signed contract for property sale and buyer is planning to build a mixed use building. Matt mentioned that property sale could occur by first week of April. asked him to provide new owner's contact info, once property is transferred. Matt mentioned that due to 'e' designation on property, buyer is already in contact with OER. Matt inquired if a new spill number is needed for previously known groundwater impact noted during investigation under 'e' designation. informed him that the subject spill case will be kept open and no need for new spill number, unless new information found at the site. 05/12/17-Hiralkumar Patel. 12:54 Pm:- received email from OER Shaminder including OER comments on DRAFT RIR. 06/01/17-Hiralkumar Patel. downloaded work plan/reports from NYC OER EPIC. as per Phase I dated Nov. 2016, site has been developed since at least 1887 when it was developed with a two-story residence on the north side of the property, a shed on the northeast corner, and a three-story residence on the southwest corner of the site. the

MAP FINDINGS

GAS STATION (Continued)

S120700581

central portion of the site was undeveloped at this time. by 1904, the site was subdivided into five separate tax lots with one two-story residence, and four 4-story mixed use buildings present along Bedford Ave and Park Ave. by 1947, the two-story residence on the southwest corner of the site was no longer present and the four-story mixed use buildings along Bedford ave were now vacant. by 1950, there were four single-story buildings present along Bedford and Park Ave with parking on the east side of the site. the site remained generally unchanged inn 1965 except the south side of the site was used for tire storage and southwestern most building along Bedford Ave was occupied by a church. by 1977, the site was redeveloped into a filling station with a single-story building present on the southeast corner and a tank field present on the southwest corner of the site along Bedford Ave. summary of Phase II report dated 01/20/2017: - three soil borings (SB1 through SB3) were installed to a depth of 25 ft bg - below the asphalt pavement, the onsite soil consisted primarily of brown silty sand with some gravel and large cobbles which were intermittently encountered from the surface to 20 ft bg - some pockets of soil with red brick and/or glass fragments were observed in soil from the surface to approx. 10 ft bg - no visual or olfactory evidence of contamination was detected in any of the samples collected - depth to groundwater at the site was approx. 22 ft bg - due to no evidence of contamination, soil samples were collected from shallow (0-5 ft) interval and at the water table interface (20-25 ft) - minor VOCs (less than 135 ppb total BTEX) noted in deeper soil samples summary of RIR dated May 2017: - site is currently vacant but was occupied by a gasoline filling station as recently as Feb. 2017 - the onsite buildings, structures, pump islands, USTs and the piping associated with tank and pump islands were removed between Feb. 13-22, 2017 - proposed future use of the site will include a new 6-story mixed use commercial and residential building with a full cellar - cellar will consist of commercial space and residential accessory space - first and second floor will consist of commercial space, residential space and parking space - third to sixth floor will consist of residential space - cellar level will require excavation to 10.5 ft bg throughout the entire site. additional excavation will be required for the installation of footers and an elevator pit - elevation of the site is approx. 26-28 ft above mean sea level - installed eight (8) soil borings (SB1 through SB8) to a final depth of 10-15 ft bg - stratigraphy of the site generally consists of brown sandy-silty fill material from the surface to 4-8 ft bg followed by gravelly, silty sand mixtures to a depth of at least 15 ft bg - large concrete pad was encountered at approx. 12-13 ft bg below the former tank storage area on the north side of the site - large cobbles or bedrock was encountered at approx. 10-12 ft bg on the southeastern portion of the site - two soil samples were retained from each soil boring representing the shallow 0-5 ft interval and deep 8-10 ft interval except for at SB5 where the deeper interval soil sample was collected at 9-12 ft - sixteen (16) soil samples and one (1) duplicate soil sample were collected - minor VOCs noted in soil samples: max. 1,430 ppb total BTEX in 0-2 ft bg in SB8 - three (3) 1-inch temporary well points (MW1 through MW3) were installed - well MW1 was installed to a depth of 30 ft bg, with screen from 20 to 30 ft; groundwater found at 26.49 ft bg - well MW2 was installed to a depth of 25 ft bg, with screen from 15 to 25 ft; groundwater found at 24.68 ft bg - well MW3 was installed to a depth of 30 ft bg, with screen from 20 to 30 ft;

S120700581

groundwater found at 26.08 ft bg - groundwater flows to the north-northwest - no free phase product was observed within the three monitoring wells - three (3) groundwater and one (1) duplicate sample were collected - contamination noted in groundwater samples groundwater analyticals (ppb):

-----MW2-----MW3
Benzene-----430
Ethylbenzene-----620-----65
Xylene-----670
1,2,4-Trimethylbenzene-----860-----27
1,3,5-Trimethylbenzene-----430-----49
Naphthalene-----900-----180 - installed six (6)

soil vapor implants (SV1 through SV6) to a depth of 10 ft bg - collected soil-vapor samples from five soil-vapor probes (SV1, SV3, SV4, SV5 and SV6) - soil vapor sample from SV2 could not be collected because the vapor point flooded - minor VOCs (less than 100 ug/m3) and CVOs (less than 8 ug/m3) noted in soil-vapor samples 06/02/17-Hiralkumar Patel. 2:56 PM:- discussed with DEC Vought and OER Shaminder. as site had multiple motor fuel tanks in past and impact noted in groundwater at downgradient corner of the site, there is possibility of soil contamination on-site from historical use. Shaminder mentioned that OER has asked installation of 20 mil vapor barrier underneath the site. need to discuss vapor mitigation efforts with NYSDOH. Robert M. Bennett Environmental Business Consultants Ph. (631) 504-6000 Ext. 116 (631) 626-1702 (C) Fax (631) 924-2870 email: rbennett@ebcincny.com 6/5/17-Vought-Assisting DEC Patel with spill. Vought called to discuss site with NYSDOH Walz and NYSDOH Walz out of office for next two days. Due to scheduled meeting with OER and developer today, Vought discussed site conceptually with NYSDOH Hughes. Vought discussed development plans (foundation slab with vapor barrier, clean soil samples from removal of most recent tank system, groundwater concentrations most likely within natural attenuation ranges, presence of at least 36 550-gallon USTs as per PBS for which there is no assessment data on file, and fact that groundwater was contaminated and as such there must be soil contamination somewhere on site as there was a pathway for which soil contamination affected groundwater to also become contaminated). NYSDOH Hughes agreed that either a passive SSDS (with future SVI study) or active SSDS be proposed as part of development. Vought called OER Chawla and informed him of same and OER Chawla will let developer know that either a passive SSDS with SVI or active SSDS must be included in work plan. OER Chawla also to indicate that DEC may require additional sidewalk well installation. Vought communicated same to DEC Patel. 06/05/17-Hiralkumar Patel. 10:45 AM:- received email from OER Shaminder. he discussed with developer who agreed with following remedy: - excavation of entire property to 12 ft bg - minimum 20 mil vapor barrier - installation of an active SSDS - additional groundwater monitoring well in the sidewalk to monitor natural attenuation 1:20 PM:- sent email to OER Shaminder including a site map with two proposed well locations. informed him that these wells are needed to monitor groundwater down gradient of former endpoint sidewall sample SW-5 and monitoring well MW2. email copied to DEC Vought, DOH Nathan and OER Horace. 06/13/17-Hiralkumar Patel. received email from OER Shaminder (at 12:49 PM on 06/12/17). he mentioned that proposed RAWP includes the following: - Track 4 excavation entire property to 10.5 plus feet - two new monitoring wells for future monitoring as required by DEC - vapor barrier -

S120700581

composite cover; and - active SSDS as required by NYSDOH 07/11/17-Hiralkumar Patel. downloaded final RAWP and RAWP Stipulation List from OER EPIC. the entire site will be excavated to a depth of 10.5 ft bg and fifteen (15) endpoint samples will be collected for lab analysis. remedial action under the subject spill will consist of installation and monitoring of off-site groundwater wells. these off-site wells will be installed after building demolition and wells will be monitored quarterly. an active SSDS and 20-mil thick vapor barrier will be installed beneath the building. 2:21 PM:- sent email to OER Shaminder and asked him to inform once the on-site building is demolished and off-site wells are installed. email copied to OER Horace. 09/18/17-Hiralkumar Patel. received email from OER Horace (at 12:17 PM on 08/30/17) including copy of email from Robert dated 08/25/17. Robert mentioned that they encountered some material from the northeast corner of the site that had elevated PID readings (100-400ppm). the material was not heavily impacted, there was no staining or significant impacts detected; only elevated PID readings and slight odors. EBC collected waste characterization samples to finalize disposal facility as current disposal facility does not accept soil with more than 50 ppm on PID. 09/26/17-Hiralkumar Patel. 8:58 AM:- received email from Robert. he mentioned that they noted some deep petroleum impacts on the southwest corner of the site which extends below the proposed bottom of excavation. the proposed bottom of excavation is 12 feet below grade and impacts were encountered as deep as 22-24 ft and they appear to extend deeper. additionally, groundwater is present at approximately 24.5-26.5 ft below grade and impacts likely extend to the water table. due to the vertical depth of impacts, Robert proposed minor changes to the Remedial plan to address the impacts. he plans to use oxidant treatment to the open excavation, backfilling with clean soil after removing a bulk of impacted soil and installing a permanent monitoring well to observe the effectiveness of oxidant treatment/bulk removal and to monitor trends over time. 9:42 AM:- sent email to Robert and asked him to submit site map with approx. location where contamination noted. email copied to OER Horace. 10:25 AM:- received email from Robert including a site map which shows area of contamination in southeast corner, but previous email stated contamination noted in southwest corner. 1:47 PM:- sent email to Robert and asked him to confirm where deeper contamination noted: southwest or southeast? email copied to OER Horace. 1:52 PM:- received email from Robert confirming that deeper contamination noted in southeast corner of the site. 09/27/17-Hiralkumar Patel. 8:40 AM:- visited site and met Rob, James Bellew and Tovia Kohn. the north half section of the site has been dug down to 12 ft depth. Rob mentioned that during work, they noted some contamination in west-central section (not southeast or southwest as previously mentioned) of the site. they noted contamination to a depth of approx. 22 ft bg, but no samples were collected. asked Mr. Kohn to delineate contamination prior to any comments on remediation/monitoring plan. Tovia Kohn **construction manager** Ph. (917) 624-0299 email: tovia@prestigenyllc.com James Bellew Ramboll Environ **2nd env. contractor working at site** Ph. (973) 286-4277 (347) 640-2759 email: jbellw@ramboll.com 12:27 PM:- sent email to Rob and asked to confirm location where deeper contamination noted. email copied to OER Horace and James. 12:40 PM:- received email from Rob. he confirmed that deeper contamination was noted in west-central section. he will send a delineation plan (including installation of soil boring and well) tomorrow morning and

MAP FINDINGS

GAS STATION (Continued)

S120700581

delineation work will occur on 09/29/17. 09/29/17-Hiralkumar Patel. received email from Rob (at 4:44 PM on 09/28/17) including a site map with proposed delineation boring/well location. Rob proposed to install one well MW-5 in west-central portion. more borings will be installed if impact noted during installation of MW-5. Rob proposed to analyze samples for VOCs. 8:37 AM:- left message for James and informed him that soil samples must be collected for analysis during boring installation. 8:39 AM:- sent email to (and left message for) Rob and informed him that soil samples must be collected for analysis during boring installation. email copied to James. 8:49 AM:- sent email to Rob and asked him to analyze samples for VOCs and SVOCs. 10:01 AM:- received call from Rob. he confirmed that samples will be collected for VOC/SVOC analyses. asked Rob to also collect soil samples from borings with evidence of contamination to document subsurface condition. 10/17/17-Hiralkumar Patel. received email from James (at 11:40 AM on 10/16/17) including investigation report. summary: - subsurface soils at the site consist of brown sandy-silty fill material from the surface to a depth of about 4-8 ft bg. gravelly, silty-sand is present immediately below this layer to at least 15 ft bg. large cobbles or potential weathered bedrock was encountered at 10-12 ft bg on the southeastern portion of the site - depth to groundwater is approx. 28.5 ft to 30.5 ft bg - groundwater flows to the north-northwest ----- - nine borings (DB1, DB2A, DB2B, DB2C, DB3A, DB3B, DB4A, DB5A and DB5B) were advanced to depths ranging from 18 to 28 ft bg - monitoring well (MW-5) was installed directly at boring location DB1, in the approx. location of the impacted material identified in the field - odors and elevated PID readings were observed in soils in borings DB1, DB2A, DB2B and DB4A - no product found on water soil analyticals (in ppb):
-----DB1-----DB2B-----DB2B-----DB2C 27 ft 15 ft 27 ft 15 ft
Ethylbenzene-----3,500-----2,200----2,100

S120700581

most recent UST system was segregated and disposed by Speedway - additional soil was excavated to depths of 20 ft and 26 ft bg as per site map, 25 ft by 38 ft area around well MW5 was excavated and endpoint sidewall samples were collected at 20 ft depth and bottom sample was collected at 26 ft depth. no contamination noted in endpoint samples. as per chain-of-custody, endpoint samples were collected on 10/18/17. 11/30/17-Hiralkumar Patel. 9:13 AM:- spoke with Rob at EBC. he mentioned EBC managed soil removal in the area of MW5. there was no groundwater noted in the excavation. the well MW5 was not gauged during excavation activities. Rob mentioned that they have asked construction crew not to destroy well MW5 and planning to keep well in foundation. asked Rob to gauge and sample well MW5 and based on groundwater sample result, the department may require installation of a third off-site well (two off-site wells were required to monitor groundwater based on previous sampling results) and closure of well MW5 to prevent penetration through the vapor barrier. Rob mentioned that they tried to install previously approved off-site wells, but there is space restriction due to ongoing construction activities. off-site wells will be installed, when possible. 12/08/17-Hiralkumar Patel. 11:28 AM:- received message from Joe Rennie from EnviroTrac. 12:25 PM:- spoke with Joe. he inquired about spill closure based on results of endpoint samples collected from excavation in area around well MW5. informed Joe that the subject spill case will not be closed at this time as the Department requires groundwater monitoring via installation of off-site monitoring wells based on endpoint sample results after removal of motor fuel tanks and results of remedial investigation (report dated May 2017). also informed him that EBC had submitted a RAWP (dated June 2017) including installation of two monitoring wells for future monitoring, vapor barrier and an active SSDS. 02/28/18-Hiralkumar Patel. 9:58 AM:- received email from Edward Russo from EnviroTrac with groundwater investigation work plan proposing 1) installation of two (2) 2-inch diameter wells with 15 ft of screen, 2) collection of soil samples during well installation from highest PID and deepest dry, and 3) collection of groundwater samples, for two quarters, from one existing and two new wells for VOC analysis only. based on results of previous sampling, groundwater sample analysis for VOCs only is acceptable, but the work plan needs to be revised as the proposed wells are across the street and between 50 and 100 ft away from the site. wells should be installed on sidewalk adjacent to the site. 1:21 PM:- sent email to Ed and asked him to submit a revised work plan including proposed wells on sidewalk adjacent to the site. also asked him to include location of existing well on the map. email copied to John Engdahl (jjengdahl@speedway.com) and Joe (EnviroTrac). 2:09 PM:- received email from Ed. he mentioned that due to ongoing construction, a construction fence takes up a good portion of the sidewalk. in addition, a canopy is installed over the sidewalk to protect pedestrians during construction. as a result, drilling on the site (south) side of Park Avenue isn't possible at this time. 2:10 PM:- received call from Ed and Joe from EnviroTrac. Ed mentioned that due to sidewalk canopy as part of site's redevelopment, they won't be able to install wells on sidewalk along the site for another year. Joe also mentioned about previous spill closure based on historical groundwater data. prior to finalizing further requirements, suggested them to collect another groundwater sample from well MW5. Ed agreed to that and will collect groundwater sample from existing well MW5. 03/30/18-Hiralkumar Patel. 8:49 AM:- sent email to Ed inquiring

S120700581

update on GW sampling from existing well MW-5. email copied to John Engdahl (Speedway) and Joe (EnviroTrac). 04/12/18-Hiralkumar Patel. 10:32 AM:- spoke with Joe. he mentioned that the monitoring well MW-5 has been removed during construction activities. 05/03/18-Hiralkumar Patel. 12:43 PM:- spoke with Rob. he mentioned that building structure has been constructed, but cellar floor foundation has not be poured yet. they recently excavated last section. entire site has been dug down to 12 ft bg. vapor barrier has been installed behind foundation wall and supporting columns. horizontal portion of vapor barrier and SSDS will be installed beneath cellar floor in near future. no petroleum contamination found in 14 endpoint soil samples collected at the site. Rob mentioned that EnviroTrac will install proposed monitoring wells. during investigations since Feb. 2017, petroleum contamination was noted in endpoint sidewall sample SW-5, northeast corner (well MW-2) and west-central (MW-5) section of the site. groundwater flows to the north. during remediation under spill # 9506480, 1) well MW-10 was installed in close proximity to sample location SW-5 and well MW-7 was installed across Park Ave, downgradient of SW-5, 2) wells MW-6 and MW-9 were installed in northeast area and well MW-8 was installed across Park Ave, downgradient of NE corner of the site, and 3) wells MW-4, MW-11 and MW-10 in northwest corner of the site were downgradient of recent well MW-5. based on site maps and results of endpoint samples after removal of recent tank systems in Feb. 2017, contamination noted in MW-5 area could be result of leak from old 550 gal tank systems which were removed in 1995. site maps indicates presence of former remote fills in NE corner of the site, but those tank systems were removed in 1995. fill ports for recent tank systems were adjacent to the tanks. results of groundwater samples from previous wells MW-4, MW-6, MW-7, MW-8, MW-9, MW-10 and MW-11 shows less than 250 ppb of total BTEX after Oct. 2011. spill # 9506480 was closed on 03/21/14. based on review of all available information, previously proposed monitoring wells are needed to monitor groundwater condition adjacent to the site. previously, EBC proposed installation of two wells, but a third well is also needed to monitor condition noted in area of MW-5. 1:11 PM:- left message for Ed. 05/04/18-Hiralkumar Patel. 11:26 AM:- received message from Joe from EnviroTrac. 05/07/18-Hiralkumar Patel. 9:02 AM:- spoke with Joe and informed him that the Department requires groundwater monitoring/sampling via installation of minimum of three permanent wells: one well near the northeast corner of the site (on south sidewalk of Park Ave), one well at intersection of Park Ave and Bedford Ave (south sidewalk of Park Ave) and one well on west side of the site (on east sidewalk of Bedford Ave). Joe mentioned that EnviroTrac (on behalf of Speedway) will install required monitoring wells once on-site scaffoldings are removed and then EBC (on behalf of property owner) will monitor/sample these wells. a revised work plan will be submitted for review. 05/15/18-Hiralkumar Patel. received email from Ed (at 10:43 AM on 05/14/18) including a revised work plan. - three (3) 2-in dia. off-site monitoring wells will be installed with a 15 ft of screen that will bridge the water table (noted approx. 20-23 ft bg) - wells will be installed after removal of sidewalk scaffolding/safety canopies - soil samples will be collected from highest PID and deepest dry interval, and analyzed for VOCs CP-51 list - groundwater samples will be collected and analyzed for BTEX/MTBE - wells will be surveyed - a report will be submitted after monitoring/sampling of three wells for two quarters 793-801 Bedford Realty LLC. **property

storage and utilities. remedy included: - excavation and removal of soil exceeding Track 4 Site-Specific SCOs to a depth of 12 feet below grade. additional excavation was performed to 15 feet for the elevator pit - excavation and removal of petroleum hotspot (DB-1) - removal of 6 underground storage tanks (five 4,000-gallon and one 600-gallon) - collection and analysis of 15 end point samples (some contamination was noted in endpoint sample EP-8, but no further remediation is needed based on result of endpoint soil/groundwater samples collected from nearby area of DB-1) - installation of a vapor barrier system - construction of a composite cover consisting of a 6-inch thick concrete building slab - installation and operation of an active SSDS - deed Restrictions - E Designation for future permits - site management plan that includes 1) operation and maintenance of engineering controls (composite cover, vapor barrier, SSDS), 2) periodic inspections of institution controls and engineering controls, and 3) certification of engineering and institution controls (yearly report submission including results of inspections and monitoring well sampling) 05/22/19-Hiralkumar Patel. 10:20 AM:- sent email to OER Shaminder and informed him that case can be closed unless NYSDOH requires any indoor air sampling/SSDS monitoring. email copied to DOH Nathan and OER Hanna. 10:31 AM:- spoke with OER Shaminder about proposed monitoring well sampling as part of site management plan. Shaminder mentioned that they require site management plan only for vapor mitigation components (vapor barrier/SSDS) and does not require groundwater sampling. inclusion of groundwater sampling in site management plan is incorrect and he will send a revised site management plan (or an email) confirming this change. 11:08 AM:- received email from DOH Nathan confirming no further requirements. 05/29/19-Hiralkumar Patel. 10:45 AM:- received email from OER EPIC including a copy of Notice of Satisfaction issued by NYCOER. 1:02 PM:- sent email to OER Shaminder and asked him to submit a revised site management plan. 06/04/19-Hiralkumar Patel. received email from OER Shaminder (at 10:13 AM on 06/03/19) including link to RAR with revised SMP. revised SMP states that three on-site wells will be closed and abandoned. case closed based on review of available information."

Remarks: "unknown amount spilled. clean up is on going."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

As per Jeff Vought, this spill is assigned to Pratik Lahkani. Spill summary from Shaminder Chawla OER email on 5-8-17 : RI investigations have been completed at above address. This property has a history of filling station. The filling station was closed last month and the underground storage tanks, pump islands and all associated piping was removed from the Site in March 2017.		
Actual: 15 ft.			

MAP FINDINGS

GROUND WATER - OER (Continued)

S120702652

Specifically, three 4,000-gallon underground storage tanks (USTs) were removed from the Site at this time. No holes or evidence of release was observed while removing the tanks from the ground. Additionally, endpoint samples collected by EBC showed no detections of CP-51 list VOCs or SVOCs. PBS # 2-600822 The proposed future use of the Site will include a new 5-story residential use building with a full cellar. Approximately half of the cellar level will require excavation to 7.5 feet below grade and the other half will require excavation to 11.75 feet below grade. RIR SUMMARY 1.Depth to groundwater was measured at 7-9 feet below grade surface (bgs); 2.SOIL- No VOC compounds detected in soil; 3.GROUNWATER- Elevated levels of petroleum-related VOCs were detected at concentrations exceeding GQS including 1,2,4-trimethylbenzene (max. 1,800 ug/L), 1,3,5-trimethylbenzene (max. 420 ug/L), benzene (max. 120 ug/L), ethylbenzene (max. 1,700 ug/L), isopropylbenzene (max. 160 ug/L), naphthalene (max. 340 ug/L), n-butylbenzene (max. 20 ug/L), n-propylbenzene (max. 300 ug/L), o-xylene (max. 1,100 ug/L), p-isopropyltoluene (max. 5.8 ug/L), sec-butylbenzene (max. 17 ug/L), styrene (max. 6.4 ug/L), and toluene (max. 390 ug/L); and 4.SOIL VAPOR - Soil vapor has trace concentrations of BTEX (max. of 193 g/m3), and no chlorinated VOCs. 05/10/17 - Lakhani As per DEC Vought, may have to consult with NYSDOH on vapor mitigation efforts in the new building unless the basement of the new building will be a ventilated parking garage, as the proposed depth of part of the new building is 7.5'bg and the contaminated groundwater is 7'-9'bg. OER Project #17TMP0397K File Review: RIR (EBC, 05/2017) - The proposed future use of the site will include a new 5-story residential use building with a full cellar. The cellar level of the building will consist of residential and accessory, open cellar space. Past uses of the site were commercial and residential which includes a radiator repair shop. By 1977 the site was developed into a filling station. The filling station was closed and USTs, pump islands and all associated piping was removed from the site in March 2017. Water level data was collected from four (4) monitoring wells. Depth to groundwater was measured at 7.12'-8.92'bg. Thirteen (13) soil samples were collected to be analyzed. Five (5) soil vapor probes were installed. One of the soil vapor samples could not be sampled because the vapor point flooded. Soil vapor probes were installed to a depth of 10'bg which represents the proposed new building's cellar foundation depth. Soil results are as follow: xylene 4300 ppb(SB-2, 0-2'bg), xylene 1010 ppb(SB-4, 8-10'bg). Groundwater results are as follow: benzene 9.3 ug/L(MW1), 1,2,4-trimethylbenzene 1800 ug/L(MW3), 1,3,5-trimethylbenzene 420 ug/L(MW3), benzene 120 ug/L(MW3), ethylbenzene 1700 ug/L(MW3), naphthalene 340 ug/L(MW3), p/m-xylene 4300 ug/L(MW3), o-xylene 1100 ug/L(MW3), toluene 390 ug/L(MW4), 1,2,4-trimethylbenzene 380-400 ug/L(MW4), 1,3,5-trimethylbenzene 84-90 ug/L(MW4), benzene 4.9-5.1 ug/L(MW4), ethylbenzene 160-180 ug/L(MW4), p/m-xylene 990-1100 ug/L(MW4), naphthalene 53 ug/L(MW4), o-xylene 410-430 ug/L(MW4), toluene 43-46 ug/L(MW4). Soil vapor results are as follow: 1,2,4-trimethylbenzene 6.93 ug/m3(SV2), 1,2,4-trimethylbenzene 5.7 ug/m3(SV3), 1,2,4-trimethylbenzene 5.55 ug/m3(SV4), 1,2,4-trimethylbenzene 5.8 ug/m3(SV5), 1,3,5-trimethylbenzene 12.4 ug/m3(SV3), acetone 698 ug/m3(SV2), acetone 1410 ug/m3(SV3), acetone 650 ug/m3(SV5), ethylbenzene 27 ug/m3(SV2), ethylbenzene 7.98 ug/m3(SV3), ethylbenzene 14.7 ug/m3(SV4), ethylbenzene 12.2 ug/m3(SV5), p/m-xylene 122 ug/m3(SV2), p/m-xylene 38.5 ug/m3(SV3), p/m-xylene 56 ug/m3(SV4), p/m-xylene 46

ug/m3(SV5), MTBE 61.6 ug/m3(SV3), o-xylene 37.9 ug/m3(SV2), o-xylene 21.8 ug/m3(SV3), o-xylene 18.2 ug/m3(SV4), o-xylene 15 ug/m3(SV5), PCE 17.2 ug/m3(SV2), PCE 6.1 ug/m3(SV4), PCE 11.7 ug/m3(SV5). In his email, NYSDOH Nathan Walz notices an oddity in the vapor sampling. It is stated in the RIR that groundwater was measured to a depth of 7.12-8.92'bg, however, the soil vapor samples were collected at 10'bg. This would make them underwater, although, one of the points did flood. This does not follow the NYSDOH's protocol which states that soil vapors must be sampled at either 5'bgs or 2' above the groundwater interface. The below link includes several reports related to the spill case:
<https://www.dropbox.com/sh/fv25ppuoj1oqb1/AADuZPMTwZvnuMOegomX4M1Ga?dl=0> 05/11/17 - Lakhani Three (3) 4000 gallon USTs were excavated and removed from the site in March 2017. Removal was completed by CDSP, Inc. Tank removal work included excavating overlying or adjacent soil to expose the individual tanks, removing and disposing of the tank contents, removing the tanks, and disposing of the tank as recycled scrap metal. All dispensers, piping, and associated service station equipment were also removed. The USTs were inspected and there was no evidence of holes in any of the tanks. CDSP collected endpoint samples and screened them with a PID. Readings were negligible and there was no visual/olfactory evidence of contamination. The five (5) endpoint samples showed no exceedances of CP-51 SCLs for VOCs or SVOCs. 05/30/17 - Lakhani On 05/24/17, spoke to OER Chawla regarding further remediation at the site. DEC Lakhani recommended a second round of groundwater sampling. Upon receiving the groundwater data, if values are high then plans will be developed and included in the RAWP as an addendum to treat the water possibly by ORC. Soil contamination is not of concern since excavation will be taking place down to groundwater. On 05/25/17, NYSDOH Nathan Walz emails to inform that the description of past use of the site fails to report that there used to be until June 2009 or later two attached garage bays where automobile work most likely occurred. It appears that there is a lack of data in the vicinity of former garage area where they may have been floor drains etc., that may have led to subsurface contamination. Nathan recommends collection of additional soil, groundwater, and soil vapor samples in this area. Furthermore, the report does not state why only two (2) of the six (6) soil borings go to the groundwater interface and the remainder are shallow 0-2 feet samples. As per the RIR, soil boring samples were collected continuously from the surface to a final depth of 10' bg... Soil recovered from each soil boring was field screened for the presence of VOCs with a PID and visually inspected for evidence of contamination. Two (2) soil samples were retained from each soil boring representing the shallow, 0-2' interval and deep, 8-10' interval except for at SB1 where an additional soil sample was collected from the 6-8' interval. 07/06/17 - Lakhani OER Shaminder sent the following the email: By the time we got your email that additional work is not needed, EBC was in field collecting additional data. Attached is the new data and the old data combined for the 436 Flushing Ave site. The two additional borings SB7 & SB8 did were pretty consistent with the April data, the groundwater data was slightly better and the soil vapor data was pretty consistent. Also, the groundwater flow direction stayed pretty close to the same. We have reviewed RAWP prepared by EBC. Edited clean and redline copies are attached. Pdf version is in EPIC. Basically, RAWP requires:
1.Track 4 remedy full property excavations ranging from 7.5 to 11.5

GROUND WATER - OER (Continued)

S120702652

feet below grade. 2. Localized dewatering (GW table at 7) 3. End point sampling 4. Waterproofing/vapor barrier system Grace 300R product 5. Composite cover with 6 concrete slab 6. Post excavation GW monitoring if required by DEC This is rush job. We are planning to approve documents by end of this week. Let me know if you have any comments 09/12/17 - Lakhani DEC Lakhani required a third round of post excavation groundwater monitoring to confirm attenuation. 10/18/17 - Lakhani OER Shaminder informed that all five (5) groundwater wells have been destroyed. DEC Lakhani confirmed that the wells do not have to be reinstalled and so there is no continued monitoring required as there are no sensitive receptors downgradient from the site. A third round of groundwater samples was not collected since the wells were destroyed. 11/14/17 - Lakhani Three (3) tanks have been found on section B2 of the property. One tank was found on 10/20/17, another on 10/25/17 and the last on 11/01/17. The tanks were removed and endpoint samples were collected. Most samples results were returned indicating no VOC and SVOC exceedances, except UST-B for the tank found on 10/25/17. The concentration for xylene in UST-B was 427 ug/kg(5'bg). The final depth of excavation in this tank excavation area is 7'bg. 11/29/17 - Lakhani RAWP (EBC, 06/2017) - The proposed remedial action will consist of: 1) Selection of Track 4 Site Specific SCOs, 2) Completion of a waste characterization study prior to excavation activities, 3) pproximately half of the Site's footprint will require excavation to 7.5 feet below grade and the other half will require excavation to 11.75 feet below grade for the installation of the cellar level. Additional excavation will be required for the installation of footers and the elevator pit, 4) Removal of any additional UST is encountered, 5) Since groundwater is present at approximately 7 to 9 feet below grade and the redevelopment will require excavation from approximately 7 to 11.75 feet below grade for the installation of the cellar as well as an additional 5.5 feet for an elevator pit, groundwater will be encountered and local dewatering will be needed, 6) Collection of five (5) endpoint samples across the building's footprint, and 7) Installation of a waterproofing/vapor barrier system below the building's concrete poured slab as well as behind foundation walls of the proposed building. 12/28/17 - Lakhani EBC uploaded the endpoint samples to OER EPIC. Five (5) locations (EP1 through EP5) were sampled and vertically delineated. Sample results are as follow: 1,2,4-trimethylbenzene 6400 ppb(EP1, 11.5'bg), ethylbenzene 2000 ppb(EP1, 11.5'bg), toluene 1200 ppb(EP1, 11.5'bg), xylene less than 6570 ppb(EP1, 11.5'bg), 1,2,4-trimethylbenzene 13000 ppb(EP2, 11.5'bg), ethylbenzene 2700 ppb(EP2, 11.5'bg), toluene 1000 ppb(EP2, 11.5'bg), xylene less than 12240 ppb(EP2, 11.5'bg), 1,2,4-trimethylbenzene 4000 ppb(EP2, 12'bg), xylene less than 3290 ppb. Clean soils were encountered at 12.5'bg at EP1 and at 13'bg at EP2. No exceedances were observed in EP3 through EP5. 06/22/18 - Lakhani EBC informed that the current slab is roughly 7'bg on the southern half of the property and just over 10' on the northern. This required excavation depths of approx. 8' on the south side and 11'-11.5' on the north side. However, additional soil was removed from the north side after the first couple of endpoints failed. The northern portion of the property was excavated to 13'-13.5'bg at which depth groundwater was beginning to daylight. This area was brought back to the desired grade with 3/4 bluestone before pouring the 6 -8 cellar floor. 08/05/19 - Lakhani - Spill being transferred to Lin."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site Description: "Plume track down 224251 identified 735 Bedford Avenue/12 Spencer Street at the source of CVOC contamination. The plume trackdown project was originally called the Spencer Street Groundwater plume trackdown. The name was changed to 735 Bedford Avenue in 2018. The plume trackdown project was generated based on information collected on the public sidewalk of Spencer Street between Flushing Avenue and Park Avenue. The project area is located on the western extent of Long Island, in the New York City Borough of Brooklyn, in the northern section of the Bedford/Stuyvesant neighborhood. The area of investigation includes Spencer Street and Bedford Avenue, south of Flushing Avenue. The surrounding area is predominantly industrial/commercial with mixed commercial and residential properties. The area of investigation is approximately 1.3 miles east southeast of the East River. Location The Site is located in the Bedford Stuyvesant section of Kings County. The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped spanning between Bedford Avenue and Spencer Street with 25 feet of frontage along both Bedford Avenue and Spencer Street. The

north and south sides of the property are bordered by residential buildings. The west side is bordered by the Bedford Avenue and the east side by Spencer Street. Site Features The Site is improved with a multi-story commercial building with one half accessible by Bedford Avenue and the other half accessible on Spencer Street. There is currently a cellar level below the 735 Bedford Avenue portion of the site. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. The current use of the building as office space is in compliance with the zoning. Surrounding land use includes multi-family residential properties to the north, commercial / retail / office use to the west, residential and commercial (warehouses) to the south and commercial (warehouses) to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 450 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the Site has been developed since at least 1887 with a residential home through at least 1904. In 1918 the property is shown to be redeveloped with a 1story building identified as a carriage and auto repair shop. The present 3-story building is shown by 1935. The use from 1935 to 1965 is shown as storage. From 1977 to 1989 the building is labeled with an M which refers in general to manufacturing. From 1991 to 1996 the use is not specified. The Requestor purchased the property in March 2015. The investigation of this brownfield site is the result of the 735 Bedford Ave. (Site #224251) (aka Spencer Street Groundwater Plume) groundwater plume trackdown. Site Geography and Geology Subsurface soils at the Site consist of historic fill materials to a depth of approximately 1 to 5 feet below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater occurs beneath the Site at a depth of approximately 15 feet below grade under water table conditions. Based on groundwater flow maps on properties in the vicinity, groundwater flow is generally east. However, the groundwater flow direction was determined from groundwater elevation measurements taken on the Site show the flow direction to be from the south east to the northwest in the eastern half of the Site. The Site is not located within a designated flood zone area. "

Env Problem:

"Background: 224281 was identified as a potential source for contamination outlined in a plume track down identified as Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater

12 SPENCER STREET (Continued)

S123159094

samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichloroethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm (unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichloroethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem: "People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on site commercial building is occupied and actions are recommended to address potential exposures associated with soil vapor intrusion. Additional investigation is needed to determine whether additional actions may be needed to address the potential for exposure associated with soil vapor intrusion off-site."

 Site Description:

"Location The Site is located in the Bedford Stuyvesant section of Kings County and is comprised of the eastern half of a single tax parcel totaling 2,500 square feet (0.057 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 25 feet of frontage along Spencer Street. The north and south sides of the property are bordered by residential buildings. The west side is bordered by the Bedford half of the property which is being renovated for a commercial tenant. Properties on the east side of Spencer Street are all in commercial / warehouse use. Site Features The Site is improved with the eastern half of a 3-story masonry building constructed in 1931 (estimate). The 2nd and 3rd floor of the building is used as office space by the Requestor. The first floor is being outfitted for a commercial tenant. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent

Env Problem:

"Background: BCP site C224281 was identified as a potential source for contamination outlined in a plume track down identified as Spencer Street GW (Site 224251). As part of an off-site investigation performed upgradient to BCP site C224204 (11 Spencer) groundwater samples were collected showing high concentrations of chlorinated volatile organic compounds (CVOCs). Tetrachloroethene (PCE) was detected at 120,000 parts per billion or ppb (compared to a groundwater standard of 5 ppb), trichloroethene was detected at 38,000 ppb (compared to a groundwater standard of 5 ppb) and 1,1,1-trichloroethane was detected at 86,000 ppb (compared to a groundwater standard of 5 ppb). These elevated values located as part of an up-gradient plume led to the creation of P-Site Spencer Street

GW. In the summer of 2017 Environmental Assessment Remediation (EAR) on behalf of the Department performed the plume track down. Four (4) monitoring wells (MW-1 to MW-4) were installed to delineate the plume. Concentrations of PCE ranged from 150,000 ppb in MW-3 to 0.33 ppb in MW-1 (compared to a groundwater standard of 5 ppb). Along with the groundwater analysis, five (5) soil samples were collected from four locations (MW-1 through MW-4) at the water table interface and/or the depth interval exhibiting indication of impact. PCE in soil samples ranged from 4,200,000 ppb in MW-3 to 0.7 ppb in MW-4 (compared to commercial soil cleanup objective (CSCO) of 150,000 ppb). C224282: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), some metals, and polychlorinated biphenyls (PCBs) as part of a limited subsurface investigation performed by Environmental Business Consultants (EBC) on behalf of the property owner. Sub slab soil Vapor samples were collected and analyzed for VOCs. Based upon the limited investigation conducted to date, the primary contaminants of concern are tetrachloroethene (PCE), trichloroethene (TCE), and 1,2-dichloroethene (1,2-DCE). Soil Based on the investigations completed to date, chlorinated VOCs are detectable in soil. Maximum concentration of PCE in soils collected on site are 4.2 ppm (unrestricted use soil cleanup objective (UUSCO) is 1.3 ppm). Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, and Dibenzo(a,h)anthracene were detected above CSCO objectives throughout the site. Groundwater PCE [maximum concentration 45,000 parts per billion (ppb), standard 5 ppb], TCE (9,100 ppb max, 5 ppb standard), 1,2-dichloroethene (4,200 ppb max, 5 ppb standard), and well as 1,1,1-TCA, 1,1-DCA, and 1,1-DCE were detected above the NYSDEC GA Groundwater Quality Standards. Sub-slab soil vapor and indoor air CVOCs were detected in the sub slab vapor and indoor air samples. Further evaluation of the results is required to determine if monitoring or mitigation is necessary on-site. "

Health Problem:

"People are not expected to come into contact with contaminated soil or groundwater because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The on-site commercial building is occupied and additional investigation is needed to determine whether actions may be needed to address the potential for exposure associated both on and off-site."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT 9/8/99 On site. Wolf Landau, owner of site, 1-800-543-5007 212-966-3404 Phil DeBlasi Tyree 516-249-3150 ext 352 Wolf's contractor excavating for footing of five residential bldgs on northern portion of property. Phil handed DEC analytical from boring that were performed along northern portion of property all clean. Phil was getting hits from his mini rae meter - but no odors. When DEC rechecked same soil with PID, no detection whatsoever. JMR 9/9/99-Spoke to Lou from Tyree, who is proposing addtl Geoprobe investigation on the station property to investigate the impact to groundwater and the installation of permanent monitoring wells along the perimeter on the sidewalk to monitor the groundwater. I recommended the complete source removal in the areas where tank pull endpoints were hot. JMR 3/13/0 REASSIGNED FROM ROMMEL TO VOUGHT. 1/6/03-Vought-Spoke to Dr. Youssefnia (516-338-0626) (718)997-8688 who is working owner who was requesting site information. Vought sent

1001223876

him a copy of the FOIL request. Dr Youssefnia stated that according to a building expediter he was working with, a building was already on-site. 1/29/2004-Vought-File review by Vought: Tank Closure Report-March 1998-Tyree Organization(Joe Rennie-631-249-3150). Reason for tank closure was property divestment. Excavation and removal of three (4000-gallon) gasoline USTs west of station building, twelve (550-gallon) gasoline USTs located west of station building(previously abandoned with water), three (550-gallon) steel USTs located on southwest corner of property (previously abandoned with water), one (1000-gallon) fuel oil UST(previously abandoned) located southeast of station building, one (550-gallon) fuel oil UST located adjacent to Bedford Ave, and one (550-gallon) waste oil UST located north of station building. Surrounding property is residential/commercial. Gasoline service station located across Flushing Ave southwest of site. Soil analyticals show up to 2250ppb xylene(ASW3), 607ppb MTBE(ASW3), 2330ppb benzene(ASW4), 17800ppb naphthalene(ASW4), 1120ppb benzene(ASW5), 21800ppb naphthalene(ASW5), 93.1ppb benzene(ASW6), 5640ppb naphthalene(ASW6), 3280ppb xylene(ASW8) and 132ppb MTBE(ASW10). All ASW samples from gasoline excavation. Soil analyticals also show 116000ppb phenanthrene(HL1) and 2940ppb ethylbenzene(HL2). All HL samples are from hydraulic lifts. 254.63 tons of soil were excavated and removed (disposal manifest provided) in Dec 1997. 1309.06 tons of soil were excavated and removed in Feb 1998 (disposal manifest provided). Email to DEC(O'Dowd) from Tyree(Devaux)-12/9/98. New property owner is Wolf Landau. Subsurface Investigation Report-Tyree Org-5/24/99. Nine soil borings performed north of gasoline excavation. Soil analyticals show 7950ppb xylene(B6 6-8'), 60400 1,2,4-Trimethylbenzene(B6 6-8'), 5660 1,3,5-Trimethylbenzene(B6 6-8'). No water samples taken. Email from Tyree(Louis Drozd) to DEC(O'Dowd)-9/3/99. Tyree requests environmental officer onsite to avoid potential conflicts with respect to underpinning of site which has already begun. Progress Report (Tyree)-11/4/99. Approximately 50% of the entire excavation has been completed. During the excavation of the northwest end of the property, a concrete vault containing two 550-gallon steel riveted tanks was discovered . Tanks were removed. Impacted soil observed approximately 8-10 feet below grade around the tank excavation area. Excavation of impacted soil to depth of 12'. Geoprobe investigation planned for 11/99 around old tank field. Email from Tyree(Drozdz) to DEC(Rommel)-11/29/99. Two borings performed in areas suspected of having highest contamination . A full report will be submitted. Letter from DEC(Rommel) to Getty(Ochotororena)-11/30/99. Currently the owner has constructed the foundation walls but significant soil and groundwater contamination still exists at the site . Therefore the Department does not recommend that construction of a residential building continues on top of high concentrations of petroleum that currently exist in soil and the shallow groundwater . The Department required: 1)submission of soil endpoint analyticals 2)submission of a workplan including full delineation of soil and groundwater contamination, source removal, installation of a vapor barrier, long term remediation proposal for groundwater. Rommel spoke to Samuel Salamon (917-903-9813) and explained that significant contamination still exists on site and that construction of residential building is not recommended. Salamon indicated that he spoke with Drozd who assured him that soil was clean and ok for construction. Email from Tyree(Drozdz) to DEC(Rommel)-11/30/99. To date, Tyree has organized the disposal of approximately 800 yards of additional impacted soil

since the beginning of excavation activities in August 1999. Impacted soil was observed primarily in the area north of the sand fill next to the former tank field. Impacted soil was removed to a depth of 14' below grade. Letter from DEC(Rommel) to Getty(Ochotorena)-11/30/99. The Department does not recommend that construction of a residential building continues on top of the high concentrations of petroleum that currently exist in the soil and shallow groundwater. The Department requires: submission of endpoint analyticals, submission of a workplan including delineation of soil and groundwater contamination (including five wells in the sidewalk along Flushing avenue, Bedford Ave and along the eastern portion of the property), source removal, installation of a vapor barrier and horizontal piping for later biological treatment/passive venting/SVE and long term remediation proposal for groundwater contamination. Once the source material has been removed and the vapor barriers have been installed construction of the foundation can continue. Copy of letter also sent to Landau. Email from Tyree(Drozdz) to DEC(Rommel)-12/1/99. We would like to request a cease of construction order, directed to the property owner, as dictated by the state. Letter from Tyree(Drozdz) to DEC(Rommel)-12/2/99. Further delineation scheduled for 12/3/99. Tyree will evaluate requirements in in 11/30/99 letter and provide a response upon client approval. 800 yards of additional soil was excavated. As per DEC request, the impacted soil in this area was removed to a depth of approximately 14 feet below grade in the areas of gross contamination, directly above the groundwater interface. Soil/groundwater borings were conducted in the area of the highest observed contamination (B-2 and B-3). Other boring attempts were unsuccessful due to unstable and confined site conditions that limited equipment access. Further site delineation will be conducted on December 3, 1999. Soil analyticals show 21800ppb ethylbenzene(B2 15-17'), 95800ppb xylene(B2 15-17'), 39100ppb xylene(B3 10-12'), 45000ppb toluene(B3 15-17'), 69000ppb ethylbenzene(B3 15-17') and 243000ppb xylene(B3 15-17'). Remedial Action Plan(Tyree)-12/23/99. Plan involving additional removal of grossly impacted soils to the groundwater interface, followed by short term land farm type bioremediation project, concluded with installation of a process controlled, enzyme enhanced bioremediation. Required horizontal piping will be installed. Final stages of excavation/removal process will be followed by the installation of a horizontal piping gallery and a groundwater recovery well. Clay at site may inhibit SVE. A geomembrane liner will be installed to ensure no vapor migration into above residence. Letter from DEC(Rommel) to Tyree(Drozdz)-1/7/00. DEC has reviewed RAP. DEC staff is currently reviewing the bioremediation portion of the proposal and will provide comments in the near future. DEC approves the proposed additional soil excavation and monitoring well installation. Letter also noted additional borings may be required. Well Installation Report (Tyree)-1/2/00. Tyree has successfully installed four monitoring wells in the sidewalks on Bedford and Flushing Avenues. Apparent groundwater flow to the southeast. Groundwater analyticals show 8.9ppb benzene(W1), 34.7ppb toluene(W1), 180ppb xylene(W1), 38ppb naphthalene(W1), 14ppb MTBE(W2), 28.5ppb MTBE(W3), 71.4ppb benzene(W-4) and 161ppb MTBE(W-4). Letter from DEC(Rommel) to Getty(Ochotorena)-2/18/00. DEC approves the bioremediation portion of the RAP pending the amendment of the following: 1)The reinjected water must meet one of the following criteria: it must meet wastewater limits for groundwater discharge and the area in which the injection is taking place is hydraulically

controlled by a system that prevents migration of contaminated groundwater beyond the boundaries of the containment zone 2)inclusion of a performance monitoring plan via establishment of a baseline fingerprint chromatogram of the groundwater prior to treatment to see if there is a shift in the chromatogram after treatment starts, analysis must also be performed for dissolved oxygen, 8260/8270 and GC/MS fingerprints. DEC recommends sampling every two weeks initially 3)additional installation of monitoring wells east of W-4, south of W-4, west of W-1, south of W-3. Letter also included STIPULATION AGREEMENT. Letter from Tyree(Drozdz) to DEC(Rommel)-1/22/00. Due to unforeseen litigation between the property owners and our client, further work has been put on hold until a resolution to pending legal issues has been resolved. Groundwater Results-The Praetorian Group-8/8/00. Performed groundwater and soil analysis of well samples and boring samples for Mr. Landau. It is our considered opinion that the contamination has not progressed beyond the perimeter of the property bordered by Bedford Avenue or Flushing Avenue. During sampling strong gasoline odor noted in MW2, MW4 and MW5. Groundwater analyticals show 28ppb naphthalene(MW-2), 400ppb MTBE(MW2), <100ppb benzene(MW2), 16ppb MTBE(MW3), 2ppb benzene(MW4). Business Card: Wolf Landau, Conintental Sportwear, 135 West 27th Street, NYNY 10001 Letter from Praetorian Group(Pat D'Agnese-718-359-5826)-11/27/00. We are pleased to offer this outline of our proposed RAP . Our plan calls for measured applications of our bacterial enzyme product. We will install an irrigation and vapor extracting system that will allow the The Praetorian Group to treat the site further, if necessary . Proposal also to install horizontal slotted piping across the excavation. Letter from Cosmos Environmental (Alexander Avrasen-516-374-7890). I would like to inform you that for reasons not under our control, Cosmos Environmental Services is delayed with the installation of a soil vapor recovery system . Letter also attached from Cosmos to Landau-5/2/01. Despite numerous requests the area designated by you for the installation of a SVES shed is still covered with trees and debris I specifically requested that our office be notified regarding the date and time of the installation of subsurface portions of the concrete enclosures for the elevators and the foundation walls. No notification was made of this work and this work has been completed without our presence I observed some parts of the installed pipework broken and or missing . 1/29/04-Vought-After file review NYSDEC requires: 1)signing of Stipulation agreement 2)delineation east of W-4, south of W-4, west of W-1 and south of W-3 3)current status of underground piping and recovery wells 4)immediate sampling of monitoring wells 5)surrounding area property and use sketch 6)immediate PID survey of basement. Vought called Landau (212-966-3404) with requirements and left message to return call to DEC. Vought called Dr. Yousefnia and left message to return call to DEC. Vought sent certified STIPULATION AGREEMENT including above requirements on 1/2/04. 1/2/04-Vought-Spoke with Wolf Landau who has claimed responsibility for site investigation and remediation. Vought sent STIP to Landau with 3/2/04 deadline. 3/10/04-Vought-Called Landau and Stipulation deadline extended to 4/12/04 due to FOIL review process. If Stipulation not received by 4/12 case will be referred to DEC legal. 4/2/04-Vought-Received signed Stipulation Agreement by Wolf Landau dated 4/2/04. Stip implemented by DEC Kunkel on 4/9/04. Vought faxed copy of Stip to Landau. 5/13/04-Vought-Spoke to Dr. Youssefnia and he stated that DEP was also involved in review process (Callista Nazaire project manager -718-595-4401 fax

1001223876

718-595-4479). Vought left message for Callista to return call to DEC. Vought called Wolf Landau and left message repeating Corrective action plan requirements and requirement of complete investigation by 6/9/04. 5/14/04-Vought-Received call back from Callista and no file on record with DEP. Vought faxed Callista copy of spill report and awaiting DEP response. Vought spoke to Wolf Landau and repeated 6/6/04 deadline for submission of investigation report. 6/10/04-Vought-Called Wolf Landau with regards to Investigation report and Landau agreed that if DEC did not receive report by 6/23/04 it would be referred to DEC Legal. 06/11/04-Vought-Received proposed workplan from New York Petroleum and Drilling (Dr. Youssefnia 800-958-1941) dated 6/1/04. Submitted herewith is our proposed scope of work and cost estimate to complete an environmental investigation at the following properties, 713-723 Bedford Avenue . All excavation and construction on the existing six story building has been completed . The following tasks will be performed to rule out any possible contamination...1.Conduct a detailed air monitoring program through the entire basement...with a volatile screening device 2.A professional engineer will investigate the basement concrete, foundation, elevator pits, any cracks, pipes utility etc. . Complete soil borings to the depth of 8-12 feet or water interface. Collect and analyze two soil samples according to workplan specifications. Vought arranged office meeting with Landau, Youssefnia and DEC legal. 6/14/04-Vought-Soil, Water and Air Investigation Plan (NY Petroleum and Drilling Iradji Youssefnia) dated June 14, 2004. The purpose of this workplan is to meet DEC/DEP requirements pertaining to soil sampling at the site. Proposal for four Geoprobe soil borings. No site plan with proposed locations included. If no elevated OVM readings or visual staining is observed, the sample will be collected 0-2 feet and 8-10 feet below grade . Air monitoring program will be conducted using a Century Model OVA 128 Organic Vapor analyzer... . 06/24/04-Vought-Reviewed workplan. According to STIP Investigation Summary due on April 2, 2004. Interview with consultant revealed that building is already occupied. As a result: 1)case may be referred to DEC legal for enforcement upon results of 7/1/04 meeting 2)Site visit is scheduled to look for vapor impacts and well locations 3)notification will be made to DEP Cabbagestalk and NYCDOB Phyllis Arnold due to E designation and current occupancy 5)monthly indoor air sampling as per NYSDOH guidance will be required 6)current status/sampling of SVE piping 6)installation of delineation wells east of W-4, south of W-4, west of W-1 and south of W-3 and sampling of current wells 7)determination of actual and not apparent groundwater flow direction 8)submission of endpoint analyticals from final terminus of excavation including depth and location of samples collected 9)site plan with proposed boring locations 10)soil sampling procedures of highest PID reading/deepest dry soil sample as stated in 2/6/04 letter. 6/25/04-Vought-Sent email to Caggabestalk(NYCDEP) asking if current occupation of buildings violates E designation and the certificant of occupancy (if there is one). Site visit by Vought. Site occupied by seven story residential apartment building with some apartments already occupied. Monitoring wells still in sidewalk. East of site is Universal Springs with no signs of vents or remote fills. South of site is seven story residential apartments of same age and build (possibly same developer and owner). Pride gasoline station located to the southwest and residential apartments under construction to the west. North of site is two story commercial building with no vents or remote fills. Inspected basements and sumps

of 713, 717 and 723 Bedford Avenue and top floor of 723 Bedford Avenue. No PID readings or olfactory evidence noted. Poured concrete foundation with no signs of vapor pathways. According to site representative (Mr. Soloman) residents moved in two months ago. 6/28/04-Vought-Fowarded 6/25/04 email to NYCDOB Phyllis Arnold for notification purposes as per her request during 6/24/04 NYCDOB/DEC teleconference. 7/1/04-Vought-Meeting at DEC with DEC Vought, Rommel, Nagi, Oliva and Landau, Youseffnia, Masonette and Vann(attorney 212-389-7810). Investigation Summary will be received by DEC by 8/16/04 meeting all requirements of 2/6/04 DEC letter. 8/10/04-Spoke with Billy Masonette and all wells will be located across street. Drilling will begin tomorrow and DEC will receive report by 8/31/04. 8/30/04-Vought-Received message from Billy Masonette that drilling will occur next week and was delayed due to necessity of markouts. 9/2/04-Vought-Received message from Billy Masonette that wells were installed and will be sampled. 9/8/04-Vought-Called Masonette and required him to submit a formal deadline extension request including a submittal date of Investigation Summary Report. Vought spoke to Masonette and he will send in required letter. 9/17/04-Vought-Called Masonette (646-523-1646) and left him a message to have him submit a Investigation Summary Report/Remedial Action Workplan and also inquired about extension request letter. DEC will only grant extension till 10/4. 10/7/04-Vought-Letter from NYCDEP(Caggabgestalk) to DOB dated 7/14/04. I am writing to inform...DOB...that the hazardous materials and noise E designation requirements for 723 Bedford Avenue...have not been metbuilding permits should not have been issued for the site(i.e. Certificate of Occupancy) . The developer should submit a Phase I ESA along with detailed description of the residential development and construction activities to DEP for review . 10/7/04-Vought-Letter from NY Petroleum Drilling to DEC Vought dated 9/29/04. Four monitoring wells installed after setback by Keyspan . We are finalizing thre rest of the project for the mentioned property once we have gather all the information needed we will summit(sic) a report to your agency . Vought called Petroleum Drilling and left message to return call with submittal date. 10/21/04-Vought-Called Masonette for submittal date. 11/8/04 Spoke to Youssefnia. Expect report by 11/15/04. (KMF) 11/18/04-Vought-Phase II Report (NY Petroleum and Drilling Corp. Billy Masonette) dated 11/2/04. Installation of four additional monitoring wells. The conditions on the existing wells on site W-3 and W-4 was poor, no cap was inplace and the piping for these two wells was broken. Report recommends that we can conclude that no further investigation or test is needed on the property . Groundwater analyticals show 20ppb MTBE(W2), 6ppb toluene(W2), 6ppb xylene(W2), 7ppb xylene(W4), 37ppb MTBE(W7). Don Carlo Environmental in conjunction with allied waste services removed from the property approximately 1200 tons of contaminated soil . A total of 53 readings (OVA) were taken in the entire building. There were no elevated readings detected . DEC requires: 1)site plan with well locations 2)continued quarterly groundwater monitoring 2)determination of groundwater flow direction 3)notification of next sampling event so DEC can be present. Vought sent letter with above requirements on 11/22/04. 12/13/04-Vought-Received message from Masonette that he will be sending in site plan. 1/20/05-Vought-Called Masonette for update on above requirements and left message to call back DEC with status update. 2/2/05-Vought-Received message from NYCDEP asking for outstanding requirements. Vought returned call and left message that

determination of groundwater flow direction and continued groundwater monitoring still required. 3/25/05-Vought-Spoke to Terrell Estes (NYCDEP) who requested copy of most recent letter. Vought faxed letter on 3/25/05. 9/23/05- FILE TRANSFERRED FROM VOUGHT TO OBLIGADO 2/1/06 - Obligado - called Masonette to inquire about ground water monitoring at the site. PPhone number not in service. Called Mr. Landau - He said that the work was done, however the consultant (Masonette-Petroleum Drilling Company) who did the work has been in the hospital. He will contact Masonette and will direct him to call back the DEC to give update as to status of the work. 3/20/06 - Obligado - After discussion with Joe Sun, decide to close spill based on low concentrations in last sampling round - Groundwater analyticals show 20ppb MTBE(W2), 6ppb toluene(W2), 6ppb xylene(W2), 7ppb xylene(W4), 37ppb MTBE(W7). "

Remarks: "SOIL CONTAMINATION FOUND DURING TANK UPGRADE. SOIL TO BE STOCKPILED AS NECESSARY. CORRECT SPILL DATE IS 10/30/97. ORIGINAL SPILL ASSIGNED TO O'DOWD."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Record Updated Date:	08/11/2020
	Update By:	HMDUDEK
	Site Description:	"Location The Site is located in the Bedford Stuyvesant section of Kings County and is comprised of three tax parcels identified as Block 1716, Lots 20, 21 and 24 on the New York City Tax Map. The combined lots total 18,774 square feet (0.43 acres). The Site has 167.25 ft of street frontage on Spencer Street and 75 feet of street frontage on Flushing Avenue. The area surrounding the Site includes commercial to the south and west, mixed-use (1st floor retail) properties to the east, residential properties to the northwest, and commercial / industrial properties to the north. Site Features The Site is currently vacant with no structures present and is not being used. An 8-foot high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1

districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. Surrounding land use includes commercial to the south and west, mixed-use (1st floor retail) properties to the east, residential properties to the northwest, and commercial / industrial properties to the north. The area surrounding the property is highly urbanized and predominantly consists of older industrial/ commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are eight schools located within 1,200 feet of the Site including Bnei Shimon Yisroel of Sopron approximately 200 feet to the east (see Figure 5). There were no nursing homes or hospitals identified within 1,000 feet of the Site. Past Use of the Site Lot 21 was originally developed prior to 1887 with a 2-story residential home along Spencer Street and a stone yard which fronted on Flushing Avenue. The most recent building was constructed in 1935 and was used as a garage. By 1947, the main portion of the building was used as a sheet metal works with the Spencer Street portion used as a private garage. By 1950 the private garage became part of the sheet metal works and was used for painting and spraying and making wire and wire products. The building remained in this use through at least the 1990's. Lot 20 was originally a storefront but has been a vacant lot used for parking since 1935. Lot 24 was used as a lumber shed in 1918, then as a tire shop from 1935 to 1950, storage from 1965 to 1996. The current owner purchased the property in March 2015. The buildings on lot 21 and 20 were demolished in 2018?. Site Geology and Hydrogeology Subsurface soils at the site include a silty non-native fill with ash and other rubble which varies in depth from 1 to 5 feet. A fine silt, and in some locations clay, is present beneath the fill at a depth of approximately 3 to 5 feet. Crushed rock and coarse sand grading to fine sand and silt is present below the fill and silt and extends to the water table (10 to 15 feet bgs). This is followed by a medium to coarse sand to a depth of 20 feet with cobbles and coarse sand observed in the vicinity of the source area from 20 to 50 feet below grade. The groundwater flow direction as determined from on-site groundwater elevation measurements is north and east. A site location map is attached as Figure 1. "

Env Problem:

"Nature and Extent of Contamination : Soil: A Focused Subsurface Site Investigation was conducted in July 2014 and a Supplemental Focused Subsurface Investigation was conducted in September 2014. The primary contaminant of concern in soil is PCE. PCE was detected at all 46 reported on-site soil sampling locations, at a maximum of 32 parts per million (ppm) in one of the soil samples collected from a boring that was installed near the concrete degreasing pit within the building. This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (1.3 ppm). No petroleum-related volatile organic compounds (VOCs) were detected in soil at concentrations exceeding the UUSCOs. Additional soil samples were collected in 2015, 2016 and 2017. During that investigation, the highest concentration of PCE was detected in MWC2 (2/22/17) at 900 ppm at 11/12 feet below grade surface . Contaminants of concern have also been detected in off-site soil samples collected to the north and west of the BCP site. Adjacent BCP sites abut the Site to the east. Additional delineation of off-site impacted will be required as part of the RAWP.

Groundwater: Multiple investigations were performed on-site from 2014 to 2019. Groundwater samples have been collected from nineteen monitoring wells. Several compounds were detected well above standards in groundwater during the Focused Subsurface Site Investigation. PCE was detected at a maximum of 47,000 parts per billion (ppb) (standard of 5 ppm), TCE at a maximum of 250 ppb (standard of 5 ppm), DCE at a maximum of 260 ppb (standard of 5 ppm), and 1,1,1-TCA at a maximum of 3,100 ppb (standard of 5 ppm). During a supplemental investigation, toluene was detected at a maximum of 66,000 ppb (standard of 5 ppm). Supplemental groundwater samples were collected in 2017. CVOCs were the primary contaminants of concern. PCE was detected at a maximum concentration of 120,000 ppb (standard of 5 ppm), TCE at a maximum concentration of 38,000 ppb (standard of 5 ppm), DCE at a maximum concentration of 4,200 ppb (standard of 5 ppm), and 1,1,1-TCA at a maximum concentration of 86,000 ppb (standard of 5 ppm). Contaminants of concern have also been detected in off-site groundwater samples collected to the north and west of the BCP site. Adjacent BCP sites abut the Site to the east. Additional delineation of off-site impacted will be required as part of the RAWP. Soil Vapor and Indoor Air: Sub-slab vapors containing PCE and TCE have been found beneath the building slab at levels as high as 1.6 million micrograms per meter cubed (ug/m3) and 82,000 ug/m3, respectively. These same compounds have been detected within the indoor air in the building on Lot 21 (prior to demolition), with PCE observed as high as 80 ug/m3 and TCE observed as high as 30.8 ug/m3. These concentrations represent a concern for soil vapor intrusion with respect to any on-site buildings that will be built and nearby offsite buildings. Neighboring lots were analyzed for soil vapor intrusion as part of the remedial investigations. Lot 26 had maximum sub-slab concentrations of PCE and TCE a5.47 ug/m3 and 3,000 ug/m3 respectively. Indoor air concentrations of PCE and TCE within Lot 26 resulted maximum concentrations of 14.4 ug/m3 and 0.84 ug/m3 respectively. "

Health Problem:

"Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Action is recommended to address potential exposures at an adjacent building. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in other off-site structures."

DEC Memo: "09/15/14-Hiralkumar Patel. alternate addresses: 476-478 Flushing Avenue no other spills or PBS record found. 12:57 PM:- spoke with Frank. as part of property transaction, a phase I and phase II investigations were conducted at former sheet metal factory. the site is currently vacant. during phase II investigation, PCE (50 ppm) and toluene (60 ppm) are found in groundwater. asked Frank to submit copy of investigation reports. 09/24/14-Hiralkumar Patel. 2:53 PM:- spoke with Mark Mandell, property owner's representative. asked him to submit copy of Phase I and Phase II reports for review. Mr. Mandell asked to send request in email. Mark Mandell **property owners representative** Mandell Mandell LLP. 80-02 Kew Gardens Road, Suite 606 Kew Gardens, NY 11415 PH. (718) 427-2191 Fax (718) 427-2193 email: mark@mandellmandell.com 3:09 PM:- sent email to Mr. Mandell and asked to submit copy of available environmental investigation reports for review. 3:23 PM:- left message for Alan Brooks, whose name is listed in last property tax bill from NYC Finance. as per NYC Finance record, property is owned by I. T. F. Corp. I. T. F. Corp. **property owner as per NYC Finance** c/o Alan Brooks Brooks & Cantor LLP. 3000 Marcus Avenue, Sutie 2E4 New Hyde Park, NY 11042-1005 Ph. (516) 326-6767 Fax (866) 344-7288 email: brooksea@optonline.net 3:30 PM:- sent email to Mr. Brooks with copy of email previously sent to Mr. Mandell. asked Mr. Brooks to submit copy of available environmental investigation reports for review. 09/25/14-Hiralkumar Patel. 7:04 AM:- received email from Frank including draft copy of Focused Subsurface Site Investigation report and Supplemental Focused Subsurface Site Investigation report. Frank mentioned that these reports were made for Merritt Environmental, who subcontracted them. abstract of focused subsurface site investigation report: - site consists multiple lots on two block: 1. Block# 1716 / Lot# 24 (and 25, as per tax lot) (1-9 Spencer St, 466-468 Flushing Ave) - approx. 2,500 sq. ft. vacant located at the southeast corner of the intersection between Flushing Ave and Spencer St 2. Block# 1716 / Lot# 20 (15 Spencer St) and 21 (11 Spencer St, 476-478 Flushing Ave) - one large 20,000 sq. ft. vacant one-story former manufacturing building with no basement used in large part for sheet metal manufacturing ----- 3. Block# 1716 / Lot# 15 (25 Spencer St) and 16 (23 Spencer St, 28-32 Walworth St) - one approx. 4,000 sq. ft. single-story manufacturing/warehouse building that is currently contains a seafood distributor 4. Block# 1716 / Lot# 14 (27 Spencer St) - approx. 7,000 sq. ft exterior stockyard used by the seafood distributor 5. Block# 1715 / Lot# 29 (12 Spencer St, 735 Bedford Ave) - vacant three-story commercial building with a full basement - site elevation is estimated at roughly 20 ft above mean sea level - Phase I conducted by Merritt Engineering - Phase I indicated historical underground benzene storage tank, evidence of a former aboveground storage tank containing TCE and at least two historical gasoline USTs at 476 Flushing Ave (former sheet metal manufacturing facility) ----- - GPR survey found one subsurface anomaly resembling a UST at the Flushing Ave side of the former sheet metal manufacturing building, and possible UST fill pipe in vacant lot (lot #: 24/25) - one 07/21/14, total of 16 borings (B1 through B16) were installed on lots associated with this project - borings B15 and B16 were installed in the basement of building at 12 Spencer St (lot #:

Maryann Wegh (mwegh@merrittec.com) of Merritt Engineering including link to Phase I report. abstract of Phase I: - on-site investigation was conducted on 07/07/14 - property currently consists of a four (4) 1-story vacant and one (1) occupied commercial manufacturing warehouse buildings, located on a combined plot size of approx. 33,724 sq. ft. - the buildings were constructed circa 1931 - database review indicated 550 gal UST for Benzene and a 275 gal AST for TCE (CBS #: 2-000024) were registered to 476 Flushing Ave (aka 11 Spencer St) ----- - as per CBS record, the Benzene UST was removed in May 1992 and the TCE AST was removed in Jan. 1995 ----- - there appears to be two (2) underground gasoline tanks which are no longer in use buried in the 1-9 Spencer St AKA 476-478 Flushing Ave front driveway on Spencer St and under the ground floor slab of 476-478 Flushing Ave - sanborn map for 1935 shows a gasoline tank present at the 476-479 Flushing Ave - a gasoline fill box which is no longer in use was noted in the parking lot next to the 11 Spencer st building - surface oil staining was noted throughout 13-15 Spencer St and 476-478 Flushing Ave - there is a 2,000 gal #2 oil AST located in the basement of the Flushing Ave building but the size of the tank could not be confirmed due to flooding - RCRA Non Generator, EPA ID #: NYD001287671 - Delta Metal Products Co. - 476 Flushing Ave - historical use of 1-15 Spencer St and 466-468 and 476-478 Flushing Ave consisted of a junkyard, shed, manufacturing, sheet metal works and paint spraying ----- - two (2) 275 gal #2 oil ASTs are located in the basement of 12 Spencer St discussed with DEC Jane O'Connell. after reviewing the data, she asked to transfer case to her name. 7/3/15 Greco assigned as PM of spill #1406369. Spill will be addressed under 11 Spencer Street BCP Site."

Update By:

RECURLY

Site Description:

"Location: The 85 Skillman Street site (Site) is located in the Bedford-Stuyvesant section of Brooklyn. The site is bounded by commercial/residential properties and Park Avenue to the north, residential properties, a fire station and Bedford Avenue to the east, commercial, vacant property and Myrtle Avenue to the south and Skillman Street to the west. Site Features: The site is identified as 85 Skillman Street, Section 3, Block 1900, Lot 16 on the NYC tax map. Lot 16 encompasses approximately 0.19 acres of property and includes former lots 14, 15, 16 and 17, that were consolidated into one through a lot merger. The site was formerly vacant property covered with crushed stone and gravel and used as a parking lot. Current Zoning and Land Use: The site is zoned M1-2/R6A in a mixed use zoning district. This mixed use district permits a mixture of residential and non-residential (commercial, community, light manufacturing) uses in the same building. After remediation, the site has been developed for restricted residential use as a multi-story apartment building with a basement. Past Use of the site: All of the lots which now make up the site parcel were developed as residential properties at one time. Former lot 17 on the north side was redeveloped for industrial use as a sheet metal facility for a short period around 1950, an auto repair facility and then as a junk storage or storage facility. The structure on this lot was demolished around 1978, however the lot continued to be used as a small junkyard up until recently. The residence on former lot 16 was demolished around 1965. Residential structures on former lots 14 and 15 were demolished around 1981. Since the demolitions, former lots 14, 15 and 16 have been used for parking. Site Geology and Hydrogeology: The topography of the site and the surrounding area slopes gently to the northwest towards the New York Shipyard and the East River. The ground level elevation on the property is approximately 33 feet above mean sea level. The site is underlain by a layer of historic fill that is approximately 2 to 7 feet thick starting just below the ground surface. The historic fill generally consists of silty-sand, brick, wood, concrete and other debris. The native soils below the historic fill consist of brown silty-sand. The approximate depth to groundwater is 31 feet below ground surface (bgs) in the area. Regional groundwater contour maps indicated that the groundwater flow should be to the northwest towards the East River. However, contrary to this, monitoring well water level measurements appear to indicate that the site area flow is in a southeasterly direction. Additional research indicates that groundwater flow, particularly on the eastern half of the site, may be influenced by the MTA's six subway dewatering wells located in the Nostrand and Marcy Avenue area 1,600 feet to the east of the site." "Remediation at the site is complete. Prior to remediation, the primary contaminants were PCBs in soil, as well as lead and polycyclic aromatic hydrocarbons in soil. Minimal amounts PCBs were also detected in groundwater. Remedial actions have been achieved unrestricted soil cleanup objectives, PCBs are no longer present in groundwater and no environmental easement or site management plan are necessary. The text below remains for information. Nature and Extent of Contamination: Soil - A total of 17 soil samples were initially collected at the site. Twelve of these samples were collected from six borings at two different depth intervals (0 to 2 and 6 to 8 feet) in each boring. Two soil samples were collected at the groundwater interface in two of the borings. Additionally three shallow hand-augured soil samples were collected at a suspected hotspot area

S113916513

in the NE corner of the site. At the request of the USEPA, eight additional soils samples (B7 to B14) were collected from 0 to 2 feet below grade to further delineate the horizontal extent of soil with PCB concentrations greater than 50 ppb. The shallow soils on northern lot 17 and on the western half of lot 16 were impacted by polychlorinated biphenyls (PCBs). PCB (Aroclor 1254) were found in the range of 0.51 to 150 parts per million (ppm) in the 0 to 2 foot depth interval. The shallow soils throughout the site have also been impacted by metals and polycyclic aromatic hydrocarbons (PAHs). Lead was found in the range of 450 to 5,300 ppm and individual PAHs from non-detectable to 18 ppm. No volatile organic compounds (VOCs) were encountered during the RI Except at one location where metals and PAHs were found in fill materials, there was no contamination, including PCBs found above unrestricted use SCOs in the deeper (6 to 8 foot) native soils. The RI report cited the presence of subsurface electrical equipment located in the northeast corner of the property as the possible source of the PCB contamination. The metals and PAH contamination found throughout the site, appears to be indicative of typical historic fill in NYC. Remediation consisted of excavation and disposal of contaminated soil, followed by confirmation sampling. Initially, areas of soil containing PCBs above 40 ppm (PCB Hot Spot) and PCBs between 1 ppm and 40 ppm (PCB Cold Spot) were divided into grids and sampled individually to ensure PCB removal. Upon completion of PCB soil removal, and after removal of the remaining historic fill and clean soil necessary for building construction, nine endpoint samples were taken. These indicated that no exceedances of unrestricted soil cleanup objectives for PCBs, metals, VOCs, SVOCS or pesticides remain at the site. Groundwater - PCE and TCE were initially found in groundwater at two monitoring well locations on the eastern side of the property. Both compounds were above the groundwater standards of 5.0 ppb for each and were believed to originate from an off-site source. The maximum PCE concentration was 26 ppb and the maximum TCE concentration was 38 ppb. Filtered samples of groundwater exceeded SCGs for sodium and manganese as well as for iron, which are commonly found in shallow groundwater in this region and are not considered site specific contaminants of concern. PCBs were also found in groundwater in three of the monitoring wells. Concentrations ranged from 1.5 to 2.3 ppb. Based on the fact that PCBs were not detected in the deeper soils, the depth to groundwater and the installation of the wells in contaminated boreholes, the RI report attributed the PCBs in groundwater to cross-contamination during monitoring well construction. All four wells were removed during construction. After remediation, four groundwater wells were re-installed at the site. The groundwater was sampled twice and did not contain PCBs. Although the PCE and TCE were attributed to an off-site source, groundwater was also sampled for VOCs. While the PCE in the first well was 26 ppb, the TCE decreased by 60 percent to a final concentration of 12 ppb. In the second well, the groundwater concentrations of both PCE and TCE decreased by over 90 percent (to 1.9 and 1.3 ppb respectively). Soil Vapor - During the remedial investigation, soil vapor on the property was found to contain low levels of several volatile organic compounds. The PCE concentrations found in soil vapor were less than 1.0 micrograms per cubic meter and TCE was not detected in the soil vapor. No remedial measures were necessary to address soil vapor onsite. "

Health Problem:

"Remedial actions completed at the site have eliminated all potential exposures to site-related contamination."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Updated By: HMDUDEK

Site Description: "This site is being managed under BCP site C224239. "
Env Problem: "Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil and groundwater samples during investigation in December 2007. Soil Chlorinated solvents were detected in one soil sample collected from above the water table at concentrations exceeding unrestricted use soil cleanup objectives: PCE (4.3 parts per million, or ppm) and TCE (0.87 ppm). Groundwater Chlorinated solvents were detected in all four groundwater samples collected at the site: PCE ranges from 17 to 30,845 parts per billion, or ppb; TCE ranges from 31 to 48,675 ppb; and cis-1,2-DCE ranges from 7 to 164,000 ppb. Non-chlorinated VOCs were detected in one groundwater sample (MW-2): toluene (75,488 ppb), ethylbenzene (4,393 ppb) and xylene (17,405 ppb). Significant Threat: A significant threat determination will be made following completion of a site characterization."

Health Problem: "As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns."

County and is comprised of a single tax parcel totaling 3,910 square feet (0.089 acres). The Site is located in the City of New York and Borough of Brooklyn. The Site is rectangular shaped with 78 feet of frontage along Walworth Street. The north, south and west sides of the property are bordered by warehouses and commercial / industrial buildings. Site Features The Site is improved with a 3,910 sf, 1-story masonry building constructed in 1982 (estimate). The building is divided into two sections each with its own access to the outside; the north section which was recently used as warehouse space and the south section which was used by an orthodox congregation for a prayer room. Current Zoning and Land Use Compliance with Current Zoning The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The proposed project, which includes an office building, is compatible with the surrounding land use and will be in compliance with the current zoning. Compliance with Land Use Plans On May 9, 2001, the City Council approved the Flushing - Bedford rezoning action (CEQR No. 00DCP015K) covering 15 blocks in the Flushing Avenue and Bedford Avenue area of Community Districts 1 and 3 in the Bedford Stuyvesant neighborhood of Brooklyn. According to the Notice of Completion of The Final Environmental Impact Statement issued on March 16, 2001 by the NYC Planning Commission: The Flushing Bedford area, although zoned for manufacturing uses, contains a mix of residential uses, vacant land, open uses, auto-related uses, and commercial and industrial buildings. The rezoning area has experienced a significant decline in industrial activity over the last four decades resulting in an increase in auto related uses, junk yards and vacant land. Study findings indicate that over the last two decades, there has been a substantial growth in the residential population in the surrounding areas, resulting in a housing shortfall and increasing demand for new dwelling 'units. Since the mid 1980's there has been a marked increase in residential development, especially in the area north of Flushing Avenue. Although the existing manufacturing zoning does not permit as-of-right residential development, in recent years there has been new residential development in the area north of Flushing Avenue pursuant to zoning variances granted by the Board of Standards, and Appeals (BSA). In 1996 and 1998, two rezoning applications were approved changing the designation of a three block area immediately north of the rezoning area from manufacturing to residential. The presence of vacant and underutilized land, coupled with the increasing demand for housing in the adjacent communities, presents an opportunity for new residential development in this part of Brooklyn. The objectives of the rezoning were to: -provide opportunities for new residential development on vacant and under-utilized parcels; -bring existing non-conforming residential uses into conformance, and would allow for their enlargement; -allow for the continued presence and expansion of commercial and manufacturing uses; -permit the introduction of new commercial and manufacturing uses; and, -allow the residential re-use of underutilized and vacant land. In general, the action would provide the land use controls

necessary for appropriate residential development and the continued presence of viable manufacturing uses. The proposed project will be in full compliance with the current land use plans as identified in the Flushing Bedford Rezoning Action (CEQR No. 00DCP015K) adopted by the City on May 9, 2001. Past Use of the Site The historic use of the Site includes a storefront building, garage and residence from sometime prior to 1887 to sometime before to sometime before 1965 when a two-story residence remained on the south side of the Site and a single-story warehouse used for chemical drum storage was present on the north side of the Site. By 1977, the two-story residence was no longer present and the single story chemical drum storage warehouse remained on the north side of the Site. By 1982 the Site was redeveloped with a single-story paint mixing warehouse. The Site and adjacent properties have remained generally unchanged through the current day. This site was originally a P site (Former Techtronics Ecological Site, Site No. 224239). The site then entered the BCP program to complete the investigation and remedy. Site Geography and Geology The geologic setting of Long Island is well documented and consists of crystalline bedrock overlain by layers of unconsolidated deposits. According to geologic maps of the area created by the United States Geologic Survey (USGS), the bedrock in this area of Brooklyn is an igneous intrusive classified as the Ravenswood grano-diorite of middle Ordovician to middle Cambrian age. Unconsolidated sediments overlie the bedrock and consist of Pleistocene aged sand, gravel and silty clays, deposited by glacial-fluvial activity. Non-native fill materials consisting of dredge spoils, rubble and / or other materials have historically been used to reinforce and extend shoreline areas and to raise and improve the drainage of low lying areas. Subsurface soils at the Site consist of historic fill materials to a depth of approximately 4 to 6 feet below grade. Silty sand and gravel is present immediately below this layer. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 20 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. No portion of the Site is located within a designated flood zone area. The nearest moderate risk flood zone is located 800 feet to the northwest and the nearest high risk flood zone is located 950 feet to the northwest. "

Env Problem:

"Nature and Extent of Contamination: The chlorinated solvent compounds tetrachloroethylene (PCE) and its breakdown products trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE), as well as other volatile organic compounds (VOCs) were detected in soil, groundwater, and soil vapor samples during the remedial investigation in 2018/19. Soil samples collected on site also contained elevated concentrations of Metals, Semi-Volatile Organic Compounds (SVOCs), and PCBs. Soil During the remedial investigation, eight (8) soil borings were collected throughout the site. Chlorinated Volatile Organic Compounds (CVOCs) were detected above Protection of Groundwater Soil Cleanup Objectives in all soil borings. Maximum PCE concentration of 3,200,000 ug/kg was found at SB-1708 (7-9 bgs). Maximum TCE concentration of 200,000 ug/kg was found at SB-1708 (7-9 bgs). Groundwater During the remedial investigation, five (5) monitoring wells were installed. CVOCs were detected in all five groundwater samples collected at the site: PCE ranges from 7,800 to 20,000 parts per billion, or ppb; TCE ranges from 1,800 to 11,000 ppb; and cis-1,2-DCE ranges from 270 to 11,000 ppb. The NYSDEC s list of 21 PFAS compounds was also analyzed as part

Health Problem:

of the remedial investigation. Combined PFOA PFOS concentrations ranged from 50 parts per trillion (ppt) in MW-1701 to 928 ppt in MW 1705. Soil Vapor As part of the remedial investigation, six (6) soil vapor samples were collected throughout the site. CVOCs were detected in all on-site samples. PCE ranged from 705 ug/m3 in SS-5 to 590,000 ug/m3 in SS-1. TCE concentrations ranged from 106 ug/m3 in SS-5 to 488,000 ug/m3 in SS-1. All sub-slab vapor samples also contained BTEX compounds. Significant Threat: A significant threat determination will be made following completion of a site characterization. "People may contact contaminated soils or groundwater if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and this site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future onsite buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in offsite structures."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 5/12/04 - AUSTIN - TRANSFERRED FROM MULQUEEN TO TIPPLE - END 8/23/05 - Raphael Ketani. Case transferred to Jeff Vought. 7/23/09- File Review by Intern EM Ibeh. The file being reviewed in SP# 9605522, PIN# 94724, spill date 7/30/96 on 823 Bedford Ave, Williamsburg, Brooklyn. Caller remarks from Spill report states that owner put 55gal. drum of oil out in the street that tipped over spilling oil . A search of PBS tank registrations produced 15 tanks below 1100gallons for the property with PBS# 2-322148 that were removed in 1993. No spills were found. Owner type as per PBS printed 7/30/96 is listed as corporate/commercial and the operator is listed as Fredrick Freedman with address below: Adfreed Oil Co. Inc 823 Bedford Ave Brooklyn NY 11205 P. 718.855.0512 Pictures taken on the day of the spill show a cordoned area of the sidewalk of the affected building and beyond it, covered in layer of sand and a drum of oil in front of the building on a patch of oil-stained concrete. 7/30/96: Letter from DEC to Milro Associates, Inc authorizing them to transport 7 drums of non-hazardous petroleum contaminated soil to their facility for proper storage until laboratory analysis of samples collected are performed and proper disposal arrangements made. 2 Non- hazardous waste manifests showing disposal of non-hazardous absorbents (speedy-dry sand and pads). 7/30/96- ISR to Bureau of Spill Response. 8/21/96- EcoTest Laboratories soil sample analytical report: Oil sample extracted and analyzed on 8/01 contained low viscosity lubricating oil, gasoline, kerosene and fuel oil analyzed by NYSDOH Method 310.13. Soil sample extracted 8/06 and analyzed 8/07 contained <5000ppm kerosene and fuel oil, low viscosity lubricating oil analyzed by NYSDOH Method 310.13 and no presence of gasoline. Petroleum products were not broken down into their respective constituent compounds for comparison by TAGM cleanup objectives. Oil sample analyzed contained heavy metals in minimal concentrations, <2.5ppm, except for Chromium and Lead, which were 3.6ppm and 3.8ppm respectively. Oil sample analyzed thereafter contained 1.6ppm Cr and 0.47ppm Pb with Aroclor, analyzed by EPA Method 608, at <5ppm. 8/22/01- Initial Demand letter from NYSOAG to Mr., Lazar Mauskopf of 683 Bedford Ave, Brooklyn re: 823 Bedford Ave, Brooklyn stating that the State has determined him liable for the cleanup and removal costs incurred by the New York Environmental Protection and Spill Compensation Fund. 8/22/01- Initial Demand letter from NYSOAG to A&M Baking Goods, Inc, 683 Bedford Ave, Brooklyn re: 823 Bedford Ave, Brooklyn stating that the State has determined them liable for the cleanup and removal costs incurred by the New York Environmental Protection and Spill Compensation Fund. 7/30/09- As per Bechard of OAG, the responsible parties were Lazar

Mauskopf and A&M Baking Goods of 683 Bedford Ave, Brooklyn settled in 2002 and all costs to the spill fund were covered.

08/17/09-Vought-Vought and Ibeh reviewed site with DEC Austin and spill closed as spill was on concrete sidewalk and on concrete in basement (as per photographs and ISR) and spill cleaned by state contractor including application and recovery of absorbents. Ibeh spoke with NYSOAG Bechard and NYSOAG settled with responsible party (A&M Baking Goods). Spill closed by Vought. Need for final ISR awaiting callback from DEC Farrar. 08/18/09-Vought-Spoke to DEC Farrar and as Att. Gen. Close Date box is filled out in UIS, no Final ISR needed. "

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: F003

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S121933852

Address: 480 FLUSHING AVENUE
City,State,Zip: BROOKLYN, NY 11205
Program: BCP
Site Code: 578363
Acres: 0.102
HW Code: C224259
SWIS: 2401
Town: New York City
Record Added Date: 10/16/2018
Record Updated Date: 04/08/2021
Update By: HMDUDEK
Site Description: "Location The site (a.k.a. Former Techtronics B, Site No. 224259). is in the Bedford Stuyvesant section of Brooklyn in the City of New York and is comprised of a single tax parcel totaling 4,450 square feet (0.102 acre). The site is rectangular in shape with 50 feet of frontage on Flushing Avenue and 89.25 feet of frontage on Walworth Street. The north side of the property is bordered by Flushing Avenue, and the east side is bordered by Walworth Street. The west and south property lines are bordered by two NYSBCP sites; the 11 Spencer site to the west and the 8 Walworth site to the south. Site Features The site is currently vacant with no structures and is not being used. An 8-foot-high construction fence borders the property on the north and west sites to prevent unauthorized access. Current Zoning and Land Use The property is currently zoned M1-2. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities. M2 districts buffer light industrial zones (M1) and zones which are occupied by heavy industrial use (M3) (i.e. power plants, solid waste transfer facilities and recycling plants). Nearly all industrial uses are allowed in M1 districts if they meet the stringent M1 performance standards. Offices, hotels and most retail uses are also permitted. Certain community facilities, such as hospitals, are allowed in M1 districts only by special permit, but houses of worship are allowed as-of-right. The site is currently vacant with no structures present and is not being used. Surrounding land use includes commercial and mixed-use (retail / residential) properties along the north side of Flushing Avenue, commercial / office use to the west, commercial (warehouses) properties to the south and to the east. The area surrounding the property is highly urbanized and predominantly consists of older industrial / commercial buildings with mixed use (retail / residential) buildings along main corridors such as Bedford Avenue, Flushing Avenue and Park Avenue. There are ten schools located within 1,200 feet of the site including Bnei Shimon Yisroel of Sopron approximately 150 feet to the east. There were no nursing homes or hospitals identified within 1,000 feet of the site. Past Use of the Site The environmental history of the subject property was previously investigated through the review of Federal and State Environmental databases, Environmental Sanborn Fire Insurance maps, NYC Department of Building records and the NYC Department of Finance databases. According to the review of these sources the property was developed sometime prior to 1887 with two 2-story residences in the southern portion of the Lot with the northern portion vacant. A 1-story building was constructed on the northern portion which is shown as broom manufacturers supply till 1950. Based on sources provided, a 1 story building was constructed in 1965 and identified

Env Problem:

as paint mixing . The northern building is shown as storage or warehouse. Both buildings remain unchanged till 2016 when the north building was demolished. The south building was demolished in 2018. The property was known to be most recently used by an auto repair shop and a fish market. A site characterization of the site was completed under the project name Former Techtronics B (Site No. 224259). After the site characterization the site entered the brownfield program as 480 Flushing. Site Geology and Hydrogeology Subsurface soils at the site consist of historic fill materials to a depth of approximately 1 foot below grade followed by native silty-sand and clay. According to the USGS topographic map for the area (Brooklyn Quadrangle), the elevation of the property is approximately 16 feet above mean sea level. The topography within the immediate area slopes gradually from south to north. Groundwater was reported to be present under semi-confined conditions at approximately 12-14 ft below grade. Based upon the site characterization, groundwater flow was reported to be northwest. Neighboring sites indicate a east by north east groundwater flow. The site is not located within a designated flood zone area."

"Nature and Extent of Contamination: Surface Soil: A Site Characterization was performed in 2017 under an Order from the NYS Department of Environmental Conservation. A set of two (2) surface soil samples were collected from four (4) locations across the site. The samples were collected from 0-2 inches bgs and 2-12 inches bgs. Tetrachloroethene (PCE) was detected at a maximum concentration of 16 parts per million (ppm). This concentration exceeds both the Unrestricted Use soil cleanup objective (UUSCO) of 1.3 ppm and the Protection of Groundwater SCO (PoGWSCO) (1.3 ppm). Subsurface Soil: During the 2017 Site Characterization, eight (8) soil borings were installed across the site. Samples were collected and analyzed at areas of observable impact and at the groundwater interface. PCE was detected at a maximum concentration 99 parts per million (ppm)(UUSCO: 1.3 ppm and PoGWSCO: 1.3 ppm). The following VOCs and Semi-Volatile Organic compounds were also detected in subsurface soils: Benzo(a)anthracene (260 ppm max, standard 1 UUSCO), Benzo(a)pyrene (230 ppm, standard 1 UUSCO), Benzo(b)fluoranthene (280 ppm, standard 1 UUSCO), Benzo(k)Fluoranthene (100 ppm, standard 0.8 UUSCO), Phenanthrene (800 ppm, standard 1 UUSCO), Dibenzo(a,h)anthracene (37 ppm, standard 0.33 UUSCO), Indo(1,2,3-cd)pyrene (140 ppm, standard 0.5 UUSCO). Brick and coal fragments were observed in shallow soil at some of the soil borings collected, suggesting the presence of urban fill. Groundwater: As part of the Site Characterization three (3) monitoring wells were installed and sampled. PCE was detected at a maximum concentration of 2,400 parts per billion (ppb), (standard 5 ppb), TCE was detected at a maximum concentration of 350 ppb (5 ppb standard), and 1,2-dichlorethene was detected at a maximum concentration of 340 ppb (5 ppb standard). Soil Vapor: The site is currently undeveloped. Three soil vapor samples were collected on-site with elevated concentrations of chlorinated VOCs. Max concentrations of PCE are 40.6 micrograms per cubic meter (ug/m3), TCE 1470 ug/m3 and vinyl chloride 7.77 ug/m3. "

Health Problem:

"Access is restricted by a fence. People may contact contaminants in soil by walking on the site, digging, or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into

overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The site is currently vacant and redevelopment is planned. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for future on-site buildings. Additional investigation is needed to determine whether actions are needed to address soil vapor intrusion in off-site structures."

FINDS:

Registry ID: 110004444487

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: "01/16/08-Vought-Received call from Sarah Schonfeld (718-802-9292) who works for owner. As per Sarah she sent in TTF that showed tank to be tight. TTF results submitted and looking for case closure. Vought to inquire to DEC Falvey if TTF acceptable and spill can be closed. Vought spoke with Falvey and confirmed that tank system tested tight and site visit revealed that only fill line ran underground. As per Falvey tank was AST and concrete was in good condition and no source of odors were found and no further complaints were received. Spill closed due to no impact to soil and groundwater after agreement by DEC Falvey. Vought sent NFA to: Sam One Realty LLC 199 Lee Avenue Suite 305 Brooklyn, NY 11211 Fax: (718)802-1154"

Remarks:

"FDNY called in complaint about this building. They visited the site 8 times in 2 years responding to petroleum odors. No spill is visible. J. Krimgold asked that I follow up with a PBS inspection. No spills were observed during the inspection. There was a strong petroleum odor in the hallway on the first floor. No odors were detected in the tank room or the boiler room. One resident, who's door was in the vicinity of the odor stated that she has been living there since September and did not notice the odor until the building

received heating oil deliveries. According to Rich Jones, the super, the last delivery was about 2 weeks ago. The tank is aboveground and wrapped in concrete without weepholes. There was limited information available on the tank and pipe system because there were no plans or tank labels available. It appears there is no secondary containment and the tank room has an open floor drain. According to Abe, the building manager, the tank was last tested for tightness about three years ago. The following violations were found on the PBS inspection: 1. Registration certificate not posted. 2. Fill port not color coded. 3. No secondary containment on the tank. 4. No labeling at the fill port. 5. No as built plans. 6. Unmetered tank without alternative leak detection. An administrative settlement conference is scheduled for 12/19/07 in LIC. On 12/19/07-Vought-Spoke with DEC Falvey and conference ongoing and he will have responsible party tightness test fill line as this may be suspected source."

BCP site No. C224264 Former NY Cleaning and Dyeing and reflects the investigation and possible remediation of contamination that may have migrated from that site. This work is being carried out as provided for under the Environmental Conservation Law Section 27-1411.5. Please see C224264 for further information regarding the status of the site in the Brownfield Cleanup program. Location: The Site includes properties around the BCP Site (C224264) located at 376-378 Flushing Avenue. This Site is an off-site project associated with the on-site BCP project as well as Spill No. 1609531. Site Features: The Site does not have definite boundaries since it is an off-site project associated with an on-site BCP project. Potentially impacted areas from the BCP Site Former NY Cleaning and Dyeing include the residential apartment building to the west and the three story commercial building to the east. The off-site areas are not necessarily limited to these areas. Current Zoning and Land Use: The Site is currently zoned M1-2 for manufacturing. The potentially impacted areas from the Former NY Cleaning and Dyeing Site (BCP: C224264) include a residential apartment building to the west and a three story commercial building to the east. Potential for further migration include downgradient impacts from the on-site BCP Site. Past Use of the Site: The Site has not yet been identified for its past historic use. The property potentially impacting the Site but not limited to, The Former NY Cleaning and Dyeing BCP site was historically used for several manufacturing and commercial processes including auto repair shops, storage facilities, and sheet metal works that occupied the BCP site from 1928-1940s. By the 1940s, a commercial dry cleaning plant (NY Cleaning and Dyeing) occupied Lot 48; vehicle storage and NY Cleaners-Uniform Rental services occupied Lot 40 of the site until the late 1980s. Currently, the site is occupied by a door and molding warehouse and a catering hall. Site Geology and Hydrology: Based on the information collected during the investigation of C224264, the soil beneath the site includes silt, sand non-native fill with brick, concrete, coal and other rubble associated with historic fill approximately 5 feet below grade. A native sand and clay layer is present below the historic fill to depths of approximately 12 feet below grade. The evaluation of the surrounding area is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The areas topography gradually slopes to the west. The depth to groundwater beneath the Site is approximately 9 to 13 feet below grade. Local groundwater flow is to the east. The nearest surface water body is Wallabout Channel, which is approximately 0.5 miles northwest. "

Env Problem:

"During the on-site Remedial Investigation for site C224264, soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, and pesticides. Soil vapor samples were analyzed for VOCs. Based upon the results of the RI, the primary contaminants of concern for on-site include vinyl chloride, trichloroethene (TCE) and tetrachloroethene (PCE). Contamination can likely be attributed to activities associated with the historic use of the site for manufacturing activities. Further investigation is needed to fully delineate the extent of off-site contamination. "

Health Problem:

"Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available."

FORMER NY CLEANING AND DYEING SITE (Continued)

S122449226

(Kings County), New York. The site is comprised of two tax parcels (Block 1884, Lots 40 and 48) totaling 0.8822 acres. The site fronts on Flushing Avenue to the north, Franklin Avenue to the east, and Little Nassau Street to the south. Site Features: The site is being redeveloped into a mixed commercial-residential building. Previously, Lot 40 was a one-story commercial building approximately 13,250 sqft in size, occupied by a door and molding company. Lot 48 was a three 2-story commercial buildings occupied by a catering hall, a warehouse for the door and molding company on Lot 40, and office space. According to the NYC Department of Buildings, the current buildings were constructed in 1924 (Lot 48) and 1966 (Lot 40). Current Zoning and Land Use: The site is currently zoned R7A for residential use, with a C2-4 overlay which allows for commercial use. The area immediately surrounding site consists of a three-story commercial building to the southeast and a residential apartment building to the west. Past Use of the Site: The buildings present on the site are in use as a wood door and molding manufacturer and warehouse (Lot 40, p/o Lot 48) and a catering hall (p/o Lot 48). Lot 40 appears to have been redeveloped by 1928 with the existing one-story building identified as Priemo Garage. By 1945 the building was used by Metropolitan Distributers for the storage of ice cream and delivery trucks. From 1928 to 1934, 380 Flushing Avenue (Lot 48) was used as an auto body fabricator while two 1-story buildings, identified as an auto body repair and a paper company, were located in the western portion of the Lot. A sheet metal works was identified on a portion of Lot 48 from 1928-1940. By 1940, a commercial dry cleaning plant (NY Cleaners and Dyeing) occupied all of Lot 48. Based on the 1966 Certificate of occupancy, describing Lot 40 as being used for commercial vehicle storage and trucking terminal, the lack of city directory listings for this lot between 1949 and 1992 and the history of common ownership with Lot 48 by Uniform Rentals Inc., it is probable that both lots were part of the NY Cleaners-Uniform Rental operation with lot 40 being used to store and service the company's vehicle fleet from 1949 through 1986-1987. Although not reflected in the Sanborn Maps, the City Directory listings identify 376 Flushing Ave. (lot 40) as Alexander Supply (door and molding warehouse) in 1997 and 378 Flushing Ave (portion of lot 48) as Exclusive millwork in 1992. Exclusive Door and molding currently occupies both 376 and 378 Flushing Avenue. Therefore, the laundry operations and fleet maintenance garage vacated prior to these dates, most likely in 1986-1987 when Uniform Rentals sold the lots. Site Geology and Hydrology: The elevation of the site is approximately 16 feet above the National Geodetic Vertical Datum (NGVD). The area topography gradually slopes to the west. The depth to groundwater beneath the Site, as determined from field measurements, is approximately 9 to 13 feet below grade. Local groundwater flow is to the east. The nearest surface water body is Wallabout Channel, which is located approximately 0.5 miles from the site. "

Env Problem:

"Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in soil and groundwater consist of petroleum related VOCs. Low levels of chlorinated solvents were found in soil vapor. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use. Short-term groundwater monitoring is being managed under a Site Management Plan. "

Health Problem:

"Remedial actions are complete and measures are in place to prevent people from coming in contact with any residual contamination."

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 00A
Tank Id: 9546
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I04 - Overfill - Product Level Gauge (A/G)
H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 1500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 04/01/2000
Register: True

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 122-562: 1/20/99-10:00HRS N. FRUSTACIA-14757-A MECH-NETWORKS-FOUND APPRX 1 GAL OF HEATING OIL COMING FROM BUILDING STANDPIPE. ****3RD PARTY INVOLVEMENT****-OIL OVERFLOWED AFTER DELIVERY OF HEATING OIL TO BUILDING ONTO SIDEWALK AND THEN INTO VAULT 2572- MR FRUSTACIA FOUND OIL COMPANY HAD PLACED DIAPERS TO CONTAIN OIL. SUMP PUMP IN HOLE BUT OIL MINDER CAUSED PUMP TO SHUT DOWN AUTOMATICALLY. MR. FRUSTACIA MANUALLY DISCONNECTED PUMP. NO JOINT REGULATOR IN VAULT. PLUMBING COMING FROM TRAP SEEMS TO BE GOING INTO CUSTOMER'S BUILDING. MR. FRUSTACIA TOOK SAMPLE AND PLACED ENV TAG 08317. WILL NEED TO TAKE 3 SAMPLES-1 FOR FLASHPOINT, 1 FOR OIL ID, AND 1 FOR PCB. WHEN MR FRUSTACIA CALLS BACK HE WILL BE NOTIFIED OF 2 ADDITIONAL SAMPLES AND WILL NEED TO GET ACCESS TO BUILDING AND TRY TO DETERMINE TYPE OF PLUMBING GOING INTO BUILDING. DOES NOT SEEM TO BE COMING FROM ANY COMPANY EQUIPMENT. FDR IN VAULT SHOWS JAN 1, 1951 AND 147PPM. UPDATEJAN-20-1999 1600HRS CAMPANILE O/S NETWORKS REPORTS HIM AND ZALLOUGHI ARRIVED AT 1500HRS THEY BROKE OPEN PIPES ON SUMP PUMP IN VAULT AND FOUND NO TRACE OF OIL, WENT INTO 705 BEDFORD AVE AND TRACED OUT PIPES. AND FOUND AN OIL TANK THAT BELONGS TO BLDIN THE SAME ROOM WHERE THE SUMP PUMP ORIGINATES . FOUND TRACES OF OIL IN ROOM. IT APPEARES TO BE COMING FROM OLD OIL TANK. NOTIFIED JOE BELIEVED TO BE SUPT (WOULD NOT GIVE LAST NAME) FROM S&W KNITTING MILL. WE RECOMEND DEP BE NOTIFIED OF SITUATION IN OIL TANK ROOM. MR CAMPANILE RECOMENDS THAT SUPT SHOULD CLEAN UP HIS ROOM. UPDATE ***** 1-20-99 LAB SEQ# 99-00596 <1.0 ALSO, SQ# 99-00598 OIL ID INDICATES THE PRESENCE OF A SUBSTANCE SIMILAR TO A LIGHT FUEL OIL. 16-FEB-1999 17:44 -- A.WALKER #55495, BKLYN ENV OPS, REPORTS CLEANUP COMPLETED WITH SLIX AT 16:00 HRS & E/S TAG #08317 REMOVED. Also, e2mis no. 122-564: 1/20/99 10:00HRS-***3RD PARTY INCIDENT***N. FRUSTACIA-14757 A MECHANIC-NETWORKS FOUND APPRX 1 PINT OF HEATING OIL ON 750 GALLONS OF WATER IN VAULT 2601 F/O 2 LYNCH STREET-COMING FROM OIL STANDPIPE FROM BUILDING AFTER OIL COMPANY MADE DELIVERY-NO PLUMBING IN THIS VAULT-THIS VAULT IS CONNECTED TO V 2572-INCIDENT #122562. THIS IS CONTAINED-NO SUMP IN THIS VAULT.FDR 6B50 INSTALLED 1/1/84 AND SHOWS 10 PPM-DOES NOT LOOK AS THOUGH THIS IS COMING FROM COMPANY EQUIPMENT. TOOK SAMPLE FOR FLASHPOINT-OIL ID-AND PCB. update***** LAB SEQ # 99-00597 <1.0 ALSO 99-00599-001 I.D IS NOT POSSIBLE DUE TO THE DEGRADED QUALITY OF THE MATERIAL RECOVERED. 16-FEB-1999 17:44 -- A.WALKER #55495, BKLYN ENV OPS, REPORTS CLEANUP COMPLETED WITH SLIX AT 14:30 HRS & E/S TAG #08303 REMOVED."

Remarks: "THERE WAS A HEATING OIL DELIVERY AT THAT LOCATION. THE SPILL ENDED UP IN VAULT 2572 AND IS 1 GAL ON 1000 GAL OF WATER AND VAULT 2601 IS 1 PT ON 750 GAL OF WATER.THE SUMP PUMP IN BOTH VAULTS ARE NOT RUNNING."

Name: FORMER ARKANSAS COMPANY, INC. SITE
 Address: 74 WALLABOUT STREET
 City,State,Zip: BROOKLYN, NY 11211
 Site Code: 478229
 HW Code: C224172
 Control Code: 13
 Control Type: ENG
 Date Record Added: 12/03/2014
 Date Rec Updated: 08/03/2020
 Updated By: JJTEETER
 Site Description: "Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."
 Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Residual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being

Health Problem: handled by Region 2 Spills."
"People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."
Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Residual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."
Health Problem: "People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

Updated By: JJTEETER
Site Code: 478229
Site Description: "Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot.

The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Residual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."

Health Problem: "People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

to Brownfield program. They will know by April 10, 2013 weather or not they are going to be accepted. 06/13/13 Jonathan Greco sent the following email: The referenced spill site at 74 Wallabout Street in Brooklyn has been accepted into the Brownfield Cleanup Program as site #C224172. With your permission, I would like to reference this in the DEC Remarks section of the UIS and change myself to the project manager for the spill site. 07/09/14 The source of the spill has been determined to be a leaking UST located on the western portion of the site. The UST and free product located on-site will be addressed under the BCP (Site Code C224172). Off-site remediation of the floating product is at least being partially remedied by the BCP Volunteer, but it is expected that their efforts will not fully resolve the off-site issue, and further work may be conducted by the State and/or the RP under the Spills program following completion of the BCP. 11/7/14 On-site work has been completed and site construction is underway. Though bailing of product was conducted at two wells on many occasions, product is still present. Any further actions will be undertaken under Spills program. (Greco 11/7/14) 4/4/16 - Callout to determine off-site extent and address product off-site to be done FY 2016/17. 09/18/17-Hiralkumar Patel. DEC Austin assigned this case for remediation of off-site groundwater impact from a BCP site. 10/27/17-Hiralkumar Patel. searched current and former tax lot maps and noted that the subject site was on Block #: 2261 / Lot #: 1. the subject site was owned by B.C.G. Sales, Inc. from July 1977 to Aug. 2012. alternate address: 74-88 Wallabout Street, 743-755 Kent Ave, 377-391 Flushing Ave PBS #: 2-612240. as per PBS record, the site had nine (9) 1,000 gal diesel USTs, removed in Jan. 2014. but as per reports included in BCP file, PBS application was submitted to register following tanks: - seven (7) 1,000 gal diesel USTs - one (1) 550 gal gasoline UST - one (1) 3,000 gal #2 oil UST other spill # 0307065 was reported on 10/04/2003 due to discharge of natural gas line condensate as old gas main punctured during installation of a new gas line. case closed. summary of available investigation reports from BCP #: C224172: 1) Phase I Environmental Site Assessment Report dated 10/12/2006: - review of available Sanborn maps did not indicate the presence of any buried tanks on the subject site - the subject site was utilized in the past by a bakery shop, a soap company, a wood working company, a lumber company, a shelving company, a chemical company, a paint and varnish manufacturing company, a rope manufacturing company, a plastic processing company, a cleaner industries company and warehouse and household chemical distributing company - in 2006, there were four (4) possible fill ports noticed inside the northern portion of the warehouse area on the main floor of the building - in 2006, there was a capped fill port and a vent pipe noticed along the western exterior wall of the building. according to the property owner, the capped fill port and the vent pipe were associated with an AST that was removed from the building in the past - in 2006, there was a hydraulic elevator motor noticed inside the northern portion of the warehouse area on the main floor of the building. there was hydraulic oil staining and speedi dry noticed in the vicinity of the hydraulic elevator motor 2) Supplemental Phase II Environmental Site Assessment dated Jan. 2013: - review of historical Sanborn map performed as part of Phase I ESA indicated that two gasoline UST existed inside the building ----- Phase I report states that no buried tanks were noted on Sanborn maps - a limited Phase II investigation was conducted in northern half of the site in Jan. 2007 - in Dec. 2006, a

S112138864

geophysical survey was conducted. GPR profiles collected within northeast corner of the building appeared to be consistent with the size and shape of six (6) 550 gal USTs. additionally, six vent lines (connected to the suspected USTs) were located on the northeast corner of the building - in Dec. 2006, eight (8) soil borings (SB-1 through SB-8) were installed in the vicinity of the suspected USTs on the northeast corner of the building, in the storage area and the asphalt parking lot - boring SB-1 was installed to 6 ft bg where fuel oil odors were detected and refusal encountered - boring SB-2 was installed to 16 ft bg - boring SB-3, SB-4 and SB-6 were installed to 12 ft bg - boring SB-5 and SB-7 were installed to 5 ft bg where refusal encountered - boring SB-8 was installed to 6 ft bg, where slight odors were detected and refusal encountered - one soil sample was collected from each boring, except borings SB-5 and SB-7 (as per table 1, samples were collected from depths between 6 and 11 inches, boring logs suggest that samples may have collected from depths between 6 and 11 ft) ----- - in Jan. 2007, groundwater samples (GW-1, GW-2 and GW-3) were collected from borings SB-2, SB-3 and SB-4 (11-13 ft bg) ----- no contamination found in soil or groundwater samples collected in Dec. 2006 - supplemental Phase II investigation was conducted in Dec. 2012 - in Dec. 2012, eight (8) soil borings (SB009 through SB016) were installed - shallow soils, ranging from 0-8 ft bg were characterized as mostly non-native, historic fill material consisting of brown silty sands. deeper soils, ranging from 8-20 ft bg were characterized as mostly gray, low-plasticity, silty clay ----- - petroleum like odor was observed in soil from SB009 (4-16 ft), SB014 (0-12 ft), SB015 (0-12 ft) and SB016 (0-12 ft) - visual staining was observed in soils from SB016 (8-12 ft) - in Dec. 2012, two groundwater samples (GW011 and GW013) were collected - in Dec. 2012, three (3) 2-in monitoring wells (MW001, MW002 and MW003) were installed with 10 ft of screen. screens were set 7 ft into and 3 ft above the water table at the time of installation - approx. 1 ft of LNAPL, similar to gasoline, was detected and observed in MW002, located on the southwestern corner of the site ----- - groundwater samples were collected from two wells MW001 and MW003 - in Dec. 2012, three soil vapor samples were collected - no contamination found in soil, groundwater or soil vapor samples - well MW002 was installed near boring SB009 where strong petroleum odors were noted below 8 ft depth - as per well logs, screen in wells MW001 and MW003 were installed below water table 3) Progress Report No. 3 dated 02/27/2014: - nine USTs were removed between 01/08/14 and 01/21/14 - as per tank removal affidavit dated 01/16/14, total of eight (8) 1,000 gal #2 oil USTs and one (1) 3,000 gal #6 oil UST were removed, but as per PBS application dated 05/20/14 shows seven (7) 1,000 gal diesel USTs, one (1) 550 gal gasoline UST and one (1) 3,000 gal #2 oil UST - the seven (7) 1,000 gal USTs were in group located in northeast corner of the site - the 550 gasoline UST was located along northern property line in western portion of the site - the 3,000 gal (#2 or #6 oil) UST was located in west-central portion of the site - 3,060 gal of residual liquid and 14 drums of tank bottoms removed - total of 21 endpoint samples (EP001 to EP 021) were collected from northeast corner of the site where 7 USTs were located in group - four endpoint sidewall samples were collected from location of tank #8 (gasoline UST - SW005 to SW008) and tank #9 (#2 or #6 oil UST - SW001 to SW004) - all samples were collected at 6 ft depth - no contamination found in endpoint samples, but detection limits were high for sidewall sample

S112138864

SW004 which was taken from west sidewall of #2/#6 oil tank excavation
4) Remedial Investigation Report dated 04/30/14: - a geophysical survey conducted on 07/09/13 - due to reinforced concrete, suspect tanks could not be confirmed within eastern interior of the building - cut and capped fill/vent lines were noted on west exterior wall. there was no indication that the lines went beneath the building slab and were likely connected to an AST at one time - an anomaly consistent with a UST was located in the north parking lot perpendicular to the sidewalk of Wallabout street (tank # 8) - on 08/28/13, during removal of the former buildings concrete foundation, one additional anomaly (tank #9) was identified in the southwestern portion of the property ----- total of fifteen (15) pits and one concrete vault were identified - fourteen of the fifteen pits were determined to have concrete walls and bottoms - FD016 was determined to have an earthen bottom - several of the structures appeared to discharge into the large concrete vault and several of the structures were piped in the direction of the municipal sewer system - seven (7) soil borings (SB017 through SB023) were installed to a depth of 16 ft bg - shallow soils, ranging from 0 to 8 ft bg were characterized as mostly non-native, historic fill material consisting of brown silty sands. deeper soils, ranging from 8 to 15 ft bg were characterized as mostly gray, low-plasticity, silty clay - no contamination noted in soil samples - four (4) 2-in observation wells (OB001 through OB004), with 10 ft of screen, were installed to determine horizontal extent of LNAPL in the vicinity of MW002 - two (2) 2-in monitoring wells (MW004 and MW005), with 10 ft of screen, were installed - based on well gauging results, groundwater beneath the site flows towards the west-northwest ----- groundwater samples were collected from three temporary groundwater sampling points (SB020, SB021 and SB022), two monitoring wells (MW004 and MW005) and one observation well (OB003) - on 09/18/13, LNAPL found in two monitoring wells and three observation wells - source of LNAPL is likely related to UST identified in the southwest portion of the property - no contamination noted in groundwater samples - four (4) soil vapor sampling points (SV004 through SV007) were installed - found Benzene (821 ug/m3) and TCE (143 ug/m3) in soil-vapor samples product thickness on 09/18/13: MW002-----2.48 ft MW005-----4.95 ft OB001-----4.91 ft OB002-----sheen OB004-----0.02 ft 5) Site Management Plan dated Dec. 2014: - nine USTs were removed - seven USTs (Tank 1 through 7) were identified within a subsurface concrete encasement in the northeast corner of the property - Tank 8 was located in the northwest corner (as per site map, tank was along northern property line in western portion) of the property and found to be encased in concrete ----- Tank 9 was located in southwest corner (as per site map, tank was in west-central portion) of the property ----- the USTs were found to be in poor condition with corrosion holes visually observed in Tanks # 4, 6 and 9 ranging in size up to 1/2 inch in diameter - groundwater was encountered beneath Tank #8 and 9 and LNAPL was visually observed on the water table - there was no signs of petroleum impact beneath the northeast tanks - since there was no evidence of a discharge and there was no groundwater beneath the USTs in the northeast corner of the property, discrete center line soil samples were collected from beneath the former location of the USTs (total 21 samples) - since there was evidence of a discharge and groundwater was encountered beneath Tank # 8 and 9, sidewall samples were collected (total 8 samples) - soils were excavated to a minimum

depth of 10 ft bg within the footprint of the proposed building - soils were excavated to 8 ft bg in the portion of the site to be used for the future school expansion ----- LNAPL removed through dewatering and VEFR events - LNAPL migration mitigated through the use of the steel sheeting installed at the property's perimeter ----- installed a vapor barrier/water proofing membrane under the building's foundation as per Final Engineering Report/Construction Completion Report dated 12/10/14, total of 18,900 gal of LNAPL/groundwater was removed from (excavation and wells) the site. DEC issued a Certificate of Completion on 12/23/14. Andy Lockwood PW Grosser **BCP consultant** Ph. (631) 589-6353 (516) 315-9238 email: AndyL@pwgrosser.com B.C.G. Sales, Inc. **owner from July 1977 to Aug. 2012** Moshe Gewurtz / Dov Kurland **info from online records** 751 Kent Avenue Brooklyn, NY 11211 Ph. (718) 596-4000 Northland LLC. / Starwood LLC. / 74 Wallabout LLC. **property owners/developers** review of Phase I report (dated 10/12/2006), Supplemental Phase II ESA (dated January 2013) and RIR (dated 04/30/2014) suggests that presence of heating oil (#2 or #6) UST in west-central portion of the site was not known until removal of former building concrete foundation. ----- phase I report from Middleton Env. mentioned that review of available Sanborn Fire Insurance Maps did not indicate the presence of any buried tanks on the subject site. but site history section of supplemental Phase II report from PWGC states that a review of historical Sanborn Fire Insurance Map performed as part of the Phase I ESA indicated that two gasoline underground storage tank (UST) existed inside the building. ===== 1:57 PM:- spoke with Andy at PW Grosser and inquired him about well gauging data. Andy believes that off-site wells were free of product after on-site remediation/dewatering and all wells have been closed. he will send documents for review. 2:33 PM:- received email from DEC Forster including daily reports 07/23/14 to 09/1/14. 3:08 PM:- received email from Ryan Morley (ryanm@pwgrosser.com) including two daily reports (both dated 09/16/14) and a site map (dated 09/18/13). both daily reports have same date (09/16/14) at top, bottom of pages include different dates (09/16/14 and 09/17/14). Ryan mentioned that last two gauging events occurred in Sep. 2014 before work was completed in Dec. 2014. product thickness (in ft):

S112138864

to Jennifer Lawrence at Environmental Assessment & Remediation including a standby contractor authorization form for gauging of three existing off-site wells, removal of any LNAPL found, sampling of groundwater for VOC/SVOC analyses and report preparation/submission. asked Jennifer to schedule well gauging work. 4:21 PM:- sent email to Melissa Hass at TestAmerica including a standby contractor authorization form for VOC/SVOC and fingerprint analyses of groundwater/product samples. 11/15/17-Hiralkumar Patel. 12:21 PM:- received email from Jennifer. she mentioned that Erin Quell will be managing this project, and well gauging has been scheduled for tomorrow. 11/16/17-Hiralkumar Patel. 12:30 PM:- visited site with DEC Lin and met Michael Ford (EAR technician). three monitoring wells (MW005, OB003 and OB004) were gauged and found product in well MW005. product thickness could not be found due to it's viscosity. product samples have been collected for waste characterization/fingerprint analyses. 1:11 PM:- spoke with Erin. based on field observations, asked Erin to schedule three weekly VEFRing followed by well regauging. also asked her to replace damaged well cap (OB003) and well cover plate (MW005). Erin mentioned that weekly VEFRing will be scheduled after receiving product sample results. 12/01/17-Hiralkumar Patel. 9:31 AM:- received email from Erin including waste characterization sample results. report did not include result of fingerprint analysis. 12/06/17-Hiralkumar Patel. 11:14 AM:- received email from Erin. she mentioned that first VEFRing will occur tomorrow by Island Pump and Tank. 12/07/17-Hiralkumar Patel. 9:46 AM:- received call from Erin. she mentioned that vacuum truck is in area, but could not remove product from the impacted well due to parked vehicles. asked Erin to have crew wait for sometime and pump out well if parking space become available. also asked her about result of fingerprint analysis and replacement of damaged well cap/cover. Erin mentioned that product sample collected on 11/16/17 was not analyzed for fingerprinting. she will check with on-site tech and ask to collect product sample today, if necessary tools are available, otherwise product sample will be collected next time. she will also schedule well repair during next visit. 12:30 PM:- received call from Erin. she mentioned that crew was able to remove product from well MW-5. crew used interface probe capable of gauging thick product and noted 6.5 ft product in the well prior to pump out. crew conducted multiple pump outs with approx. 15 minutes intervals in-between and gauged well between pump outs. total of 6 pump outs were conducted. at the end, 0.4 ft of product noted in the well. asked Erin to schedule next pump out in afternoon on 12/14/17. 1:13 PM:- left message in general mail box at Rabsky Development, entity listed as owner in DOB permit application filed on 06/19/13. Rabsky Development **owner listed in DOB application submitted in 2013. 505 Flushing Avenue Brooklyn, NY 11205 Attn.: Simon Dushinsky / Raphael Ph. (718) 246-4762 email: rabskygroup@thejnet.com 1:22 PM:- sent email to Erin and asked her to schedule next pump in afternoon on 12/14/17. also asked her to collect product sample for fingerprint analysis and repair damaged wells during next pump out. email copied to Jennifer. 12/08/17-Hiralkumar Patel. 9:52 AM:- spoke with Sam (347-761-2185), building super and requested assistance to reserve some parking spots near well MW5 on 12/14/17. Top Quality Management **building management** 199 Lee Avenue #286 Brooklyn, NY 11211 Attn.: Esty **property manager** Ph. (718) 522-6582 Ext. 103 10:02 AM:- spoke with Erin. she confirmed next pump out on 12/14/17. 3:38 PM:- received email from Erin including data tables summarizing

S112138864

groundwater gauging data and VEFRing event on 12/07/17. Erin mentioned that manhole covers can not be secured because the tabs have been broken of the rings and they have to replace the entire manhole to fix it. 12/12/17-Hiralkumar Patel. 2:56 PM:- approved invoice (# 46288085) from TestAmerica for waste characterization analysis. 12/14/17-Hiralkumar Patel. 1:40 PM:- received message from Erin. 1:42 PM:- spoke with Erin. she mentioned that 2.8 ft of product was noted in well MW005 at beginning. product sample has been collected for fingerprint analysis. the well was vacuumed out for about 30 minutes. crew has been gauging well for 40 minutes after pump out and found no more product accumulation. asked Erin not to continue pump out today and to schedule weekly pump out until further notice. 12/15/17-Hiralkumar Patel. 3:07 PM:- received email from Erin including updated table summarizing data collected to date. 12/21/17-Hiralkumar Patel. 1:10 PM:- received call from Erin. Island Pump gauged wells and found 1.41 ft product in well MW005. after VEFRring for 45 minutes, no more product noted in the well. based on decreased amount of product in the well, next VEFRring will occur after two weeks. 12/27/17-Hiralkumar Patel. 9:25 AM:- received email from Erin including updated table summarizing data collected to date. she mentioned that Island Pump will be at site at noon on 01/04/18. 12/28/17-Hiralkumar Patel. 1:25 PM:- received email from Erin including fingerprint result. lab report indicates that sample contained a petroleum product within most closely resembles degraded #4 oil. ----- 01/03/18-Hiralkumar Patel. 1:45 PM:- received call from Erin. she mentioned that tomorrow's VEFR event has been cancelled due to snow forecast. 01/08/18-Hiralkumar Patel. 1:24 PM:- received email from Erin stating that next vacuum event has been scheduled for 01/11/18. 01/10/18-Hiralkumar Patel. 1:38 PM:- approved invoice (# 46289471) from TestAmerica for fingerprint analysis. 01/11/18-Hiralkumar Patel. 12:15 PM:- visited site and met Mike (EAR). on-site wells were gauged and found 0.75 ft of product in well MW-5. well MW-5 was VEFRred for approx. 30 minutes. no product noted in well when re-gauged 15 minutes after VEFRring. well MW-5 will be VEFRred again today. 2:03 PM:- received call from Erin. asked her to continue weekly VEFRring. 01/16/18-Hiralkumar Patel. received email from Erin (at 4:17 PM on 01/15/18) including updated table summarizing data collected to date. next gauging will occur on 01/18/18. 01/22/18-Hiralkumar Patel. 12:59 PM:- received call from Erin. 0.75 ft of product was found in well MW-5 prior to VEFRring on 01/18/18. after 45 minutes of VEFRring, well was recharged with 0.05 ft of product. 01/25/18-Hiralkumar Patel. received email from Erin (at 9:57 AM on 01/24/18) including updated table summarizing data collected to date. 02/01/18-Hiralkumar Patel. 1:37 PM:- received call from Erin. she mentioned that crew from EAR and Island Pump responded were on-site to gauge and VEFR the well. EAR technician noted upto 0.47 ft of product in the well at the beginning. no product was noted in the well 15 minutes after first round of VEFRring. Erin mentioned that towards the end of work, an another vehicle struck the vacuum truck. driver of the other vehicle tried to escape after the accident. no-one was hurt in the accident, but the vacuum truck was damaged and need to be towed. Erin also mentioned that crew had to park vacuum truck in the 'no parking' zone due to parking issues near the well location. 1:44 PM:- spoke with DEC Karen Quinn who handles contract payments. informed Karen about accident at the site and damaged vacuum truck. 1:56 PM:- approved invoice (# 121292-121299) from EAR for work performed (project review, well gauging/product

recovery, and lab coordination) between 11/14/17 and 11/30/17. 02/09/18-Hiralkumar Patel. 9:49 AM:- approved invoice (# 121685-121704) from EAR for work performed (project review, well gauging/product recovery, and coordination) between 12/01/17 and 12/31/17. 02/12/18-Hiralkumar Patel. 9:46 AM:- sent email to Erin and Jennifer including a revised standby contractor authorization form. 1:23 PM:- received email from Erin stating that next well gauging/VEFRing will occur on 04/14/18. 02/14/18-Hiralkumar Patel. 10:10 AM:- received email from Erin including groundwater gauging data table. 12:33 PM:- received call from Erin. she mentioned that wells at the site will not be gauged today as crew working at another site. asked Erin to gauge/VEFR wells next week. 03/05/18-Hiralkumar Patel. 12:44 PM:- approved invoice (# 122366-122379) from EAR for work performed (project review, well gauging/product recovery, and coordination) between 01/01/18 and 01/31/18. 03/14/18-Hiralkumar Patel. 3:11 PM:- received email from Erin stating that well gauging/VEFRing will occur tomorrow. 03/22/18-Hiralkumar Patel. received email from Erin (at 11:56 AM on 03/21/18). VAC event scheduled for today has been cancelled due to weather. 03/30/18-Hiralkumar Patel. 10:59 AM:- received email from Erin including well gauging data table. 0.48 ft of product noted in well MW-5 on 03/29/18. 04/02/18-Hiralkumar Patel. discussed available well gauging data with DEC Austin. due to continuous accumulation of product in well MW-5, he asked to review available reports under BCP # C224172 to find details about soil profile and site-specific groundwater flow direction. based on review of available on-site investigation data, more monitoring well(s) may be needed downgradient of the site. 04/03/18-Hiralkumar Patel. 12:09 PM:- spoke with Erin and asked to hold future well gauging/VEFRing activities until further notice. 04/05/18-Hiralkumar Patel. 2:38 PM:- approved invoice (# 123114-123127) from EAR for work performed (project review, well gauging/product recovery, and coordination) between 2/1/18 and 2/28/18. 05/10/18-Hiralkumar Patel. 9:18 AM:- approved invoice (# 123783-123802) from EAR for work performed (project review, well gauging/product recovery, coordination and waste disposal) between 02/21/18 to 03/30/18. 2:33 PM:- sent email to Erin including revised standby contractor authorization form. 06/11/18-Hiralkumar Patel. 10:56 AM:- approved invoice (# 124479-124486) from EAR for project review/coordination between 04/01/18 and 04/30/18. 06/19/18-Hiralkumar Patel. review of available reports indicates presence of degraded #4 oil in monitoring well MW005 which is located down-gradient of former on-site heating oil tank #9. there is conflicting info about grade of fuel oil stored in tank #9: tank removal affidavit shows storage of #6 oil, but PBS application shows storage of #2 oil. 9:58 AM:- sent email to Erin and asked her to schedule well gauging/VEFRing (last gauging was three months ago on 03/29/18). 06/28/18-Hiralkumar Patel. 12:50 PM:- received email from Erin. they gauged wells today and found approx. 1.2 ft of product in well MW-5. 06/29/18-Hiralkumar Patel. discussed with DEC Obligado. based on review of available information, Obligado agreed with replacement of existing well MW-5 with a larger diameter well and passive product recovery using absorbent socks. 07/02/18-Hiralkumar Patel. discussed with DEC Austin. instead of expanding existing well MW-5, he asked to install three additional wells: one on east sidewalk of Kent Ave and south of existing well MW-5, one on east sidewalk on Kent Ave north of existing well MW-5, and one on west sidewalk of Kent Ave down-gradient of existing well

S112138864

MW-5. 07/09/18-Hiralkumar Patel. 12:39 PM:- sent email to Erin including a site map with possible off-site well location markings. 12:39 PM:- spoke with Erin. informed her that the department requires off-site wells to further delineate groundwater impact. asked her to install 4 inch diameter wells to a depth of at least 20 ft bg, with 15 ft of screen. as current PIN lab contracts have expired and new contracts are being negotiated, asked Erin to install wells now only if they can find lab as sub-contractor, otherwise wells should be installed once PIN lab contracts are approved. informed her that soil must be screened and sampled (# of soil samples will depends of field indication of impact) for 8260/8270 analysis. based on findings of product on groundwater, either groundwater samples should be collected for 8260/8270 analyses or product sample should be collected for fingerprint analysis. Erin mentioned that they may request for sidewalk closing permit (if possible) due to parking issues in the area. 07/10/18-Hiralkumar Patel. received email from Erin (at 4:31 PM on 07/09/18) summarizing off-site groundwater investigation discussed yesterday. she inquired if groundwater from well development needs to be drummed. 9:11 AM:- spoke with DEC Lisa Lewis about status on approval of lab contracts. she mentioned that lab contracts are being reviewed and approval may occur in couple of months. 9:19 AM:- sent email to Erin and asked her to proceed with off-site well installation as discussed yesterday. asked her to drum and properly dispose groundwater from well development. 07/11/18-Hiralkumar Patel. 8:28 AM:- approved invoice (# 125307-125308) from EAR for project review/coordination in May 2018. 08/17/18-Hiralkumar Patel. 1:14 PM:- approved invoice (# 126103-126106) from EAR for project review/coordination/VEFR in June 2018. 09/11/18-Hiralkumar Patel. 9:21 AM:- approved invoice (# 126789-126797) from EAR for planning for additional well installation work. 10/05/18-Hiralkumar Patel. 2:11 PM:- approved invoice (# 127774-127780) from EAR for disposal of contaminated water. (DEC Karen OKed typo in work date on page # 18). 10/11/18-Hiralkumar Patel. 9:59 AM:- received call from Erin inquiring about following: - need for trip blank/field blank: yes during new well installation - type of container for VOC analysis: asked Erin to use simple glass jars for VOC analysis (any result less than 200 ppb will be flagged biased low) - # of product sample: product sample from each new well (if found) and from one existing wells (to compare results between existing and new well) - need for TICs for VOCs/SVOCs: no 10/12/18-Hiralkumar Patel. 10:17 AM:- sent email to Melissa at TestAmerica including a revised standby contractor authorization form (due to a new contract #). 10/18/18-Hiralkumar Patel. 12:16 PM:- sent email to Erin including a sidewalk permit request letter. 10/29/18-Hiralkumar Patel. 2:00 PM:- visited site and met Joy Sauer (516-983-6549) and crew from ADT drilling. EAR completed well (MW-6) installation west side of Kent Ave. no high PID readings were noted but some stained soil (not necessarily petroleum impacted) was noted below water table. 10/30/18-Hiralkumar Patel. 9:30 AM:- visited site and met Joy. at the time of inspection, crew was installing well (MW-7) east side of Kent Ave, north of existing well MW-5. no PID readings were noted until 7.5 ft bg, but noted more than 15,000 ppm on PID between 7.5 and 12.5 ft depth. petroleum odors were noted in soil below 7.5 ft depth. asked Joy to collect multiple soil samples (one above water table, one at groundwater interface and one towards end of boring) from each boreholes. based on high PID readings during installation of well MW-7, inspected site 12 Franklin Ave which is

74 WALLABOT ST LC (Continued)

S112138864

located up-gradient of well MW-5 and has oil tank. site 12 Franklin Ave has an AST on saddles and no signs of spill noted from the tank. building representative mentioned that the tank was installed prior to 1983. also inspected sump pit located in underground garage at the subject site. the sump pit is located along Wallabout St (site's northern boundary), in central section. no product/sheen was noted in the sump. no petroleum odors were noted in the garage. 1:07 PM:- received call from Erin. she mentioned that crew completed drilling of the third well (MW-8) on east side of Kent Ave, south of existing well MW-5. less than 300 ppm was recorded on PID in soil below 7.5 ft depth, but free phase product was noted in soil. Erin mentioned that the PID meter was recalibrated prior to installation of well MW-8. based on field observations and PID readings during installation of MW-8, Erin suspects some sort of issue with PID meter during installation of well MW-7 (meter read more than 15,000 ppm in soil in MW-7, but less than 300 ppm in soil in MW-8 even with free product in MW-8). based on available information, asked Erin for following: - multiple soil samples from each boreholes (sampling depths were discussed based on PID values and boring depth) - groundwater sample from all wells where no product noted - product sample from all wells where noted - VEFRRing of impacted wells next week
11/02/18-Hiralkumar Patel. received email from Erin (at 6:06 PM on 10/31/18). she mentioned that EAR plans to return to the site the week of November 12 for fingerprinting and groundwater sampling. the plan is to gauge for DTW/DTP and collect groundwater samples from OB003, OB004, MW005, MW006, MW007 and MW008. fingerprinting samples will be collected from all wells with product. she inquired about well survey and groundwater samples from wells with product. sent email to Erin (at 7:00 AM on 11/01/18) and informed her that no need for well survey at this time, and not to collect groundwater samples from wells with product. 11/14/18-Hiralkumar Patel. 12:42 PM:- received email from Erin. they gauged and sampled on-site wells and noted product in well MW005 (1.75 ft) and sheen on purged water from OB003 and OB004. 3:08 PM:- received email from Erin including result of soil samples collected during installation of well MW006 (5-10 ft and 10-12.5 ft bg) on 10/29/18. no contamination noted in soil samples from MW006. 3:13 PM:- received email from Erin including result of soil samples collected during installation of wells MW007 and MW008. two soil samples were collected from both wells. no contamination noted in soil samples except 1,600 ppb Benzene in soil sample from 5-7.5 ft depth in MW008. 11/19/18-Hiralkumar Patel. 2:41 PM:- received email from TestAmerica including result of product fingerprint analysis. product sample was collected from well MW005 on 11/08/18. sample contained petroleum product which most closely resembles #6 fuel oil. 11/23/18-Hiralkumar Patel. 2:49 PM:- approved invoice (# 128471-128476) from EAR for project coordination in Sept. 2018. 11/27/18-Hiralkumar Patel. 2:36 PM:- received email from Erin including result of groundwater samples collected on 11/08/18. groundwater samples were collected from wells MW-X (blind duplicate sample as per email from Erin dated 12/07/18), OB003, OB004, MW006, MW007 and MW008. minor contamination noted in wells MW-X (1,033 ppb total BTEX) and OB003 (247 ppb total BTEX). 11/30/18-Hiralkumar Patel. 1:22 PM:- sent email to Erin including a revised standby contractor authorization form with increased budget.
12/07/18-Hiralkumar Patel. 1:44 PM:- sent email to Erin. asked her to gauge on-site wells (no product recovery at this time) and collect product sample, if noted in wells other than MW005. also asked her to

74 WALLABOT ST LC (Continued)

S112138864

submit detailed logs (including PID/visual/olfactory observations, soil type etc.) for recently installed monitoring wells. 1:57 PM:- approved invoice (# 129500-129517) from EAR for project coordination, mark-out and installation of wells MW006/MW007/MW008. 12/11/18-Hiralkumar Patel. 11:34 AM:- received call from Erin. she mentioned that technician went to site to gauge (no VEFRRing) existing wells and noted product in wells MW005 (2 ft), MW007 (0.03 ft) and MW008 (0.01 ft). as last VEFR occurred in June 2018, asked Erin to VEFR existing wells next week. 12/12/18-Hiralkumar Patel. 1:36 PM:- approved invoice (# 4600006924M) from TestAmerica for analysis of soil samples collected during installation of wells MW006/MW007/MW008 (10/29/18 and 10/30/18), product sample from MW005 (11/08/18) and groundwater samples from existing wells (11/08/18). 12/13/18-Hiralkumar Patel. 11:12 AM:- spoke with Erin. asked her to submit an update report, after next week's VEFR event, including summary of work performed to date. 01/09/19-Hiralkumar Patel. 9:11 AM:- approved invoice (# 129959-129973) from EAR for project coordination and groundwater/product sampling work conducted in month of Nov. 2018. 02/06/19-Hiralkumar Patel. 1:09 PM:- approved invoice (# 131267-131279) from EAR for report preparation, well gauging and VEFRring conducted in month of Dec. 2018. 03/01/19-Hiralkumar Patel. 2:48 PM:- approved invoice (# 131833-131841) from EAR for report preparation. 03/15/19-Hiralkumar Patel. received email from Joy (at 2:38 PM on 03/14/19) including site summary report. report includes summary of field activities conducted between Nov. 2017 and Dec. 2018. groundwater purging and field screening were not conducted on OB003, OB004 and MW005 due to sheen in well OB003/OB004 and measureable LNAPL in MW005. product sample from MW005 was collected for fingerprint analysis on 12/14/17 and 11/08/18. on 12/11/17, sample contained a petroleum product which most closely resembles degraded #4 fuel oil. on 11/08/18, sample contained a petroleum product which most closely resembles #6 fuel oil. silty clay was noted below 5 ft depth during installation of wells MW006, MW007 and MW008. lab report shows higher VOC detection in duplicate groundwater sample (MW-X: 1,033 ppb total BTEX) from well OB003 (247 ppb total BTEX). also, there was sheen noted on groundwater sample from OB003. during well gauging and VEFRring in Dec. 2018, product was noted in wells MW005 (1.5 to 2 ft), MW007 (0.03 to 0.13 ft) and MW008 (0.01 to 0.02 ft). 03/25/19-Hiralkumar Patel. 10:14 AM:- sent email to Joy and asked her to schedule weekly vac events for four weeks, beginning with first week of Apr. email copied to Jennifer and Robert. 04/11/19-Hiralkumar Patel. 10:25 AM:- approved invoice (# 132579-132588) from EAR for waste disposal and report preparation/submission, conducted in month of Feb. 2019. 05/06/19-Hiralkuma Patel. representative of property at 376-378 Flushing Ave (BCP #: C224264) submitted permit application for dewatering at their site. site 376 Flushing Ave is located south of Flushing Ave, across the street from the subject site (74 Wallabout St). the department staff (legal, spills and section A) discussed proposed dewatering plans internally and with the applicant due to possibility of migration of free phase product noted on east side of Kent Ave (in wells MW005, MW007 and MW008). DEC legal issued a letter on 05/03/19 to representative of 376 Flushing Ave with following comments (in reference to free phase product at 74 Wallabout St): - the department will undertake all NAPL recovery and vacuum recovery activities in existing well MW005 - the volunteer (BCP applicant for 376 Flushing Ave) will install a sentinel monitoring well on north side of Flushing Ave approx. 75 ft east of

S112138864

the corner of the new building constructed on the Former Arkansas Site (74 Wallabout St). the well should be screened across the observed water table and should be constructed with at least 15 ft of screen below the water table. the well should be 4 in. in dia. to allow for NAPL recovery if necessary. - should NAPL be observed to have migrated into the sentinel well following the initiation of dewatering on the site (376 Flushing Ave), the department will identify any specific actions to abate or mitigate the movement of contamination, which shall be undertaken by the volunteer (376 Flushing Ave) 05/13/19-Hiralkumar Patel. 7:57 AM:- approved invoice (# 133002-133007) from EAR for project review/coordination conducted in month of Mar. 2019. 05/15/19-Hiralkumar Patel. 11:56 AM:- received email from Joy including summary of well gauging/vac event conducted on 04/04/19, 04/11/19, 04/18/19, 05/02/19 and 05/09/19. no gauging activities occurred between 12/20/18 and 04/04/19. after Dec. 2018, product noted in wells MW005 (0.58 to 1.68 ft), MW007 (0.01 to 0.16 ft) and MW008 (0.03 to 0.58 ft). discussed available well gauging/product recovery data with DEC Austin, and decided to continue monthly well gauging/VEFRring. 3:08 PM:- sent email to Joy and asked her to continue monthly well gauging/vacuum recovery and data submission until further notice. 06/05/19-Hiralkumar Patel. 8:48 AM:- received email from DEC Zheng stating that sentinel well (under BCP #: C224264) will be installed on 06/07/19. 06/06/19-Hiralkumar Patel. 9:18 AM:- approved invoice (# 133932-133944) from EAR for project coordination/VEFR conducted in month of Apr. 2019. 06/07/19-Hiralkumar Patel. 11:17 AM:- received email from Joy including summary of well gauging/vac event conducted on 06/06/19. found product in well MW005 (0.81 ft) and MW008 (0.04 ft). 07/05/19-Hiralkumar Patel. 12:51 PM:- approved invoice (# 134788-134802) from EAR for project coordination/VEFR conducted in month of May 2019. 08/26/19-Hiralkumar Patel. received email from Joy (at 2:06 PMon 08/05/19) including summary of well gauging/vac event conducted on 07/11/19 and 08/01/19. on 07/11/19, product noted in wells MW005 (0.93 ft), MW007 (0.31 ft) and MW008 (0.31 ft). on 08/01/19, product noted in wells MW005 (0.82 ft), MW007 (0.19 ft) and MW008 (0.16 ft). DEC Jane sent email (at 4:07 PM on 08/13/19) to Joy approving weekly gauging of wells MW006, MW008, OB003 and OB004; in reference to dewatering activities at adjacent BCP site (C224264). 9:34 AM:- approved invoice (# 135328-135337) from EAR for project coordination/VEFR conducted in month of June 2019. 2:56 PM:- sent email to Joy and asked her to gauge all monitoring wells weekly using interface probe. 08/30/19-Hiralkumar Patel. 2:33 PM:- received email from Joy including weekly gauging data for Aug. 2019. during weekly gauging, all wells were gauged except MW005 and MW007. found product in well MW008 during all four weekly gauging (between 0.16 and 0.29 ft). 09/03/19-Hiralkumar Patel. 9:40 AM:- spoke with Joy and asked her to continue weekly gauging of all wells and monthly VAC of impacted wells. 09/10/19-Hiralkumar Patel. received email from Joy (at 4:52 PM on 09/09/19) including well gauging data table/hydrographs. data suggests that wells OB-003, OB-004, MW-005 and MW-008 are being influenced by the nearby dewatering. received email from Joy (at 5:09 PM on 09/09/19) including well gauging data/VAC recovery summary. all wells were gauged on 09/05/19 and product was noted in wells MW005 (1.10 ft), MW007 (0.61 ft) and MW008 (0.29 ft). product was recovered using vacuum from three affected wells. 09/16/19-Hiralkumar Patel. received email from Joy (at 6:44 PM on 09/13/19) including weekly well gauging data. all wells were

MAP FINDINGS

S112138864

gauged on 09/13/19 and product was noted in wells MW005 (0.96 ft), MW007 (0.61 ft) and MW008 (0.26 ft). 9:28 AM:- approved invoice (# 136185-136193) from EAR for project coordination/VEFR conducted in month of July 2019. 09/23/19-Hiralkumar Patel. received email from Joy (at 6:14 PM on 09/20/19) including weekly well gauging data. all wells were gauged on 09/20/19 and product was noted in wells MW005 (0.98 ft), MW007 (0.59 ft) and MW008 (0.19 ft). Pat Benedetto EAR Ph. (631) 447-6400 Ext. 159 email: benedetto@enviro-asmnt.com 10/03/19-Hiralkumar Patel. 2:58 PM:- received call from Pat. he mentioned that they visited the site today for well gauging/VEFRing, but could only gauge the wells due to parking issue. asked Pat to VEFR wells during next weekly event. 10/07/19-Hiralkumar Patel. received email from Pat (at 4:01 PM on 10/04/19) including weekly gauging data. he mentioned that wells MW006, MW007 and MW008 were removed from hydrographs as these wells were never surveyed and casing elevations have not been established. all wells were gauged on 09/26/19 and 10/03/19. on 09/26/19, product was noted in wells MW005 (1.04 ft), MW007 (0.63 ft) and MW008 (0.28 ft). on 10/03/19, product was noted in wells MW005 (0.05 ft), MW007 (0.60 ft) and MW008 (1.12 ft). 8:53 AM:- sent email to Pat and asked him to survey missing wells. email copied to Jennifer (EAR), Robert (EAR), DEC O'Connell, DEC Zheng and DEC Martinkat. 10/10/19-Hiralkumar Patel. 10:01 AM:- approved invoice (# 137125-137145) from EAR for project coordination/well gauging/VEFR conducted in month of Aug. 2019. 10/24/19-Hiralkumar Patel. 2:59 PM:- received email from Pat including weekly gauging data. all wells were gauged on 10/10/19 and 10/18/19. on 10/10/19, product was noted in wells MW005 (1.04 ft), MW007 (1.12 ft) and MW008 (0.52 ft). on 10/18/19, product was noted in wells MW005 (1.20 ft), MW007 (0.79 ft) and MW008 (0.13 ft). 10/31/19-Hiralkumar Patel. received email from Pat (at 4:45 PM on 10/30/19) including weekly gauging data. all wells were gauged on 10/24/19 when product was noted in wells MW005 (1.49 ft), MW007 (0.86 ft) and MW008 (0.13 ft). 11/01/19-Hiralkumar Patel. received email from DEC Jane (at 3:43 PM on 10/31/19). she mentioned that owner of site 347 Flushing Ave has applied for dewatering permit. as this site is not part of BCP, Section A will not be monitoring dewatering activities at site 347 Flushing Ave which may affect groundwater quality at 74 Wallabout St. site 347 Flushing Ave is approx. 425 ft west of site 74 Wallabout St. 11/12/19-Hiralkumar Patel. received email from Pat (at 4:10 PM on 11/07/19) including weekly gauging data. all wells were gauged on 10/31/19 when product was noted in wells MW005 (1.48 ft), MW007 (0.76 ft) and MW008 (0.26 ft). received email from DEC Caitlyn Nichols (at 1:23 PM on 11/08/19) including copy of dewatering permit (# 2-6101-01394/00001) for site 347 Flushing Ave. the permit requires: 1) installation of sentinel monitoring wells (4 inch diameter wells with at least 15 ft of screen across the water table) on west side of Kent Ave, approx. 50 and 100 ft north of corner of Flushing Ave to monitor drawdown between 347 Flushing Ave and 74 Wallabout St 2) monitoring of water table elevation in wells prior to commencing dewatering activities, and then daily during dewatering activities 3) weekly submission of groundwater monitoring results 4) plan to abate or mitigate movement of contamination, if observed in sentinel wells following initiation of dewatering 11/18/19-Hiralkumar Patel. received email from Pat (at 3:40 PM on 11/15/19) including weekly gauging data. all wells were gauged on 11/07/19 and 11/13/19. on 11/07/19, product was noted in wells MW005 (1.32 ft), MW007 (0.76 ft) and MW008 (0.09 ft). on

approved invoice (# 140848) from EAR for project coordination/well gauging conducted in month of Mar. 2020. 05/15/20-Hiralkumar Patel. 2:03 PM:- received email from Pat including weekly gauging data collected on 05/14/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product was noted in well MW005 (0.98 ft), MW007 (0.42 ft) and MW008 (0.06 ft). 05/27/20-Hiralkumar Patel. 1:41 PM:- received email from Pat including weekly gauging data collected on 05/21/20. no product was noted in wells OB003, OB004 and MW006. product was noted in well MW005 (0.13 ft), MW007 (0.71 ft) and MW008 (1.09 ft). 06/01/20-Hiralkumar Patel. 2:12 PM:- received call from Erin Quell from EAR. she mentioned that due to current COVID-19 situation and parking issues in the area, they were not able to vacuum out wells since 03/05/20. Erin inquired if they should call vacuum truck from Island during next visit. suggested Erin to have EAR technician visit the site in morning to confirm parking availability for the vacuum truck and then call the truck, if Island Pump can respond on short notice. 06/10/20-Hiralkumar Patel. 9:47 AM:- received email from Erin including weekly gauging data collected on 05/28/20. well OB003 was not accessible due to garbage pile, well OB004 was found dry and no product was noted in well MW006. product was noted in well MW005 (1.21 ft), MW007 (0.63 ft) and MW008 (0.11 ft). 06/15/20-Hiralkumar Patel. 10:41 AM:- approved invoice (# 140914) from EAR for project coordination/well gauging conducted in month of Apr. 2020. 07/07/20-Hiralkumar Patel. 2:36 PM:- received email from Erin including weekly gauging data collected on 06/05/20, 06/10/20, 06/18/20, 06/25/20 and 07/01/20. wells OB003 and OB004 were either found dry or no product. no product was noted in well MW006. product was noted in well MW005 (between 0.80 and 1.39 ft), MW007 (between 0.27 and 1.04 ft) and MW008 (between 0.02 and 0.12 ft). 07/10/20-Hiralkumar Patel. 10:10 AM:- approved invoice (# 140981) from EAR for project coordination/well gauging conducted in month of May 2020. 07/16/20-Hiralkumar Patel. 1:25 PM:- received email from Erin including weekly gauging data collected on 07/09/20. well OB003 was not accessible. no product was noted in wells OB004 and MW006. product was noted in well MW005 (1.30 ft), MW007 (0.85 ft) and MW008 (0.11 ft). Erin mentioned that they were able to schedule a VAC event on 07/09/20, but did not VAC from MW008 due to safety concerns. EAR technician had to repeatedly ask residents, including children, to leave the vicinity of the work zone as they were just curious, but they were not adhering to social distancing and kept trying to look into the wells while tech was working. 07/30/20-Hiralkumar Patel. received email from Erin (at 4:28 PM on 07/29/20) including weekly gauging data collected on 07/15/20 and 07/21/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (0.78 and 1.28 ft), MW007 (0.25 and 0.61 ft) and MW008 (0.05 and 0.07 ft). 08/13/20-Hiralkumar Patel. 10:40 AM:- approved invoice (# 141048) from EAR for project coordination/well gauging conducted in month of June 2020. 08/06/20-Hiralkumar Patel. 9:36 AM:- received email from Erin including weekly gauging data collected on 07/31/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product found in well MW005 (1.11 ft), MW007 (0.55 ft) and MW008 (0.13 ft). 08/06/20-Hiralkumar Patel. 3:18 PM:- received email from Erin including weekly gauging data collected on 08/05/20 and 08/13/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (1.11 ft both times), MW007 (0.48 and 0.88 ft) and MW008 (0.05 and 0.10 ft). 08/24/20-Hiralkumar Patel. 1:06 PM:- received email from Erin including a form requesting

approval to use AB Env. (instead of Island Pump & Tank due to some payment conflicts) as subcontractor for well vacuum events.

08/25/20-Hiralkumar Patel. received email from Erin (at 5:00 PM on 08/24/20) including weekly gauging data collected on 08/19/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (1.41 ft), MW007 (0.58 ft) and MW008 (0.09 ft).

08/27/20-Hiralkumar Patel. 12:42 PM:- sent email to Erin including signed form authorizing use of AB Env. as subcontractor for well vacuum events.

09/01/20-Hiralkumar Patel. 9:40 AM:- received email from Erin including weekly gauging data collected on 08/26/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product found in well MW005 (1.34 ft), MW007 (0.49 ft) and MW008 (0.06 ft). Erin mentioned that they will be on-site tomorrow (09/02/20) with AB Oil to conduct vacuum event.

09/04/20-Hiralkumar Patel. 10:15 AM:- received email from Erin including weekly gauging/VEFRring data collected on 09/02/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (0.68 ft), MW007 (1.43 ft) and MW008 (0.10 ft).

09/09/20-Hiralkumar Patel. 12:32 PM:- approved invoice (# 141112) from EAR for project coordination/well gauging conducted in month of July 2020.

09/10/20-Hiralkumar Patel. 2:40 PM:- received email from Erin including weekly gauging/VEFRring data collected on 09/09/20. no product was noted in wells OB003, OB004 and MW006. product found in well MW005 (0.02 ft), MW007 (0.10 ft) and MW008 (0.09 ft).

09/28/20-Hiralkumar Patel. 8:07 AM:- received email from Erin including weekly gauging data collected on 09/17/20 and 09/23/20. no product was noted in wells OB003 (not accessible on 09/17/20), OB004 and MW006. product found in well MW005 (0.76 and 1.52 ft), MW007 (0.26 and 0.72 ft) and MW008 (0.15 and 0.12 ft).

10/09/20-Hiralkumar Patel. 2:31 PM:- approved invoice (# 141171) from EAR for project coordination/well gauging conducted in month of Aug. 2020.

10/14/20-Hiralkumar Patel. 11:56 AM:- received email from Erin including weekly gauging data collected on 10/01/20 and 10/07/20. no product was noted in wells OB003 (not accessible on 10/07/20), OB004 and MW006. product found in well MW005 (0.57 and 0.51 ft), MW007 (0.31 and 0.25 ft) and MW008 (0.03 and 0.04 ft). wells were VEFRred on 10/07/20.

10/21/20-Hiralkumar Patel. 9:07 AM:- received email from Erin including weekly gauging data collected on 10/14/20. well OB003 was inaccessible. no product was noted in wells OB004 and MW006. product found in well MW005 (0.46 ft), MW007 (0.18 ft) and MW008 (0.17 ft).

10/30/20-Hiralkumar Patel. 12:15 PM:- received email from Erin including weekly gauging data collected on 10/21/20 and 10/28/20. well OB003 was inaccessible both times due to garbage. no product was noted in wells OB004 and MW006. product found in well MW005 (0.48 and 0.22 ft), MW007 (0.24 and 0.53 ft) and MW008 (0.11 and 0.15 ft).

11/02/20-Hiralkumar Patel. 2:26 PM:- DEC Jane forwarded email from Ariel Czemerinski of AMC Engineering regarding site 347 Flushing Ave. owner of site 347 Flushing Ave (which is approx. 425 ft west of the subject site) applied for a dewatering permit. DEC Division of Permits issued the dewatering permit on 11/08/2019 with following condition: Additional Permit Conditions: The following activities will be completed and monitoring implemented prior to beginning pumping operations and will continue until pumping operations cease: A. Install Sentry Wells " The applicant will install sentinel monitoring wells on the west side of Kent Avenue approximately 50 feet and 100 feet north of the corner of Flushing Avenue to monitor drawdown between 347 Flushing Avenue and the Former

Arkansas Company, Inc. BCP site. The wells should be screened across the observed water table and should be constructed with at least 15 feet of screen below the observed water table. The wells should be 4 in diameter to allow for NAPL recovery if necessary. Applicant will arrange for surveying of the well elevation in the same datum as the existing wells. B.Daily Monitoring Using Sentry Wells: " The applicant will monitor the water table elevation in the monitoring well prior to commencing dewatering activities, and then daily during dewatering activities. Monitoring results will be reported on a weekly basis to: Hiralkumar Patel, NYSDEC Division of Environmental Remediation, Spill Response Section hiralkumar.patel@dec.ny.gov C.Contingency Plan: " Should NAPL be observed to have migrated into the sentinel wells following the initiation of dewatering on the site, the Department will identify any specific actions to abate or mitigate the movement of contamination, which shall be undertaken by the applicant. Ariel stated that the driller attempted to install the sentry wells today (11/02/20), but found a sewer pipe (which are not regularly marked up by the 811 service) along the way. the sidewalk was marked out with electric and gas lines, many of which feed the buildings. 11/09/20-Hiralkumar Patel. 3:02 PM:- spoke with Ariel at AMC Eng. he stated that the driller tried to install wells along the curb line. asked him to check site for possibility of well installation closer to building on west sidewalk of Kent Ave. also asked him to provide their client's contact info. 11/12/20-Hiralkumar Patel. received email from Erin (at 3:48 PM on 11/11/20) including weekly gauging data collected on 11/04/20. wells OB003, OB004 and MW006 were not gauged. product found in well MW005 (0.26 ft), MW007 (1.37 ft) and MW008 (0.19 ft). impacted wells were VEFRed on 11/04/20. 11/19/20-Hiralkumar Patel. received email from Ariel (at 7:02 PM on 11/18/20) including well logs. two (2) 4-inch wells (MW-1 and MW-2) were installed (for dewatering at 347 Flushing Ave) to a depth of 20.5 ft bg, with 15 ft of screen from 5.5-20.5 ft depth. 1:37 PM:- approved invoice (# 141233) from EAR for project coordination/well gauging conducted in month of Sept. 2020. 1:57 PM:- sent email to Ariel and asked him to submit scaled site map with well locations and well locations pics (if available). 11/24/20-Hiralkumar Patel. 10:09 AM:- received email from Pat including weekly gauging data collected on 11/11/20 and 11/16/20. no product was noted in wells OB003 (not accessible on 11/16/20), OB004 and MW006. product was found in well MW005 (0.63 and 0.68 ft), MW007 (0.09 and 0.11 ft) and MW008 (0.07 and 0.14 ft). 12/01/20-Hiralkumar Patel. received email from Ariel (at 3:47 PM on 11/30/20) including a well location map and daily log. two 4-inch wells (MWN and MWS) were installed along west side of Kent Ave. both wells were gauged daily (except weekends) since 11/17/20 and no product was found in both wells. wells MWS, MWN and MW-006 are located on west sidewalk of Kent Ave. wells MWS and MWN were installed by AMC Engineering as part of dewatering activities at site 347 Flushing Ave. well MW-006 was installed by EAR (DEC contractor) as part of groundwater delineation for the subject site. from the northwest corner of the intersection of Flushing Ave and Kent Ave, the well MWS is 43 ft north of the intersection corner, well MWN is 102 ft north of the intersection corner and well MW-006 is approx. 162 ft north of the intersection corner. groundwater was found around 8 ft bg in well MW-006, around 11 ft bg in MWN and around 13 ft bg in MWS. 12/03/20-Hiralkumar Patel. 1:41 PM:- received email from Pat including weekly gauging data collected on 11/25/20 and 12/02/20. well OB003 was not

FORMER ARKANSAS COMPANY, INC. SITE (Continued)

S113402002

Town: New York City
Record Added Date: 01/25/2013
Record Updated Date: 08/03/2020
Update By: SMQUANDT
Site Description: "Location: The site is located at 74 Wallabout Street in Brooklyn, Kings County. The site extends from Wallabout Street on the north to Flushing Avenue to the south, and is approximately 0.89 acres in size. Site Features: The site formerly contained an approximately 44,700 square foot 2 to 3 story warehouse, an accessory at-grade parking and loading area at the northwest corner of the lot and a smaller fenced-in parking area at the southwest corner of the lot. The site is currently undergoing redevelopment, and the majority of the site is now covered by a building foundation. Current Zoning and Land Use: The subject site is zoned R7-1 (residential zoning district) with a C1-5 commercial overlay, permitting residential, commercial and community facility uses. The proposed use is for residential and commercial for the majority of the parcel, with a planned school expansion from the adjoining parcel. Past Use of the Site: The site was utilized in the past by a chemical manufacturer, furniture manufacturer, shelving company, paint and varnish manufacturer, lumber company, cable and rope company, packaging company, plastic processing company, and a housewares and household chemicals distributing company. Site Geology and Hydrogeology: Shallow soils, ranging from 0-8 feet below ground surface (bgs) were characterized as mostly non-native, historic fill material consisting of brown silty sands. Deeper soils, ranging from 8-15 feet bgs were characterized as mostly gray, low-plasticity, silty clay. Groundwater occurs at the site at a depth of approximately 10 feet below ground surface. The flow is in a west/northwest direction."

Env Problem: "Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds in soil, and floating petroleum product atop the groundwater table. Remedial action resulted attainment of the site specific cleanup objectives throughout the parcel, as well as the removal of all petroleum product within the site boundaries. Residual contamination in soil, and soil vapor, if any, is being managed under a Site Management Plan. Remediation associated with Spill #1213721 is being handled by Region 2 Spills."

Health Problem: "People are not expected to come into contact with site related contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by public water supply that is not affected by this contamination. Because the site is vacant and undergoing remedial activities, soil vapor intrusion does not represent a current exposure pathway. Measures are in place to minimize the potential for vapor intrusion in buildings constructed at the site in the future and sampling indicates that soil vapor intrusion is not a concern for off-site buildings."

 DEC Memo: "12/09/05: This spill transferred from J.Kolleeny to S.Kraszewski.
 03/23/06: This spill transferred to K.Tang - SK 12/11/07: J.Kann.
 This spill transferred to J.Kann. Consolidated with 9611167 (closed)
 and 9614725 (closed). Spill 9611167 indicates 07/28/06: NYCHA update
 summary states that two 35K USTs installed in 1982 and stored #4 and
 #6 oil were closed-removed in 2001. A 2K Diesel tank installe din
 1982 was closed-removed in 2001. In 1999, a 20K UST was installed. In
 1996, a 4K AST was installed. Both were disconnected in 2001. In
 2001, two 25 USTs that store #2 oil and one 2K diesel tank were
 installed and are currently in service. No recovery system and no MWs
 on site. NYCHA recommends that DEC review the available site
 assessment. 3/10/11: J.Kann - Investigative work plan submitted on
 3/3/11. 5/29/12: J.kann - priority p0 assigned to the site 3/31/15:
 J.Kann - email sent to NYCHA on March 11 asking if they have any
 information regarding the tank closure (endpoints). NYCHA did not
 find additional information, therefore the IWP was approved today.
 10/5/15: J.Kann - received notice that field work will be occurring
 today and tomorrow at Marcy Houses. 1/20/16: J.Kann - SIR for the

DEC Memo: "12/09/05: This spill transferred from J.Kolleeny to S.Kraszewski.
07/28/06: NYCHA update summary states that two 35K USTs installed in 1982 and stored #4 and #6 oil were closed-removed in 2001. A 2K Diesel tank installed in 1982 was closed-removed in 2001. In 1999, a 20K UST was installed. In 1996, a 4K AST was installed. Both were disconnected in 2001. In 2001, two 25 USTs that store #2 oil and one 2K diesel tank were installed and are currently in service. No recovery system and no MWs on site. NYCHA recommends that DEC review the available site assessment. - SK 12/11/07: Closed and consolidated with spill 9315457. Reassigned to J.Kann -J.Kann"

Remarks: "tank failed test "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY PMS/Shaw investigated site and recommended a dual-phase extraction system to address free product, soil contamination and dissolved-phase groundwater contamination. The system was installed in summer of 2005, and after delays caused by DEP site personnel, started up in the fall of '05, however, there were problems with electrical service and the system was shut down in October '05. It may have been re-started in November and run through December, but never received any system start-up report or data. PMS/Shaw ceased activity at the site in late 2005, and site was transferred to Greyhawk in early 2006. - J. Kolleeny 05/30/06: NYCDDC Consent Order Bi-Monthly Site Status Rpt indicates that Greyhawk/Roux performed gauging and sampling of monitoring wells in April 2006. A sheen was observed in MW-16, 0.9 ft. of product in DPE-8, and 0.45 ft. of product in MW-21 (this well is upgradient of site and product was ID'ed by Shaw as no. 2/no. 6 fuel oil, which they suspected was from an off-site source). GW sampling showed high levels of dissolved-phase contamination in MW-3 (11,146 ppb TVOCs), MW-8 (1,385 TVOCs), MW-9 (5,150), MW-10 (815), MW-13 (646) and MW-16 (1,193). Rpt notes that DPE system is currently inactive. Sent email (in eDocs) to Andy Ledins of Greyhawk asking that they re-start system (making any

needed repairs and/or improvements), or if they believe system to be inadequate, that they prepare and submit an alternative plan to expedite cleanup of site. - JK 07/09/07: A DPE system has been installed at this site but start-up and operation of system have been prevented by NYCDEP who have repeatedly requested changes to the system and its treated water discharge location. Every time DDC consultants have met their demands, new demands are made. Meanwhile, on-going site monitoring (see reports in eDocs) continues to show free product in several wells and relatively high levels of dissolved-phase GW contamination in some wells. At meeting on 5/30/07 with DDC, Greyhawk & Roux, monitoring report for Oct. '06 - Mar. '07 was hand-delivered (in eDocs). I approved recommendations for removal of SVOCs from sampling program (due to general absence in samples), change in well gauging frequency from monthly to quarterly, and removal of wells MW-01, MW-04, MW-14, MW-15, MW-17 and MW-18 from monitoring/sampling program (well MW-06 was also requested for removal, but I asked that it be included in one more sampling round, after which if it is again ND, it can be dropped from program. Also agreed that DEC would look into setting up conference call involving DEC and DDC legal staff to discuss how to handle NYCDEP's lack of cooperation and resolve impasse. After meeting, Andy Ledins of Greyhawk mentioned that one possible way around problem would be to operate system primarily in slurping mode, so groundwater discharge would not be an issue. On 7/9/07, I sent an email to Brian Morrissey of Roux and Andy Ledins asking if this was ever implemented, and for name of DEP contact. - J. Kolleeny 10/20/08: Reviewed April-Sept.'07 mon rpt, dated 12/21/07, and Oct.'07-June'08 mon rpt, dated 10/16/08, both by Roux (both in eDocs). April-Sept.'07 rpt confirms removal of wells MW-01, MW-04, MW-14, MW-15 MW-17 & MW-18 from GW sampling program as approved by DEC at meeting on 5/30/07; gives results of April '07 and Aug. '07 GW sampling events, showing high or moderate levels of VOCs in several wells and free product in 4 and 2 wells, resp.; rpt notes that operation of on-site DPE system will resume once sewer discharge connection is approved by DEP and built, and recommends removing wells MW-05, MW-06, MW-12 and MW-21 from sampling program. Oct.'07-June'08 rpt gives results of Dec.'07, March'08 and June'08 GW sampling events, showing high or moderate levels of VOCs in several wells and free product in 2, 3, and 3 wells, resp. During June'08 event, product was purged from MW-16 (0.4 gals) and DPE-08 (2.1 gals), absorbent sock was reinstalled in MW-21. Rpt recommends resuming operation of DPE system after repairs & modifications to system and after proposed sewer discharge pipe is connected to 12-inch sewer near intersect of Kent Ave & Little Nassau St., and recommends removing wells MW-05, MW-06 and MW-27/DPE-03 from GW sampling program. Sent email to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC, Brian Morrissey of Roux, and Andris Ledins of Greyhawk: I have reviewed monitoring report for period October '07 through June '08 for this site, prepared by Roux Assoc. and dated 10/16/08. Report recommends (1) removing wells MW-05, MW-06 and MW-27/DPE-03 from GW sampling program, and (2) resuming operation of on-site DPE system after system modifications are complete and proposed system discharge pipe is connected to local sewer main near intersection of Kent Avenue and Little Nassau Street. These recommendations are approved. Please continue to keep me updated on status of remedial system at this site, and feel free to contact me if you have any questions. - J. Kolleeny 08/13/09: Reviewed monitoring rpt for July 2008 through April 2009, by Roux, dated

5/22/09 (in eDocs). Rpt states that on-site DPE system has been operating continuously since 4/1/09, after new transfer pump was installed. GW sampling in Dec.'08 showed moderate to high VOC levels in 7 wells, with worst contam in MW-03: 10,680 ug/L TVOCs. Free product was detected in 4 wells during rpt period, with greatest thickness observed in well MW-26/DPE-15 during Sept.'08 gauging event: 1.20 ft. Roux will continue to operate/monitor DPE system and continue quarterly GW sampling/gauging. Changed spill priority to P2.

- J. Kolleeny 10/01/09: On 9/14/09, received email from Hassan Hussein of DEC R2 Div of Solid/Haz materials: Please provide details of remediation project at this facility. Info is needed to complete our recent haz waste compliance inspection. We need to know when remed system was installed, what waste streams are generated, what caused site contam, and where recovered materials are stored. I sent reply: Remed system at DEP Kent Avenue Shop is dual-phase extraction system. It is located in basement (equipment shed is in SE corner of basement). Construction of system began in 2003. System was started up in '05, but was shut down due to issues with NYCDEP, most notably their insistence that City construct dedicated line to carry system's treated water discharge to sewer main in street (rather than combining their discharge with facility's sewer discharge). System was started briefly several times since then and shut down after short periods, but has been running continuously since April '09. Site contam was caused by gasoline & kerosene USTs, which leaked based on sampling of soil & GW in areas of tanks. Free petroleum product, I.D.'ed as mineral spirits, is present in several wells at site. System removes liquids and vapors from subsurface; these fluids are separated by moisture condenser. Recovered vapors are treated by passing through granular activated carbon & discharged to atmosphere. Vapor discharge is monitored with PID & sampled for lab analysis to ensure compliance with benzene discharge std. Recovered liquids go thru oil-water separator; free product goes to product holding tank, which is pumped out by vac truck when nearly full and transported to recycling facility. Water from oil-water separator passes thru GAC and is discharged to City's municipal sewer system. City's consultant has DEP permit for this discharge. You can find addtl info about project in spills database. Hassan and I spoke on phone, he sent photos of 2 tanks at facility (in eDocs image folder), and I forwarded his questions/issues to Brian Morrissey of Roux Assoc., DDC's consultant. In response to questions about system, assoc. tanks, and vapors in equipment shed, Brian sent reply with attached IT Corp. RAP & design drawings (in eDocs): As requested, here is March 2001 Design Analysis Rpt & Remedial Design Work Plan by IT. Recovered product is periodically removed by AARCO with vac truck. Product recovery amount has not been substantial recently. Plans for replacement of vapor-phase carbon are in progress. I sent email to Brian: Thanks for RAP & diagrams. I have couple of questions: is product holding tank located in equipment enclosure in SE corner of basement? If so, is vent pipe routed to outdoors in some fashion? On 9/16/09, Brian sent email reply: Here are responses to questions in your email and our subsequent discussion: 1. Product recovered in oil/water separator is conveyed to & stored in tank T-1, 500-gal capacity AST, located in building but outside of treatment enclosure. AST is connected to vent line that runs to building exterior. 2. Recovered product that accumulates in T-1 is periodically removed with vac truck and taken to recycling facility. Copy of Jan. 2009 non-haz waste manifest is attached [in eDocs image folder]. Contact

info for recycling facility: New York Oil Recovery Co., 94 Hausman St, Brooklyn, NY 11222,(718) 599-5120. 3. I spoke with Greyhawk regarding uncovered oil/water separator. We believe cover was temporarily removed for maintenance and operator neglected to reinstall cover at completion of activity. Greyhawk will direct its O&M subcontractor to ensure that cover will be on separator at all times except during maintenance tasks. 4. Since system commenced continuous operation, Greyhawk & Roux have not received any reports re: NYCDEP's concerns with vapors/odors. Treatment enclosure fan, which exhausted vapors out to garage area, has been shut off. There are no current plans to further address this issue. 5. I heard that DEC inspector inquired about registration status of 500-gallon AST and oil/water separator. Normally, process tanks including oil/water separators are not subject to tank registration requirements nor requirements of 6 NYCRR Parts 613 & 614. Based on my understanding of regs, there is no NYS requirement to register remedial system's AST or oil/water separator. Do you agree? On 9/22/09, I replied: Thanks for addt'l info and answers. About item 5, based on conversations with Jacob Krimgold, head of PBS Unit, I agree that process tanks storing petrol product recovered by remed system need not be registered. However, regarding vapors/odors, Haz Waste inspector was not so much concerned by complaints of vapors and odors from DEP staff at facility, he was concerned by strong and potentially combustible petroleum vapors within system enclosure. I assume that if cover is kept on oil-water separator this would be less of a problem, and that all electronics in system enclosure are non-sparking, or whatever appropriate term is. Is there anything else typically done to reduce vapors within such enclosure, and do you think that such vapors in this case are any cause for concern? On 10/01/09, Brian wrote back: Here is some info in response to your concerns regarding vapors & odors generated by operation of remed system at Kent Ave: 1. Equipment in treatment room is XP, that is rated for Class 1, Div. 2 atmosphere. 2. Current plan is to install carbon-based filter on room exhaust fan for odor control. 3. Greyhawk is at site today working with their subcontractor to ensure that maintenance of oil-water separator and waste generation/storage issues are properly attended to. Please let me know if you have any other questions. - J. Kolleeny 09/07/10: Reviewed Site Turn-Over Status Rpt by LiRo, dated 6/24/10 (in eDocs). Rpt states that DPE system had significant downtime between Nov. 2008 and March 2009; on 4/1/09, system resumed operation running on only one leg to reduce water influent flow. In Feb. 2010, LiRo replaced Greyhawk/Roux as CM/Consultant. Info provided to LiRo by Greyhawk in April 2010 indicated DPE system operated thru much of 2009; system air & water influent & effluent sampling was performed in Dec. 2009. O&M info indicated excessive bio-fouling of oil/water separator, must be cleaned regularly to keep system running. Rpt notes that last soil sampling was done in 2003, and states that addt'l sampling is needed to determine current conditions and evaluate system effectiveness. Free product is present in several wells and is recovered manually during quarterly monitoring. GW sampling in Jan. 2010 showed worst contam persists in SW area of site (although most wells in NE part of site weren't sampled), with MW-03 having 7,220 ug/L total VOCs (down from 10,680 ug/L in Dec. 2008), MW-09 having 2,783 ug/L tVOCs (up from 1,862 ug/L in Dec. 2008), MW-10 having 2,355 ug/L tVOCs (down from 2,719 ug/L in Dec. 2008), and MW-08 having 548 ug/L tVOCs (down from 1,123 ug/L in Dec. 2008). Rpt recommends continuing quarterly

product recovery and semi-annual GW sampling; preparation of 6-month summary rpt and annual rpt with recommendations for changes as needed; performing a supplemental soil investigation to determine current soil conditions, providing data for evaluating system effectiveness and trunk line options; and submitting letter rpt with results of soil investig and system evaluation. - J. Kolleeny 12/13/10: Reviewed Quarterly Monitoring Rpt (June-Aug. 2010) by LiRo, dated 10/28/10 (in eDocs). GW data for June 2010 show high levels of dissolved-phase contam persist in southwest part of site. Well MW-03 had 9,612 ug/L total VOCs (up from 7,220 ug/L in Jan. 2010), MW-09 had 4,978 ug/L tVOCs (up from 2,783 ug/L in Jan. 2010), MW-10 had 1,961 ug/L tVOCs (down from 2,355 ug/L in Jan. 2010). On east side of site, well DPE-08 had 768 ug/L tVOCs (up from 110 ug/L in Jan. 2010) and MW-26 had 638 ug/L tVOCs (not sampled in Jan. 2010, but had 27 ug/L tVOCs in Dec. 2008). LiRo states that pre-remediation baseline soil data from July 2003 should be updated to evaluate DPE system effectiveness and help focus system operation, and rpt includes supplemental investigation work plan proposing 8 soil borings, with 3 possibly to be converted to monitoring wells, based on field observation of contam. I sent letter (in eDocs) to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo, approving invest plan, but asking that one boring be moved to DPE-18 (which had high levels of VOCs in soil), that GW samples be collected from wells MW-14, MW-15, MW-16 & MW-18 to supplement June 2010 GW data, and that system O&M data be included in summary rpt to help evaluate system's effectiveness and need for system modifications. - J. Kolleeny 12/23/10: [JK] Received System Shutdown Notification email from John Proios of LiRo: Site Name: DEP-Kent Ave Shop Date and Time of Shutdown: 12/22/10, 10:00 am Reason for Shutdown: Excessive iron fouling in moisture separator, oil/water separator, and filter canisters Corrective Action Required: Pressure washing and scrubbing at moisture separator, oil/water separator, and filter canisters Estimated Duration of Shutdown: 5 days 12/29/10: [JK] Received System Shutdown Notification email from Ian Hoffman of Env't Assessment and Remediations: Site Name: DEP-Kent Ave Shop Date and Time of Shutdown: 12/22/10, 10:00 am Reason for Shutdown: Excessive iron fouling in moisture separator, oil/water separator, and filter canisters Corrective Action Required: Pressure washing and scrubbing at moisture separator, oil/water separator, and filter canisters. Corrective action delayed due to weather delays, logistical constraints regarding vacuum truck access. Estimated Duration of Shutdown: 14 days 05/12/11: Reviewed Quarterly Mon Rpt & System Performance Rpt for period Sept.-Nov. 2010, dated 2/22/11, by LiRo (in eDocs). On-site DPE system operated ~86% of time, vapor and GW discharges were in compliance with discharge limits. No free product was detected in wells. Sept./Oct. 2010 GW sampling showed worst contam in several wells in vicinity of former USTs: MW-03 had 9,592 ug/L total VOCs (had 9,612 ug/L in June 2010), MW-09 had 3,356 ug/L tVOCs (down from 4,978 ug/L in June 2010), MW-10 had 2,944 ug/L tVOCs (up from 1,961 ug/L in June 2010). LiRo will conduct soil investig to obtain current data in Feb. 2011. Rpt recommends continued system O&M and GW Mon; rpt includes no proposals requiring DEC approval. - J. Kolleeny 08/22/11: Received System Shutdown Notification email from Ian Hoffman of Env't Assessment and Remediations: Site Name: DEP-Kent Avenue Shop Date and Time of Shutdown: Reported by LIRO 8/12/11 14:45:00 Reason for Shutdown: high level alarm at moisture separator and high level alarm at product tank (false alarm at

NYCDEP (Continued)

S103272814

product tank) Corrective Action Required: troubleshooting scheduled for Monday, 8/15 Estimated Duration of Shutdown: 2.5 days 08/29/11: Reviewed Quarterly Mon Rpt & System Performance Rpt for period Dec. 2010 thru Feb. 2011, dated 6/29/11, by LiRo (in eDocs). On-site DPE system operated ~82% of time, vapor and GW discharges were in compliance with discharge limits. Two wells in SE corner of site had measurable free product in Jan. 2011: DPE-01 had 0.02 ft, and DPE-08 had 0.05 ft. Soil investigation in Feb. 2011 found overall lower total VOC levels and smaller area of impact compared with July 2003 soil sampling data; however, significant levels of soil contam remain, esp. along E side of site. GW sampling in Jan. & Feb. 2011 showed worst contam in several wells in vicinity of former USTs in SW part of site: MW-03 had 9,020 ug/L total VOCs (down from 9,592 ug/L in Sept. 2010), MW-09 had 5,731 ug/L tVOCs (up from 3,356 ug/L in Oct. 2010), MW-10 had 2,296 ug/L tVOCs (down from 2,944 ug/L in Oct. 2010). Outlier well MW-15 (in NE corner of site) had 2,620 ug/L tVOCs in Feb. 2011, up from ND in Jan. 2011 and ~2 ug/L in Oct. 2010; LiRo suspects this result may be anomalous. Rpt proposes to reconfigure operation of DPE system by shutting off vapor extraction component of system in west and northeast areas of site, to focus vapor extraction in areas with high residual soil contam based on results of Feb. 2011 soil investigation. Specifically, LiRo proposes to shut off air vacuum component at wells DPE-06, DPE-07, DPE-11, DPE-17, and DPE-18 (rpt also proposes to shut off DPE-16, however, figures indicate that well has been destroyed, and this was confirmed by Steve Frank of LiRo on 8/29/11). I sent email (in eDocs) approving proposed system changes to Afsar Samani of DDC, cc's to Fatemeh Ashkan of DDC and Steve Frank of LiRo. - J. Kolleeny 01/17/12: Reviewed Qtrly Monitoring and System Performance Rpt for March-May 2011 by LiRo, dated 9/6/11 (in eDocs). On-site DPE system operated ~93.5% of rping period. Vapor & GW discharges were in compliance with limits. Free product was observed in only one well, MW-09, but not enough to measure thickness (well was not sampled for dissolved VOCs). Feb. 2011 soil sampling showed high VOC levels in SE part of site, but total mass and extent of VOCs have decreased compared with historical maximums & distribution. May 2011 GW sampling showed highest dissolved VOCs persisting in wells near closed-in-place USTs. Well MW-03 had 9,514 ug/L total VOCs (up from 9,020 ug/l in Jan. 2011); well MW-10 had 2,730 ug/L tVOCs (up from 2,296 ug/L in Jan. 2011); all other wells sampled in May 2011 had less than 1,000 ug/L tVOCs (with several being ND). LiRo concludes DPE system is effectively reducing contam at site. LiRo will continue quarterly GW gauging & sampling, maintain DPE system ops & monitoring, continue to submit quarterly rpts, and reconfigure operation of system to focus on remaining areas with high VOC levels (as approved by DEC in Aug. 2011). - JK 05/11/12: Reviewed Qtrly Mon and Syst Performance Rpt for June-Aug. 2011 by LiRo, dated 1/4/12 (in eDocs). On-site DPE system operated ~76% of rping period. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. August 2011 GW sampling showed high VOC levels persist in wells near closed USTs: MW-03 had 8,570 ug/L total VOCs (down from 9,514 in May 2011); MW-09 had 6,249 ug/L tVOCs (not sampled in May 2011 due to visible NAPL); MW-10 had 3,783 ug/L tVOCs (up from 2,730 ug/L in May 2011). LiRo concludes DPE system is effectively reducing contam at site. LiRo will continue quarterly GW gauging & sampling, maintain DPE system ops and monitoring, continue to submit quarterly rpts, and enact DEC approved changes to DPE

S103272814

system. - J. Kolleeny 07/24/12: Reviewed Qtrly Mon and Syst Performance Rpt for Sept. 2011 - Feb. 2012 by LiRo, dated 4/6/12 (in eDocs). On-site DPE system operated ~58% of time from Sept-Nov 2011, and ~70% of time from Dec. 2011 thru Feb. 2012. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling performed in Nov./Dec. 2011 and again in Jan. 2012 showed high VOC levels persisting in wells near closed USTs: MW-03 had 7,393 ug/L total VOCs in Nov. 2011 (down from 8,570 ug/L in Aug. 2011), but went back up to 8,709 ug/L tVOCs in Jan. 2012; MW-09 had 3,952 ug/L tVOCs in Dec. 2011 (down from 6,249 ug/L in Aug. 2011), but went back up to 7,078 ug/L tVOCs in Jan. 2012; MW-10 had 1,558 ug/L tVOCs in Dec. 2011 (down from 3,783 ug/L in Aug. 2011) and decreased further to 801 ug/L tVOCs in Jan. 2012. LiRo concludes DPE system is operating effectively. They will continue quarterly GW gauging & sampling, maintain DPE system ops and monitoring (replacement of blower in progress), and continue to submit quarterly rpts. - J. Kolleeny 12/06/12: Reviewed Qtrly Mon and Syst Performance Rpt for March-May 2012 by LiRo, dated 8/21/12 (in eDocs). On-site DPE system operated only ~42% of rping period, mainly due to 49-day shutdown caused by blower malfunction. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling in April continued to show high VOC levels in wells near closed USTs: MW-03 had 9,398 ug/L total VOCs (up from 8,709 ug/L in Jan. 2012); MW-09 had 5,038 ug/L tVOCs (down from 7,078 ug/L in Jan. 2012); and MW-10 had 3,127 ug/L tVOCs (up from 801 ug/L in Jan. 2012). LiRo concludes DPE system is operating effectively. They will continue to do quarterly GW gauging & sampling, maintain DPE system ops and monitoring, and submit quarterly rpts. - J. Kolleeny 06/10/13: Reviewed Qtrly Mon and Syst Performance Rpt for June 2012 to Feb. 2013 by LiRo, dated 5/6/13 (in eDocs). Rpt states that NYCDDC & NYCDEP have notified LiRo of site building reconstruction program scheduled for 2014, during which on-site DPE system will temporarily be shut down and place in secure storage. DPE system operated ~99% of this rping period. Vapor & GW discharges were in compliance with limits. No measurable free product was detected in any wells during this period. GW sampling in June & Sept. 2012 and Jan. 2013 showed well MW-03 had 12,710 ug/L total VOCs in June 2012 (up from 9,398 ug/L in April 2012), increased to 14,790 ug/L tVOCs in Sept. 2012, and decreased to 7,815 ug/L tVOCs in Jan. 2013; MW-09 had 8,978 ug/L tVOCs in June 2012 (up from 5,038 ug/L in April 2012), decreased to 8,644 ug/L tVOCs in Sept. 2012, and decreased to 5,092 ug/L tVOCs in Jan. 2013; MW-10 had 3,159 ug/L tVOCs in June 2012 (up from 3,127 ug/L in April 2012), decreased to 2,581 ug/L tVOCs in Sept. 2012, and decreased to 130 ug/L tVOCs in Jan. 2013. LiRo concludes DPE system is operating effectively. They will continue quarterly GW gauging & sampling, DPE system O&M, submission of quarterly rpts, and will continue to gauge and sample accessible wells during upcoming building reconstruction and temporary DPE system shutdown scheduled for 2014. - J. Kolleeny 10/07/13: Reviewed Quarterly Mon and Syst Performance Rpt for March to May 2013 by LiRo, dated 8/12/13 (in eDocs). On-site DPE system was operation for ~72% of reporting period. System's vapor discharge was in compliance with air discharge std. No free product was detected in any wells during this period. Rpt states that due to NYCDDC budgetary constraints, no GW samples were collected during this monitoring period. I sent email to Steve Frank of LiRo, cc to Fatemeh Ashkan of

DDC: Steve, I'm reviewing quarterly mon rpt for March to May 2013 for this site, dated 8/12/13. Rpt states (on page 10): Due to NYCDDC budgetary constraints, no GW samples were collected during this monitoring period. Was I notified about this? I don't seem to have any recollection of GW sampling having been suspended at any of my sites due to budget problems. This site has an active remedial system and several wells with relatively high levels of contam (in Jan. 2013, well MW-03 had 7,815 ug/L total VOCs and well MW-09 had 5,092 ug/L tVOCs). Continuing with regularly scheduled quarterly GW sampling at this site seems to me like a fairly high priority. Has funding for sampling at this site been restored? Has GW been sampled since January 2013? Please let me know status of this site, and please let me know when situations like this arise. Received email reply from Steve Frank: John, Our analytical services subcontract is now funded and Kent Ave Site was sampled in August. Results are attached [in eDocs as brief]. I apologize for not sending notification. There may be other sites of yours that we missed a sample event at. I will send you a list if there are others. If there are any future issues that will result in interruption of monitoring, we will send notification. Aug. 2013 GW data show well MW-03 had 10,487 ug/L total VOCs (up from 7,815 ug/L in Jan. 2013), well MW-09 had 6,525 ug/L tVOCs (up from 5,092 ug/L in Jan. 2013). I asked Steve Frank why well MW-10 was not sampled in Aug. 2013, he said because it went dry during purging and did not recharge. - J. Kolleeny 02/26/14: Reviewed Quarterly Mon Rpt & System Performance Rpt for June to August 2013 by LiRo, dated 11/19/13 (in DecDocs). Rpt states that on-site DPE system only operated 6 days out of mon period; system has leak in oil/water separator and was shut down on 6/7/13. Rpt presents results of well gauging in July & Aug. 2013 and GW sampling in Aug. 2013. No free product was detected during this mon period. GW sampling showed MW-03 (worst well) had 10,487 ug/L total VOCs (up from 7,815 ug/L in Jan. 2013), MW-08 had 83 ug/L tVOCs (down from 124 ug/L in Jan. 2013), MW-09 had 6,525 ug/L tVOCs (up from 5,092 ug/L in Jan. 2013), and MW-13 had 436 ug/L tVOCs (down from 556 ug/L in Jan. 2013). Rpt concludes that tVOC concentrations remain high in area of MW-03 and MW-09, but overall, dissolved-phase plume remained stable; absence of measurable free product suggests DPE system has been effective in removing product, and system has prevented off-site migration of dissolved plume. Rpt states that following actions will be conducted as part of routine monitoring program: Continue quarterly well gauging & sampling; prepare DPE system for temporary shutdown & storage pending site Bldg reconstruction; continue to prepare/submit quarterly mon rpts; continue to gauge & sample accessible mon wells during upcoming site Bldg reconstruction and temporary DPE system shutdown scheduled for 2014. Rpt has no proposals requiring DEC response. - J. Kolleeny 05/05/14: Reviewed Quarterly Mon Rpt & System Performance Rpt for Sept. to Nov. 2013 by LiRo, dated 1/8/14 (in DecDocs). Rpt states that for Sept.-Nov. 2013 mon period, no system O&M data were collected due to system being shut down for duration of quarter, and well gauging & GW sampling were conducted on Dec. 4th & 5th due to scheduling issues. Dec. 2013 GW elevation data indicate GW flow is still towards center of site, preventing off-site migration of contam plume. Dec. 2013 GW sampling results show well MW-03 had 8,997 ug/L total VOCs (down from 10,487 ug/L in Aug. 2013), well MW-08 was inaccessible and not sampled, well MW-09 had 4,950 ug/L tVOCs (down from 6,525 ug/L in Aug. 2013), well MW-10 had 4,576 ug/L tVOCs (up from 130 ug/L in Jan. 2013, not

MAP FINDINGS

NYCDEP (Continued)

S103272814

sampled in Aug. 2013), and well MW-13 had 583 ug/L tVOCs (up from 436 ug/L in Aug. 2013). Rpt states that LiRo will continue to gauge & sample accessible site wells during upcoming bldg construction and anticipated DPE system shutdown scheduled for 2014; replace DPE system's oil/water separator and operate system until shutdown is required for pending bldg construction; and prepare/submit quarterly mon rpts. - J. Kolleeny 08/08/14: Reviewed Quarterly Monitoring Rpt & System Performance Rpt for Dec. 2013 to Feb. 2014 by LiRo, dated 4/8/14 (in DecDocs). Rpt states that on-site DPE system was operational for 72 of 90 days during rpt period; oil-water separator was replaced on 12/5/13, allowing re-start of system on 12/18/13. PID screening and lab sampling/analysis of vapor effluent showed system air discharge in compliance with State stds. A GW effluent sample collected in Jan. 2014 was in compliance with NYCDEP discharge criteria. Avg system flow rate was 0.55 gpm, and total GW discharge for rpt period was 58,270 gals. Well gauging showed no free product in any wells during this rpt period. GW sampling in Feb. 2014 showed well MW-03 had 6,533 ug/L total VOCs (down from 8,997 ug/L in Dec. 2013), well MW-09 had 5,101 ug/L tVOCs (up from 4,950 ug/L in Dec. 2013), well MW-10 had 3,561 ug/L tVOCs (down from 4,576 ug/L in Dec. 2013), and well MW-13 had 978 ug/L tVOCs (up from 583 ug/L in Dec. 2013). LiRo will continue to gauge & sample accessible site mon wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, & prepare/submit quarterly mon rpts. - J. Kolleeny 11/10/14: Reviewed Quarterly Mon & System Performance Rpt for March-May 2014 by LiRo, dated 8/6/14 (in DecDocs). Rpt states that on-site DPE system was operational 92 out of 92 days during rpt period (100% of time). PID screening and lab analysis of vapor effluent showed system air discharge in compliance with State stds. Avg system flow rate was 0.65 gpm, total GW discharge during rpt period was 86,276 gals. GW sampling in April 2014 showed well MW-03 had 10,190 ug/L total VOCs (up from 6,533 ug/L in Feb. 2014), well MW-09 had 5,047 ug/L tVOCs (had 5,101 ug/L in Feb. 2014), well MW-10 had 2,942 ug/L tVOCs (down from 3,561 ug/L in Feb. 2014). LiRo will continue to gauge & sample accessible site mon wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, and prepare/submit quarterly mon rpts. - J. Kolleeny 01/22/15: Reviewed Quarterly Mon & System Performance Rpt for June-Aug. 2014 by LiRo, dated 10/24/14 (in DecDocs). Rpt states that on-site DPE system was operational 86 out of 92 days (92.5%). PID screening and lab analysis of vapor effluent showed system air discharge was in compliance with State stds during rpt period. Avg system flow rate was 0.61 gpm, total GW discharge during rpt period was 75,705 gals. GW sampling in July 2014 showed well MW-03 had 10,274 ug/L total VOCs (up from 10,190 ug/L in April 2014), well MW-09 had 6,437 ug/L tVOCs (up from 5,047 ug/L in April 2014), well MW-10 had 6,063 ug/L tVOCs (up from 2,942 ug/L in April 2014). LiRo concludes that overall, GW data indicate dissolved-phase contaminant plume is similar to previous monitoring periods with no significant changes in plume configuration. LiRo will continue to gauge & sample accessible site monitoring wells during upcoming site bldg reconstruction (scheduled for 2014), operate DPE system until temporary shutdown is required for upcoming bldg reconstruction, and prepare/submit quarterly mon rpts. - J. Kolleeny 03/16/15: Reviewed Quarterly Monitoring & System Performance Rpt for Sept.-Nov. 2014 by

NYCDEP (Continued)

S103272814

LiRo, dated 2/3/15 (in DecDocs). Rpt states that on-site DPE system was operation 86 of 91 days (94.5%); on 11/14/14, system was shut down, dismantled and placed in storage for duration of site reconstruction program. PID screening & lab analysis of vapor effluent showed system air discharge was in compliance with State stds during rpt period. Avg system GW recovery flow rate was 0.61 gpm, total GW discharge during rpt period was 75,705 gals [? data not updated from previous quarterly rpt? Sent email inquiry to Steve Frank of LiRo]. GW sampling in Oct. 2014 showed well MW-03 had 9,919 ug/L total VOCs (down from 10,274 ug/L in July 2014), well MW-09 had 7,117 ug/L tVOCs (up from 6,437 ug/L in July 2014), well MW-10 had 5,863 ug/L tVOCs (down from 6,063 ug/L in July 2014). LiRo will continue to gauge & sample accessible mon wells during upcoming site reconstruction (scheduled for 2015) and prepare & submit quarterly mon rpts. I sent email to Steve Frank of LiRo: Steve, I have a question about LiRo s Qtrly Mon Rpt & System Performance Rpt for Sept.-Nov. 2014 for this site. On Page 7, rpt states that system was operational for 86 out of 91 calendar days in this rping period. However, on Page 8 text states For rping period (92 days), average system flow rate& was 0.61 gpm and, Total net system GW effluent discharge for rping period was 75,705 gals. These flow rate & discharge numbers are identical to numbers in previous qtrly rpt (June-Aug. 2014), and since text here gives rping period as 92 days (rather than 91, as stated on previous page), I m wondering if flow rate & discharge data presented here are holdovers from previous qtrly rpt, and were inadvertently not updated for this rpt? Please let me know if this is true, and if so, please provide correct system flow rate in gpm and GW effluent discharge in gals, if those data are available. - J. Kolleeny 03/17/15: Received email reply from Steve Frank of LiRo: Jon, Your guess was correct. We will send you a new pdf of rpt with corrected flow rate/discharge numbers. - J. Kolleeny 03/24/15: Received email from Steve Frank of LiRo with revised Quarterly Monitoring & System Performance Rpt for Sept.-Nov. 2014, uploaded to DecDocs. - J. Kolleeny 07/23/15: Reviewed Quarterly Monitoring & System Performance Rpt for Dec. 2014 to Feb. 2015 by LiRo, dated 5/14/15 (in DecDocs). Rpt notes that on-site DPE system was shut down and put into storage on 11/20/14, in preparation for site construction work. In addition, due to interruption of DDC funding, no GW sampling was performed this quarter. Therefore, site activities during this quarter were limited to gauging of all accessible wells, which was performed in Jan. and Feb. 2015. No LNAPL was observed in any wells. GW contour maps based on gauging measurements show GW flowing radially inward toward center of site, altho this pattern appears to be less pronounced in Feb. 2015 map. Rpt states that quarterly GW sampling at site resumed on 4/13/15 (results will be in next quarterly rpt). - J. Kolleeny 10/30/15: Reviewed Quarterly Monitoring & System Performance Rpt for March to May 2015 by LiRo, dated 8/26/15 (in DecDocs). Rpt notes that on-site DPE system was shut down and put into storage in Nov. 2014 in preparation for site construction work. GW sampling was performed in April 2015; results show well MW-03 had 11,071 ug/L total VOCs (up from 9,919 ug/L in Oct. 2014), well MW-08 had 161 ug/L tVOCs (up from 70 ug/L in Oct. 2014), well MW-09 had 3,839 ug/L tVOCs (down from 7,117 ug/L in Oct. 2014), well MW-10 had 1,717 ug/L tVOCs (down from 5,863 ug/L in Oct. 2014), well MW-13 had 323 ug/L tVOCs (down from 421 ug/L in Oct. 2014), and well DPE-13 had 109 ug/L tVOCs (up from 28 ug/L in Oct. 2014). Other wells had minimal VOCs or were ND, or

NYCDEP (Continued)

S103272814

were not sampled. Rpt states that generally reduced VOC concentrations in site perimeter wells and absence of free product indicate that DPE system was effective and functioned as designed by removing free product and preventing off-site migration of dissolved-phase GW plume. Rpt states that LiRo will continue quarterly well gauging and sampling to extent feasible during building reconstruction, will initiate monthly EFR events at accessible wells to remove contaminated GW during site reconstruction, and will continue to prepare/submit quarterly monitoring rpts. - J. Kolleeny 03/23/16: Reviewed Quarterly Monitoring & System Performance Rpt for June to Aug. 2015 by LiRo, dated 12/18/15 (in DecDocs). Rpt notes that on-site DPE system was shut down & put into storage in Nov. 2014 in preparation for site construction work. GW sampling was performed in June 2015; results show well MW-03 had 12,133 ug/L total VOCs (up from 11,071 ug/L in April 2015), well MW-08 had 137 ug/L tVOCs (down from 161 ug/L in April 2015), well MW-09 had 5,144 ug/L tVOCs (up from 3,839 ug/L in April 2015), well MW-10 had 4,283 ug/L tVOCs (up from 1,717 ug/L in April 2015), well MW-13 had 227 ug/L tVOCs (down from 323 ug/L in April 2015), well DPE-13 had 101 ug/L tVOCs (down from 109 ug/L in April 2015). Other wells had minimal VOCs or were ND, or were not sampled. No LNAPL was observed in any wells during rpt period. Rpt states that tVOCs in several wells remain high, but overall dissolved-phase plume is similar to previous monitoring periods. On 8/26/15, LiRo initiated EFR on six wells (MW-03, MW-09, MW-10, MW-13, DPE-01 & DPE-13) as an IRM; ~235 gals total fluids were recovered. Rpt states that LiRo will continue to gauge & sample accessible wells on a quarterly basis, will continue to do monthly EFR events as an IRM, and will continue to prepare/submit quarterly rpts. - J. Kolleeny 06/10/16: Reviewed Quarterly Monitoring & System Performance Rpt for Sept. to Nov. 2015 by LiRo, dated 3/24/16 (in DecDocs). Rpt notes that on-site DPE system was shut down & put into storage in Nov. 2014 in preparation for site construction work; states that when construction activities are complete LiRo will evaluate remedial requirements and determine if DPE system should be re-commissioned and reactivated. EFR events were performed on 5 wells (MW-03, MW-09, MW-13, DPE-01, DPE-13) in Sept. 2015, removing ~35-40 gals from each well, then on same 5 wells in Oct. 2015, removing ~53-54 gals from each well, then from first 3 of those wells in Nov. 2015 (DPE wells were blocked), removing from 50 to 65 gals from wells. GW sampling in Sept/Oct 2015 showed well MW-03 had 12,255 ug/L (up from 12,133 ug/L in June 2015), well MW-08 had 187 ug/L tVOCs (up from 137 ug/L in June 2015), well MW-10 had 6,149 ug/L tVOCs (up from 4,283 ug/L in June 2015), well DP-12 had 282 ug/L tVOCs (had 4 ug/L when last sampled in Oct. 2014), well DP-13 had 42 ug/L tVOCs (down from 101 ug/L in June 2015). Well MW-09, which had 5,144 ug/L tVOCs in June 2015, was not sampled and no explanation is provided in text or tables. Rpt notes that a number of wells saw increases in VOCs this quarter, but states that overall, there was no significant change in plume configuration. LiRo will continue to gauge & sample accessible wells on a quarterly basis, will continue to do monthly EFR events as an IRM, and will continue to prepare/submit quarterly rpts. I contacted Steve Frank of LiRo regarding well MW-09 not being sampled this quarter; he responded that MW-09 was inaccessible at time of sampling due to parked vehicle over well, which was noted in well purge logs but not in text or well gauging data table. - J. Kolleeny 07/08/16: Reviewed Quarterly Monitoring & System Performance Rpt for

S103272814

Dec. 2015 to Feb. 2016 by LiRo dated 4/29/16 (in DecDocs). Rpt notes that on-site DPE remedial system is shut down while site building undergoes renovations, but that monthly EFR on impacted, accessible wells continues to be performed as an interim measure to address GW contam. In this quarter, EFR events were performed in Jan. & Feb. of 2016, removing ~267 gals total fluids, bringing total since IRM began to 1,133 gals total fluids removed. GW sampling in Jan. 2016 showed well MW-03 had 15,871 ug/L total VOCs (up from 12,255 ug/L in Sept. 2015), well MW-09 had 6,138 ug/L tVOCs (up from 5,144 ug/L when last sampled in June 2015), well MW-13 had 217 ug/L tVOCs (up from 42 ug/L in Sept. 2015); other wells sampled were either ND or had very low tVOCs. Wells MW-08 & MW-10 were not sampled; well purge logs indicate they were blocked by construction equipment. LiRo concludes that high tVOC levels remain in vicinity of MW-03, MW-09 & MW-10, but that plume is similar to previous monitoring periods. LiRo will continue to gauge & sample accessible wells on a quarterly basis, perform monthly EFR at select wells to remove contaminated GW as an IRM, & prepare/submit quarterly monitoring rpts. - J. Kolleyen 09/09/16: Reviewed Quarterly Monitoring & System Performance Rpt for March-May 2016, dated 7/20/16 (in DecDocs). Rpt notes that while DPE system is shut down for site bldg renovations, monthly EFR continues to be performed on accessible wells with high levels of dissolved VOCs (MW-03, MW-09, MW-13, DPE-01, DPE-13) as an IRM. In this quarter, EFR events were performed in March, April & May 2016, removing total of ~321 gals total fluids, bringing total since IRM began to 1,454 gals total fluids removed. No LNAPL was detected during rpt period. For April 2016 GW sampling event, only two wells were accessible for sampling: LMW-01 and MW-19, both of which were ND for VOCs. LiRo will continue to gauge & sample accessible wells quarterly, do monthly EFR at impacted wells as an IRM, & submit qtrly mon rpts. I sent email to Steve Frank of LiRo: Steve, I reviewed LiRo's Qtrly Mon & System Performance Rpt for March-May 2016 for Kent Ave Shop, and I see that only 2 monitoring wells were accessible for GW sampling on 4/11/16 neither of which is among highly contaminated wells at site. Yet EFR summary table indicates EFR events were performed on all of those wells in April and on most of those wells in May 2016, so they must have been accessible at those times. Why weren't critical wells (MW-03, MW-09, MW-13, DPE-01, DPE-13) sampled when they were accessible on EFR visit dates? Please let me know. - J. Kolleyen 09/12/16: Received email reply from Steve Frank of LiRo: Jon, Thanks for your note and I understand your concern. Construction conditions are in a constant state of flux at Kent Shop. We tried to sample wells on April 11 and found them blocked. We returned next week and found wells still blocked and unfortunately, we moved on from trying to sample those wells in April. Different LiRo crews & equipment are required to complete sampling vs EFR & there is a subcontractor involved & work scheduled at other sites. We always go out in advance of attempting EFR & we did that on April 26th. Wells were accessible & we completed EFR on 27th. Going forward, I think we can coordinate our sampling & EFR events more closely when we scout for EFR & see wells are accessible, we will scramble a sampling crew to try & hit site to sample within a day or two. Just to give you an idea of what we are up against, I attached photos of conditions inside. June 2016 photo is from area of MW-03, 09 & 13 & Stuff (not technical term) is piled up there because it was in way somewhere else. It could sit there for 2 days or 2 months we have no say in that. In ramp removed photo ramp got torn out, so until that gets rebuilt we cannot get

Map ID

NYCDEP (Continued)

S103272814

personnel in there at all. We are not currently able to complete EFR or sampling but we continue to scout site monthly. Next time we see well access, we will get a sampling crew there ASAP. I sent email reply: Steve, Thanks for explanation & photos I can better see what you re up against. It occurs to me that there could be a quarterly period during which your staff will be unable to either sample/gauge wells or perform EFR on wells at this site. In that case, perhaps it makes sense to reduce reporting frequency from quarterly to semi-annual, at least for duration of site renovations? If/when remedial system is re-started, LiRo could resume submission of quarterly rpts. I m not sure whether or not to also suggest a reduction of GW sampling frequency, and of course I d prefer to see EFR events continue monthly as approved IRM while DPE system is off, assuming wells are accessible. Please let me know what you think. - J. Kolleeny 09/15/16: Received email reply from Steve Frank of LiRo: Jon, I think switch to semi-annual reporting until system is back on-line is a fine idea. We will continue to visit site and try for monthly EFR (as construction conditions permit) and I think it would be best to stick with quarterly GW sampling. I fear that if we dial back to semi-annual sampling and catch a period with no well access we could end up with no data. I sent email reply: Steve, Sounds good, so I will consider reporting schedule for this site to be changed to semi-annual for duration of building reconstruction project, while EFR and GW sampling schedules will remain same, at monthly & quarterly, resp. (with understanding that there may be months/quarters in which EFR/GW sampling of certain wells is not possible to do access constraints). - J. Kolleeny 03/31/17: Reviewed Semi-Annual Monitoring & System Performance Rpt for June to Nov. 2016, by LiRo, dated 1/30/17 (in DecDocs). On-site DPE system was shut down in Nov. 2014 for building renovations. Monthly EFR was performed in June & July 2016 as required IRM during system down time, removing ~205 gals of total fluids (volume of total fluids removed since start of IRM is ~1,659 gals). LiRo made site visits in Sept. & Oct. 2016 to attempt EFR & GW sampling, but was unable to do either due to construction activities. Based on discussions with site personnel, EFR in basement will not be possible until after Spring 2017. However, in early Nov. 2016 LiRo was able to collect GW samples from 10 out of 16 wells in monitoring program. No free product was detected in wells. Sampling results showed well MW-3 had 11,191 ug/L total VOCs (down from 15,871 ug/L in Jan. 2016), well MW-10 had 957 ug/L tVOCs (down from 6,149 ug/L in Sept. 2015), well MW-13 had 5 ug/L tVOCs (down from 217 ug/L in Jan. 2016), well DPE-13 had 201 ug/L tVOCs (up from 42 ug/L in Sept. 2015); well MW-9 (historically high impacts) could not be sampled. LiRo will continue to do quarterly well gauging & GW sampling, & monthly EFR events as an IRM on accessible wells as permitted by site conditions, & will continue to submit semi-annual mon rpts. - JK 11/27/17: Reviewed Semi-Annual Monitoring Rpt for Dec. 2016 to May 2017 by LiRo, dated 8/31/17 (in DecDocs). On-site DPE system remains shut down for bldg renovations. Rpt states LiRo conducted gauging of accessible site wells & sampling of 12 wells in Feb. 2017 (5 wells couldn't be sampled due to access blocked by construction), and gauging of accessible wells & sampling of 13 wells in May 2017 (4 wells couldn't be sampled due to access blocked by construction). In March 2017, LiRo resumed EFR events, regaining access to basement wells after reconstruction of access ramp & basement floor was completed. EFR was performed on 5 wells in March, April & May 2017, recovering ~268 gals of total fluids,

Map ID
Direction

S103272814

bringing total recovered since EFR began to ~1,725 gals total fluids. No measurable LNAPL was detected in this rpt period. GW sampling showed well MW-03 had 16,775 ug/L total VOCs in Feb. 2017 (up from 11,191 ug/L in Nov. 2016) and had 10,806 ug/L tVOCs in May 2017; well MW-09 had 4,801 ug/L tVOCs in Feb. 2017 (not accessible in Nov. 2016; had 6,138 ug/L tVOCs in Jan. 2016) and had 3,708 ug/L tVOCs in May 2017; well MW-10 was not accessible in Feb. 2017 (had 957 ug/L tVOCs in Nov. 2016) and had 1,698 ug/L tVOCs in May 2017; well MW-13 was not sampled in Feb. 2017 (had 5 ug/L tVOCs in Nov. 2016) and had 117 ug/L tVOCs in May 2017; well DPE-12 had 78 ug/L tVOCs in Feb. 2017 (down from 282 ug/L when last sampled in Sept. 2015) and had 59 ug/L tVOCs in May 2017; well DPE-13 had 171 ug/L tVOCs in Feb. 2017 (down from 201 ug/L in Nov. 2016) and had 120 ug/L tVOCs in May 2017. LiRo will continue quarterly gauging/sampling of accessible site wells to extent feasible during bldg reconstruction activities, continue monthly EFR at accessible wells as an IRM during reconstruction, & will prepare/submit semi-annual monitoring rpts. - J. Kolleeny 07/19/18: Reviewed Semi-Annual GW Monitoring Rpt (June 2017 to Jan. 2018) by LiRo dated 5/16/18 (in DecDocs). GW sampling in Oct. 2017 & Jan. 2018 showed (main wells of concern) MW-03 had 8,271 ug/L total VOCs in Oct. 2017 (down from 11,850 ug/L in Aug. 2017) and had 8,921 ug/L tVOCs in Jan. 2017; well MW-09 had 2,858 ug/L tVOCs in Oct. 2017 (down from 3,708 ug/L in Aug. 2017) and had 1,541 ug/L tVOCs in Jan. 2017; well MW-10 had 1,905 ug/L tVOCs in Oct. 2017 (up from 1,068 ug/L in Aug. 2017) and had 939 ug/L tVOCs in Jan. 2018; well MW-13 had 305 ug/L tVOCs in Oct. 2017 (up from 11 ug/L in Aug. 2017) and had 154 ug/L tVOCs in Jan. 2018; well DPE-13 had 167 ug/L tVOCs in Oct. 2017 (same as in Aug. 2017) and had 119 ug/L tVOCs in Jan. 2018. EFR was performed monthly during rpt period, recovering ~982 gals total fluids (bringing total fluids recovered since start of IRM to ~2,707 gals). In Dec. 2017, LiRo drilled 16 soil borings to obtain current soil data for evaluation of remedial alternatives to inactive on-site DPE system; 47 soil samples were collected and results ranged from ND in 25 samples to 173,410 ug/kg total VOCs. Based on Dec. 2017 soil data, areas of residual vadose zone soil impacts are located in SW & E portions of site. Rpt states that data shows a general overall decrease in total mass of VOCs in soil. Rpt includes an evaluation of remedial alternatives including MNA with EFR, GWET, S-ISCO, and In-Situ Biorem (IB) with MNA. Rpt concludes best alternative for site would be IB, which would involve application of bacteria & nutrients into existing site wells by gravity feed, possibly supplemented with oxygen. Rpt states that quarterly well gauging & GW sampling and monthly EFR will continue, pending DEC approval of proposed changes. Proposals requiring DEC approval are: discontinue and decommission DPE system, discontinue monthly EFR, reduce well gauging & GW sampling to semi-annual and analyze GW samples only for VOCs, prepare & submit an IB design/treatment study work plan to evaluate this technology as remedial approach for site. - J. Kolleeny 07/19/18 (cont.): I sent email to Steve Frank of LiRo: Steve, I m reviewing Semi-Annual Mon Rpt for this site dated 5/16/18. Rpt recommends reducing GW sampling frequency from quarterly to semi-annual, and includes latest GW data from a Jan. 2018 sampling event. Since site is currently on quarterly schedule, I was wondering if you have any addt'l GW data, perhaps from April or May 2018? I always like to see latest available GW data when reviewing remedial proposals. Also, since LiRo is recommending a new remedial approach (In-Situ Bioremediation, or IB), are you sure you want to reduce GW sampling

MAP FINDINGS

NYCDEP (Continued)

S103272814

frequency? Won't that delay your ability to evaluate effectiveness of new approach? Finally, I see IB proposal recommends injection of bacteria & nutrients into existing wells. Since those wells are screened to straddle water table, with screens presumably extending only a few ft above water table, how would injections into those wells address residual vadose zone soil impacts at site? Please feel free to call to discuss. - J. Kolleeny 07/27/18: Received email from Steve Frank of LiRo with answers to my 7/19/18 email: JK - Rpt recommends reducing GW sampling frequency from quarterly to semi-annual, and includes latest GW data from Jan. 2018 sampling event. Since it's currently on quarterly schedule, do you have any add'l GW data for April or May 2018? SF - We have quarterly data from April & June. Latest GW data is attached. [In Decdocs.] JK - Seeing as LiRo is recommending a new remedial approach (In-Situ Bioremediation, or IB), wouldn't reducing GW sampling frequency delay ability to evaluate effectiveness of new approach? SF - Proposed reduction is for long-term routine sampling. We will develop an IB design/study work plan that will specify more frequent monitoring of wells in treatment area to evaluate effectiveness. JK - IB proposal recommends injection of bacteria & nutrients into existing wells, screened to straddle water table, with screens extending only a few feet above GW; how would injections into those wells address residual vadose zone soil impacts at site? SF - Water table is extremely shallow in treatment area and most soil contamination is in capillary fringe or below water table. IB design/treatment study proposed in our rpt will include an evaluation of potential effectiveness in capillary fringe. Reviewed add'l GW data; well MW-3 had 11,742 ug/L total VOCs in April and had 8,199 ug/L tVOCs in June; well MW-9 had 2,059 ug/L tVOCs in April and 1,122 ug/L in June; well MW-10 had 1,257 ug/L tVOCs in April and 2,373 ug/L in June; other wells had low to moderate VOC levels. I sent letter (in DecDocs) approving proposals in LiRo's SAMR for June 2017 to Jan. 2018, to Jerry Aliberti of DDC, cc's to Marco Chen of DDC, Steve Frank & Martha DeLozier of LiRo. - J. Kolleeny 02/07/19: Reviewed Semi-Annual Monitoring Rpt for Monitoring Period (February to July 2018) by LiRo dated 12/11/18 (in DecDocs). Rpt presents results of GW sampling in April & June 2018; these are same data sent in July 2018 and reviewed in above 7/27/18 entry. Rpt notes that on 7/27/18 DEC approved LiRo's proposals to cease operating & decommission on-site DPE system, discontinue EFR as an IRM, and reduce well gauging & GW sampling frequency from quarterly to semi-annual, and that DEC requested preparation/submittal of an in-situ bioremediation work plan. Rpt states that LiRo will continue to gauge & sample accessible site wells on semi-annual basis, prepare/submit semi-annual rpts, and will prepare/submit in-situ bio-rem work plan in Jan. 2019 monitoring rpt. - JK 04/04/19: Reviewed Semi-Annual Monitoring Rpt for Monitoring Period (Aug. 2018 to Jan. 2019) by LiRo dated 2/28/19 (in DecDocs). One monitoring event was conducted during rpt period, in Oct. 2018. Well gauging showed no LNAPL in any site well. GW sampling showed well MW-03 had 6,327 ug/L total VOCs (down from 8,199 ug/L in June 2018), well MW-09 had 176 ug/L tVOCs (down from 1,122 ug/L in June 2018), well MW-10 had 3,811 ug/L tVOCs (up from 2,373 ug/L in June 2018), well MW-13 had 174 ug/L tVOCs (up from 78 ug/L in June 2018), well DPE-13 had 102 ug/L tVOCs (up from 63 ug/L in June 2018); other wells sampled were either ND or had very low to moderately low (below 100 ug/L) levels of tVOCs. Worst GW impacts remain in SW area of site. Rpt notes that contaminant plume appears to be confined to site. LiRo

will continue to gauge & sample accessible site wells and submit monitoring rpts on semi-annual basis; they will also prepare a preliminary design for a bioremediation system and draft a Remedial Action Work Plan. - J. Kolleeny 09/30/19: Received email from Steve Frank of LiRo: Hi Jon, I wanted to give you a heads-up on our findings at Kent Ave shop. Some product appeared in LMW-01 back in April & unfortunately (and I am sorry for this) no one immediately recognized this as an unusual condition. However, given that LMW-01 is an up-gradient well which has historically not shown contamination, I believe it is unusual. We tested product for fingerprint and it came back as mineral spirits (confirmed with a second ID sample). We started EFR on well and as of this morning, thickness was 0.13 ft. There is no record of mineral spirits storage at site and considering well location it is possible that there is an off-site source. We ordered Sanborn maps and an EDR database rpt (I attached a Sanborn map) and records indicate that there was a fairly large dry-cleaning plant (with 6 solvent tanks called out) from 1940s thru 90s or maybe a little later even. From our mineral spirits findings at Brooklyn 3/3A, we learned that a type of mineral spirit (Stoddard Solvent) was an early dry-cleaning chemical. Former dry-cleaning building (380 Flushing Ave) appears to have been demolished (probably in 2018) and property has an E-designation. I could not find add'l info on property in City's OER database. I was thinking that we could continue to do EFR for a couple of months and if product goes away, pursue source no further. If product persists, I think we would need to put in some add'l up-gradient wells along Kent Ave to further evaluate source. Let us know what you think of my suggestions or if there are any other things you would like us to do. I sent email reply: Steve, Thanks for bringing this to my attention. I would suggest continuing to do EFR to see if product disappears in a month or two. I believe that property at 380 Flushing Ave which formerly was a dry cleaning plant is now a BCP site; I will follow up on that to try to find out if they have detected any mineral spirits in wells and/or if they have knowledge of mineral spirits or Stoddard Solvent having been stored at that site. I'll also find out what sort of remediation they have done or will be doing, and if they have done any off-site investigation. Thanks again for heads-up on this, and please let me know how it goes with EFR efforts to eliminate product. I checked Remediation database, found that former dry cleaning plant at 380 Flushing Ave is a BCP project, no. C224264, off-site investigation under no. C22426A, being managed by Wendy Zheng of R2 Remediation Section A. According to notes in database, GW flow at site is to E (away from Kent Ave Shop), and main impacts at site are from fuel oil. - J. Kolleeny 11/26/19: Discussed this site with LiRo at 11/21/19 DDC Consent Order semiannual status meeting, told them Wendy Zheng said main site contaminant is fuel oil, and off-site investigation will only be done to N and E, based on GW flow. Steve Frank and Martha DeLozier of LiRo stated that Stoddard Solvent contamination in soil resembles fuel oil. They also stated that EFR events have greatly reduced product in impacted well, they will evaluate product rebound. On 11/26/19, Martha DeLozier sent follow-up email: Jon, As discussed in our meeting last Thursday, attached is an excerpt from document titled Toxicological Profile for Stoddard Solvent, US Dept. of Health & Human Services, Agency for Toxic Substances and Disease Registry, dated June 1995. Excerpt discusses chemical and physical info for Stoddard solvent which is similar in chemical composition to white spirits / mineral spirits. Also

attached is soil data from solvent tank (mineral spirit) excavation work related to DSNY-Former Brooklyn North 3 site (314 Rutledge St parcel). As you can see from results, 1,2,4-Trimethylbenzene was detected at highest percentage concentration levels. - JK 01/17/20: Reviewed Semi-Annual GW Monitoring Rpt for Monitoring Period (Feb. to July 2019) by LiRo dated 12/4/19 (in DecDocs). Well gauging on April 8-9, 2019 showed well LMW-01 had 0.22 ft of LNAPL, later identified as mineral spirits (i.e., Stoddard Solvent) (see above entries for 9/30/19 & 11/26/19); well gauging on 6/25/19 again showed 0.21 ft of LNAPL in well LMW-01. GW sampling in April 2019 showed well MW-03 had 11,066 ug/L total VOCs (up from 6,327 ug/L in Oct. 2018), well MW-09 had 2,002 ug/L tVOCs (up from 176 ug/L in Oct. 2018), well MW-10 had 1,089 ug/L tVOCs (down from 3,811 ug/L in Oct. 2018), well MW-13 had 113 ug/L tVOCs (down from 174 ug/L in Oct. 2018); other wells sampled had very low to ND levels of VOCs. Rpt states that on 9/30/19, LiRo informed DEC of presence of mineral spirits in well LMW-01 and of LiRo's intent to perform EFR on this well for two months to evaluate any increases/decreases in mineral spirit thickness. Rpt notes that well LMW-01 is located up-gradient of former on-site UST system, that this well never had mineral spirits before, and there is no record of mineral spirits being used or stored at site. Rpt also states that with measurement of LNAPL ID'ed as mineral spirits in LMW-01 in April and verified in June 2019, LiRo conducted EFR on 9/19/19 and 9/30/19; after two EFR events product thickness was reduced to 0.13 ft. Based on this reduction, EFR was discontinued. Rpt states that LiRo will continue semiannual gauging & sampling of accessible site wells and will perform EFR as required by SMP, and for next monitoring period will gauge wells monthly to evaluate presence of LNAPL. Rpt also includes a RAWP proposing Biological Augmentation, which I will review separately. - JK 01/22/20: Reviewed RAWP included as attachment in LiRo's Semi-Annual GW Mon Rpt for Feb. to July 2019 (in DecDocs). RAWP proposes biological augmentation to address residual petroleum impacts at site. RAWP states there is an area of residual soil contam in a smear zone at water table, and this contam soil is acting as an ongoing source of GW contamination. To address soil contam, LiRo will implement a GW recirculation, mixing and oxygenation system. Proposed system will utilize conduits and extraction wells from former on-site DPE system. Two extraction wells (DPE-11 & DPE-13) located up-gradient of presumed contam soil mass will remove GW, which will be pumped to a treatment system where nutrients & oxygen will be added, with volume of additives and mixing rates controlled by Biological Oxygen Supply System (BOSS). Treated/amended water will then be gravity fed to 3 re-circulation wells (DPE-06, DPE-12 & DPE-17) located down-gradient of contam soil. Bio-augmentation program will extend over 12 months, with quarterly sampling of GW for bio parameters, semi-annual sampling of GW for petroleum contaminants (as per current monitoring schedule), and confirmation soil sampling after 9 months to evaluate progress of soil remediation. Operation and performance monitoring of bio-augmentation system will be summarized in usual semi-annual rpts, and results of bio-augmentation program will be summarized in a single rpt in first semi-annual monitoring rpt after receipt of confirmation soil sampling data. RAWP states that LiRo will not implement bio-augmentation program until there are no more measurable product (mineral spirits) in any site well. In quarter following no observation of product at site, after bid document prep and USEPA notification, program will be initiated. I sent letter (in DecDocs)

approving RAWP to Jerry Aliberti of NYCDDC, cc's to Ricardo Walton of DDC; Steve Frank, Martha DeLozier & John Proios of LiRo, but suggesting that bio-program be implemented when there is no more product in wells located within proposed bio treatment area. - J. Kolleeny 06/04/20: Reviewed Semi-Annual Monitoring Rpt for Aug. 2019 to Jan. 2020 by LiRo, dated 4/23/20. Rpt notes that on 9/30/19, LiRo notified DEC of the presence of product ID'ed as mineral spirits in well LMW-01 and of LiRo's intent to do EFR on that well for 2 months to evaluate changes in product thickness. LiRo gauged site wells multiple times in Sept., Oct., Nov. & Dec. 2019 and Jan. 2020; product was identified intermittently in wells LMW-01, DPE-08, MW-06, MW-03 and DPE-03, and product thicknesses detected during this period ranged from 2.01 ft (LMW-01) to 0.01 (several wells). LiRo performed EFR on well LMW-01 on Sept. 19 & 30, 2019 and on wells LMW-01 and DPE-08 on Jan. 17 & 31, 2020. A total of 151.21 gals of fluids were removed from these wells during rpt period. LiRo installed an absorbent sock in LMW-01 on 10/10/19 and in MW-06 and DPE-08 on 11/21/19. A product sample from DPE-08 taken on 11/8/19 was ID'ed as possibly mineral spirits or weathered gasoline. Rpt notes that on 1/22/20, DEC approved LiRo's RAWP for biological augmentation (included in previous semiannual rpt), with caveat that RAWP will not be implemented until no free product is observed within treatment area. Site-wide GW sampling performed in Nov. 2019 showed well MW-03 had 7,412 ug/L total VOCs (down from 11,066 ug/L in April 2019), well MW-08 had 148 ug/L tVOCs (not sampled in April 2019, had 525 ug/L tVOCs in Aug. 2017), well MW-09 had 968 ug/L tVOCs (down from 2,002 ug/L in April 2019), well MW-10 had 797 ug/L tVOCs (down from 1,089 ug/L in April 2019), well MW-13 had 169 ug/L tVOCs (up from 113 ug/L in April 2019), well DPE-08 had 525 ug/L tVOCs (not analyzed in April 2019; had 153 ug/L tVOCs in June 2018), well LMW-01 had 391 ug/L tVOCs (not sampled in April 2019 due to free product; had 9 ug/L tVOCs in Oct. 2018), well DPE-13 had 110 ug/L tVOCs (up from 43 ug/L in April 2019). Rpt states that LiRo will continue semi-annual GW sampling, perform EFR as required by SMP, perform monthly gauging of accessible wells for next monitoring period to evaluate presence and migration of product, and will implement approved biological augmentation RAWP when there is no more product observed within treatment area. - J. Kolleeny 12/28/20: Reviewed Semi-Annual Monitoring Rpt for Feb. to July 2020 by LiRo, dated 11/13/20. During rpt period, LiRo completed semiannual GW sampling on 4/6/20 and 6/24-25/20; time gap was due to DEP restricting access to site interior due to COVID-19; LiRo collected free product and product/water mix samples from LMW-01 & DPE-14 on 7/30/20 and submitted for lab analysis of target VOCs; LiRo performed 11 add'l well gauging events for product, installed & maintained absorbent socks in wells MW-06 & DPE-8, and conducted 4 rounds of EFR (twice in Feb., once in March and once in July 2020). Product thickness ranged up to 0.52 ft (in DPE-08). A total of 36 gals of product were recovered from LMW-01, MW-09, DPE-08 & DPE-14 by EFR this period, bringing cumulative total recovered to 187.71 gals since 4/8/19. Rpt states that EFR seems to have short-term effect in reducing product thicknesses, but long-term effectiveness will require further monitoring. Rpt states that LiRo will not implement approved biological augmentation program until no more free product is observed within treatment area. June 2020 well gauging data appear to show GW flow to ENE across site, instead of usual inward radial flow toward site center. GW sample results show well LMW-01 had 85 ug/L

total VOCs (down from 391 ug/L in Nov. 2019), well MW-03 had 7,582 ug/L tVOCs (up from 7,412 ug/L in Nov. 2019), well MW-08 had 1,451 ug/L tVOCs (up from 148 ug/L in Nov. 2019), well MW-09 had 890 ug/L tVOCs (down from 968 ug/L in Nov. 2019), well MW-10 had 161 ug/L tVOCs (down from 797 ug/L in Nov. 2019), well DPE-08 was not sampled due to LNAPL (had 525 ug/L tVOCs in Nov. 2019), well DPE-13 had 13 ug/L tVOCs (down from 110 ug/L in Nov. 2019), well DPE-14 had 3,958 ug/L tVOCs (no earlier sampling data available). Other wells sampled were ND or had very low tVOCs. Rpt notes that GW contam plume has expanded beyond bldg footprint to include well LMW-01 and for 1st time includes on-site well DPE-14; this differs from historical data showing no off-site migration, and LiRo states this trend will require further monitoring. LiRo will continue monthly gauging of select wells for LNAPL and EFR as required by SMP, and semiannual gauging and sampling of all accessible site wells. LiRo will implement approved biological augmentation program when no LNAPL is observed in treatment area and funding constraints are removed. - J. Kolleeny "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Tank Info:

Tank Number: 001
Tank Id: 58359
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

J02 - Dispenser - Suction Dispenser
E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
L00 - Piping Leak Detection - None
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
K00 - Spill Prevention - None
F01 - Pipe External Protection - Painted/Asphalt Coating
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
G02 - Tank Secondary Containment - Vault (w/access)
Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported

DEC Region: 2
DER Facility ID: 328078
DEC Memo: "3/27/07 bf: Spoke with Matt of Associated Environmental (631)234-4273. Epoxy patch from previous repair at top of tank was problem. Tank is AST. They plan on having the tank cleaned out, inspected, remove epoxy, and weld a steel patch to tank. Then tank will be tightness tested. They plan on starting work next week. One problem is getting a tanker to be dedicated to the building while the repairs are made. Petroleum Tank Cleaners will be doing repairs and testing in conjunction with Associated. Sent ttf letter to: David Rochlitz 544 Park Avenue Brooklyn, NY 11205 7/13/07 On 7/12/07, received call from Antionette Ollivierre of American Environmental Associates and Solutions (718)209-0653. She requested a call back. Called her back today. I faxed her a copy of the ttf letter dated 3/27/07. fax:(718)622-5807. bf 9/20/07 Received call from Aron Weinstein tesla Environmental 732-904-4618. Called him back at 2:45 PM. He will send email letting me know where project stands. Tank is encased in concrete and there may be structural concerns regarding the building. A Phase II was done on the property and eight borings were done. I told him I need to see those. I asked him why the tank failed and he could not answer except that the Horner EZ 3 should not be allowed. He was on a cell phone and was hard to hear. bf 11/13/07 On 11/8/07, received call from Donna of ABC Tank. Ph.(718)272-2800 Fax.(718)272-3147. She requested any paperwork regarding the spill. I sent her the ttf letter and the spill report. Called her back, but she is not in until Thursday. bf 3/4/08 Site inspected on 2/29/08. NOV issued. Received call to day from John of Gianco (contractor doing tank test/repair). I faxed ttf letter to him. Fax: (631)952-5975. bf 4/2/08 Signed order hand-delivered with check for \$1100 panalty. bf 4/30/08 Received faxed letter on 4/9/08 from John Sinatra of Gianco, dated 4/8/08, to Robert Hoffman. Tank passed pressure test over the weekend holding 7 pounds of air. No contamination was found on, near, or surrounding the tank. It is his belief that the tank can be out online as a backup. 6/19/08 Called Robert Hoffman requesting tank test report. He faxed letter to close spill, not report. Sent tt return letter to him since document is not a tank test report. bf 7/1/08 Received passing test report on 6/30/08. NFA. bf"
